INDEX TO THE EVIDENCE AND APPENDICES.

A.

ACCIDENTS. *See* SAFETY OF RAILWAY TRAVELLING, 2.

ACCOMMODATION:

Want of, for the Liverpool goods traffic; *Clark* 3. 38. 196, 197; *Holland* 415. Remedy now being provided; *Cawkwell* 11,442. Loss of business from want of, especially in the corn trade; *Clark* 44, 45. 48, 49. Increase of, would greatly benefit Liverpool; *Patterson* 303–306. Some increase proposed by railway company; *ib.* 312–317. Want of, at Rochdale; *Blackburn* 1289, &c.

Answers to above; *Cawkwell* 11,399 *et seq.*; *O'Brien* 11,960 *et seq.*; *Allport* 12,345 *et seq.*; *Smithells* 12,951. *et seq.*; *MacNay* 13,961 *et seq.*

Want of, by trains from Limerick; many more would travel if trains were better arranged as to keeping time and returning; *Ryan* 2653–2679. Insufficient, between Castlereagh and Castlebar; *Earl of Lucan* 2952. Public difficult to satisfy in matter of railway accommodation; *Malcomson* 3400. General complaint of the want of, on Irish Great Southern and Western line; *Brady* 3344–3346. Great want of, on North-eastern Railway; *Wooler* 9620 *et seq*; also on Midland Railway; *Hutchinson* 9757 *et seq.*

Where a company is liberal in the way of accommodation it is valued by the public; if number of carriages were reduced, traffic would instantly be reduced also; *Sturrock* 17,911, 17,912.

Statement of Mr. John Bullar as to want of railway accommodation at Putney; *App.* S. Remarks by the London and South-western Railway Company upon statements of Mr. John Bullar, as to want of railway accommodation at Putney, and as to through booking; *App.* DE.

ACCOUNTS OF RAILWAY COMPANIES:

Should all be published in same form; *Teulon* 16,491. Public should be thoroughly informed of financial state of any company wishing to borrow money; *Bidder* 16,711.

No uniform system of railway accounts exists at present; *Sturrock* 17,814. Desirability of uniformity in railway returns, but great difficulties in the way; *ib.* 17,900. 17,906. Audit in Ireland at present almost useless; *Earl of Clancarty* 6331–6333.

Superiority of French system of railway accounts; *Chadwick* 17,274.

Extract from the report of the Committee of Investigation on the accounts of the London, Chatham, and Dover Railway, appointed 31st August 1866; *App.* DW.

See also BOARD OF TRADE RETURNS. CAPITAL ACCOUNT.

ACT OF 1844 [7 & 8 Vict. c. 85.]:

Neither possible nor desirable to carry out provisions of; *Galt* 7400–7402. Reasons for this opinion; *ib.* 7403 *et seq.* Strong desire expressed in Dublin in 1865 that provisions should be carried out; *ib.* 8489, 8490.

See also GALT. GOVERNMENT ASSISTANCE, &c.

ACTS OF PARLIAMENT. *See* LEGISLATION.

AGREEMENTS:

List of, made with other Irish companies, giving their dates, periods, and a short sketch of the nature of each; *App.* AW.

AGRICULTURAL SHOWS, IRELAND:

Facilities now given by Irish railways to, in conveying stock and implements free, &c.; *Macfarlane* 6518–6522. Popularity and advantages of; would be enhanced by reduction of fares; *ib.* 6523–6526.

AGRICULTURAL TRAFFIC:

Agricultural people would not be induced to travel much if fares were reduced one half; *Grierson* 13,291. Low rates would not much develop trade in agricultural districts; *ib.* 13,274. Great Western fares are much the same in agricultural as in thickly-peopled districts; *ib.* 13,290. Appears capable of increase; railways have offered every facility; *Allport* 13,792, 13,793. 13,798–13,802. Nothing will make agricultural population travel; *Stewart* 14,760. Extensive reduction of fares in agricultural districts would be attended with certain loss; *Harrison* 15,209, 15,210. 15,219. 15,225. First-class passengers more numerous in proportion to second and third class in agricultural than in manufacturing districts; *ib.* 15,226, 15,227. Rates for cattle at present satisfactory. Reduction in rates for agricultural produce not necessary; *ib.* 15,220.

AGRICULTURE, IRELAND:

Would be greatly stimulated and developed by better railway arrangements and a reduction of fares and rates; *Sullivan* 2088–2133. There would be an increase in the produce of the soil in Ireland if rates were lower; *Ryan* 2781. Railway facilities cause increase of 5 per cent. in value of agricultural produce; *Malcomson* 3444. If rates on corn and hay from Limerick were reduced, much that now goes round by the coast would be sent by rail; *Cooper* 3744–3747. A large amount of traffic can be carried in a purely agricultural district, instance the Great Eastern; *Bidder* 4235. If lower rates obtained, much more of the agricultural produce of Carlow would come to Dublin; *Roe* 5900, 5901. Agriculture in neighbourhood of Cork and Bandon Railway undeveloped from bad management of line; *Shaw, W.* 6388, 6389. 6415, 6416. With better arrangements between companies and reduction of rates, an enormous increase of traffic in agricultural produce would take place from the west of Ireland; *Meldon* 6737–6741.

AIRE AND CALDER NAVIGATION. *See* LANCASHIRE AND YORKSHIRE RAILWAY. WATER CONVEYANCE.

ALLPORT, MR. JAMES. (*Analysis of his Evidence.*)

Is general manager of the Midland Railway Company; 5261. Has only temporary arrangements for through booking for tourists and goods to a limited extent. Has found that agreements between Irish and other English companies have materially interfered with through booking of Irish railways. Through booking traffic is embraced by arrangements with Ulster Company; they have also made similar arrangements with other English companies; 5265–5267. 5269. Midland Company have attempted to make arrangements with other companies, but have failed. If better arrangements could be made between English and Irish companies a large amount of traffic could be developed which does not now exist. Irish railways ought to be thrown open to every English company who can book through by a reasonable route. Free trade principle adopted upon Midland Railway is best for the companies and the public; 5268–5271. Is not generally in favour of compulsory powers for booking through, but thinks that if English companies make an arrangement with one Irish company they should be compelled to make arrangements with others having reasonable routes; 5272, 5273. Attempted some years since to book through to Belfast and South of Ireland, but difficulties were raised by the boards and it was given up; 5274, 5275. Is aware that Irish railway companies are now applying to the Government for further assistance; if given, it should be upon condition that the whole of Irish railways are thrown open to English system; 5276–5280. Inconvenience arises from country being split up into such small divisions. Amalgamation would be as advantageous to Irish railway system as it has been to the English. Sufficient scope in Ireland for two or three systems of railways, but all should be compelled to work in harmony with each other. Is not in favour of Government supervision, even in the particular

ALLPORT, MR. JAMES—*cont.*

case of Ireland, as it is not equal to private management. It would not be necessary to have a supervising power to prevent unfair competition, as that might be left to arbitration; several cases in England where standing arbitrators are appointed. The proper way to regulate companies would be to lay down certain rules, and add an arbitration clause, which clause should be extended to the public. Would be a good system to extend to English companies if they called upon Government to assist them; 5281–5290. Is aware that it has been recommended that Government should purchase Irish railways; objects if management in the hands of Government. If difficulties in the way of leasing overcome, and a lease were to be granted to a small number of individuals, management of railways could not be superior to present management. Reasons why witness thinks Government management inferior to that of body of directors; discussion thereupon. If Government granted a lease and allowed proprietors to appoint their officers, it would be merely transferring the railways over to the Government for the Government to transfer them back again to a company; 5291–5305. Present management of railways in Ireland generally speaking satisfactory to the public; they are tolerably well managed. Thinks they have done all that can be reasonably expected of them towards developing resources of the country. Is not aware that any of them have been managed with a view to favour steam ship companies rather than the shareholders; there has been a tendency to make exclusive arrangements with one or two English companies; 5306–5308. Midland system has connexion with South of Ireland by way of Bristol. Has exchange traffic with steamboat companies trading to that port, but no through booking arrangements with any other Irish company through Bristol; 5309, 5310. Has no coal traffic arrangements with any Irish company. Coal traffic in Ireland could be much developed if companies adopted same free-trade policy which has guided Midland affairs; increase of this traffic in the last 17 years. Send no coals to Ireland. Mileage rate to London varies according to distance and circumstances; states *modus operandi*. Highest rate does not exceed 1½*d.* per ton per mile, lowest about ⅜*d.* Rates do not include use of waggons or terminal charges; terminal charges in the country and in London. Same rate for large as for small quantities; 5311–5324. 5336, 5337. If a fair mileage rate were established, believes Yorkshire coal could be delivered in Dublin for 12*s.* 6*d.* or 13*s.* per ton. If coals were conveyed across the Channel to Ireland by screw steamers as they are between the North and London, with same rate for long distances as Midland, the whole of Ireland could be freely supplied with English coal. Is aware that there is no communication in Dublin between railways and the wharves. Cartage makes a considerable additional charge. Assuming that railway charged ½*d.* per ton per mile, there is no reason why coal should not be sold at stations on extreme west coast of Ireland for about 16*s.* or 17*s.* per ton. Obstacles that prevent attempts being made. Boards and managers of two or three large companies in England think that no company could carry at the rate of ½*d.* per ton per mile; 5325–5334. Has always found temporary loss has followed reduction of rates, but generally there has been a gain in the end; 5335. Reductions on Midland Railway have been made from time to time; occasionally even now they reduce the present low rate; 5338. No reason why experiments in reduction of rates would be attended with more difficulty or greater risk in Ireland than in England; it should be done with care; would be attended with loss, but increase of traffic would ultimately make it up; in agricultural districts it takes much longer time to make up loss than in manufacturing districts, more especially where the population is comparatively poor. A reduction is frequently made in one district, and not in another. Mentions three instances upon the Midland; 5340–5342. Would not reduce third-class fares from 1*d.* to ½*d.* at once, but gradually until seen how far reduction may be carried with profit; 5343. It is possible that from Bristol to Lancaster (extreme length of railway) a third-class passenger could not go and return same day; such a state of things as that a third-class passenger upon any part of Southern and Western railway could not go to and from Ennis same day should not exist, as it tends to check traffic. Midland issue third-class day tickets at a reduction of 25 per cent. from double fares; these are much taken between country places and market towns; would be to interest of railway companies in Ireland to do the same. Has been for some years trying to get the same system adopted from all places in England to all places in Scotland, but has not yet succeeded; 5344–5356. Has tried to establish a low scale of third-class fares in purely agricultural districts. Result of an experiment made to abolish second-class carriages and only have first and third, and how long it took to recover itself; 5358–5374. If Irish railways were purchased by Government and leased to a company, they would be willing to wait with greater patience for result of experiment than could be expected from present boards of directors, though that would depend very much upon the terms of the lease; 5370–5374.

ALLPORT, MR. JAMES—*cont.*

Further examination (1).

Is general manager of the Midland railway; 12,345. Has read the evidence containing complaints against that company; 12,346. Reason why rates from Gloucester are very low as compared with Liverpool rates. Would not get any traffic if rates from Liverpool to Hull were as high as from Liverpool to Sheffield. With reference to an extract from a private letter read by Mr. Clark, complaining that Stavely iron works could not send iron to Liverpool (70 miles) as cheaply by 3*s.* per ton as to London (170 miles), witness states that there is a mistake, as the rates are 2*s.* 6*d.* more to London. Admits that rates are low to London, in consequence of the competition by the river Trent; 12,347–12,357. Mr. Clark wrong in stating that there is only one railway from Liverpool to Leeds, as practically there are four. All competition by routes ultimately ends in similar charges being made by the companies; not generally reduced charges; are several instances where it was the reverse. Denies Mr. Patterson's statement that favouritism is ever shown by Midland Company. Does not make any difference in the rates for same traffic from same district, whatever the quantity sent. Company do not give the large brewers at Burton any advantage over the smaller ones. An arrangement made some years ago by manager of London and North-western gave great advantages to two large brewers; course taken by Midland Company in the matter. Hands in table correcting several inaccuracies in one given in by Mr. Clark; 12,358–12,366. Answers Mr. Wheeldon's complaint that he could not buy some Indian corn, because the rates per quarter from Liverpool to Derby were double those between Gloucester and Derby, by stating that Midland Company have no line from Liverpool or Manchester to Derby; the North Staffordshire Company fix the rates. Only since Burton line opened that London and North-western have given Midland through rates to Liverpool and Manchester; 12,367–12,372. Relative to complaint of Mr. Patterson, that rates from Morecambe to Manchester (56 miles) are the same as from Morecambe to Liverpool (32 miles), witness states that the London and North-western fix the rates. If he were manager he would defend this rate. Thinks Liverpool traders wish to absorb whole traffic of the kingdom. Gives exports from Gloucester and Liverpool. Is the duty of railways to develop resources of the district. Rates given should yield a profit. As a member of the community, would consider it a national calamity if trade were concentrated in one port; 12,373–12,378. If companies can create a trade at remunerating rates they do so. Considers that, providing charges are within maximum parliamentary rates, no one should complain. Profit varies upon different articles. Accounts for certain discrepancies pointed out by Mr. Halhead, who is not correct in his distances; 12,379–12,388. Instead of Mr. Stead's traffic from Saltaire to Manchester being 70,000*l.* per annum, it only amounts to 457*l.* Difficulty in following the various witnesses, as in many cases they are not comparing same commodities. States that Mr. Wright's complaint as to inequalities in certain rates is in many cases well founded; the low rates are generally in consequence of there being water competition. Corrects inaccuracies in rates quoted by Mr. Wright for copper and glass. Course pursued by company as to charge when a manufacturer sends three different articles (tubes, brass wire, and iron wire) to one party. Thinks Mr. Clark is not correct in stating that if three different articles were in one parcel the highest rates would be charged; 12,389-12,404. Worcester Canal Company and old Birmingham Canal Company are as conveniently placed for the town as they well can be. Mr. Wright is incorrect in stating the Birmingham Canal Company fix the rates, and also mistaken in stating that Worcester Canal Company have a wharf outside of Birmingham, and that it is not near the centre of the town. Chairman of Midland railway denies having said that where company have the power of charging high rates they do so in order to make a divi-

ALLPORT, MR. JAMES—*cont.*
dend, as stated by Mr. Wright; policy is totally opposed to it. Explains certain other statements made by Mr. Wright as to high rates to Sheffield, "travellers patterns," and as to development of Birmingham traffic; 13,405–13,412. As to Mr. Wright's complaint about rates for glass, witness states that low rates are given when company are not liable to breakage, and a high one if they are so liable. Is a low rate from Birmingham to Bristol; 12,413,12,414. Answers Mr. Sturge's complaint of want of facilities by Midland Company, value of land at King's Norton, and there being no terminal charge at Gloucester. Instead of land being 60*l.* or 80*l.* per acre, company have recently paid 800*l.* Land has trebled in value since railway constructed. Negotiating for some near the station, and will have to give more than 500*l.* per acre. Explains statement made by Lord Ashtown's colliery agent, as to loss to brass founders of Birmingham from the high price of coke. Replies to complaint of Rev. J. Field, as to want of correspondence of trains in different lines on midland counties; 12,415–12,422. May be a little truth in opinion that jealousy exists between different companies as to trains meeting on a line, but is not so with the large companies, as the trains are made to suit the bulk of the traffic. Witness describes fully the arrangements made by the Midland Company. Emphatically asserts that trains are fixed solely with reference to convenience of the public, and never with reference to driving traffic in a particular direction; practice may be adopted by some of the smaller companies. Are occasionally inconveniences and detentions on branches of Midland line. Causes which prevent the trains advertised to fit in not doing so. Is not aware that small companies place obstacles in the way of meeting Midland trains. Company put on a large additional force in summer time; 12,423–12,439. 12,448. Want of punctuality does not increase risk of accident, if attention is paid to the signals. Thinks there is no risk of danger at Lichfield when Liverpool train is timed to arrive five minutes before Derby train. Does not remember any serious accident occurring from want of punctuality. Is generally from driver not looking out for the signals; 12,440–12,447. Makes observations upon Mr. Cox's evidence, complaining of the high rates charged by Midland Company for certain goods, and to his statement that he has been prevented from entering into competition in certain districts by the inequalities, and from sending goods in consequence of the great delay in the delivery. Explanation of a charge made to Mr. Cox for lead from Ambergate to Derby. Ambergate a mere junction, and traffic very small. Mr. Cox's corrected figures for pig lead from Matlock are still incorrect; traders on Midland line are thoroughly alive to the difference between a station to station rate and a collected and delivered rate; they can have the fullest information if they ask for it. Company do not publish a list of terminal charges. Reason why Mr. Wass sends his lead by canal. Refers to Mr. Cox's evidence where he compares charge for lead from Newcastle to Derby as with charge for coke from Newcastle to Burton, and states that coke does not come from Newcastle; comes from neighbourhood of Darlington, and in one case waggons, &c. are found. A waggon will not take much more lead than coal or coke in weight; 12,448–12,462. Mr. Cox is in error in comparing certain charges in not reckoning distance by the shortest route, and in stating that Derby Canal belongs to Midland Company. Answers complaints of several Derby witnesses, who all complain of want of competition by the Midland Company. Hands in a list of rates charged to those gentlemen; in every case the rates are lower from London to Derby than from London to Nottingham. Effect of competition as between Nottingham and London has not been to reduce the rates. Is a very questionable proceeding if shot is put into casks and sent as lead to avoid the particular class, as stated by Mr. Cox. Shot is a damageable commodity; requires great care. Never inspects the goods; not unusual for silk and very valuable commodities of that kind to be declared incorrectly; if they were damaged they could not under such circumstances claim the value. Gets a great deal of common lead in casks, particularly scrap lead, for which the lowest rates are charged; shot is generally loose in bags; 12,463–12,473. Reasons why sugar from London to Sheffield is charged lower than from London to Derby, as complained of by Mr. Renals. With respect to Mr. Cox's complaint that Midland Company charge demurrage, witness states that he has only been charged 3*l.* 15*s.*, extending over a considerable period. Mr. Cox has refused to pay this, although 3*l.* 6*s.* of the sum has

ALLPORT, MR. JAMES—*cont.*
been paid by Midland Company to other companies. Is quite prepared to defend system; is unfair that traders should keep trucks standing under their load day by day. Contends that Mr. Cox did not bring forward this complaint as an illustration of the system, but as a hardship in his own particular case. Is not aware of any complaint from Derby respecting demurrage charges, 12,474–12,482. Is not true that Derby people are in the hands of the Midland Company. London and North-western Company get very nearly one-half of the traffic; it is carried by Midland and delivered over to them at Rugby. Cannot find a single complaint that traffic by London and North-western has ever been delayed or treated differently from traffic coming by Midland line from London; is a fair interchange of traffic between the two companies. Mr. Renals would have nutmegs and sugar or cinnamon and molasses put in same class. As to Mr. Renals' complaint that Derby has not made the progress it ought, witness states that population has greatly increased in the surrounding districts; reason why silk traffic has fallen off; there are four or five very important iron works and mills. Quotes rates for silk from Derby and Nottingham; are on same footing; reason the Derby rates were revised. Gentlemen examined on behalf of Derby Chamber of Commerce do not represent the manufacturers there. Messrs. Cox, Renals, and Nicholson's accounts are very small. Value of a ton of silk; price charged not exorbitant. Thinks Mr. Nicholson unreasonable in declining to pay sum charged. Hands in a table showing average per-centage of increase in places where population in 1851 was over 20,000 and under 50,000. Mr. Nicholson's desire that silk should be taken out of the Carriers Act is, that the risk should be thrown upon the company; 12,483–12,494. With respect to Mr. Wheeldon's complaints of the Midland rates, witness explains that in many cases Midland have no control over them, but where Midland have any control rates will bear comparison with those from any other place in the kingdom. Mr. Wheeldon complains of the low rates to Burton as compared with Derby; reason they are given. Why rates have been recently raised from Burton to Derby; 12,495–12,501. Answers Nottingham complaints with regard to coal trade being limited to nine particular coal dealers, by stating that coal owners and public are satisfied with the arrangement; and that such arrangement has not tended to increase the price of coal. Is not true that gentlemen connected with the railway have any favour shown to them. Principle to let the largest dealers have the wharves; same system must be adopted by every company; is adopted by London and North-western Company at Camden Town. North-eastern Company have adopted the plan of selling the coal for the coal owners; system to some extent objectionable; do not give more coal owners access to York than Midland give to Nottingham. Midland is adopting same practice at every large town. Does not exactly prevent any new coal dealer starting; deals with the coal owners same as North-eastern; charges a terminal of so much per ton for the wharf, and not a rent. If there had been 10 or 12 large coal dealers they would have been accommodated by curtailing the space of the others. Mr. Brentnall is a very small dealer; his principal trade is by canal, which belongs to the Great Northern; 12,502–12,520. Neither Mr. Corbett or Mr. Gentel complain of the Midland Company. As a proof that railway has not been the obstruction that some of the gentlemen would like the Commission to believe, witness points out the extraordinary development that has taken place in the district. Explains why demurrage for detention of waggons was charged to Mr. Corbett; 12,521–12,528. How the break of gauge at Bristol and Gloucester has seriously affected traffic; to a certain extent public interests of country must suffer. No general regulations could be introduced which would give greater facilities for interchange of traffic; would be unfair if companies were compelled to adopt through rates; gives an illustration. Does not think that booking through could be very much extended without inconvenience. Reason why it is impossible to book through passengers or goods on Midland system. Thinks that in the course of a few years almost all railways will be worked as one system; 12,529–12,545. Is to the advantage of every company that goods and passengers should be forwarded on as quickly as possible. Does not think any impediment or delay is ever thrown in the way. Midland Company was perhaps one of the first to adopt free trade principles. Gives quantity of coal carried into London in 1865, and number of tons from collieries on Midland line; also quantity carried by this railway, and names of the other

ALLPORT, MR. JAMES—*cont.*

companies who carried to London. All coal from Midland collieries would come over a considerable portion of Midland Railway. Unless some equivalent given by Great Northern would encourage as much as possible coal being taken on Midland line from company's collieries at Peterborough. Great Northern would not give any equivalent. Exchanges goods traffic with other companies on condition that they exchange with us; 12,546–12,552.

Further examination (2).

Has received a memorial from Wingerworth colliery proprietors complaining that almost all railways, and particularly Midland and North-western, require coal merchants or coal masters to provide waggons; when coal trade first established on railways coal owners preferred finding their own; thinks they would now refuse to sell theirs to the railways; is in favour of companies finding them, as work could be done cheaper, and with one-fourth less of trucks; would also save a great expense at sidings and for shunting. If Midland purchased all the private waggons it would involve an expenditure of about 1,000,000*l.* York, Newcastle, and Berwick railway some years ago bought owners' waggons and found it work satisfactorily. Some of large coal owners would prefer railway finding them, but unless done generally it would not work well. How work would be simplified if trucks belonged to railway; would be a better class of waggons. Goods waggons on Midland will carry between 400 and 500 tons a year; get more work out of them than most companies. Midland have now about 20,000 coal trucks belonging to private owners; have none of their own; arrangement of finding waggons peculiar to mineral traffic; 13,634–13,639. 13,651–13,656. 13,686–13,697. Number of tons trucks will carry; 10-ton waggons too heavy for the axles, and not so convenient to work; originally ordinary goods waggons were limited to four tons. Denies that company ever required Wingerworth colliery to alter the axles, and at same time allowed Staveley colliery to run with the old waggons; 13,640–13,645. Not true that Midland Company take from two to six days to deliver coal from Clay Cross colliery to Derby; takes 1½ hours; has never received a complaint from Wingerworth company. Have no control over coal trucks; difference between goods and coal traffic; consignees have so often detained trucks at sidings that company have been obliged to charge demurrage after a certain time. Course pursued by company when waggons of one colliery get injured or injure those of another colliery. New waggons are inspected when first put upon the line; restricted as to number of tons they are to carry. Have had more disputes with Wingeworth colliery respecting break down of waggons than with any 20 collieries put together; 13,646–13,650. 13,663–13,670. As the number of waggons is given and the dates when delay took place, witness will be able to trace them and give results; has had no complaint of these delays. Admits that there were some complaints in 1864; delays were caused by the immense increase of traffic consequent upon strike of Staffordshire colliers; if complaints refer to last December there is no truth in them; 13,657–13,662. 13,682. Contends that his letter, written on the 14th November 1865, does not refer to delays, but to damage done to waggons. How matters settled if companies dispute cause of damage; 13,671, 13,672. Is not true that Midland charge higher from Clay Cross to Grantham than they do from Swinton, 20 miles farther. Company graduate scale so that Yorkshire and Derbyshire collieries can compete with other collieries; 13,674. Mentions arrangement made in answer to complaint that lower rates are given to large collieries for gas coals and on quantities that smaller collieries cannot raise. Reason why a rebate granted some years since was given to coal merchants in preference to coal owners. As to complaint that an arbitrary charge is made for siding accommodation and signalmen's wages at some colliery junctions and not at others; witness states a charge is only made where a siding is brought upon main line between stations, as in that case company is obliged to put up signals and employ a man specially. Thinks Wingerworth company pay nothing; 13,675–13,681. Reads letter from coal owners and coal merchants denying that price of coals has increased in Nottingham since trade restricted to nine coal merchants. Traffic considerably increased since alteration made. Are 67 coal merchants in Nottingham; from a return made in December 1864 witness finds that Wingerworth colliery only sent four waggons to Nottingham out of a total number of 1,571; total getting of that colliery about 2,000 or 3,000 tons weekly.

ALLPORT, MR. JAMES—*cont.*

Gives an explanation as to complaint of Mr. Brentnall of his trade being stopped; 13,684, 13,685. Coal traffic could not be carried on regularly unless company took it into their own hands. If waggons belonged to railway they would undertake the delivery of goods at stations, and rigidly enforce return of waggons within two days, or impose a fine of 1*s.* per day. Have such a regulation, and enforce it sometimes; 13,698–13,702. If companies purchased all the waggons saving effected would be more in time and convenience than money; 13,703–13,710. Considers that on Midland line more work is got out of waggons than upon any other line; not companies' interest to see them standing still. Cause that has led to better working of waggons within the last ten years; 13,711–13,714. 13,722, 13,723. Why witness thinks the suggestion that all waggon stock should be one common stock would tend to great confusion, delay, and inconvenience. A considerable proportion of rolling stock belongs to rolling stock or waggon companies, and hired to various coal owners, who pay from 9*l.* to 12*l.* per annum, irrespective of distance run. Locomotive engines or ordinary passenger carriages are not supplied in a similar way; 13,715–13,721. Answers Mr. Brown's complaint as to want of through rates from Cannock Chase colliery to Birmingham and to the north-east; 13,723. As to suggestions of many of the witnesses that railways should not make a charge for terminals, witness states that Midland Company have spent nearly 4¼ millions upon stations out of a total capital of 20,900,000*l.*, and that during last year expense for goods traffic alone was 344,000*l.*, and therefore it would be a great injustice to companies if they were prohibited charging for terminals; difficult to say whether amount charged pays for outlay; in many cases total amount charged is lower than should be for terminals alone; 13,724–13,727. Is in favour of having a fixed terminal charge, if fairly adjusted. Midland Company have not expended more upon stations than other companies. Thinks terminal at each end about 2*s.* 3*d.* per ton; no company in the kingdom can do it for anything like this sum at the large stations. Terminal expense to a great extent irrespective of distance goods are carried; believes that in many cases if a fair terminal charge were deducted, it would be found, where distance short, that the goods are carried for nothing. Company never fix rates on principle of mileage rates, but upon a gross charge varying according to circumstances: in some cases mileage rates would be higher for long distances, and in others lower; 13,728–13,741. As to Mr. Wheeldon's complaint that charges are higher from Derby than to other places, witness mentions that low rates are given to enable him to compete with maltsters 200 miles away. Gives some of the gross charges for short distances to compare with those given to Mr. Wheeldon; more profit out of the short distances. As long as there is a profit upon the transaction it is greatly to interest of railway companies and immense benefit to public to give traders low rates. A uniform rate would destroy trade; instances the iron trade of South Wales or Cleveland. Carries coal to London now at ⅜*d.* per mile, but if uniform mileage rate adopted whole of traffic could not be carried at that rate, and if mean of the two rates charged it would drive out inland coals, and stop railway coal trade altogether. London could not obtain coals at a lower rate than at present; 13,742–13,748. 13,757–13,760. Is for benefit of public that companies should have the power of charging differential rate, and that any abatement of that power would be injurious to trade and the companies. Company charges moderate rates for short distances, and very low rates for long distances to enable traders to transact business. Would be the most fatal thing to the commerce of this country if companies were compelled to make uniform charges all over their lines. Great increase in exports during last 17 or 18 years is due to development of trade by means of railways; 13,749–13,755. Does not carry any unremunerative traffic; 13,756, 13,757. Believes companies have adopted through booking as far as practicable; in consequence of number of tickets that would be required it would be impossible to make it universal. Midland Company do not book through from every station to every station; book through to every large place, and to London from every station. Has only recently adopted through booking arrangements with south-western parts of England. Books through from London and all large stations to Belfast, and one or two other stations in Ireland. Have a more general and perfect system of through booking as regards goods than with passengers; 13,761–13,764. System pursued when goods are forwarded to a station off Midland line to which there is no through booking; in such a case there is generally a delay of at least 24

ALLPORT, MR. JAMES—*cont.*
hours; liability would attach to company first dealing with the goods; 13,765–13,768. A passenger booking through to some distant town would sometimes pay less than if he paid fares to the different places in succession; instances from London to Edinburgh or Aberdeen, but in this case low fares are given owing to sea competition. In great majority of cases through fares consist of the local fares added; is not the case between London and Ireland or Scotland. Thinks companies in their returns they make to the Board of Trade take these low through fares into account; 13,769–13,776. Advantages that Midland have given to the public; have abolished express fares and third-class fares. Reduced fares last year on southern portion of line to extent of about 26,000*l.* a year; believes it will ultimately be a benefit to the company; loss now, nil; the increase is newly created traffic; gives increase of mineral traffic since 1850; same increase going on over whole country. Traffic in agricultural parts of country has not increased; increase of goods and minerals far exceeds increase in passenger traffic; gives comparative rates, and states that increase on Midland line represents increase all over the kingdom. Unless there were coal-fields mineral traffic would not so largely increase upon lines generally as upon Midland. In agricultural districts people do not travel unless they have either business or pleasure. Would not answer to reduce fares on whole system of railways uniformly; 13,777–13,781. 13,790–13,797. With a view of ascertaining fairness of passenger charges it must be considered that certain terminal expenses are increased as respects passengers; terminals on passengers exceedingly small; 13,782–13,789. Carries manure at very low rates or would not get traffic; charge lower than for minerals; 13,798–13,802. Principle upon which departure of trains is fixed. As to the inconvenient hours at which trains leave Newark for Lincoln; witness explains that direct route from London to Lincoln is by Great Northern by way of Peterborough; Midland Company do not get 10 passengers a week; 13,803–13,810. Uniform charges might be adopted to a certain extent, but companies must be allowed to make exceptions; 13,811, 13,812. Would be impossible to publish rates, as they are continually being altered; are more frequently lowered than raised; a month's notice, unless in special cases, is given; is not aware that any person has been refused seeing the rates; 13,813–13,820. Is aware that rates are published in France; reason why system has materially interfered with development of trade between the two countries; 13,821–13,825. Why a low rate of through booking cannot be made with France; 13,821–13,833. If companies were bound to publish rates they could not make any reduction so as to obtain specific traffic. Shows how completely Mr. Galt is in error when he asserts that coal can be conveyed from northern counties up to London at the rate of from 1*s.* 6*d.* to 2*s.* 6*d.* per ton, and that the difference between 6*s.*, the price at the pit's mouth, and 28*s.* or 30*s.*, the selling price in London, is the railway charge, as railway charge including terminals is about 5*s.* 6*d.* per ton; absolute cost to company, excluding interest upon the engines, is about 5*s.*; is not possible to bring it to London cheaper. Would not pay to increase size of trains; weight conveyed by a train; 13,834–13,841. 13,853–13,857. Witness wrong who stated before Parliament that Great Eastern could carry coals at ¼*d.* per ton per mile. Mr. Galt assumes in many cases that cost of working train is a fixed amount. Cannot give any idea of the difference in working a long or short train; wages, &c., the same. May burn a little more coal; does not think a train could run at all under 2*s.* per mile; wear of engine nearly the same. Do not run goods trains of less than 20 tons; 13,842–13,852. Have not objected to packed parcels; generally speaking, taken by goods trains; have a special scale, companies do not charge the highest rate which they are entitled to charge. Have special authority to inspect the parcels, but have never done so. Put them in the fifth class; charges exact weight and at a certain rate without reference to mileage; charges ordinary parcels rates if they go by passenger trains, and the same for packed parcels as for a parcel which consists of one kind of goods only; are generally sent by goods trains; 13,858–13,875. Believes that a parcel can be sent from almost every part of the country to every other part at through and sufficiently low rate. Reduced some years ago parcel rates to a uniform scale irrespective of distance, but it was not successful; 13,876–13,880.

Further examination (3).

Has been furnished with Mr. Cosgrove's evidence. History of agreements made from time to time with

ALLPORT, MR. JAMES—*cont.*
Burton brewers. Knows only of the existence of the agreement made in 1859 by London and North-western Company with Messrs. Allsopp; could not see it or procure a copy until autumn of 1864. Midland made an agreement in 1861 to effect that they should be put on same footing as the other Burton brewers. Has repeatedly informed the Messrs. Bass that as soon as company knew nature of agreement, they should have the benefit of it. Brewers have not suffered loss. Midland have always refused to give special advantages to large brewers. How incorrect statements made by Mr. Cosgrove arise. His evidence much stronger and far beyond the statement signed by brewers and companies of Burton; 16,877–16,883. Mr. Cosgrove's statement that Midland must have known of the drawback allowed to Messrs. Allsopp by London and North-western from receiving the overcharge sheets is quite incorrect; explains how business done, and states that overcharge sheets only occasionally and then accidentally came before Midland Company; have only received them from 22 principally unimportant places; tried to get them; for last four years have not had a single one; denies that they were ever sent to them for correction. Course pursued by London and North-western to enable Messrs. Allsopp to receive the drawback; whole abatement made by them, Midland received their full rate. Were not receiving a diminished rate from London and North-western at the time when Messrs. Bass allege they should have been receiving a certain allowance; would have been only too glad to have made the allowance; 16,884–16,892. Object of London and North-western was to secure the traffic; Messrs. Allsopp had more interest in keeping agreement secret than railway company. As soon as witness knew of the agreement the brewers were all informed that they should receive the benefit of it; allowed them all to keep back sufficient money to cover all the allowances when known; 16,884–16,895. 16,904. Mr. Cosgrove has not stated that by an agreement entered into with the Messrs. Bass in 1863 Midland agreed to reduce rates to those at any time made by other routes, and also to build them extensive premises in London. Company have expended 130,000*l.* to enable brewers to get upon line and thereby save cartage. Injustice to Midland Company from Burton brewers claiming 4½*d.* per ton for traffic passing over branches into main lines; this question and that of interest are the only two points at present at issue with Messrs. Bass; is willing to submit dispute to arbitration. Have agreed to refund 9*d.* per ton and a lower scale of rates. If entire list of overcharges had been in possession of Midland they would not have been able to deal with it. Names terms of agreement made with Messrs. Allsopp; 16,896–16,903. By a clause in the agreement London and North-western have to provide storage room in London for Messrs. Allsopp. Mentions amount of claim made by Messrs. Bass for overcharges, and states that 11,600*l.* of it is due entirely from North Staffordshire Company, which is quite independent of Midland; why it is unfair to make this claim against Midland. Messrs. Allsopp send the bulk of their traffic by London and North-western and North Staffordshire Companies; latter company have not refused to allow drawback; they were quite as much in the dark about agreement with Messrs. Allsopp as the Midland; 16,905–16,911. Does not admit that Messrs. Bass have a good claim for 59,000*l.*; explains difference between them, and reads correspondence showing that they have no claim for the drawback upon terminals. With reference to complaint of inequalities in the rates witness hands in table of rates given by Mr. Cosgrove, and those the company are at liberty to charge under their Act, which shows a reduction of nearly 50 per cent. in favour of brewers; in no instance is the sum charged equal to the mileage rate. Agreement with Messrs. Bass only includes traffic on Midland line. In what way Mr. Cosgrove's calculations are wrong. Trade of Burton brewers not interfered with; has rapidly advanced, and although several large reductions have been made to them in rates of carriage they have never made any reduction to public. Increase in tons in last 10 years carried by Midland alone from Burton. Explains how Mr. Cosgrove is entirely wrong in his history of the earlier transactions of Burton; 16,912–16,925. Great increase of Burton trade has arisen from opening of railways, and especially from facilities given by Midland. Uniform rates imposed for grain from Eastern counties irrespective of distance as complained of by Mr. Cosgrove was done entirely at solicitation of Messrs. Bass. Considers proposition of Burton brewers, to cancel agreement made for 21 years because London rates higher, is monstrous. Low rates from Yarmouth

ALLPORT, MR. JAMES—*cont.*
to London due to sea competition. Deplorable condition of Great Western also due to same cause. People have no right to complain of paying average rates of country merely on ground that in some places exceptionally low rates are given. Mentions proposition made to Mr. Bass; 16,927, 16,928. As to demand made by the brewers with respect to terminals where no carting service performed, witness states that terminals are fixed to avoid a great deal of trouble in dividing rates when inequalities exist in the mileage. Clearing-house charge for ale and all goods except special and mineral class carted at Burton 4*s.* per ton. Well known by all companies that cartage is not done; if deduction made, companies would recoup themselves by increasing the rate now charged; 16,929–16,937. Mr. Galt's calculation that passengers can be conveyed 100 miles for 6*d.*, is based upon a train conveying a greater number of passengers than actually do travel. Gives cost of working expenses per mile for passengers and goods, and earnings per train mile on Midland for passengers. Either working expenses are much higher per cent. than is shown by the Board of Trade returns, or working expenses for goods and minerals must average more than witness has stated; 16,938–16,941. 16,955–16,959. Reduction of fares would not increase number of passengers. Uniformity of fares would be as absurd as uniformity of rates. Low fares can only be charged where population large. Mr. Galt's recommendation that experiment of low fares should be tried in certain districts would not lead to a true result. Why Mr. Galt's statement that difference in price of coal at pit's mouth, and charge made in London, is made up of railway charges incorrect. Mr. F. Hill's evidence that if Government were to take the railways it could do away with difficulty of getting arbitration, witness states that for many years past there has not been arbitration to deal with; with most of large companies is done by agreement. Midland Company only too glad to meet requirements of Post Office. Gives payment of Midland for postal service, and number of miles run; sum charged is very moderate. Terms were fixed by agreement. Has had no arbitration with Post Office since witness joined Midland in 1852. Average of Midland trains 5*d.* per mile, but would not be fair to give the same by ordinary passenger and goods train; 16,942–16,947. Ascertained the number of bags of letters carried by Midland, and found that money paid was about 1*s.* 3*d.* per bag irrespective of distance; has no doubt that rates for same service are nearly as low by many of the large companies; would charge more on the average for packages conveyed for public. Complaint of public about deliveries of the post groundless. Companies complain of Post Office trying to absorb parcels traffic. As to Mr. Hill's allusion to the admirable system of Post Office as compared with railways, witness states there is no comparison between the two; 16,948–16,951. Number of trains in use. Never sends an engine and a van without any passenger carriages attached to it for mail; 16,952, 16,953. Reason night travelling is gradually diminishing. No Government management or Act of Parliament would remedy the want of communication as complained of by Mr. Hill. Inconvenience that would result if Government were to take whole of railways into their hands and lease them; 16,954. Almost always carry full train loads of minerals; carry about 200 tons of coal. Gives receipts for passengers and for goods and minerals in 1864; nearly approaching that position when it is no longer a passenger railway under the Act. Would never discontinue carrying third-class passengers; have discontinued fourth-class, but all third-class passengers are carried at 1*d.* per mile; 16,960–16,963.

Further statement from Wingerworth Colliery in reply to witness's evidence; *App.* BW. Further observations by the Wingerworth Coal Company in reply to witness's additional evidence; *App.* CM. Remarks by the Inspector-General of Mails on certain portions of witness's evidence affecting the postal service; *App.* CW. Replies of Messrs. Bass and Co. and other brewers of Burton-on-Trent to the statements of witness; *App.* DY.

AMALGAMATION:

Local traffic of Great Eastern Railway has been much developed since amalgamation; *Bidder* 4470–4472. Evils of amalgamation between canal and railway companies; should be prohibited by Act of Parliament; *Wilson* 9907 *et seq.* Witness considers that railway companies should not be allowed to amalgamate, though Parliament has generally sanctioned it; *ib.* 9985–9988.

In certain cases amalgamation is good, but it would be adverse to the public interest to amalgamate all the railways in England into one system; *Cawkwell* 11,684–11,691.

AMALGAMATION—*cont.*
Witness believes that amalgamation first arose from a belief that it would stop competing lines, but it has not had that effect; *Hawkshaw* 14,595. Amalgamations effected are of advantage to the public, but concerns are now large enough; *ib.* 14,612–14,614.

Amalgamations which have taken place have produced great convenience; *Stewart* 14,793. If railways were all in hands of one proprietor, no doubt much waste in working might be saved; *ib.* 14,795. Further amalgamations desirable, but they should be carried out whilst companies are prospering. Argument and illustrations in support of this opinion; *ib.* 14,816–14,821.

North-eastern is the largest amalgamated company in the kingdom; amalgamations have been earnestly desired in their district; *Harrison* 15,184. Public opinion is now quite in favour of amalgamation. Great development of traffic; appointment of a superior class of officers; greater safety in travelling, and other advantages arising therefrom; many more are likely yet to take place, but witness does not think that there will be any larger than some at present are; *ib.* 15,337–15,344. Causes leading to amalgamation; *ib.* 15,345. Compulsory amalgamation impracticable; *ib.* 15,348.

Amalgamation has always been a benefit to the companies and the public; has "produced harmony of action, "economy of working, certainty of regulation, and facility "of transit;" *Huish* 15,904, 15,905. Witness thinks that all the lines might be allowed to fall into four or five large groups; branches should be united with trunk lines, but whether amalgamation of parallel lines should be allowed is a grave question; Parliament has generally been averse to it, also to amalgamation of any of the great systems; *ib.* 15,906–15,911. Public, though opposed generally to amalgamation, is better served by them; *ib.* 15,912–15,914. Not desirable at present to amalgamate the great lines; *ib.* 15,915, 15,916. Railways and canals are better in opposition than amalgamated; *ib.* 15,917–15,923.

Amalgamations have been very beneficial; no steps need be taken to increase them, but expression of opinion of this Commission would be very useful. Desirability of amalgamation of the four railways south of the Thames; discussion as to effect of this on continental rates. Parliament should take care of continental route; *Bidder* 16,763–16,768. 16,774–16,780. No distinction between amalgamation of parallel lines and others, but it is a question how far two such large systems as the North-western and Great Western could be worked together; *ib.* 16,769–16,771. Amalgamation of all the English railways impracticable; *ib.* 16,772. Certain rules should be laid down by Parliament before amalgamations are sanctioned; *ib.* 16,775–16,779.

Present amalgamations "unreal." If *bonâ fide* amalgamations were carried out, all parties would be benefited; *Chadwick* 17,282–17,287.

Amalgamations of large companies have gone far enough (perhaps almost too far). Many of the benefits might be obtained without actual amalgamation; *Gooch* 17,578–17,582.

See also COMPETITION. SMITHELLS. WATER CONVEYANCE.

AMALGAMATION OF IRISH RAILWAYS:

No system could be developed without a connexion of all the railways at Dublin; *Mulvaney* 1847. Amalgamation desirable; *Forbes* 1710. 1829; *Sullivan* 1988–1990. 2107. One central administration requisite; *ib.* 2031. If railways were amalgamated into one system, or into two or three groups, capitalists might perhaps be found who would lease them for a term, trusting to make them pay by better management and increased traffic from reduction of fares; *Mallet* 2297. 2301–2304. Witness believes that if Government took them, they could get a company to work and manage them; *ib.* 2298. Necessary accommodation more easily arranged if managed by one company; *Tinsly* 2350. Railways should be amalgamated under a Government board, who might establish uniform rates; constitution of board; rights of shareholders should be preserved; if railways purchased by Government, a temporary loss from reduction of fares might be met by an advance of public money; it would not be fair to tax the districts through which they passed, people would sooner submit to present rates; Government preferable to a local management; *ib.* 2587–2650. By amalgamating small lines some expense of management would be saved; certain shareholders averse to amalgamation; negotiations for amalgamating Waterford and Limerick with Great Southern and Western; *Malcolmson* 3595–3597; this amalgama-

tion would greatly benefit the public, but the proposition was declined by the Waterford and Limerick shareholders; *Longfield* 2845–2851. Amalgamation of small boards with larger companies would reduce fixed charge in favour of proprietors; small boards often act in an obstructive manner; *Hemans* 3831, 3832. Discussion as to how Ireland should be divided into districts in the event of amalgamation of railways; *ib.* 3833–3839. Witness states cause of nonpayment of dividend in some railways and reduction in others; *ib.* 3840–3848. Points out how saving would be effected by amalgamation, discussion thereupon; *ib.* 3849–3856. Gives reasons why he thinks no favour would be shown by railway companies either to amalgamation or purchasing lines. Holders of stock would be glad of any measure that would ensure them a modest dividend. Thinks when shareholders opposed amalgamation they must have been influenced by the directors; *ib.* 3857–3860. Amalgamation, with protection from monopoly, and a large reduction in the rates, would be popular with shippers of goods and cattle; how temporary loss could be met. Barony rate could not be put on; illustration; *ib.* 3861–3869. 3871–3874. 3899–3902. Amalgamations numerous in England; *ib.* 3888–3892. If Irish railways were amalgamated, and the country divided into three systems, thinks it would not be possible that working could be satisfactorily carried on by a few boards unless Government appointed a referee who should have full power to do justice to every line; *ib.* 3893, 3894. Whole system could be vested in hands of one or two companies. Dublin should be the chief centre of railways, and at Belfast there should be another centre; *ib.* 3897, 3898. Witness would like to see amalgamation tried, as it would diminish expense of management; *Ennis* 4100, 4101. Irish railways should be amalgamated and placed under one management; *Bidder* 4217, 4218. Scheme propounded for Government to buy them and let them to a limited company, &c.; *ib.* 4219 *et seq.* All the large English companies have consolidated themselves into great systems without State interference, but many years must elapse before same rule would work in Ireland; thinks State might step in and hasten operations; *ib.* 4295–4299. Advantage of concentrating all the railway companies into one would be felt in England as well as in Ireland. Does not think amalgamation in England yet complete; *ib.* 4300, 4301. Originally there was as great a division of railway interests in Wales as in Ireland; basis upon which they are being combined; *ib.* 4346–4352. Difficulty in dealing with amalgamation of railways in Ireland upon same basis; *ib.* 4353. Amalgamation in England has greatly tended to a gradual reduction of the rates; 4355. A large saving would be effected by consolidation of Irish railways; *ib.* 4373.

Repeated proposals to amalgamate Great Southern and Western with Waterford and Limerick; negotiations have come to nothing, but witness thinks it is only a question of time; company is now absorbing small lines; these were made cheaply and well; difficult to get some lines for their real value unless Government interfered; *Haughton* 4586–4590. Public inconvenience from want of amalgamation of smaller lines; *ib.* 4591. Work in concert with some small lines, not amalgamated, without much inconvenience to public; *ib.* 4601–4607. Discussion as to what advantages would result from amalgamation; *ib.* 4704–4716. Amalgamation of northern railways desirable, but very difficult; instances of unsuccessful attempts; reasons of failure; failure of a forcible attempt; *Murland* 4874–4890. In case of amalgamation, increase of traffic in populous parts would set off loss on sparsely peopled parts; *ib.* 4909, 4910. Considerable improvements in working, and some saving in expense, might be effected if all the railways were worked by one company; *ib.* 4914–4919. Amalgamation of Irish lines would be very beneficial if it could be brought about, but great difficulties in the way, chiefly with the non-paying lines, and from local jealousies; very difficult to get Irish lines to work together; *Cawkwell* 5148–5152. If Irish railways were amalgamated under one company they could not be properly managed; might be divided into three or four systems; *ib.* 5163, 5164. 5195. 5206. Length of system, gross receipts upon traffic of London and North-western and whole of Irish system. Reason why latter more difficult to manage; *ib.* 5165–5169. A connecting link in Dublin between all railways that come there would materially facilitate general management; an Act has been obtained for the purpose, but scheme languishes for want of capital. It would even be to the interest of the London and North-western to contribute to have link supplied; *ib.* 5165–5173. If railways could be under one management shareholders and the public would be much benefited; *ib.* 5174–5179. If amalgamated, Irish

railways would reduce rates and develop a trade which does not now exist, and at same time secure a gain to companies; *ib.* 5186–5188. If all the southern railways were amalgamated into one company it would not be to their interest to carry all the traffic to Dublin so as to have the longest mileage; *ib.* 5196, 5197. Amalgamation of Irish lines desirable, but should be managed under two or three systems; *Allport* 5282, 5283.

By amalgamating small companies a great saving might be effected; *Dargan* 5489. Thinks amalgamation could be carried out at some future time without Government or Parliamentary interference. No difficulty in whole of Irish railways reducing themselves into two or three systems. The directors would consent to any scheme that would put their property in a better condition, but the officers would object unless they received compensation; *ib.* 5493–5503. Amalgamation would produce a saving of one-fifth in working expenses; *ib.* 5530. Would not prevent further extensions; *ib.* 5535. If matters left as they are, amalgamation will be very slow; *ib.* 5606–5608. Directors generally indisposed to lease lines, but if amalgamated and skilfully managed result would astonish the shareholders; expenses could be enormously decreased and income augmented; *Roe* 5798–5803. 5833. Should be arranged in three systems; *ib.* 5827, 5828. 5842, 5843. Irish railways might be efficiently worked as one company if amalgamated; *Grierson* 5929–6023; such company should be either independent of the English companies, or they should be represented in it; *ib.* 6038. Should not be allowed to concentrate all their traffic at one port to injury of others; *ib.* 5950. Great advantages would result from amalgamation in developing traffic, saving in working expenses, economy of rolling stock, &c.; *ib.* 5996–6004. Not too extensive to be managed as one system; train mileage considerably less than large English systems; *ib.* 6005–6016. Local traffic need not be neglected; it should be looked after by local managers, but general interest must be paramount; at present companies working too much against one another to force traffic to their own lines; *ib.* 6017–6031.

Amalgamation in north of Ireland most desirable; interests of shareholders and public both demand it (being identical); obstacles; attempts have hitherto failed; inconvenience and delay from different interests involved, although passengers are booked through; *Lanyon* 6192–6200. Irish railways should be amalgamated into several systems; one centre of management would not answer; reasons; case not parallel to that of great English systems; but amalgamation should certainly take place; *ib.* 6201–6215. Witness thinks it would have to be compulsory; principles upon which it should be carried out; *ib.* 6242–6247. Shareholders generally would not offer much opposition; *ib.* 6281. Amalgamation desirable; *Earl of Clancarty* 6326. Amalgamation of all the lines under Government most desirable; *Fox* 6572 *et seq.*; *Meldon* 6735. Any partial amalgamation useless; *ib.* 6726. No prospect of amalgamation except under Government; *ib.* 6752–6756. Injuries to trade from antagonistic action of different companies; *Boileau* 6804. Great necessity for all the railways of Ireland being worked on one system; *Perry* 6829. Urgent need of better arrangements between companies or amalgamation; failure of attempts at the latter; *Pim* 7079–7086.

Amalgamation has hitherto gone on but slowly in Ireland, and is likely so to continue; jealousy and discontent would ensue if it were allowed to stop competition; *Hancock* 7632–7637. General amalgamation undesirable, unless undertaken by the State, in which case it would be a great advantage; *ib.* 7700–7708. One reason which prevents amalgamation of Irish lines is that the individual interests of certain seaports with which they are connected stand in the way; *ib.* 7767–7771. Amalgamation of all the lines north of Dublin desirable; *Shaw, T.* 8358.

It would be better for Ireland if amalgamations were carried further than at present; *Hawkshaw* 14,615–14,617.

Witness sees no reason why Irish companies should not amalgamate as English have done; *Harrison* 15,346–15,349.

Rates are high, speed is low, trains are few, and dividends small. Too many officials; lines are over-governed; *Huish* 16,011–16,015. 16,030, 16,031. They might all without difficulty be thrown into four or five groups, and worked much more economically and with far greater facilities and convenience for the public; *ib.* 16,015, 16,016. The difficulty would be with the directors who would be displaced; *ib.* 16,017–16,019. Greater facilities for amalga-

Amalgamation of Irish Railways—*cont.*

mation than in England; witness is surprised at its not being done, but public opinion is not strong enough to overbear private interests. Proprietors would like it, and the evils above named would be modified if not removed; *ib.* 16,020–16,027. If this Commission, or the Legislature, recommended it, it might be coupled with some boon; this has already been done to some extent; *ib.* 16,028, 16,029. Discussion as to manner in which lines might be grouped; *ib.* 16,034–16,038. Great Southern and Western is well managed, and is the most successful; *ib.* 16,032–16,041. Ireland does not offer the same gound for reduction of fares as England, but as witness's proposition would reduce expenses, fares might also be reduced. If plan carried out, it must be by some of existing companies. Witness thinks 25 per cent. on cost of trains might be saved. Fares could not be reduced by mere competition as in England; *ib.* 16,043–16,050. After a dividend of say 5 per cent., witness thinks they would try reduced fares; even if not, great public facilities would be gained; *ib.* 16,051–16,053. Any Government assistance should be conditional on amalgamation and reduction of charges; *ib.* 16,055–16,057. A recommendation from this Commission, or from Board of Trade, would be some inducement to Irish proprietors to amalgamate, but a pecuniary inducement (loans on their debentures, for instance) would clench the matter; *ib.* 16,058–16,063. Witness would not approve of Government purchasing them; *ib.* 16,064–16,067. Irish railways have cost less per mile than English; 16,067–16,073. Witness does not think that suggestion of purchase by an English company would find favour; does not himself approve of it; quite a competent management could be selected from present staffs; *ib.* 16,074, 16,075. Instance given in which transit could be much cheapened; *ib.* 16,077. Apart from increased accommodation, amalgamation would increase profits; *ib.* 16,082. Amalgamation of northern lines might injuriously affect some of the ports now supplied by them; *ib.* 16,081. 16,083.

If paying and non-paying lines could be equitably amalgamated, all parties would be benefited; the chief difficulty would be to arrive at present true value of shares; *Sherriff* 16,429–16,432.

Suggestion that Irish railways should be amalgamated and stocks consolidated into one; shares to be given to present holders according to ascertained value of property; directors to be well paid, and to have an interest in the results. The whole could be worked with great ease and facility in Dublin, provided proper gentlemen were selected for the purpose; *Bidder* 16,781–16,788. As to settlement with proprietors of stock at present valueless; *ib.* 16,789, 16,790.

Amalgamation of Railways and Canals. *See* Water Conveyance.

Amortization of Railway Capital:

Letter from Mr. R. Dudley Baxter on the system of, in France and other continental countries; *App.* DJ.

Annual Tickets. *See* Tickets.

Appeal, Court of:

There should be a tribunal of appeal for special cases; *Clark* 150–152. It should be a body to whom an appeal would lie to ensure carrying out a compulsory uniform mileage rate; it might also have power to modify rates and terminal charges under special circumstances; *Sturge* 845, *et seq.* An independent board should be established to redress grievances; *Wooler* 9657–9665. There should be a rates board established in connexion with Board of Trade, which should have power (within the Act) to settle questions of rates summarily without recourse to law; *Williams* 10,342–10,352, 10,452–10,429. Appeal to present tribunal is so expensive that the least injury is to put up with the first damage; *ib.* 10,430–10,440. There should be a power of appeal to Board of Trade; *Mathews* 10,489. Large companies would object to any tribunal short of the highest tribunal of appeal; if court constituted, no appeal should be allowed from its decision; *Hollins* 11,391–11,395. Such a tribunal unnecessary; present courts sufficient; *Smithells* 13,090–13,095. If there were uniform rates and terminals, a court of appeal would be unnecessary. If court of appeal had power to compel companies to charge rates irrespective of powers which have been given to them by Parliament, their decision might be most prejudicial to railway companies; *Grierson* 13,390. Board of Trade should have some control over railways generally, and should have power periodically to revise rates, and the

Appeal, Court of—*cont.*

public should be able to appeal to it; *Low* 13,804. 13,906, 13,907. Suggestion of a tribunal of appeal (somewhat analogous to Poor Law Board or Committee of Council on Education,) &c.; *Wragge* 15,467 *et seq.* Necessity of a board of appeal for deciding questions between one company and another, and between companies and public. It should be formed of one great judicial authority, aided in case of difference by two assessors named by contending parties. Witness does not fear any bad result from errors of such a court; decisions could be subject to appeal; *Bidder* 16,833–16,847. 16,964. 16,968.

Arbitration:

In settling disputes between Post Office and railway companies, arbitrators generally lean towards the latter; this considerably curtails the use of railways for postal purposes; *Hill* 7938–7943.

Complaint on the part of the railways, that arbitrators will not go into the question of parcels; that arbitration is given under a feeling that letters should be carried at least possible cost to the country; and that arbitrators generally decide in favour of the Post Office; *O'Brien* 12,334. 12,337. 12,340.

Results of arbitration not unusually go against Post Office; *Page* 14,926. Arbitrators used to be able to agree, but latterly decision has generally been given by umpire; *ib.* 14,931, 14,932. Complete want of uniformity in sums awarded by arbitrators and umpires; suggested remedy; *ib.* 14,948. Arbitration is found to be "desultory, unsatisfactory, and troublesome;" *ib.* 15,040. Umpires act with perfect honesty, but have mistaken views; as a rule, they lean to railway companies; *ib.* 15,091–15,096. System of arbitration is disliked by companies on account of its dilatoriness and uncertainty. Instances of companies being kept for years without their money from delay of arbitrators, arising generally from difficulty in agreeing upon an umpire; *ib.* 15,097–15,104.

Witness, who is himself an arbitrator, would never recommend arbitration between company and consignor as to rates for goods, where it can be avoided; *Harrison* 15,261. Witness does not think that compulsory arbitration between companies for interchange of traffic will answer; *ib.* 15,277. 15,282.

Method of conducting Post Office arbitrations. Arbitrators are seldom able to agree without having recourse to an umpire; *Gregory* 17,711–17,713. High class of persons called in as umpires; *ib.* 17,714, 17,715. Arbitrations less frequent of late, from better agreement between Post Office and railway companies; but, when undertaken, not more easy to settle than formerly; *ib.* 17,716–17,719.

List of arbitrations between the Post Office and railway companies, showing the date of each award, the name of the arbitrators for the Post Office and the railway company respectively, and the name of the umpire, if an umpire has been appealed to; *App.* CV.

See also Post Office.

Army Stores. *See* Military Stores.

Atkinson, Mr. Henry John. (*Analysis of his Evidence.*)

Is mayor of Hull and chairman of the Chamber of Commerce and of the Parliamentary Committee of the Corporation; 881. The North-eastern Railway Company, in order to bring traffic to the docks on the Tyne, &c., in which they are interested, divert the natural traffic from Hull by carrying it longer distances at equal rates, instead of charging an equal rate per ton per mile over their whole system. This they call "treating all alike;" 881, 882. 890. 894. 946. Previous to 1854 competition existed, but in that year an amalgamation took place, which produced the state of things complained of, notwithstanding that the companies pledged themselves that the people of Hull should not suffer. Vigorous efforts for redress have been made in vain; 883–889. The only other railway running to Hull is the Manchester, Sheffield, and Lincolnshire; they have agreements with the North-eastern Company to the prejudice of Hull; 891–893. Parliament should enforce an equal mileage rate throughout each railway system; reasons; 896–909. 946. Railway companies too irresponsible; a controlling body needed. Private agreements with individuals should be prevented; 910–917. Difficulties of opposition to or entering into competition with an already existing railway. Particulars of agreements between the railway companies which prejudicially affect Hull; 918–927. Powers to private parties to run

Atkinson, Mr. Henry John—*cont.*
trains on their own account practically inoperative; 928–933. Question of separate agreements with individuals discussed; 935–945. Rates from Leeds to Hull (55 miles) same as to Hartlepool (83 miles), the railway company being interested in the docks at the latter place. Description of the injurious effects upon the whole trade of Hull from the diversion of traffic thus created; 946–961. The dock dues at Hull rather high; 962–964. Railway companies should be prohibited from running steamboats, it being injurious to themselves and to the regular shipowners, and of no advantage to the public. Witness pressed this view upon Parliament last year; but without success; 965–983.

B.

Back Carriage:

Scarcely ever heard of in Germany; *Mulvaney* 1272. Witness believes back carriage could be obtained in Ireland; *Mallet* 2165–2171. 2191. Difficulty of obtaining back freights in parts of Ireland; *Earl of Lucan* 3038. 3044. Coal trucks in Ireland now bring back corn and bread-stuffs; *Malcomson* 3568. Coal trucks on London and North-western line generally go back empty; *Cawkwell* 11,645.

Bagot, Mr. John. (*Analysis of his Evidence.*)

Is a merchant in Dublin; 6992. Great complaints from merchants of inequalities in the charges, and also of the through rates being most injurious to Dublin trade; how they affect commercial travellers and customers from country towns. Mentions a case where great inconvenience was occasioned from insufficiency of third-class trains from Dublin to Tralee. Goods can be delivered in Carlow *viâ* Dublin from Liverpool nearly as cheap as from Dublin to Carlow, in consequence Carlow customers are driven from Dublin to Liverpool. Specifies particular charges upon certain articles. Formerly certain goods were delivered from Dublin to Bagenalstown for 7*s.*, but in consequence of arbitrary classification are now charged 8*s.* 6*d.* to 18*s.* 6*d.* Company refuses to supply classification lists, and Great Southern and Western and Midland Great Western do not keep tariff of prices; 6993–6999. Difference in the rates for corn, seed corn, and seed, leads to people marking goods improperly. Difference in rates for ginger cordial and ginger wine, although both same value. Inequalities in the rates for small parcels, and method adopted in order to make parcels up to luggage weight, and thereby save expense. Can get no explanation of these inequalities in Ireland. Would like to see penny postage system carried out for parcels, that is, same rate for any distance, or might be divided into 50 or 100 miles. Same charge on same railway for a hamper of soda-water for 25 as for 51 miles; 7000–7011. 7018, 7019. Has heard that railway companies give preferential rates; this may be the reason why they will not give tariff of prices. Should not be allowed. Complains also of the break in railways. Inconvenience felt from this cause by a person wishing to go to Derry. In consequence of high rates contract tickets are seldom issued; 7012–7017. In some cases parcels rates have doubled on Dublin and Kingstown railway; not many goods sent; line too short. Carry market parcels and market baskets free. Four-horse coach running by side of railway, which carries cheaper than the railway; 7020–7025. General good that would arise from serious reduction in rates would completely

Bagot, Mr. John—*cont.*
outbalance any small evil that might be done in other respects. Would like people to be able to carry their fish to all parts of the country inland. Gives rates for herrings from Arklow to Dublin; high rates do not prevent them being eaten by the people there. Difference in charge might be appreciable in consumption. Reason why generally obliged to pay half the carriage of goods to most of the customers; 7026–7031. Can send goods to Cork cheaper than to such places as Templemore and Mallow; also sends goods to Londonderry by way of Liverpool cheaper than direct from Dublin. Gives difference and insurance by water; 7031–7039. Would propose as a remedy to present state of things that Government should take possession or control of railways, so that people should be able to travel for ½*d.* per mile third-class; thinks it would pay; 7040, 7041. Customers would transact their business in person instead of by correspondence if they could travel cheaply. Mentions a case of store cattle being driven 60 or 70 miles in consequence of the high rates; would have cost double if sent by railway. Thinks a less reduction than 50 per cent. would induce them to be sent by railway. Fat cattle are also sent by road for a shorter distance; 7042–7048. Is not prepared to enter more fully in detail into nature of great movement that should be made for reduction of rates; differs *in toto* from gentlemen connected with railways who say that if a penny is taken off it cannot be made up; 7049.

Baltic Trade:

Great diminution of, from Liverpool; *Clark* 45, 46. Liverpool is at a disadvantage with the eastern ports as to; *Halhead* 433, 434.

Bankrupt Lines:

Opinion of Select Committee of the House of Lords that undertakings practically bankrupt should pass into hands by which they could be efficiently conducted; an Act was passed in 1865 to prevent Bankruptcy Act applying to Irish railway companies; *Hancock* 7749–7753. Londonderry and Coleraine Railway has been taken possession of for debt by Loan Commissioners; *Galt* 8501, 8502. Bagenalstown line is bankrupt; *ib.* 8504.

Barrington, Mr. John. (*Analysis of his Evidence.*)

Is Lord Mayor of Dublin; as such presided at meeting held to consider subject of Irish railways. Has heard much about the subject, and has a general knowledge of the position of the country with regard to it; 7104, 7105. Some alteration required in system, but very hard to suggest a remedy. Result of meeting was the receipt of 18 letters, consisting mostly of complaints of what are considered excessive charges, and how they militate against shopkeepers in the country, by parties living in the neighbourhood round these country towns finding it more advantageous to go and buy direct in Dublin. Reasons which may induce them to go there; 7106, 7107. 7124–7130. Not sufficient inducement to labouring classes to travel. Fares are too high. Experiment tried last week or two on Midland Great Western line of running an excursion train at single fares for third-class passengers; the receipts increased 1,000*l.* It was the artizan class who chiefly made use of these trains; 7108–7110. Railway companies have objected to carrying people at low fares, thinking the better classes would avail themselves of them, and not travel first or second class; does not think they would. No reason why the rich should not enjoy low fares. Midland Great Western has got into different hands, who are trying a reduction of fares. Great Southern and Western lines are running excursion trains at a single fare for the Exhibition. Has been informed that they rather lost by it; 7111–7120. No difficulty in organizing excursion trains in Ireland for want of facilities for amusement and entertainment of the people. At Killarney, hotels, &c. are very good; not so good at Connemara, but no difficulty in getting anything to eat there. Hands in a letter headed "Irish Railway Reform Movement. Statement as submitted by the Right Hon. the Lord Mayor of Dublin to the Royal Commissioners on Railways, showing causes of complaint on Irish lines;" 7121–7123. Is a soap manufacturer in Dublin; sends products all over the country. Has been put to disadvantage in consequence of different rates charged between Liverpool or other towns in England and towns in Ireland, as compared with the rates between different towns in Ireland. Has been obliged to ship goods over to Liverpool to be taken to Sligo. Cheaper to send them by that route; now sends them by railway, and allows customer 10*s.* per

BARRINGTON, MR. JOHN—*cont.*

ton; nearly half the profit. Does not know cost by either route. Goods going from Liverpool to Sligo go round the coast; go same way to Ballina. Natural difficulty of sea conveyance being cheaper than land conveyance might be got over by reducing land carriage; 7131–7137. If rates were lower would send an increased quantity of soap to Sligo and be able to compete with Liverpool men. Cannot send it from Dublin there by sea. Reduction would bring trade direct to Dublin; would be profitable to railway companies. Has repeatedly written to directors of Great Southern and Western line as to a lower tariff from Dublin to Cork, but they will not consent to it. If rates were reduced one half could supply Cork market with soap. Hands in table, sent by Alderman Mackie, showing through rates from different towns in England to different towns in Ireland, the various relations of one to another, and how they affect his trade. Return defective in not giving charges from Dublin to certain towns in Ireland; 7138–7147. 7278, 7279. Thinks that if Commission were to suggest that a committee should sit in Dublin and go through country and see real position of railways some good might result from it. Long discussion as to whether fuller information could be obtained by so doing, and in the event of this being granted, whether people in England might not desire same thing; and also as to whether more information could be acquired by a committee in Dublin as to feeling in regard to proposed new tax; 7148–7161. 7257–7277. In case of some railways it would be very beneficial if Government interfered; might buy up some, or lend them money at a low rate of interest. General feeling that railway directors are not liberal enough with the public. Difference of opinion prevails as to whether Government should interfere. Mentions Mr. Galt's views, and states that there are many who think that Government, by purchasing railways at a certain rent, might benefit the people by reducing the fares, and that loss, if any, might be met by imposing an income tax for Ireland of 1*d.* in the pound. Has not ascertained the opinions of others, but thinks that plan would be generally acceptable. Would not mind an additional 1*d.* in the pound, benefit to the country should be looked to. Owners of landed property would not like it, but from increased prosperity of the country they might get higher rents, and there would probably be a demand for building ground. Believes that after a time traffic would so increase that there would be no necessity for the tax. Is of opinion that the whole community would receive a benefit from such a scheme; 7162–7178. 7198–7202. What addition it would be necessary to make to a certain resolution (handed to witness) before it would be carried at a public meeting in Dublin. Whole country has been benefited by construction of railways; benefits would be extended by a large reduction in the rates; 7179–7184. Discussion as to whether landowners whose land is held on long leases, owners of property held on perpetuity leases, and absentees, would receive a benefit equal in value to amount they would have to pay in income tax; 7185–7202. If Government once took up the railways, they could not go back to old system; would have to make new lines. Saving that would be effected in management. If a large reduction were made gain to the public would be a great deal more than the loss; 7203, 7204. If old lines did not pay with reduced rates, new lines would increase loss; 7204–7207. An extension of railways in a district already supplied might improve it even still more, and much more than amount of tax they would have to pay. Could not be extended without consent of Parliament. If Government did not think it would pay, they would not make line. No railway should be constructed with the intent of making it remunerative by imposing high rates, but inhabitants should wait until country sufficiently populated to make it remunerative. Parliament might take a case of this kind into their consideration; 7208–7216. Rates by Bianconi's cars. If Government were to take possession of all existing railways, it would be necessary for completion of scheme that all future ones should come into their hands. Parliament might either prevent new railways being made, or give authority to private speculators to make them upon condition that after a certain time they should be handed over to Government. Reads a letter from Mr. Goodbody, a large miller at Clara in the centre of Ireland, who states that if coal could be carried for ½*d.* per ton per mile, it would come into more general use and be a fruitful source of revenue. Many who get their living by making and saving turf and selling it in the towns would obtain employment in other ways; some might suffer. Objection made to the introduction of coal; same was made to introduction of machinery;

BARRINGTON, MR. JOHN—*cont.*

7217–7228. Getting coal into interior of the country, and making it available for working machinery, would provide a much more profitable employment than cutting turf; number of population that used to cut turf diminishing. From Clara it is 80 miles to nearest port; does not know charge for coal by railway; Mr. Goodbody states it is 1*d.* a ton per mile. If there should be a large demand at the port, price would slightly increase; would soon equalize itself. A reduction of one-half upon this distance would make a difference in the price of coal to extent of 3*s.* 4*d.* per ton; reduction would be about 25 per cent. on present prices. It would probably bring coal into use in places in the neighbourhood of which turf is obtained. Facilities for unloading coal in port of Dublin defective; movement in Dublin to empty the ships by machinery will make the price uniform throughout the year. Is aware that in most parts of England the railway comes down to the landing place, and that coal is unshipped at about 2*d.* or 3*d.* a ton. In Dublin it costs 3*s.* 6*d.* An Act has been passed this session to lay down tramways along the quays; will make coal cheaper in Dublin, and people in interior will also get it; would be a great inducement to a poor man to use coal if he could get it for 2*s.* or 3*s.* a ton cheaper; 7229–7249. Discussion as to whether people at such places as Clara are not in a better position for obtaining coal than people in south of England; 7250–7254. If Government took railways, and average loss for first two or three years was a million per annum, but afterwards from increased traffic there was no loss at all, people of Ireland would not wish for a further reduction; 7255. Is not aware that rates for third-class passengers in India average ⅜ths of a penny per mile; 7256. Reads two letters, one complaining of railway charges for conveying cattle and sheep, and their result; and the other of railway arrangements in connexion with Wicklow Copper Mining Company. Hands in a letter received from one of the directors of this company giving a full account of the different rates charged. Refers to district between Dublin and Bray and Kingstown, which shows that low fares encourage the people to go about. Scarcely fair to compare this district with others, it being a pleasure district; 7280, 7281.

Papers referred to by witness:—Statement as submitted by the Lord Mayor of Dublin to the Royal Commissioners on Railways, showing cause of complaints on Irish lines; *App.* AM. Comparative charges for through goods traffic between England and Ireland; *App.* AN.

BASS, MESSRS. & CO.

Official collection of tariffs for the transport of goods, finances, equipages, horses, and cattle on the State railways of Belgium; *App.* AS. Particulars of railway service between various towns in; *App.* DN.

Bewlay, Mr. Thomas. (*Analysis of his Evidence.*)

Is a merchant in Dublin; 6901. Arrangements made by English companies for transmission of goods by Irish railways detrimental to mercantile interests of Dublin, and invariably made for interests of English lines, and not with regard to Irish traffic. Gives three illustrations showing difference in rates charged from Liverpool and from Glasgow to certain places *viâ* Dublin, and to same places from Dublin; reason why difference made. If Midland railway can afford to carry at low rates through Dublin, they ought to carry at lower rates from Dublin, and not charge more. Does not know freight from Liverpool to Westport. Must allow steamboats something to induce them to take the goods. Is rather a benefit to people at places where difference made. Would have Midland reduce rates, raising them would send traffic by sea; 6902–6918. Is not aware that in many cases Irish railway companies charge Great Western and London and North-western companies a local rate upon Irish portion of line; 6919. Mentions inequalities in the rates charged for manufactured and pig lead (the ores being obtained from Wicklow mountains) sent from Dublin to Belfast and from Dublin to Newry; 6920–6923. Important to commerce of Ireland that there should be a considerable reduction in rates. Reduction would not materially increase produce of ores. How and in what quantities ores are sent to Newry; 6924–6929. Should be a reduction in rates charged for coal into interior of the country. Turf has become a costly article of fuel. Would be a great boon to peasantry if coal could be carried for ½*d.* per ton per mile, and consumption would greatly increase. At what price obtained from Kingstown, and cost when brought to smelting works; might be delivered at any railway station into interior for about same rate. Means of unloading and placing on the railway should be much cheapened; for 50 or 60 miles would have same effect as reducing rates one-half. Has an agreement with Great Southern and Western Company to carry anthracite coal for 1*d.* per ton for any distance exceeding 30 miles. This coal is not used at smelting works, but principally for lime-burning. Price at pit's mouth, and at a distance of 30 or 40 miles. Distance of mine from railway, and cost of cartage. Not sufficient traffic to warrant a branch railway being made. Consumption not large, and if it were to go to any considerable distance would come into competition with Welsh anthracite coal, which is landed at all the ports from Waterford to Cork at about 7*s.* per ton. Is not suited for domestic purposes. Gives imports of coal into Dublin for 1850–1852 and 1860–1862. Is certain that a large portion of coal goes into the interior of the country. Is carried for 1*d.* per ton per mile. If rate were reduced to ½*d.* per ton, quantity carried would be enormously increased; 6930–6951. Has heard that present charges on merchandise repress and prevent traffic being carried on, comparing value or market price of goods, at one place and another. If a very large reduction took place, in a very short time increase of traffic would bring up income to an amount greater than at present. A reduction of 75 or 80 per cent. would be sufficient. Would like to see deficiency made up by Legislature guaranteeing something like present rates. Would prefer that deficiency should come out of general funds of United Kingdom, but would be willing to make a special tax for Ireland. If England and Scotland were taxed, would be ultimately benefited in a far greater proportion. Reason why experiment should be tried in Ireland. Gives number of first and second-class passengers carried by five daily trains on Great Southern and Western for the half year, and number of third-class passengers carried by three daily trains on same railway and for same period. If experiment tried as suggested and increase of traffic did not make up for reduction, there would be heavy pressure put upon State to continue low rates. Does not imagine such a contingency would arise; illustrates matter by mentioning number of passengers carried from Cork to Macroom by two opposition cars; gives fares, and states traffic remunerative. Cars very general over south and western parts of Ireland, and as far north as Sligo. Mr. Bianconi ran them until driven off the road by railways. Thinks railway not yet opened from Macroom; 6952–6972. High rates in some districts due to lines having been made in unremunerative districts. Roman Catholic places of worship erected at Dublin and elsewhere by the pennies of the poor and not from legacies or donations; furnishes an analogy to what might be expected on railways were rates low enough to enable the poor to use them; 6973, 6974. May be some who travel third class in Ireland who in England would travel second, but thinks generally people like to associate with their own class; 6975. Reason for reducing first-class fares. Very little pleasure traffic in Ireland. Companies occasionally run excursion trains; should have them every day in the year; 6976–6978. Gives an instance of persons travelling by omnibus and by steamer in consequence of railway being dearer; 6979–6981. Knows instances of cattle being driven along the road, and mentions case of a gentleman driving 65 miles in consequence of the high rates; 6982–6986. Relates a curious circumstance showing disadvantage under which peasantry in Killybegs labour from not being able to bring produce to market; would be a great advantage to have cheap lines of railway carried to such places. Would impress upon Commission that there should be a very large reduction, believing that the greater the reduction the greater will be the success; illustrates this by the penny newspaper and postage stamp, and from the 6,000,000*l.* derived from tobacco, being principally consumed by the lower classes, comparatively little being derived from cigars; wishes to show that income is derivable from the million, and that they are the true source of income. Would not give an opinion as to whether, if tobacco duty were reduced one half, revenue would be the same; 6987–6991.

Bianconi's Cars:

Plan of competition against himself adopted by Mr. Bianconi to make his cars pay; *Forbes* 1685, 1686. Liberal arrangement of, to assist in speedy transit of fish to nearest railway; *Brady* 3308. Do not run in competition with railways about Limerick; there are some in the neighbourhood of Bruff; *Malcolmson* 3562–3564. Railways have driven off; *Bewlay* 6970. Fares by; *Barrington* 7217.

Bidder, Mr. George Parker. (*Analysis of his Evidence.*)

Is a civil engineer and director of the Great Eastern Railway; 4213, 4214. Has been often consulted by railway companies both upon financial and engineering questions. Has paid attention to position of Irish railways generally; 4215, 4216. Whole of railways in Ireland should be amalgamated and placed under one management; 4217, 4218. Suggests a scheme of which the first step would be to obtain an Act of Parliament authorizing Government to buy up all the railways; management of them should then be placed in the hands of a limited company, by having a contract let to them, subject to conditions that there should be facilities given to the public, and low rates for coal, cattle, dairy produce, &c. Explains particularly the scheme; states rates that should be charged, and how the three descriptions of stock should be dealt with. Long discussion thereupon; 4219–4231. 4246–4254. 4259–4271. 4280–4282. 4322–4328. 4356, 4357. 4367–4372. 4393–4400. 4404–4439. 4450, 4451. 4462, 4463. Reduction of rates will stimulate industry of any country; 4232. Thinks there would be a large passenger traffic in Ireland; one train a day at ½*d.* per mile would pay this company. It is only by applying a low rate continuously that extent of traffic can be ascertained; 4233, 4234. A large amount of traffic can be carried in a purely agricultural district; cites the Great Eastern; 4235. If rates for coal in Ireland were same as by the Great Eastern there

BIDDER, MR. GEORGE PARKER—*cont.*

would be a great increase in traffic; the coal owners finding the waggons, the terminal charge being 5*d.* The rate from Peterborough, 100 miles, is 108 farthings. If Irish cottagers could get coal they would use it. Consumption both for manufacturing and domestic purposes would increase. Thinks it could be delivered at stations in central parts of Ireland for ⅜*d.* and 5*d.* for terminals; price at Dublin quays. Unless under 20*s.* the Irish poor would not use it; 4236–4245. 4364–4366. 4440, 4441. Is of opinion that Government would receive offers from proposed company, as undertaking would be profitable. Terms of lease might be considered every 10 or 14 years, and readjusted upon net revenue of railway at that period; how to meet objection that by such plan it would not be for the interests of the lessees to stimulate traffic beyond a certain point; 4255–4274. How extensions of railways in Ireland should be dealt with under scheme. Discussion thereupon; 4256–4258. 4319. 4358–4362. If Government bought the railways they would have to pay more than market value; 4272–4274. There might be loss for a year or two if scheme carried out; but saving in management, greater economy in working, better use of rolling stock, and stimulus given to traffic by reduction of rates, would ultimately relieve the State from loss; 4275–4277. 4293, 4294. Has no doubt that the terms offered to State would cover interest of debt; 4278, 4279. Reasons why his scheme preferable to plan either of allowing existing companies to borrow money upon the security of the State at a reduced rate of interest to pay off their debentures, or having compulsory amalgamation between leading companies. If companies were divided into two systems, it would be an improvement upon present system; 4283, 4284. Would object to laying any charge upon the State in order to benefit Ireland. State can confer a benefit upon companies by borrowing at a low rate of interest and accommodating them with capital so obtained. If Government had supplied debentures at 4½ per cent. they could have raised the money for 3½, thereby making considerable profit; 4285–4291. The answer that the contract has been made for a certain number of years would relieve the Government from any pressure put upon them to get new companies to work at unremunerative prices; 4292. All the large English companies have consolidated themselves into great systems without State interference, but many years must elapse before the same rule would work in Ireland; thinks State might step in and hasten operations; 4295–4299. Advantage of concentrating all the railway companies into one would be felt in England as well as in Ireland. Does not think amalgamation in England yet complete; 4300, 4301. In some respects everything said as to Irish railways is applicable to English. Great convenience to several English railway companies if Government would take the debentures; 4202. Scheme applicable only to Ireland. In England could only deal with preference capital and not interfere with management; 4303–4305. Irish railways in same condition as English when Manchester and Liverpool and London and Birmingham were separate lines. Market value of shares would be likely to rise if there were an expectation of scheme being adopted. Value should be taken at announcement of scheme; 4308–4310. If railway traffic increased between first proposal of scheme and adoption, dissatisfaction would be felt by shareholders, but any terms would be an advance of present value; 4311. Any company prepared with requisite capital and security should be allowed to compete for lease of Irish railways. The most eligible terms should be accepted. It might be necessary to appoint a board to receive and judge of tenders. Should not be an Irish board, though Irishmen might be members; 4312–4317. If scheme carried out there would be many dissatisfied, having lost their influence; 4318. Thinks that localities not now served by railways would have no difficulty in getting power to make them, provided they had a legitimate *locus standi*; 4320, 4321. Mineral traffic in Ireland ought to be quadrupled; if rates were reduced one-half the traffic should be doubled; wherever low rates are introduced a fresh source of traffic springs up; 4330–4332. Whether traffic be at low or high rates it is made up by quantity, and comes to this, that the normal earnings of a railway are 5*s.* a train mile, and normal expenses 2*s.* 6*d.*; 4330–4333. If coal were carried for ⅜*d.* instead of for ¾*d.* as at present, it would not require three times existing traffic to make up for reduction, as goods trains would then be filled; 4334. Increase on English railways and also on continental lines mainly due to their long leads; would be modified when lead only 60 miles, though partly met by terminal charge being the same for 50 as for 60 miles; 4335, 4336. How demurrage upon a waggon is regulated; by consolidating systems it is got rid of; 4337, 4338. Cannot have so long a through rate between any two points of a country which is narrow. When lead is short reduction in charge for conveyance of certain articles depends upon reduction of rate; in coal, if rates were reduced from 1*d.* to ⅝*d.* in a lead of 50 miles, the saving would be 2*s.* 6*d.* per ton; 4339–4341. If passenger fares were reduced to ¼*d.* a mile the requisite increase would be obtained from more people travelling, and by trains taking goods from station to station on their way; 4342, 4343. Working expenses of Irish railways as compared with Great Eastern are nearly the same per-centage; the former gets an advantage in wages, and from not having to pay Government duty. Chief difference in miscellaneous charges. Charge for permanent way in Ireland not yet up to its full amount; 4344, 4345. 4374–4377. Not acquainted with Great Western amalgamation basis; previously there was as great a division of railway interests in Wales as in Ireland; basis upon which they are being combined; 4346–4352. Difficulty in dealing with amalgamation of railways in Ireland upon same basis; 4353. Amalgamation in England has greatly tended to a gradual reduction of the rates; 4355. Explains the case of the London and North-western Company, giving rates for coal that would not admit of witness sending them to London; 4363. A large saving would be effected by consolidation of Irish railways; 4373. Thinks rolling stock of Irish railways sufficient; 4378. Discussion as to expediency of carrying coal at ⅜*d.* per ton per mile. Gives gradients on certain lines; 4379–4390. It is possible that a company might be found to buy up whole of railways in Ireland, but thinks scheme suggested would be preferable. Companies could not borrow on such easy terms as Government; 4401–4413. In order to develop traffic unequal mileage rates must be adopted; 4442, 4443. States amount set apart for permanent way, engine power, and carriages and waggons, and gives duration of rails and sleepers; 4444–4449. Under proposed plan there would be an inducement to increase traffic. No company would lease railways unless they expected a greatly increased traffic; 4452, 4453. Irish gauge would be no obstacle to working witness's proposal; 4454–4458. The London and North-western and Great Western Companies might be represented in leasing companies. English companies would not get possession of Irish railways to work them to the detriment of all other companies without the sanction of Parliament. They would view it as a mercantile speculation; 4459–4461. Thinks through traffic would be better developed if lease were in the hands of London and North-western Company than in the hands of a mercantile company; 4464, 4465. Cannot state saving in management since Great Eastern amalgamated; 4466, 4467. Reasons why railways should not be in the hands of parties connected with the district; 4469. Local traffic of Great Eastern has been much developed since amalgamation; 4470–4472.

Further examination.

As Government purchase must end more or less in management it would not be advantageous to public companies; 16,586. Recommended at his previous examination the purchase of railways by Government and working them by a commercial company; 16,587, 16,588. As to expediency of any aid by Government to railway companies, by means of guaranteeing their fixed liabilities, witness assumes that the aggregate Government would take would be their preference charges; if taken they need not raise a shilling for this purpose, but should convert them at once into terminable annuities, so that in about 44 years they would be in possession of the income of the railways, so far as regards those particular charges. Should compel present holders to take 4½ per cent. Knows no reason why people should not turn their stock into terminable annuities; effect of alteration would rather raise the price of consols. A mistake made by Government in dealing with the annual surplus. When annuities terminated, Government could give up the 4½ per cent. upon companies reducing rates *pro rata*. Should take care that monetary value given to holders of the securities was more than the present market price. Railway companies pay on the average more than 4½ per cent. interest; first class railways have been raising money at 5 per cent.; cannot tell variation; some have borrowed at 3½ per cent. Very little preference stock under 5 per cent.; bulk of it irredeemable; would treat it all as irredeemable. If companies could borrow at 4½ per cent. they would not be benefited by having Government aid.

BIDDER, MR. GEORGE PARKER—*cont.*
Government might render it 3½ per cent. perpetual, the one per cent. profit either given to the companies or used for state purposes. Why there would be no inconvenience from railways passing into the hands of Government; 16,589–16,593. 16,629–16,650. 16,653–16,663. Debenture debt bears a fixed proportion to total capital. Amount of debentures allowed to be issued should be according to value of railway, and not in respect of its cost; cannot decide value when railway constructed; would limit the debentures up to period of opening. Thinks Great Northern paying 7 or 8 per cent. should be authorized to issue more than Great Eastern, which is only paying 1½ or 2 per cent. An average should be taken of the resources of a railway in fixing amount of debentures. The idea that debentures are a first charge on railways is a delusion; 16,594–16,598. Lloyd's bonds only take precedence of debentures which are subsequent to date at which they become due; 16,599. Mode of proceeding much more summary in cases of simple contract debt than in cases of debenture. Would allow companies to borrow as much as they please, but all their proceedings should be published half-yearly. Reason why there would be no difficulty in assimilating proceedings of companies having already obtained Acts and those who have not. How Standing Order 157 and clause 2 of Companies Clauses Act is evaded in the application of the revenue of a new line being purchased by an old company; 16,600–16,612. 16,617–16,619. If railway a useful work, owners of the land favourable, and no overriding grievance, companies should be left to raise money in the best way they can, care being taken that public are not deceived; 16,613–16,615. If Government were to guarantee the debentures, their charge would come in first; 16,616. All guarantees should be taken by Government; would be no risk to State and a great advantage to railways and to holders of stock. Amount of guarantee might be at least 7,000,000*l.* a year. Those companies receiving the most relief should be compelled to give some equivalent to the public; same view entertained by the late Robert Stephenson; way in which this might be done; 16,620–16,627. 16,651, 16,652. Why Government aid should be given to railway companies and not to other commercial undertakings; are some on similar footing which might receive assistance; 16,628. How Government should deal with those railways desiring to borrow, under the general guarantee, additional money for new works; 16,664. Does not know of any railway not able to pay their guaranteed preference stock; are such cases in Ireland. Some railways are managed by persons having no real interest in improving their condition. Caledonian railway an analogy; 16,665–16,670. Reason inequality of mileage rates essential. Suggests that companies should fix a certain profit on articles to be carried, and then only charge for actual cost of conveyance; 16,671–16,682. No complaint in witness's district as to inequality of rates. Why company charged coal importers at Ipswich a higher rate per ton than they charged the Peterborough people; explains how it paid company better to carry coal 60 miles for ½*d.* per ton per mile than 10 miles for 1*d.* per ton. Rates charged by Great Eastern for conveyance of cattle from Tonning to London; 16,683–16,695. Right principle for companies to receive all the traffic they can if it leaves any margin of profit; 16,696–16,699. Would be a great importance to companies as well as to holders of stock if whole of preference capital could be consolidated. Difficulty in bringing such an arrangement into operation; 16,700–16,710. Companies should be allowed to raise new capital in such a manner as they think proper, provided that whole of their liabilities were published. Would make it a misdemeanor to publish an incorrect statement. Would not recommend mode adopted in America. To what companies the system might be extended. Companies cannot now borrow without coming to Parliament; 16,711–16,730. 16,733–16,738. How those companies should be dealt with that have already borrowed a large capital, if all restrictions as to borrowing were removed; 16,731, 16,732. Should be no extension of a line within a so called company's district unless it were a *bonâ fide* affair, and landholders interested themselves in some substantial way; would not make them find the capital. Course that might be taken to ensure these lines being *bonâ fide*; 16,739–16,743. 16,745, 16,746. On the whole does not think speculative lines objectionable; some of the best lines so got up; 16,744. Would not limit great companies from making extensive new lines. Great companies dislike competition except where they inflict it themselves; would not attempt to prevent this aggression. In what way witness considers railways have

BIDDER, MR. GEORGE PARKER—*cont.*
paid the public 15 per cent. on the outlay; 16,747–16,751. 16,753. Does not recommend a Government guarantee on the cost of a railway, but only to an extent of a portion of existing liabilities. In the case of a new railway, Government could only take part of its obligations when railway formed; 16,752. Believes that on the whole competing lines are beneficial; instances competition existing between London and Manchester. Could give an instance of what witness considers illegitimate competition; 16,754–16,758. Result of competition has been generally to lower fares; is otherwise beneficial. Great Eastern lowered their fares to Great Northern rates; are higher on Ipswich route than on some other great railways; charge rather more to Cambridge by Great Eastern than by Great Northern; 16,759–16,762. Amalgamations have been a benefit to railways and to the particular districts. Thinks expression of this Commission would tend to increase amalgamations. Would be a great advantage to public as well as to the companies if London, Chatham, and Dover, South-eastern, Brighton, and South-western were amalgamated, but Legislature should take care that all railway progress was not stopped in their districts; if amalgamated, would not cause rates for continental traffic to be raised. Companies sometimes cause injury to districts by making agreements with each other; 16,763–16,768. 16,773–16,780. As to amalgamation, does not see any distinction between parallel lines and others. Questionable whether it would be expedient to amalgamate two large systems like North-western and Great Western; the former nearly as large as can be worked conveniently; 16,769–16,771. Would be desirable, but doubts whether it would be practicable to amalgamate the whole of the English railways; 16,772. With reference to the amalgamation of Irish railways, witness thinks it would be advantageous to public and shareholders if, after ascertaining actual value of shares, the existing shares were all cancelled and new stock created, giving as many shares to each individual as should equal real value of his property. If suggestion carried out and advance of money made by Government to discharge floating debts there should be a stipulation that rates and fares should be reduced. Would rather that there should be a consolidation of stock, and existing companies entirely annihilated, except so far as being in the receipt of a certain income. How floating debts might be dealt with. Would be better to abolish all the present board of directors, and create a new board composed of experienced men. If proper gentlemen selected whole of railways could be managed by a board sitting in Dublin; 16,782–16,788. Must put the proper value on the stock; if valueless, nothing should be given for it; 16,789, 16,790. Is not acquainted with discussion now going on in Ireland respecting the purchase of railways by the State; 16,791, 16,792. Would be desirable to work both English and Irish railways by a limited liability company; if so, how rolling stock and permanent way could be kept up. Hands in a contract showing provision made in the case of North Staffordshire. Subject to some general supervision, companies might have the power of subletting to themselves; has seen no indisposition on the part of companies against such an arrangement; are hardly ripe for it. How objection that it would not be to their interest towards termination of their lease to cultivate traffic might be overcome; 16,793–16,806. Within certain limits, is of opinion that reduction of rates would be remunerative to companies. Importance of reducing rates on heavy articles. Wants a cheaper class for workmen and their families. In some cases reduction might be advantageously made in first-class fares. Limited company would be inclined to make the experiment of reducing fares more rapidly than the present companies. Does not know whether those companies in few hands are more liberal than large companies. Should be left to themselves whether shareholders in a limited company should part with their shares; 16,807–16,815. Within certain limitations, running powers should be universal; benefit that would result therefrom; how rates might be fixed and arrangements limited. A company having running powers can deliver and take traffic to any station on the line, but not take up local traffic; 16,816–16,823. 16,827–16,832. Has not experienced any unwillingness on the part of any company to book through; is much more frequent now; 16,824–16,826. Should be a board of appeal to decide questions between different companies; how it should be constituted; its power. Why decision of the judge should be subject to appeal; 16,833–16,844. No difficulty now in companies appointing arbitrators, and abiding by their decisions; 16,845–16,847. Should be general running power to secure the

BIDDER, MR. GEORGE PARKER—*cont.*

forwarding of traffic between neighbouring railways; 16,848–16,850. Nothing can be worse than present law as to rating. General amount of rating of railways cannot be less than half or three-quarters of a million. Heavy expense to railways resisting parochial assessment. Payments made should go to the State and not to the parish. How value of railways for rating purposes ascertained. Land taken for railway should be valued as agricultural land if in an agricultural parish or as building land if in a town, and rate made accordingly; 16,851–16,858. Does not know whether canals are rated; docks are, but does not know how rates fixed; 16,859–16,861. Present system of compensation for injuries to passengers unjust upon railway companies. Neither inquiry by jury or by Board of Trade satisfactory. Suggests that every one travelling should be charged an insurance rate, which should not be more than half the risk incurred; difference between payment received and sum awarded or given should be borne by the railways jointly; advantages of such a scheme. Fixed amount should be 300*l.* for first class, 200*l.* for second, and 100*l.* for third. If a man valued himself at 50,000*l.* or upwards, should pay an additional sum; 16,862–16,866. 16,869, 16,870. Cases of injury 20 or 30 times as numerous as cases of death; accidents resulting in serious compensation not numerous. Sum awarded to a man injured on Harwich line; 16,867, 16,868. Companies should be compelled to insure at all railway stations; would entail a little additional trouble in issuing an insurance ticket; if person killed, ticket might be lost. Passengers should have option either to insure for separate journeys or for life; 16,871–16,876.

Further examination.

Substitutes in place of answer to question 16,848 "that "running powers should be generally granted" the answer "that companies should have power to forward "all goods over neighbouring lines or portions thereof, "allowing same rate as they are charging; and if com- "pany receiving traffic disapproves of such rate, there "should be an appeal to arbitration, and any increase "allowed should apply to the past as well as to the "future;" explains operation of such a plan, and why it would not involve frequent reference to arbitration. Would be impossible to construct a tariff of charges to meet all cases. If traffic only likely to last a short time manager would have to consider this in making the contract; 16,961–16,968. 16,975. 16,977–16,983. Fish and other perishable articles often damaged and miss the market from difficulty experienced in forwarding on. Companies have occasionally to make compensation for loss arising from delay. Proper notice should be given to companies in order that arrangements might be made to forward trains. Traders should be able to know at once the rates for traffic to enable them to make contracts; 16,969–16,974. 16,976. Has no recommendation to make respecting general passenger traffic or any alteration as to rates for perishable articles. Arrangements should be made, if possible, that coals, iron, stones, bricks, manure, and some articles of agricultural produce should be conveyed at rates which are quite exceptional to anything at present existing. Idea of Mr. G. Stephenson to construct a line from Derbyshire coalfield to London, expressly for mineral traffic, was abandoned; has since been taken up by Mr. Hawkshaw. How such a railway should be constructed. Two bills introduced by Great Eastern in 1863 and 1864 for this purpose were defeated. Is certain that such a railway would be successful; would be a great relief to manufacturers and consumers of coal, and advantageous to public. Thinks such a line could carry coal at ¼*d.* per ton per mile with profit; would be a charge of 9*d.* per ton for use of waggons, and 5*d.* for terminals. Might run one passenger train a day for labourers and artizans at ¼*d.* per mile. Cost of construction should not exceed 1,000*l.* per mile; course of mineral railway, and length; speed should not exceed 15 miles per hour. Such a line would save cost and damage to trucks from shunting; cost from this cause very great at Rugby. Would only have coaling and watering stations; 16,984–16,997, 17,006–17,010, 17,031, 17,069. From Darlington total rate would be about 6*s.* 2*d.* per ton, or about the same as sea colliers charge; coal conveyed by railway worth more than by sea; 16,998, 16,704, 16,705. New company would not have any difficulty as to station accommodation in London. Railway would have the means of disseminating coal throughout a very large district now shut out from a supply. Doubts whether it would interfere with coal that comes by Great Northern, North-western, or Great Western lines. Cost of new stations would be covered

BIDDER, MR. GEORGE PARKER—*cont.*

by the 5*d.* terminal. Railway would limit itself as to coal. About a million and a half of tons of coal consumed among poor population inhabiting eastern parts of London, which railway would supply; could also supply the intermediate country districts; 16,999–17,003. 17,018. 500 tons of coal a full train load. Quantity taken by Great Northern and North-western, and between Dunkirk and Paris. A tender is used as well as an engine where there are gradients. Gives gradients on suggested coal railway; hands in a plan showing comparative gradients from Doncaster to Peterborough and then to London. Has not considered whether construction of mineral lines generally would be advisable; line suggested would have been unaggressive; 17,011–17,017. Advantages of getting bricks and stones to London at ¼*d.* per mile. Trucks might take back manure and timber; need not cause their delay; would be branches into brickfields and quarries. Neither Great Northern nor Great Eastern carry bricks; 17,019–17,021, 17,023–17,030. 17,067. Line proposed would have been single; 17,022. Cost of working railway traffic; gives the various items; doubts whether all companies adopt same mode of classifying their items of expense; why charge heavy at present time. Duration of rails and sleepers. Thinks maintenance of way will not increase; economy to keep way in good order. Ordinary mineral trains run up to 40 miles an hour. Cost of maintaining way in a great measure due to heavy mineral trains and engines; 17,032–17,062. 17,068. 17,070. 17,139–17,143. Train of 400 tons at ¼*d.* per ton would produce about average earnings on Midland; if return traffic obtained cost would be reduced; 17,063–17,066. Could arrange a plan upon which all Board of Trade returns should be furnished; is an uncertainty about them now. Is no reason why they should not be all uniform; thinks companies would object to make them; 17,071–17,078. How cost of station work and shunting is arrived at; 17,079, 17,080. Could calculate pretty accurately and separate cost of passenger and goods traffic. Why expense of roads, stations, and bridges should be separately set out; 17,081–17,084. No prospect of any general reduction in cost of working railways. Advantages and economy of using steel rails. Price of labour on railways increasing; 17,085–17,089. Reason why number of accidents will not be lessened. General use of the telegraph considerably increases safety of travellers. Present amount of traffic could scarcely be worked without it; first used on Blackwall line. Doubts whether number of accidents has decreased in proportion to amount of travelling. Averse to any legislative enactment as to safety of passengers. Does not know of any arising from imperfect maintenance of way. Having four lines of rail would diminish number, but would rather have two separate lines of railway. North-western have a third line down to Bletchley; is a great relief to their mineral traffic; 17,090–17,105. Should have at head station the rates tabulated for reference, and at local stations rates applicable only to traffic of district. Terminal charge should be distinguished from mileage rate; companies would not object to publish terminal at each station; they would merely give clearing-house rate; in some cases they would not be able to show that this was reasonable. Reason why witness fears whether his recommendation that station to station rate should merely be actual cost, and th at everything else should be included under the term terminal charge, could be carried out; 17,106–17,116, 17,121–17,126. Believes scale of terminal charge adopted by clearing house is very fair as between companies, but is not aware how far it represents actual cost and interest of capital involved at stations. Considers railways are doing their work at a fair rate; if so, does not matter to public how rate made up. Motive public have in wishing to know company's charge for terminals; 17,117–17,120. Average charge of locomotion for all trains according to Board of Trade returns is 8½*d.* per train mile; does not include interest on capital. Average for passenger trains would be rather less if separated. Cost of locomotion for a short train greater than for a long one. Cannot state cost of locomotion for an engine alone, or cost of wear and tear of the carriage itself; a reference to contract made with North Staffordshire might supply this information; 17,127–17,138. In what way a company limited as to number of its proprietors would be likely to reduce cost of working. Mentions a plan proposed by witness to Great Eastern board with a view of getting work well done, and reducing peculation; scheme shelved; why such a plan not adopted by present companies; 17,144–17,153. In present state of the law thinks companies cannot let a line to a small number of individuals; was done in the case of the

BIDDER, MR. GEORGE PARKER—*cont.*

South Staffordshire; if an Act passed for this purpose companies would avail themselves of it; 17,154–17,159. Disposition of Parliament this year is rather to prevent companies which are got up without any capital obtaining Acts of Parliament; is one Committee in the House of Commons called "The Slaying Committee," which has slain every bill got up for speculation purposes, without having a *bonâ fide* capital, as also those interposing another liability before the existing debentures. Is not altogether unfavourable to speculative lines. No interference with present system of legislation as to new schemes would very much improve matters. Railways *bonâ fide* got up and supported by landholders ought to be supported. Large companies would also encourage these lines, unless they opened out a district to a rival company; 17,160–17,167. If whole conditions known upon which contractors undertook construction of railway, the public should be allowed to furnish rest of money if they thought proper; 17,168–17,170. Cannot say what line would cost per mile if land obtained at its agricultural value, and all unnecessary expense avoided; permanent way will cost 2,500*l.* for a single line, provided there are no bridges or cuttings; estimate for a double line including stations is about 5,000*l.* per mile. Companies pay now about four times the agricultural value of the land. Cheapest line between Wimbledon and Croydon; mentions a case that happened in connexion with the purchase of the land for this railway; 17,171–17,178.

Paper referred to by witness:—Copy of contract for working the North Staffordshire Railway; *App.* CL.

BIRKENHEAD:

Answer of Great Western Company to complaints (contained in Appendix) as to warehousing at; *Grierson* 11,928. Statement from superintendent of docks at, as to practice of railway companies giving warehouse room free of rent; *App.* T.

BIRMINGHAM:

Unfairness of railway charges at; *Wright* 626–631. Competition at, prevented by combination; *ib.* 653–656. Explanation in answer to this on the part of the North-western Company; *Cawkwell* 11,762. Explanation in answer on the part of the Great Western Company, with table in support of explanation; *Grierson* 11,941–11,954. For the carriage of goods between Birmingham and London there are three railways, and one canal, and between Birmingham and Liverpool two railways and two canals; *ib.* 11,955. Answer in justification of system pursued by Midland Railway, and statement that in much of his evidence Mr. Wright is altogether mistaken; *Allport* 12,390. *et seq.* Witness knows of no town which has improved under the railway system more than Birmingham. The population returns and the trade will show that it has increased probably more than any town in the kingdom; *ib.* 12,412. Memorial from corn merchants at; *App.* E.

BLACKBURN, MR. JAMES. (*Analysis of his Evidence.*)

Is president of the Rochdale Merchants' and Tradesmen's Association; 1288. Complains of the want of accommodation, and states that there are not so many trains to Rochdale as to other places of much less importance, and that higher rates are charged from Rochdale than from several other places of less distance; gives illustrations. Their ordinary fares are above what the Act of Parliament allows; 1289–1330. The railway has bought the interest in the canal, so that all the goods traffic is in their own hands, and they can charge what rates they think proper; 1331, 1332. States that on Sunday there is no train from Manchester to Rochdale between 10 o'clock in the morning and 5 o'clock in the evening, whilst to Oldham there are three or four in that time; 1333–1344.

BOARD OF TRADE:

Letter from, as to the power of Parliament to revise railway rates and tolls; *App.* BM. Statement from, on railway charges for conveying rockets for saving life from shipwreck; *App.* CO. Letter from, on the subject of terminal charges, 25 May 1866; *App.* CR. Letter from Mr. R. Dudley Baxter on the system of amortization of railway capital in France and other continental countries; *App.* DJ.

See also APPEAL, COURT OF. GOVERNMENT ASSISTANCE, &c.

BOARD OF TRADE RETURNS:

No reason why returns to Board of Trade should not be uniform; companies would perhaps object, but it would make them very useful. Present returns are reliable, if data upon which founded be clearly understood; *Bidder* 17,071–17,080. Passenger and goods traffic, and expenses of maintenance, might be accurately distinguished; *ib.* 17,081–17,083. Desirable that expenses of companies should be shown in greater detail; *ib.* 17,084.

BOILEAU, MR. JOHN GEORGE. (*Analysis of his Evidence.*)

Is a wheat merchant of Dublin; 6802. Has for a considerable time directed his attention to system pursued upon Irish railways. Is of opinion that the proper development of the commerce of the country can only be effected by cheap rates both for passengers and goods. Trade in white paint seriously inconvenienced by Great Southern and Western line charging 20*s.* per ton, whereas it can be brought by steamer from Liverpool and Bristol for 10*s.* Present through-rate system organized by London and North-western line, and co-operated with by Irish railways, has proved most detrimental to traders of Dublin; gives an instance. A person leaving Dublin for Belfast will have to travel over three or four different lines whose interest should be identical, but whose operations are antagonistic, and consequently traffic in every way suffers. States that the express train from Dublin arrives in Belfast just one hour too late to catch steamer which sails each evening for Scotland. This accounts for letters taking nearly two days to go from Dublin to Scotland. How delay may be obviated. Dublin trader suffers from carriage to such towns as Armagh, Enniskillen, &c., being so high that the shopkeepers there cannot come to Dublin, but are confined to Belfast. Great complaints of the high rates charged by Midland Great Western Company. Dublin merchants in sending goods to west of Ireland very frequently ship them by steamer to Liverpool, and thence by steamer to Sligo and Westport, and save considerably by so doing. Dublin and Kingstown Railway have reduced fares, owing to opposition caused by river steamers and by omnibus. Frequent changing of time-table on the Dublin and Wicklow line has been loudly complained of. Has frequently to make a reduction off the carriage paid, or correspondent would transfer his dealings elsewhere. If traders could get their goods as cheap from Dublin as from English outports, much of their business would be sent to Dublin. In consequence of expensive mode of conducting railways, directors cannot venture such experiment as reduction of rates. Has prepared tabular statement, showing charges on articles in large daily consumption. Gives evidence obtained from firm of Alexanders and Co., wholesale druggists, who complain of the high rates charged for goods and small parcels. Inconvenient arrangements made by Midland Great Western line for goods traffic; quotes rates paid for parcels; 6803–6805. If Midland line reduced fares from Dublin to Galway (126 miles) one-third, poor people who now walk would be induced to use the railway. Thinks such reduction would pay the company; 6806–6811. 6816. This railway company have made a special rate for harvest men; but they only did so when they were compelled; 6812–6815.

BOLTON AND LEIGH RAILWAY COMPANY. *See* CLARK, MR. C.

BONDS:

Statement of mortgage debentures, bonds, and other loans of Irish railways from the commencement, showing amounts, rates of interest, dates at which to be repaid, &c.; *App.* AW.

See also GOVERNMENT ASSISTANCE.

BORROWING POWERS:

Necessary and easy to keep companies right with their borrowing powers; *Sherriff* 16,324.

Argument to show that amount of debentures which railways should be authorized to issue should be in respect of the value and not of the cost; the one being a security, whereas the other is no security at all, though up to period of opening of line, issue should be limited; *Bidder* 16,595, 16,596. Debentures are not, as is commonly supposed, the first charge on railways. Instance given, showing that contract debts come in in priority before them. Public is deluded on this subject, under sanction of Legislature. Lloyd's bonds for work done, take precedence over all debentures of subsequent date; *ib.* 16,597, 16,598. Parliament should take care that public is not deceived by taking up railway securities

Borrowing Powers—*cont.*

without the fullest information. The most complete publicity of expenditure and liabilities should be compulsory upon companies, and public should then be left to advance money to them to what extent, and upon such terms, as they think fit; *ib.* 16,599–16,603. 17,168, 17,169. There would be no difficulty in assimilating proceedings of companies having Acts with those which have not; Parliament would see that existing contracts were fulfilled before they were cancelled. Manner in which clause 2 of Companies Clauses Act is evaded, expenses of working line getting a priority over all existing liabilities without its being recognized; *ib.* 16,604, 16,605. Argument to show that working expenses must take priority; recent legislation on this subject; *ib.* 16,606–16,610. 16,617–16,619. Parliament should see that any proposed scheme is a really useful public work, and enforce the fullest publicity at frequent intervals of accounts, liabilities, &c., and then leave companies to raise whatever they require on the best terms they are able, and in what proportions of debenture, ordinary, and preference capital they think fit; *ib.* 16,610–16,615. If Government guaranteed debentures, theirs would be the first charge; *ib.* 16,616. Companies wishing to borrow should be allowed to do so in the way they think best, after putting forth a correct and particular statement of all possible liabilities; if publication of an incorrect statement were made a misdemeanor, witness believes it would prevent any attempt at concealment. Companies then would not need to go to Parliament for increase of capital, unless they required additional land. This would really abolish limit to borrowing powers, and enable companies to use their credit like other commercial bodies for raising money; they would, witness believes, obtain better terms than now. New advances must always be subject to previous charges; *ib.* 16,710–16,732. To what other companies same principle might be applied; *ib.* 16,735, 16,736.

Bourn Districts:

Comparative statement of grain rates from Bourn districts with Northampton, Norfolk, and other barley districts to Burton-on-Trent; *App.* BI.

Brady, Mr. Thomas F. (*Analysis of his Evidence.*)

Is secretary to Special Commission on Irish Fisheries, and late inspector of fisheries in Ireland; 3182, 3183. Is acquainted with state of all the Irish fisheries. Describes the best coasts for sea fisheries, and enumerates their products; 3184–3186. Since 1844 population employed in fisheries decreased; 3187, 3188. Extension of Irish railways has not led to any increase in produce of fisheries; facilities of transit are insufficient; 3189, 3190. Before extension of railways chief market for fish taken on west coast was in the interior, but now it is sent to Dublin, and from thence to all the principal towns in England. In seaport towns there is a falling off in the demand for fish. Supply in Dublin unequal to demand; 3191–3194. 3275. High rates tend to depress the trade. Better facilities for getting fish away since introduction of railways. States cause of decrease in the trade; 3195–3200. Jolters or hawkers buy the fish at the boats and send it to Dublin. Price of fish risen in consequence of great demand for English market; gives route by which it is sent, and price at the market, and also price paid by hawkers to fishermen. If greater facilities were afforded, fishermen could send their fish direct to factor in Dublin; 3201–3223. 3231, 3232. 3245, 3246. 3248–3257. Quotes rates for fish by certain railways. Midland Railway charge unequal rates in proportion to mileage. Complaints made of inequality, but there has been no alteration. Discussion as to how far a reduction of rates would affect the price of fish. Reasons why fishermen do not send their own fish to market, and thus do away with the middlemen's profit; 3224–3230. 3233–3244. 3247. 3263. 3266–3269. Great many middlemen make large profits. There are no markets where fish is caught, it is sold on the strand in bulk. In some cases there is competition; 3258–3262. Custom of this class of people to sell goods to agents; 3264, 3265. If the fish is spoilt on the journey, profit of middlemen considerably reduced; 3269–3271, 3310–3314. Railways have not benefited the fisheries to the extent contemplated; 3263. 3274. Except at Galway the fisheries on the west coast have not suffered from a trades-union system. A fishing company was established there, and was well supported by the fishermen, but it failed from mismanagement, and not from any obstructions by the people or the railway company; 3276–3282. 3284. Want of private enterprise is the root of much of the evil existing in Ireland; 3283. Railway company at Galway

Brady, Mr. Thomas F.—*cont.*

afford every facility; quantity of fish carried by that line in 1852, and where collected; 3285–3291. Reduction of rates would increase quantity sent from Sligo and Ballina, as it has to be carted 16 or 18 miles. Salmon sent from Ballina round north coast by smacks at much less expense than by railway; 3292–3296. 3298–3301. Interviews between Irish Fishery Commissioners and directors of Irish railways; 3297. 3330–3332. No uncertainty in the fishing trade. Galway train starts at 12 o'clock at night, and the boats are all in before that time. A similar train from Sligo or Castlebar would be of great advantage. In some places coarse fish are packed in ice. In such case a few hours' delay is not of much consequence; 3301–3305. Large take of fish at Kinsale last year. There is a good supply in Dublin Bay, but these are not affected by railway carriage. City of Dublin badly supplied with fish, as it is sent off to English market. Reads extracts from Reports of Commissioners, in which they state that moderate rates, especially for small parcels, and quick transit, would benefit the fish trade in certain districts, but that in 1855 the rates were increased from Cork and Dublin. Discussion upon this increase; 3305–3310. 3315–3329. Encouragement to fishermen on western coast, if a reduction were made in freight, and facilities of transit increased. The Great Southern and Western line make up a train when they have large packages of fish. Witness would have trucks attached to ordinary trains to carry the fish. There are no special trains for fish. It is a long time reaching the market, being generally sent by goods train at inconvenient hours. Fish caught at Castlebar on Monday does not get into Dublin market till Wednesday morning, there being no mail train; 3333–3343. General complaints made of want of accommodation on the Great Southern and Western line; 3344–3346. Insufficiency can hardly be attributed to fact, that being a poor country with limited traffic, companies cannot afford to run cheap trains. How requirements of Castlereagh district could be met. Reason why there is no night train from Castlebar to Castlereagh; 3350–3356. Difficulties in getting from place to place by trains not running in connexion with one another. This would be remedied if there were not so many opposing interests; 3357, 3358. Third-class accommodation very bad in Ireland. In consequence of the delay it costs a passenger in the end more to travel third-class to the Dublin markets than if he had gone first-class; 3359–3362.

Branch Railways. *See* Extension of Railway System.

Brentnall, Mr. Thomas P. (*Analysis of his Evidence.*)

Is a coal merchant at Nottingham; attends on behalf of the Association of Trade Societies there, which has agencies and correspondents in about 2,000 towns, both in the United Kingdom and abroad; 9818–9822. Is practically acquainted with the coal trade. Midland Company used to deliver to about 50 or 60 persons, (consisting of coal merchants and private dealers), but about six months ago they selected nine of the largest consumers or sellers of coal at Nottingham to whom they gave sidings; all the rest who were refused lost their business by the railway; reason company gave for this proceeding. Company issued a circular to the collieries instructing them to sell only to the nine; had no right to do so. Was a great deal of difficulty and confusion when so many were supplied at same wharf. Small dealers can get coals by having them in the name of one of the nine; have to pay about 3*d.* per ton for the accommodation; as this is more than the average profit upon slack, this trade is monopolized by the nine; 9823–9836. 9839, 9840. 9848–9850. 9863. 9882–9889. Company do not charge the nine rent for the siding, but expect them to take an office for which a rent is charged. Took away witness's siding without notice, and wanted to charge half a year's rent for the office; defended case in County Court of Nottingham, and gained a verdict; 9837, 9838. There is a railway communication direct to Nottingham collieries, and the canal to certain portions of colliery districts; 9841. Has a canal wharf at Nottingham, so has not been affected by the alteration as much as some others. Alteration has not raised price of coals more than 6*d.* per ton; inhabitants generally opposed to it; 9842–9844. 9851, 9852. 9855–9858. Thinks the nine make greater profits, as they are enabled to make better terms with the collieries; does not think any of them are connected with the railway; 9845–9847. Rates on Erewash Canal similar to railway; belongs to Great Northern; 9853, 9854. 9891, 9892. Explains phrase in

Brentnall, Mr. Thomas P.—*cont.*
Mr. Mellor's letter, wherein he states that company charge a demurrage upon waggons which cannot be approached. Believes legality of this charge has never been tested; one merchant made attempts to do so; knows the case where some coals were left upon the line, because merchant to whom they were sent was not one of the nine; 9859–9862. Legality of refusal to carry for the public has been tested in one case; is not aware whether decision was in favour of the company; Mr. Hutchinson tried to get some coals down the other way, to test the question through the Protection Society, but no one would send him any; reasons; 9863–9873. Most of the large collieries supply the nine; witness gets supplied by water; 9874. Great deal of dissatisfaction at first felt by colliery proprietors at change; now seem more satisfied. Has no doubt that some of them are connected with the railway; the selected nine are not; are merely coal merchants; 9874-9881. Would be a benefit if Great Northern or some other company had a branch into the coal fields; 9890. 9893–9895. Midland Railway should extend their accommodation to other dealers; 9896–9898.

Brewing Trade of Burton-upon-Trent. *See* Allport, Further examination, (3.) Cosgrove. Rates and Charges, &c., 2.

Bristol:
Memorial from Chamber of Commerce of, complaining of unfair and unequal rates on timber, rice, &c., particularly as compared with Newport; suggesting better arrangements with respect to passengers' luggage and obtaining tickets; reduction of fares; third-class carriages to all except express trains; smoking carriages; punctuality; communication between passengers and guard; periodical revision of rates by Board of Trade; *Low* 13,882. 13,932–13,946. To a certain extent Liverpool may have same complaint against Bristol that Bristol has against Newport; *ib.* 13,914–13,918. Complaint from carriage-makers of Bristol and Bath of rates on carriages to London; *ib.* 13,919–13,929.
Declared real value of total exports from port of, in 1863; *App.* B.

Brokers, &c.:
Memorial of, and others interested in the commerce of London, to the chairman and directors of railway companies connected with the Metropolis; *App.* CQ.

Brown, Mr. John Nurthall. (*Analysis of his Evidence.*)
Is general manager of Cannock Chase Colliery Company and Lintz colliery, and director of Gloucester Waggon Company, Patent Shaft and Axletree Company, &c. Was formerly general manager of South Staffordshire railway; 11,070, 11,071. Has had 30 years' experience in canal and railway traffic. States capabilities of collieries, and number of tons sent weekly by railway. Colliery on South Staffordshire branch of London and North-western railway; 11,072–11,076. In consequence of the delays that take place in sending and returning waggons, coal traffic is not worked satisfactorily. Has 800 waggons, and 200 or 300 private ones in addition. Estimates loss by demurrage at 3,000*l.* per annum, besides loss of traffic and damage to colliery; 11,077–11,083. Is compelled to have more waggons than would otherwise be necessary to work traffic. Thinks it takes about 50 per cent. more to work a given quantity of traffic than formerly. If whole stock of country belonged to clearing house, traffic could be worked with one-half of present quantity, but doubts whether railway companies and collieries would get a fair share of them; question discussed. Companies put coal and mineral traffic on one side for goods and other traffic subject to demurrage. Reason why witness considers that want of locomotive power and station accommodation is the great cause of detention; 11,084–11,094. 11,165–11,182. Thinks companies do not give any preference to their own waggons over those of another company, but give a preference over those of private owners, even when they are carrying same sort of traffic. If companies do not work their trucks through within a certain time they are liable to demurrage, but in case of private waggons they charge demurrage to the owners. Gives several instances of delay that have taken place upon sending goods to Bishop's Waltham and Reading, and the course companies pursue when the waggons get damaged. Quotes clearing house regulations showing that railway companies would be compelled to repair waggons belonging to another company; 11,095–11,116. Could recover loss caused by collision from companies, but would incur

Brown, Mr. John Nurthall—*cont.*
their displeasure. Reads replies to several letters complaining of delays, and puts in a statement of the working of the waggons from August 1864 to August 1865, and will put in a table showing a month's working for each company with whom witness does business; 11,117–11,124. Thinks if clearing house regulations were made applicable to mineral waggons (whether number owned by traders be large or small) the present evils would not exist; discussion thereupon. Would necessitate clearing house keeping a great many separate accounts, and create a little more trouble to railway companies; would be prepared to pay for additional trouble given. Traders having a small quantity of traffic would not find it worth their while to find their own waggons; would probably increase those in hands of private traders; 11,125–11,142. 11,146–11,152. Mentions railways that find waggons for mineral traffic; 11,143–11,145. In the case of traders sending as small a number as five waggons for a distance of 150 miles, the companies return them at their convenience. Would be unnecessary to make companies send back specially so small a number, as they need never be left behind. Should be some check in order to know where waggons are; two sent away six months ago have never been found; 11,153–11,155. Railway company only finds waggons from colliery at Newcastle-on-Tyne; they could find all if they please. Companies should have the option of finding waggons, provided they charged a reasonable sum for their use. Quotes difference made when companies find them; price charged pays; 11,156–11,162. In case of customers neglecting to unload a waggon within a certain time, companies charge for station siding room; reason why they are sometimes unable to enforce this charge; 11,163–11,164. Does not get a through rate to all stations to which coal is sent. Names railways that do not give them; has through rates to all stations on the Brighton line, but none by Midland to Gloucester and Bristol. Has a through rate to one or two stations only on the London and South-western, and one from Wednesbury station, but not from the colliery. Reason why Midland company refuse to give them. Companies should be compelled to give them. States that if a waggon leaves colliery for Southampton, there are three charges and declarations required. Great inconvenience arises sometimes from waggons being detained, in consequence of non-arrival or miscarriage of declaration. Gives instances of great delays that take place at junctions, particularly at Wednesbury and Reading, in consequence of want of locomotive power and siding-room accommodation; 11,183–11,195. 11,199–11,201. 11,203. 11,208, 11,209. Has a mileage rate applicable to London and North-western only. Quotes rates per ton per mile for certain distances. Companies refuse in many cases to give a list of rates; inconvenience that results therefrom; desirable that all rates should be published, and if special arrangements made, should be applicable to all parties; 11,196–11,198. 11,202. 11,204–11,206. 11,245–11,247. Companies make differential rates in favour of one part of country as against another part; 11,207. Gets favourable rates from Midland, but not so favourable as those from Derbyshire and Leicestershire. Derbyshire coal comes into market at same price for carriage as witness's coal, although distance 30 or 40 miles further. Should be an equal mileage rate, so that each firm or district should possess the advantages or disadvantages of its position. Reason why witness does not send coal to north-east of England, Midland companies Leicestershire and Derbyshire fields supply that district, with the exception of portion of district between Birmingham and Bristol and the west supplied by witness. Derbyshire coal owners can get a through rate to compete with witness at Gloucester and Bristol, but cannot get a through rate to compete with them at Lincoln or Hull; reason why companies refuse to give a through rate. Does not complain of any particular railway, but of the system; 11,210–11,227. Should be equal mileage rates exclusive of terminals for each class of traffic. Maximum rates fixed by Act of Parliament are merely for haulage, and do not include terminals, risk, porterage, loading or unloading, station accommodation, &c., &c.; should be a maximum fixed by Act for all these points. All rates should be calculated upon the shortest railway distance; for instance, goods rate from Birmingham to London by Great Western should not be higher than those sent by London and North-western; this applies to the maximum, as companies should be at liberty to charge as low as they please. Should be a minimum charge for short distances, and no company compelled to carry for five or six miles without a fixed charge; might carry below that charge if they thought

Brown, Mr. John Nurthall—*cont.*

proper; 11,228–11,244. Should be a universal fixed charge for station accommodation, including porterage, with liberty to reduce at any station; does not think there would be much difference. Should also be a fixed charge for cartage throughout country, and an exception made for such a place as London, which might be higher. Cost of delivery in Liverpool less than in London; 11,248–11,252. Companies should be under legal obligation to cart, collect, and deliver all goods traffic, except those articles which appear in the mineral class in clearing house regulations, and special articles, such for instance as large boilers, &c. Would limit the distance from stations at which they are to collect; would not compel them to cart where they have no carting establishment; 11,253–11,269.

Statement of Cannock Chase Colliery Company's waggons which have been delayed or damaged by certain railway companies; *App.* BN.

Brussels:

Statement laid before the Chamber of Representatives, March 7, 1865, concerning tariff for passengers and luggage on the railways of the State; *App.* N.

Brydges, Mr. Charles John. (*Analysis of his Evidence.*)

Is general manager of the Grand Trunk of Canada Railway; 5375. Principal lines, Grand Trunk amongst others, have received aid from Government. Amount afforded, capital expended, and interest to be paid; 5376–5380. At first Government appointed a certain number of directors to control railways, but now railways are managed by parties appointed by share and bond holders. Government directors found to be inconvenient with regard to political matters in the colony; now exercises no control over railway beyond any included in the Act authorizing railway. Can only interfere in regard to the rates, a maximum rate being fixed by Act for one portion only of the Grand Trunk Railway. The fares actually charged are much lower than those fixed over portion of the line from Montreal to Toronto. Competition as strong there as any other part. From Quebec to Portland passenger rates do not vary very much; for goods there is a regular scale; 5381–5392. Quotes average rates for passengers; has only two classes. Return tickets at a reduction of 25 per cent. are in some cases only issued to the lower class passengers, but almost invariably to the first class. Has also an emigrant class which is used for one description of traffic; 5393–5401. Fares have been reduced in the last three years from 25 to 30 per cent., and there has been a considerable increase of traffic, and also in the receipts; 5402–5407. The table of fares and rates must be submitted to the Governor-General in Council, who could reject it and direct something lower. There never having been an appeal, proof that public is satisfied; 5408–5412. Has considerable cattle traffic; rates vary according to time of year; 5413–5415. In some cases through rate 30 or 40 per cent. lower for passengers and goods than usual rate. Rates lower than in England; description of traffic. Rates generally rather lower than on the American railways, arising from fact of Grand Trunk competing for rather shorter distances to get to same points, and from having more direct water competition; 5416–5423. Post office send their mails by the railway; how rate of payment determined, and number of mails per day; 5424–5436. With exception to the limit to one portion of line, railways are as free in respect of charging rates as English companies. Question never been raised to reduce maximum rates. Thinks there is general satisfaction with rates. Lines in Canada in hands of three or four companies; gives names and routes; 5437–5441. Grand Trunk Railway has no security either for a limited period or in perpetuity against competing lines. Is at the risk of Canadian Legislature sanctioning competing lines. Competition, principally by lake or river, over nearly the whole of the system; 5442–5451.

Bullar, Mr. John:

Statement as to want of railway accommodation at Putney; *App.* S. Statement of, as to through booking; *App.* AD. Cannock Chase Colliery:

Statement of Cannock Chase Colliery Company's waggons which have been damaged or delayed by certain railway companies; *App.* BN.

Capital:

Capital invested in railways,—in 1844 about 70,000,000*l.*, in 1865 about 450,000,000*l.*; *Galt* 7342, 7343.

Lines should always be made on the commercial principle; contractors, landowners, &c. should not be paid in shares; capital should all be brought to credit in cash; *Hancock* 7610–7622.

Present disposition of Parliament is not to grant Acts to companies without capital; *Bidder* 17,160, 17,161. Many companies could not be got up without speculation; witness does not see how present system could be improved; *ib.* 17,162, 17,163. Landowners' lines should be encouraged, by compelling large companies to work them at 50 per cent. Present irregular methods of raising capital should be done away with. Capital should be *bonâ fide* raised in some way or other, in what manner should be stated, and public then left to act as they think fit; *ib.* 17,164–17,170.

List of Irish railway companies incorporated previously to 1855, who obtained powers to make new railways and to raise capital for the construction of the same in 1855 and subsequent years; the length of such lines and capital authorized, together with the length of such lines opened for traffic at 31st December 1864; *App.* AJ. List of Irish railway companies incorporated in 1855 and in each succeeding year, showing the length of railway and capital authorized, the length open at 31st December 1864, and capital raised to the same date; *App.* AK. Return by the several railway companies in Ireland of their authorized share and loan capital, and of the sums received in respect of their ordinary capital and preferential capital, and debenture stock or funded debt on 31st December 1863, specifying the rate per cent. of the dividends for 1863 on each of the said capital; showing also the loans outstanding on 31st December 1863, classified according to the several rates per cent. of interest; and the capital authorized and paid up, for subscriptions to other undertakings, whether such are on lease to or worked by the subscribing company, or are independent; *App.* AA. Table showing for the railways in Ireland—1. The capital authorized; 2. The capital raised on ordinary shares, preference shares, debenture stock, and loans, from 31st December 1861 to 1864 respectively; and as regards the lines opened,—3. The receipts from traffic, and the working expenses during those years. 4. The interest on preference and guaranteed shares and debenture stock, and on loans, calculated on the amounts paid up on 31st December in each year; and 5. The proportion per cent. which the surplus income bears to the ordinary share capital, and the proportion per cent. which the net receipts bear to total capital; *App.* AB. Letter from Mr. R. C. Dudley Baxter on the system of amortization of railway capital in France and other continental countries; *App.* DJ. Particulars as to the capital, &c., of the railways in Belgium; *App.* DO.

Capital Account:

Value of preference stocks is at present reduced from the different classes and variety which exist; their consolidation, witness believes, would increase their value; difficulties, and how to be removed; recommendations from this Commission would probably clear the way; *Bidder* 16,700–16,709.

Carriages:

Plan of first-class carriages in use on Russian railways; *App.* CJ.

CARRIERS' ACT:

Railway companies take advantage of provisions of limiting liability for loss, &c. on certain goods to 10*l.*; *Nicholson* 8766–8768. Origin of the Act; *ib.* 8783. The 10*l.* clause should be repealed; *ib.* 8834. Defective classification in; *ib.* 8850.

Act could not be made applicable to railways, but companies should be subject to same rules as common carriers; *Corbett* 11,058, 11,059.

Witness sees no objection to a revision of present protection to carriers to meet altered state of things; *O'Brien* 12,310.

See also WILSON.

CARRYING POWERS OF RAILWAY AND CANAL COMPANIES. *See* RUNNING POWERS. WATER CONVEYANCE.

CARRYING ON RAILWAYS AND CANALS:

Should be open to everybody on payment of toll; *Wilson* 9954.

CARS, &C. IN IRELAND:

Instance of large number of passengers at Macroom from low fares caused by competition; cars are still very general in some parts; *Bewlay* 6963–6970. Instances of cars, omnibuses, and coaches competing successfully with railway; *ib.* 6979, 6980; *Bagot* 7021–7023; *Barrington* 7280.

CARTAGE. *See* RATES AND CHARGES, &C., 6.

CATHEDRAL TOWNS:

Comparison of the railway service in France and England between the metropolis and various celebrated cathedral towns; *App.* DM.

CATTLE TRADE, IRELAND:

Would be greatly stimulated and developed by better railway arrangements and a reduction of rates and fares; *Sullivan* 2088–2133. Consideration of, with reference to improved means of transport; sufferings of animals in travelling, and proposed remedy; *Mallet* 2238–2241. Dairy farms; discussion whether a profitable trade in milk could be established; *ib.* 2244–2249. In consequence of high rates, cattle are driven long distances instead of being sent by railway; *Ryan* 2685. High rates not the only cause of cattle being driven; *Longfield* 2810–2815. Decrease of cattle trade; *ib.* 2818, 2819. Cattle trade would be immensely increased by a reduction of 50 per cent. in the rates; *Earl of Lucan* 2977, 2978. Rates from parts of Ireland to London more than from Holland or Germany to London; most desirable to reach English markets; *ib.* 3030, 3031. Low rates would cause nearly all the cattle to be sent by railway; *ib.* 3051, 3052. Railway facilities cause increase of 5 per cent. in value of cattle; *Malcolmson* 3444. On Waterford and Limerick line cattle traffic has been the best source of income; trade decreasing from scarcity of cattle; present rates do not affect transmission, as railways carry nearly all; *ib.* 3470–3474. Dead meat traffic. Is reported that cattle are much bruised on their journey to London; principally store cattle which come through Waterford to be fattened in England; cattle less injured by steamer than by railway; *ib.* 3475. 3814. Two years ago the cattle traffic was increasing; a general falling off since; rates were advanced three years ago; *ib.* 3588–3592. If greater facilities were afforded, trade would increase; facts in support of this opinion; *Cooper* 3650, 3651. Whole stock of farmer travels once a year. If rates were lower, a large proportion would use railway that now travel by road. Does not think that railways carry the greater part of cattle in vicinity of the line; discussion as to how much the cattle travel; *ib.* 3652–3666. Complaints made of high rates, and opinion that a reduction of one-third would materially increase traffic; *ib.* 3663, 3664. 3690. Rates nearly equal on all the railways; lowest on Waterford and Limerick, on which there is a great traffic; *ib.* 3665–3668. Almost all fat cattle go by railway; for distances under eight miles they would go by road; *ib.* 3671–3674. A reduction would not induce farmers to fatten more beasts; the increase would be in store cattle; *ib.* 3675–3678. Calves enumerated as horned cattle; *ib.* 3679. Delay in movement of cattle in large districts where there are no railways; in those counties cattle are raised to be fattened in dairy counties, so that one of the journeys would be partially made through districts where there are no railways; *ib.* 3680–3682. Points out

CATTLE TRADE, IRELAND—*cont.*

certain places where store cattle are driven from 50 to 100 miles, although in the vicinity of railways; discussion thereupon; *ib.* 3683–3689. 3697–3699. Comparison of rates on certain of the English and Irish lines; 3691–3696. 3700–3704. Thinks that only a small portion of the cattle driven along the road are disposed of on the way; *ib.* 3705. Cost of driving cattle from western part of county of Limerick to Ballinasloe fair, compared with railway charge; *ib.* 3706–3710. How calculation made that railway companies could reduce one-third; *ib.* 3711–3713. Reasons why three-fourths of the pigs are sent by railway; *ib.* 3714, 3715. Complaints made by drovers against the companies; *ib.* 3729. Condition and weight of animals much deteriorated by sending them long journeys on foot; number of miles per day fat and store cattle should be driven; reasons why store cattle are sent by railway although driving by road is cheaper; *ib.* 3730–3743. If rates were lower there would be more cattle traffic; grass-fed cattle are frequently walked 20 or 30 miles; *Hemans* 3817, 3818. If companies would make a large reduction in cattle rates, and bring back coal from Dublin for ½*d.* per ton per mile in the same trucks, it would pay in the end; *ib.* 3923. Midland Great Western cattle traffic at a standstill; this arises from scarcity. No reduction of fares would increase traffic; rates are reasonable; a small reduction recently made; reasons why fat cattle are sometimes driven; number of miles they go; injuries received in trucks not comparable to wear and tear along the road; cattle could not be driven so far in summer time; *Ennis* 4040–4049. 4053–4059. If rates were reduced there would be an increase in store cattle traffic, but it is doubtful whether it would be profitable. Facilities at every station for putting cattle into trucks. Numbers of store cattle still travel by road. Quantity carried limited by number of trucks possessed; at Ballinasloe fair the supply deficient, but at other fairs, when supply ample, do not get all the traffic; sometimes borrow rolling stock from other companies; *ib.* 4050–4052. 4060–4063. 4069–4071. Witness does not know proportion that travel by railway and by road, or proportion of the whole cattle that travel in a year; *ib.* 4064, 4065.

Particulars of cattle traffic on Great Southern and Western; cheap cattle rates tried, but proved a failure; *Haughton* 4595–4600. Very little store cattle driven more than 20 miles; *ib.* 4620. Conditions under which this traffic is conducted make it expensive to work; question discussed; *Murland* 4741–4759. Temporarily increased by bad harvests; *ib.* 4793. Particulars of cattle traffic between England and Ireland carried on by London and North-western Railway Company; *Cawkwell* 5121–5135. Reduction of cattle rates would increase income; *Earl of Clancarty* 6362. 6376–6378. If rates were reduced one half all the cattle in Ireland would be carried; *Meldon* 6743–6746. Cattle frequently driven to market to their great detriment in consequence of high rates; *Boileau* 6804; *Bewlay* 6982; *Bagot* 7042–7048; *Pim* 7099. But few horses go by railway, rates being too high; *ib.* 7099–7102. Great dissatisfaction at recent advance of cattle rates; *Barrington* 7280.

Abstracts from the half-yearly reports of the Midland Great Western Railway from July 1851 to June 1864, both inclusive, showing amount realized from cattle traffic in each half year; *App.* AG. Statement of cattle traffic on Great Southern and Western Railway of Ireland from 1846 to 1864; *App.* AH.

See also DEAD MEAT TRADE.

CAWKWELL, MR. WILLIAM. (*Analysis of his Evidence.*)

Is general manager of the London and North-western Railway; 5053. Acquainted with Irish railways generally, especially those in connexion with and going through Dublin. Has connexions through Fleetwood and Belfast with northern railways of Ireland; 5054. Had through booking for passengers between principal stations on North-western and Great Southern and Western lines; tried to get it for goods, but only partially succeeded. Have had great difficulties in bringing through booking into operation even with Great Southern and Western. States system of through booking for goods, and arrangements made with that company; 5055–5059. 5079. 5081–5085. Scarcely any through booking from Cork *viâ* Dublin in consequence of a differential rate of 20 per cent., which throws traffic upon the water. None from Greenore. An Act has been obtained for a railway from Dundalk to Greenore, and for the construction of a port at Greenore. Arrangements the London and North-western Company have made for the traffic; discussion thereupon; 5060–5064. 5090–

CAWKWELL, MR. WILLIAM—*cont.*

5095. Between Dublin and Limerick Junction the rates by railway or by sea route are the same. Gets a larger proportion of the traffic between Limerick Junction and Dublin, but does not get heavier traffic between Limerick and Waterford and down to Cork; 5065–5068. Is of opinion that railway traffic of Ireland has not yet been half developed. Steam packet interest in the way of trade being effectually developed; 5069–5072. Irish boards so mixed up with steam packet companies that railway companies do not get the advantages they should. In all divisions of traffic Irish companies have their local rates out first, and other companies have to sacrifice a portion of their receipts on the English side. Irish rates not lower than those of the London and North-western; 5073, 5074. How through booking rates divided; 5075, 5076. English rates for cattle in many cases lower than Irish; 5077. Some of the Irish railways managed with a view to profit steam packet companies rather than railways. Discussion as to liability to sea risk; 5078–5080. 5156, 5157. 5250–5260. When a board interested in steam packets the traffic rates will be fixed to favour their port; 5087, 5088. London and North-western have expended money in Dublin to secure a position upon the Liffey when traffic can be shipped and carried by steamer to Holyhead; has not spent money in Greenore; 5088–5095. Has never seen a letter (*handed in*) from Mr. Stephen Brown addressed to chairman of London and North-western Company respecting Dundalk and Greenore railway scheme; 5096–5098. Has through rates with the Midland Great Western from all the principal stations, and with Dublin and Drogheda; also with Ulster, by way of Fleetwood, upon condition that sea risk is taken. Mentions arrangements with the different companies as to through booking, and states that company has to pay the Dublin, Wicklow, and Wexford Railway Company 50 per cent. higher fares than are charged for the local traffic between Dublin and Kingstown out of the through fare, and pay station rent in Dublin and expense of clerks; 5099–5116. 5136–5141. Steam packet companies divide the traffic between Dublin and Holyhead as against Liverpool and Dublin. London and North-western authorized to run steamers between Holyhead and Dublin and Kingstown. Cannot put on boats to Greenore; 5117–5120. Carries cattle from Dublin to Manchester by way of Holyhead. Reason why they are not sent through Liverpool; through rate same by both routes. Not same rate from Holyhead to Manchester by railway as from Liverpool to Manchester. Carries traffic between Liverpool and Manchester to satisfaction of steam packet companies and the public; 5121–5134. By way of Holyhead the steamers and railways belong to London and North-western Company; by other route, the steam packet companies are paid, and difference charged on the railway; 5135, 5136. Traffic in goods from Ireland does not much increase. No reason why cattle traffic in Ireland should not be carried on as in Scotland, notwithstanding transhipment necessary to bring in traffic to England. Facilities afforded by Midland Great Western Company, and at Holyhead for sending this traffic to London; 5142–5145. If rates were materially reduced goods traffic would increase considerably; but companies would not get so large a profit as now. Great benefit would result from amalgamation in Ireland. Tried to make arrangement with respect to a group of railways which lie about Dundalk, but did not succeed owing to the different values of the properties; 5146–5149. Difficulty in putting a value upon non-paying dividend lines; might be assisted by borrowed money with regard to their loans; 5150, 5151. Irish railway companies cannot work together, and make their through arrangements as in England; 5152. Absence of through arrangements beneficial to steam packet companies; 5153, 5154. If traffic fairly dealt with between steam packet and railway interest does not think that either would be damaged. Is not aware of any case in England where traffic is encouraged in some particular direction by offering advantages to persons so to send it. Railway companies have a legal right to make their own rates and develop traffic in their own way; 5155–5161. Parliament could not compel companies to give equal rates for goods whether carried by railway or steamboat, unless they guaranteed them a reasonable dividend; 5162. If Irish railways were amalgamated under one company they could not be properly managed; might be divided into three or four systems; 5163, 5164. 5195. 5206. States length of system, gross receipts upon traffic of London and North-western and whole of Irish system. Reason why latter more difficult to manage; 5165–5169. A connecting link in Dublin between all railways that come into Dublin would materially facilitate general management; an Act has been obtained for the purpose, but scheme languishes for want of capital. It would even be to interest of London and North-western to contribute to have link supplied; 5165–5173. If railways could be under one management shareholders and the public would be much benefited; 5174–5179. If Government took Irish railways in hand they would find English companies ready to work them, and by allowing them 50 per cent. of the gross receipts they would have an interest in developing traffic; 5180. 5246–5249. Reasons why it is not advisable to lease lines to a limited liability company. Question discussed; 5181–5185. 5189–5194. 5198–5204. 5207. Upon amalgamation Irish railways would reduce their rates and develop a trade which does not now exist, and at same time secure a gain to the companies; 5186–5188. If all the southern railways were amalgamated into one company it would not be to their interest to carry all the traffic to Dublin so as to have the longest mileage; 5196, 5197. Thinks traffic from south of Ireland to Scotland is nearly all taken by sea; 5205. Beneficial results have followed where Government have assisted railways in agricultural countries in Europe. Does not see any objection to Governments proposing reduction and bearing loss until traffic increased; there would be no ultimate loss; 5208–5210. Irish system of management not satisfactory, and the mere conversion of the railways into two or three systems would not be attended with any important benefit unless there was some alteration made in the boards or some control by Government; 5211–5216. Has found it difficult to make arrangements, as boards of directors adhere to system of exacting local charges, cartage, &c. If Government appointed good commercial men as directors on Irish boards, matters would be improved; 5217–5221. Discussion as to whether goods can be shipped cheaper from Dundalk through to Manchester, or consigned to an agent at Liverpool to send on to Manchester; 5222–5236. At present there is no through arrangement with respect to coal; company is about to establish a trade by joining some of the Lancashire coal owners in making low rates to Liverpool for the purpose of shipping coal to Ireland. Coal owners have no shipping trade from Liverpool; is principally down to the northern ports. London and North-western Company have applied to Parliament for authority to make a line from Wigan to St. Helen's to join the St. Helen's railways, which will give an access to Widnes and Garston, considerable places for shipping purposes; 5237, 5238. No communication in Dublin between railways and wharves; if connecting link made it will come down to the quays; Bill before Parliament to make tramways along the quays; 5239. If arrangement with Lancashire coal owners carried out coals will be much cheaper in Dublin and in the interior of Ireland, and a large trade will be established; 5240–5245.

Further Examination.

Is general manager of London and North-western Company; 11,399. Will supply information as to system of traffic on that railway. Has read the evidence of witnesses from Liverpool and other towns; 11,400, 11,401. Explains statement made by Mr. Clark, that Liverpool is unfairly burdened with charges as compared with other towns, and also that rates for goods (particularly chemicals and timber) are higher from Liverpool to places inland than from eastern ports inland. Reasons why low rates given in instances named; 11,402–11,406. 11,410–11,415. Admits principle that where there is competition, lowest rates should be charged compatible with profit, and where it does not exist, the highest rate compatible with not driving off traffic. Benefit that results from carrying out this principle. Is not anxious to promote competition any further than is necessary for benefit of traffic. Where there is no competition, rates are limited by a consideration of possibility of future competition. Companies cannot impose very high traffic rates to any place where there is trade. Maximum rates are charged in some places and on some articles; 11,407–11,409. 11,416–11,420. Tendency to reduce rates since opening of railways. Has been no material reduction in the rates between Liverpool and Manchester except in article of grain; 11,421–11,423. Difference in rates for sugar from Liverpool to Sheffield (as complained of by Mr. Clark) is owing to water competition by rivers Humber and Trent; 11,424–11,428. London and North-western do not carry salt, coals, or anything in large quantities where carriage and labour form a material part, between Winsford and Liverpool, as in consequence of having either to cart through the town, or pay 6*d.* a ton for merely crossing the Liverpool Dock Company's

CAWKWELL, MR. WILLIAM—*cont.*
rails they cannot compete with canal; discussion upon this charge. Does not carry coals or salt into Liverpool for export. Is not aware of any application to Parliament on part of companies to lay down their own rails to wharf side; 11,429–11,437. Thinks Mr. Corbett has not much to complain of so long as Winsford man is not charged less for the conveyance of his salt; 11,438–11,441. Want of accommodation for coal traffic is caused by difficulty in obtaining land. Has recently purchased a large plot near Edgehill, which will relieve Crown Street. Offered to purchase land in neighbourhood of Liverpool if coal owners would guarantee an increased traffic; 11,442, 11,443. Has not raised terminal charge upon coals. Explains necessity of circular sent last November to coal owners; 11,444–11,447. French trade from Liverpool has not increased in consequence of there being cheaper and improved communication by other routes. The 10 per cent. clause in Liverpool and Manchester Act, complained of by Mr. Clarke, was repealed in 1846; it could not have been complied with. In consequence of increased traffic has spent 1¾ millions upon stations in Liverpool since line came into witness's hands. Has not a separate account of this expenditure for whole period. Would not have paid a company owning a line only from Liverpool to Manchester to have spent the money that London and North-western have spent at those towns; 11,448–11,456. Thinks cartage in Liverpool cannot be done for 10*d.* per ton with profit, as stated by Mr. Clark. Reads replies from certain persons showing that from 1*s.* 6*d.* to 2*s.* is the sum paid. Custom in Liverpool of adhering to charge and taking off discount where transaction is large, does not alter rate to public, but gives a profit to Liverpool broker. If individuals could cart cheaper than railways they would; 11,457–11,465. Deputation from corn trade of Liverpool had several interviews with London and North-western railway, asking for a separate rate for corn when not warehoused in Manchester: reads a letter from Manchester corn merchants (who pay the rates) objecting to proposed change. Concessions were made to views of Liverpool merchants; has been no remonstrance from Manchester merchants. Before present Commission appointed, the London and North-western Company represented to companies carrying between Liverpool and Manchester the desirability of revising rates; 11,466–11,476. Objects to table put in by Mr. Clark in substantiation of his statement that lower rates are charged for timber and deals from other ports than from Liverpool, and delivers in tables showing how discrepancies principally arise. Any alteration made in rates since Mr. Clark gave evidence is notified in the tables. Considering the great cost to companies in Liverpool, thinks that town in a very favourable position as regards timber rates; 11,477–11,486. Hands in table showing that company carry grain from Liverpool to certain places at very favourable rates as compared with other carriers in the country; also delivers in table showing that rates generally are in favour of Liverpool; specifies favourable rates for several articles. Admits that mileage rates are high upon the articles selected by Mr. Clark, but gross rates in the majority of cases lower. Public could obtain rates upon application, but not in the form delivered in; 11,487–11,499. 11,507, 11,508. With reference to complaint made as to high rates for timber and deals, witness states that in consequence of peculiar measurement adopted in Liverpool much more than 20 cwt. is carried for a ton, and that Mr. Chaloner, one of the largest timber brokers in Liverpool, points out in his circular the advantage the buyer enjoys in consequence. Has seen Mr. Chaloner's circular calling attention to the high rates charged in Liverpool, but considers he is mistaken in his comparison; 11,500–11,506. London terminals are much higher than those in the country, 11,507. Carries by way of Holyhead to Dublin; same rates as by way of Liverpool. Brings goods into Liverpool by way of Holyhead, but does not seek for traffic between Dublin and Liverpool. Does not carry free from Holyhead to Holywell; explains arrangement entered into with City of Dublin Company; 11,511–11,519. Cost of handling timber much greater at Liverpool than at the eastern ports; same expense not incurred at Hull, Gloucester, or Bristol. If same mileage rate had been charged from West Hartlepool as from Hull it would not have been made a port for London and North-western Company; is a great advantage to the country round Hartlepool. Has a right to adopt low rates and even incur a temporary loss for sake of developing traffic which in future will be valuable; 11,526–11,530. A proposal to submit terminal charge to arbitration under direction of Board of Trade, as proposed by a clause in Railway Clauses Bill, would be resisted by the London and North-western Company. Is not aware that the Legislature has already sanctioned that principle in one of the North Staffordshire Acts. Such a principle objectionable and unnecessary, as if an unreasonable charge were imposed parties have their remedy against companies; discussion whether it is right that private parties should have to contest such matters against so powerful interests as large railway companies. Companies would not object to a maximum terminal being fixed and published, provided it was a fair one. In 1861 a proposition was entertained by railway companies and chairman of committees to have a uniform terminal for the country, another for London and general traffic, and another for mineral traffic; but in consequence of coal owners objecting the matter dropped. Reason why there should be a separate terminal for London; 11,537–11,555. Thinks that circular put forward on behalf of chairmen of different railway companies must be incorrect in putting terminal charge at 2,000,000*l.*; as London and North-western line alone must be about 1,000,000*l.* Company referred to in circular, whose expenses for terminal charge exceeded 159,000*l.* for half year ending December 1860, could not have been the London and North-western Company. Gives mileage of London and North-western Company, and amount spent in station accommodation since 1849; 11,556–11,561. Under what heads terminal expenses are included in expenditure of London and North-western Company in 1863. Cannot state per-centage of terminals applicable to goods and passengers. Gives mileage of sidings; their cost a serious item. Does not remember average length of carriage upon London and North-western line, or on all the railways in England and Wales. Gives capital, station accommodation, and cost of maintenance of principal stations; 11,562–11,569. Discussion as to what terminal charge would pay provided collection and delivery were done by owners. Thinks in such case terminal would be increased; 11,570–11,572. Explains memorandum stating that 42*l.* was charged for 12 witnesses from Liverpool to London, whereas they could have come from Belfast for 30*l.*; 11,573. Reason why witness is in favour of "omnibus" bills; 11,574, 11,575. Would modify classification, and fix maximum toll applicable to whole country, but companies should be allowed to reduce or make special rates. How traders at Coventry and Nuneaton have been benefited by having special rates; discussion upon this question; 11,576–11,592. Would be no advantage in establishing a rates officer in order that rates might be published. Special rates made are applicable to all traders at same place; have given them only to two or three individuals who had formerly special rates with the canal, and then upon ground that they bring a large traffic. Has an agreement with Messrs. Allsopp, but rates given applicable to rest of trade at Burton. Special rates are seldom given now; 11,593–11,602. A month's notice is given of any increase in the rates; is generally notified by circular or by advertisement in the newspapers. Do not always give a month's notice of reduction. Would not charge the large customers with whom agreements have been made any increased rate; 11,603–11,606. Passenger traffic would not materially increase if fares were considerably reduced; if one company made a reduction to large towns, say Manchester and London, would increase traffic between those places for a considerable time. Effect of competition some years ago between Great Northern and London and North-western companies; 11,607–11,610. Alterations are made in rates by manager, and afterwards submitted to directors for their sanction; 11,611–11,613. Experiments were made by a company of running 3rd class by almost every train at Parliamentary rates in Lancashire and Yorkshire district, but they were discontinued. Would not materially increase traffic if more facilities were afforded for 3rd-class travelling; 11,614–11,618. Is not favourable to excursion fares; would only run them at moderate fares at proper times; induces labouring classes to spend more money than they can afford, and interferes with general receipts by ordinary trains. Runs weekly trains during the autumn, charge regulated by number of days allowed to excursionists. Fares are pretty uniform on London and North-western system. Excursion traffic pays best where ticket returnable same day. Does not think, on the whole, this traffic pays; 11,619–11,632. Attempts uniformity in rates, but in consequence of alterations and special rates, it exists only to a very limited extent; 11,633–11,635. Believes equal mileage rates would not be beneficial to the public, and would injuriously affect coal trade, and enhance the price of coal. With exception of competition between districts, London and North-western com-

CAWKWELL, MR. WILLIAM—*cont.*

pany have, practically, no coal traffic competition; 11,636–11,644. London and North-western do not find coal trucks; are sent back empty; would be so if they belonged to the company; are returned as soon as possible free of charge; demurrage not allowed in case o detention; 11,645–11,650. Gives coal rates per ton per mile. Has coal from Midland district; 11,651–11,654. If uniform rates were established, a difficulty would arise unless uniform rates were adopted by canals and steamers; 11,655, 11,656. Fares by Lancashire and Yorkshire railway not being remunerative does not arise from competition; the capital laid out upon that line was enormous. Parliament allowed them an advance of 20 per cent. upon everything but coal traffic; would be a hardship to make rates equal on this line; 11,679, 11,680. If Parliament compelled a reduction in all the rates, it would interfere with arrangements made with lines which companies are working at fixed rentals, and prevent reductions being made to encourage traffic. Answers certain complaints made by witnesses as to inequalities in the rates; 11,681–11,683. Would not be to the public interest for Government to purchase and work the whole railway system of England, or that they should be amalgamated and worked as one concern. Is in favour of large companies amalgamating. Thinks some small companies might be amalgamated with large ones, but not likely large companies will amalgamate with each other. A saving in the working is the cause that has generally induced amalgamation. The smallness of dividend has most likely operated against Irish railways amalgamating, or possibly the directors have very small interests in the companies; 11,684–11,694. Reason why witness thinks present system of inspection of permanent way effective, and that matters would not be improved by appointment of a Government inspector. Is companies' interest to keep them up. Having a Government inspector would diminish responsibility of railway officials. Railways of England are in a very good state of maintenance; 11,695–11,704. Does not know state of permanent way on Irish railways; 11,705, 11,706. Doubts whether any good result would follow the granting persons a more easy means of recovering penalties for unpunctuality. Cause of trains not keeping their time. Would be better to allow longer time for trains to run, than that they should not arrive at the advertised time. Public have a right to obtain damages for unpunctuality; has numerous claims, which, if found reasonable, are always liberally settled; 11,707–11,716. Does not think trains are less punctual than formerly; a record is kept, and any delay at once booked, and, if possible, remedied. As a rule, trains are not systematically unpunctual. Reason why company cannot give longer time in the summer months when the trains are habitually late. Servants are called to account if trains not punctual; are not fined, but lose their chance of promotion or are dismissed. Explains cause of delay at Market Harborough, as complained of by Rev. Mr. Field; discussion thereupon. Cannot prevent delays without multiplying a number of unprofitable trains; 11,717–11,733. Great inconvenience from break of gauge; mentions several cases where the broad gauge is objectionable, and entails great increase of cost as well as delay in transit of goods. Great Western Company would alter their gauge if they had the means; estimates the cost at about 3,000*l.* per mile, besides cost of alteration of sidings and stations; 11,734–11,745. Explains statement made by Messrs. Howard of Bedford, complaining that Great Northern trains do not meet Cambridge and Oxford trains at Sandey, and also with regard to not having a joint station for the two companies at Bedford. No restriction in Acts of Parliament as to where stations are to be placed; no good would result from making it imperative. Crossings such as those at Bedford, dangerous; would not be allowed now by Board of Trade; 11,746–11,753. Public could not have anything more simple than the County Court, where they have complaints to make against a railway company. Public continually appeal against charges. Cannot be, as Mr. Mathews states, that public cannot bring law suits in consequence of the great expense, and also for fear of the company afterwards being spiteful to them. Thinks that inasmuch as an appeal to the Court of Common Pleas is not an expensive tribunal, there is no necessity for another to settle matters of undue preference; 11,754–11,760. There are a number of complaints made with regard to rates to South Staffordshire, which have not been put in a fair way before Commission. States that Mr. Wright was mistaken when he states that parcels are charged separately as smalls when sent to same consignee; gives plan adopted by London and North-western Company and clearing house regulation in this matter; 11,762. Will supply explanation about glass hereafter, and put in table explanatory of that and other matters; 11,763.

Remarks by Mr. Charles Clark, of Liverpool, on witness's evidence; *App.* BT.

CHADWICK, MR. EDWIN. (*Analysis of his Evidence.*)

Mentions way in which his attention was first directed to railway system of this country. Opinion entertained of English system by one of the leading German statesmen; 17,179, 17,180. Believes that the benefits derivable for the future from the cheaper and better use of the existing railways from the completion of branches and new main lines will be found to be collectively as great as any that have resulted from present system. Is scarcely a district where branch railways or tramways will not be required; reads extracts from a work published by Mr. Wm. Chambers confirmatory of this opinion. Enormous economy of transit from having tramways in towns; instances those in France and America. London General Omnibus Co. failed to introduce system; other private projects have also failed. Expense of present system of legislation, even where there is no opposition, prevents the making of agricultural tramways or small branch railways. Board of Trade may grant powers for the construction of railways where there is no opposition; is rarely a case when there is no one to oppose. Whole system of Parliamentary procedure ought to be swept away; is justified in this opinion by the way in which the Public Health Act is carried out, which is by sending down an engineer to survey district, hear objections, and finally report; upon which report order framed; course pursued if judgment of engineer disputed; would adopt similar plan in the case of railways; might be done at about one-twentieth of the expense at present incurred. Has not read the Acts passed for the formation of tramways or railways without application to Parliament; 17,181–17,189. Would have an independent functionary to preside over Court of Appeal; same opinion entertained by Mr. Bentham. Is not sufficiently acquainted with details of the organization and of the department of Ponts et Chaussées, but knows that Sir J. Easthope and Mr. Locke were in favour of French system; restrictions imposed under French system; as to surveys, is much better than our own; 17,190–17,197. Reasons why railways should not be constructed for private profit, but merely as a means of communication from one part of country to another; how managed in France; discussion thereupon. Government should lay out main lines of communication, and then works carried out by contractors, offered to the best bidder; lines should then be leased to the competitor offering to make the greatest reduction to the public; advantages of such a scheme; 17,198–17,209. 17,211–17,214. 17,225–17,231. Thinks many railways have been formed without reference to profit, and worked in the same way as highways; 17,210. Upon what principle construction of railway intended to yield no profit, but merely repay cost of construction, should be proceeded with; 17,215, 17,216. Is acquainted with system of gas lighting established in Manchester; thinks system illustrative of witness's opinion as to construction of railways; gives result of system in Manchester; 17,217–17,224. Is aware that toll bars in suburbs of London are being removed; has been done to some extent in Scotland, and almost universally in Switzerland; these facts quite demonstrative of question that high roads may be worked to general advantage of community only, and that tolls need not be taken under such circumstances; 17,232–17,235. Enormous obstruction in obtaining an Act of Parliament, and uncertainty as to sort of opposition to be encountered, deters persons from applying for power to make a railway on principle suggested; more expeditious and cheaper course adopted in Prussia; 17,236, 17,237. Explains why there is an analogy between gas and canal companies and railway companies. Conveyance of small parcels and development of retail trade seriously hindered by separation from lines of communication from postal system; is considered an important matter in Switzerland. A small parcel transmitted from Land's End, either to May near Thurso, or to Valentia in Ireland, has to go through 19 different changes over different lines. Difficulty in getting independent bodies of commissioners to act in smaller districts, unless they received a profit. If system on Paris and Orleans line were introduced into England it would contribute to improvement in railway administration; causes that sometimes prevent improvements being made in England; 17,238–17,246. 17,249–17,251. As to question whether there has been no application made to Parliament to construct railway on system suggested, because commercial

CHADWICK, MR. EDWIN—*cont.*
people believed it to be wholly impracticable, witness states that with respect to towns, commercial people have been proved to be largely in default, even on their own principles; instances gas and canal companies. Method of controlling supply of gas in London exceedingly imperfect as compared with reform of like companies in Paris; 17,247, 17,248. Does not consider French system of railways perfect. Importance of a small parcels delivery, especially in connexion with a cheap telegraphic post. Why Post Office stations should be utilized for this purpose. Advantages that have resulted from introduction of this system into Switzerland; would be same advantages if carried out in Manchester and London. Why orders for goods and messages are not sent by telegraph in England. Have reduced telegraphic message one-half in Paris, and increase has been tenfold. Large increase in receipts from reduction made in Belgium in railway and telegraphic charges. Benefit to farmers if system of cheap parcels post established; 17,252–17,259. Cheap postal communication equivalent to an increase of speed. Thinks if potteries were to be established *de novo* it would be cheaper to take the coal to the clay, and not the clay to the coal. Is assured upon good authority that business of sugar refiners is declining in London, owing to railway charges. Is well known that cost of transit governs location of manufactures; instances cotton manufactures. Railway companies may facilitate establishment of manufactories on their lines by giving special low rates, but special low or exceptional rates only an exemplification of what ought not to be special but general; 17,260–17,265. Thinks that railways in this country should be made and maintained upon same principle that public roads are now made in Ireland; rating should fall upon district benefited, and in proportion to benefit conferred; 17,266–17,269. Saving that would be effected by unity of management. Difficult to say to what extent unity of management should be carried. In what way present amalgamations are fallacious and a pretence; 17,270–17,273, 17,282–17,287. Enormous subdivision of management in Ireland. French system of surveillance and accounting a great check against defaults of the Redpath kind; defaults have been much larger than public know of; gives some instances leading to supposition that dishonesty prevails; contrasts railway officials with permanent officers in the civil service; considers the latter are in reputation and life the best in Europe, and, as a class, the most ungratefully paid; on the whole thinks there are branches of governmental administration in England which have beaten all private commercial management in respect of defaults. Has been told that cost of customs exceeds any private establishment of equal management, but department of Public Works laid out works to be done for 6,000,000*l.* which if they had been left to private enterprise would have cost 16,000,000*l.*; if same principle had been carried out by Government with reference to the two main outfalls, whole of metropolis would have been drained at that cost. Could not say result of saving that would be effected by amalgamation of customs and inland revenue; 17,274–17,282. 17,288–17,293. Is desirable to extend action of the State in railway matters to the widest possible bounds. As to question whether same action should not be extended to life and fire insurance, witness states that life insurance is taken up by Government annuities. Is averse to insurance. Benefits that result from unity of management in France; 17,294–17,296. Why witness is of opinion that an assistant commissioner would be better able to get out facts and information than present commissioners. If source of profit were taken away from people who manage railways, they would be managed economically and in same way as postal service managed; believes they would be much easier to work than what is done under Poor Law administration; 17,297–17,302. Does not propose that Government should undertake the detailed management of railways. Would advise a special executive commission to consider and explore grounds by which these large economies are to be effected. Recommended the consolidation of the seven water companies in London on same plan as consolidation of seven gas companies in Paris, but was opposed by the directors and engineers; saving that would have been effected. If railways amalgamated by Government becoming possessors of the whole of them, they should deal direct with the shareholders and not with the directors. Need for local inquiry. Witnesses examined from Ireland have stated case fairly from a director's point of view, but doubts whether the fullest information has been afforded. Evidence taken with respect to Ireland should have been published daily in the newspapers; 17,303–17,308. Further complaint of present unsatisfactory and expensive procedure for obtaining railway concessions in England, and advocacy of local preliminary examinations, &c. Detailed account of French procedure, and comparison between that and English, much to the advantage of the former. Argument and statistics to prove doctrine of ascending ratios of consumption with reduced ratios of charges. Public opinion abroad is tending in favour of reducing rates to actual cost of transit. Excessive cost of retail distribution of goods shown by comparison with Switzerland, &c. One great disadvantage of present disunity of management is the time wasted in "labour of verification;" argument and instances cited in proof; local inquiries needed on this subject, also on that of competition, and as to additional value imparted to land by improved means of transit. In order to obtain reformed general rates, witness considers it would be worth while (though he does not believe it would be necessary) to pay an increased income tax. While concurring with Mr. Galt on many points, witness cannot agree with him that any existing directorates would be the most eligible parties for carrying out railway reform. Answers to objections on the score of Government patronage: competitive examinations for appointments. Army pensioners might be employed, and ordinary military force utilized in time of peace. How shareholders should be provided for. Suggestions of a distinct department for railway business; *Addendum after* 17,308.

CHAMBERS OF COMMERCE:
Letter and enclosure sent by the Commission to the various Chambers of Commerce and other public bodies in the United Kingdom; *App.* H. Memorial from Liverpool Chamber of Commerce addressed to President of Board of Trade, and referred to this Commission; *App.* K. Resolutions of the Association of Chambers of Commerce in the United Kingdom; *App.* L. Report of the Committee of the Chamber of Commerce of the city of Waterford appointed to investigate into the present working of railways to and from Waterford, and to bring the result of their inquiries before the notice of the Royal Commissioners on Railways; *App.* U. Supplemental report from same committee; *App.* AC. Memorial from Wolverhampton Chamber of Commerce respecting railway charges; *App.* BF. Complaints from the South of Scotland Chamber of Commerce as to delays in the delivery of goods by railway; *App.* DX.

CHANGE OF CARRIAGE:
There is nothing so disliked by public as changing carriages. In Belgium changing is so inconveniently frequent that no English public would tolerate it; *Hawkshaw* 14,534–14,536. Unwillingness and dislike of public to change; *Stewart* 14,840; *Gooch* 17,485.

CHEMICALS:
Railway charges for carriage of, to and from Liverpool, as compared with other places; *App.* A.

CLANCARTY, THE RIGHT HON. THE EARL OF. (*Analysis of his Evidence.*)
Has been for seven years director of the Midland Great Western Railway of Ireland, has regularly attended meetings of the board, and has taken great interest in all their proceedings; 6283, 6284. Moved resolutions for reducing fares to what they were in 1861, when they were raised 10 per cent. Quotes rates for passengers, and receipts, which show that up to 1861 there was a steady increase, but from that time receipts began to decline. Produces a return showing the falling off in 1st and 2nd class passengers, and also in the receipts. General depression in the country about this time, but does not attribute falling off to this circumstance, but the raising of the rates; 6285–6305. 6313–6316. Directors cannot lower rates without appearing to run in rivalry with Great Southern and Western. No attempt made to amalgamate the two companies. Proposed to try as an experiment a reduction of 10 per cent. on portion of the line from Althone to Galway, and guaranteed the company from loss, but board refused; the fares in consequence have fallen off considerably. Reason assigned was, that as there was to be an International Exhibition this year, higher rate of fares might be more productive, an expectation which has not been realized; 6306–6311. 6318–6325. Cannot venture to say in how long a time a reduction of 30, 40, or 50 per cent. would recoup itself; but states that upon first joining board, fares were moderate and traffic increasing, when rates were raised the reverse was the case; 6312. Considerable emigration from west of Ireland;

CLANCARTY, THE RIGHT HON. THE EARL OF—*cont.*

6317. Would amalgamate all the Irish railways and put them under Government control. Private enterprise in Ireland connected with railways almost extinct. Much depends upon facilities given by railways for transmission of manufactured goods. Is not aware of any special manufacturing or other establishments of any kind which have been got up in consequence of introduction of railways; 6326–6329. Evils that would have been prevented if railways had originally been in hands of Government, and benefits that would accrue by their being under such control. Mentions condition of Irish North-western railway, and states that on many railways, in order to make good dividends, money is appropriated to capital which ought to be appropriated to revenue; 6330–6337. 6339, 6340. 6358. A board of directors not prosperous in way of earning revenue, much tempted to starve a line and postpone necessary repairs and expenditure which ought to be carried on every year in order to increase the permanent revenue; 6338. Was one of a deputation to Chancellor of the Exchequer to propose that 1,000,000*l.* should be advanced at 3½ per cent. to replace debentures bearing interest at 5 per cent., the profit to go entirely towards reduction of rates, but the proposition was declined. Better plan would be to leave debentures as they are, and for the share capital to be taken up by Government, who would then become the absolute owners of the railways. The experiment might be first tried in Ireland, as it would develop resources of the country. Small permanent board with two subordinate boards would be sufficient to manage the railways. Would be less danger of abuse if patronage of appointment of officers were placed in the hands of a board presided over by a member of the administration. As to Government patronage in Ireland; 6341–6350. Similar boards have been appointed to carry out great works in Ireland, but have not been very successful; instances board for improving drainage of the river Shannon; 6351–6354. Scheme of taking over Irish railways by Government would be sanctioned by the Legislature if they desired the welfare of Ireland. Would be best to tax Ireland by a special rate to make up for temporary loss rather than scheme should not be tried; would do away with any jealousy that might exist in the sister country; 6355–6357. Basis of purchasing Irish railways laid down in the Act of 1844. Government would be paying too low for them upon those terms, as even from present unfavourable circumstances dividends will rise; 6358–6361. The most important matter would be lowering the rates so as to develop resources of the country. Directors are afraid of lowering cattle rates, thinking that if they did not answer they would not be able to go back to the old rates; and in consequence cattle are driven by the road. Government could make better regulations, especially in parcels traffic; could also regulate the mail trains, and do away with the necessity for carts, cars, and foot messengers; 6362-6364. Government would not be strictly borrowing the money for purchasing railways, it would merely be a conversion of railway shares into Government stock. The annual charge for the interest upon capital advanced would be necessarily considered as one of the ingredients in the charge upon railways. Government should become possessed of the railways, and should not lose by the arrangement: might be done with benefit to present shareholders and to the public, and would lead to a reduction in the rates; 6365–6375. Has not formed any opinion whether it would be better for Government to work lines or grant leases. Hands in memorandum of comparative statement of weekly receipts from passenger traffic on Midland Great Western for year ending January 1865. A small reduction made this year in carriage of cattle, and a steady improvement has taken place in the traffic; 6376–6378. Wages increased in west of Ireland during last few years owing to emigration. Hands in table headed "Abstracts from half-yearly reports of Midland Great Western Railway;" 6379–6381.

Paper given in by witness:—Abstracts from the half-yearly reports of the Midland Great Western Railway of Ireland from July 1851 to June 1864, both inclusive, showing the amount realized from passengers, goods, and cattle traffic in each half year, and distinguishing between the returns of passenger traffic and revenue in each year; *App.* AG.

CLARK, MR. CHARLES. (*Analysis of his Evidence.*)

Is a merchant at Liverpool and chairman of the Chamber of Commerce; 1, 2. Great complaints of the charges on the goods traffic as compared with other places, the mileage rates being 20, 30, and 50 per cent., including terminal charges, in excess of those elsewhere. Numerous instances quoted, and returns (given in) referred to. Great want of accommodation also; 3–8. 30, 31. 38, 54, 55. 195–197. Uniform rates are charged by all the companies coming to Liverpool, there being a combination amongst them. Through charges are made, though the traffic may pass over several railways; 9–24. 29. Only two places where the charges are in excess of Liverpool; 25–28. The rates press especially upon heavy goods; 30–34. Tonnage inwards and outwards of Liverpool. The exports exceed those from all the rest of England; 35–37. Companies which are interested in the Liverpool traffic, and collect goods there; 39–43. Injury to the Liverpool trade, especially the salt trade, from above causes; 44–47. Also to the coal trade for want of accommodation; 48, 49. Diversion of the French trade also; 50–53. More accommodation might be given with present means, but further means also required. A new line wanted to Manchester; 56–58. Prices should be less to Liverpool than to other places. Reasons; 59, 60. No competition by water; 61, 62. Nor between the railway companies, though very desirable; 63–67. 138. Striking instance of diversion of traffic quoted; 67–69. The grievances complained of are of very old standing, and although occasional competition has temporarily remedied them, they now appear to be permanent; 70–76. Witness considers that the London and North-western Company do not adhere to the (Liverpool and Manchester) Act of 1826, which provides that a reduction of rates shall take place when the dividend exceeds 10 per cent. That point has in fact been considerably exceeded, but as the company calculate the profits over the whole line, instead of as between Liverpool and Manchester (between which places there is a greater traffic than between any other two in England), the reduction is not made; 77–82. Discussion of this point; 83–101. Witness believes that the provision above quoted is inferentially re-enacted in the Amalgamation Act; 101. Chamber of Commerce has never attempted to set up a rival company; 102. Railway companies meet complaints courteously, but give no redress; 102–104. Rates should be fixed at so much per mile, and a certain sum added for terminal expenses, irrespective of the distance traversed; terminal expenses not heavier in Liverpool than elsewhere; 105–110. At Liverpool the rates generally do not include collection and delivery, though at some places named they do; 111–116. 125–137. Witness believes that cartage can be done profitably at 10*d.* a ton; 117–124. A controlling power necessary to prevent the present waste of capital. Equal charges should be made for equal services. Railways should carry at their minimum price over their whole system, except in special cases; 139–145. Parliament should fix rates from each town on every railway on certain principles suggested, and there should be tribunal of appeal for exceptional cases. Rates should not be unequal to meet the case of cost of construction being greater at one part than another; 146–159. Rates to Liverpool are excessive and unequal; 160–162. Discussion of equalization of rates; 163–174. In fixing rates there should be a uniform charge for terminal expenses on all distances, and an equal mileage rate added; the latter, however, might be slightly higher for a short than for a longer distance; 175–181. 185–188. Interest on capital should be included in mileage rate; 182–184. Companies should not be allowed to make contracts with individuals to carry at lower rates than are charged to the public, as is now frequently done; 189–194. Lines at Liverpool are at times excessively overloaded for want of better accommodation; 195–197. An additional railway would be no improvement unless the charges were reduced. Probably a new company would not agree with existing ones to charge present rates. The difficulty is in getting a *bonâ fide* competition; 198–202. Witness considers the Liverpool and Manchester Act of 1826 to be evaded, that having provided for a reduction of rates if the profits went beyond 10 per cent. This point has been far exceeded, but by amalgamating other and worse paying lines this has been kept nominally below that amount, and the rates have not been reduced. A general reduction of rates by Parliament witness maintains would not be any breach of faith; 203–211.

[*For statements in answer to this witness's evidence, see* ALLPORT, Further Examination (1.) CAWKWELL, Further Examination. SMITHELLS.]

CLARKE, MR. SEYMOUR. (*Analysis of his Evidence.*)

Is general manager of the Great Northern Railway; 12,553. Has read the evidence given before this Commission; 12,554. With exception of those made by Mr. Smith and Mr. Gentel, very few complaints against

CLARKE, MR. SEYMOUR—*cont.*
Great Northern Railway. As to Mr. Smith's complaint, that rates for lump sugar and sugar in hogsheads are not the same, and that grapes are charged differently to onions, witness explains principle upon which charges are made. Classification generally complained of is the result of many years' experience. Is an annual revision of classification at a conference of goods managers, who meet to regulate the traffic, attend to complaints, and consider applications for reductions, &c. Variations in classification subject to revision of general manager or directors. Certain grievances of sugar trade were discussed and finally adjusted at one of these meetings. Names heads of different departments, and their duties. As long as companies keep within maximum, parties who feel themselves aggrieved have no appeal; 12,556–12,563. Ground upon which classification is based. Are two reasons why a different charge is made for articles differently classed. Classification does not agree with Parliamentary classification; is much more subdivided. Is possible that Parliamentary classification does not agree with clearing house classification. Act fixes a maximum but companies can go lower. Do not always charge same rate between two towns, although in same class in clearing house classification; circumstances which justify exceptions being made in charges; object of classification to generalize. In case of alteration of rates, do not remove goods out of their particular class, but would deal with them as special rates. No alteration from classification that is not in favour of the public. Articles taken from a lower class to a higher one, would be against public, but not in excess of the Act of Parliament. Discussion as to removing articles from one class to another. Classification quite necessary; 12,564–12,585. Has a classification of terminal charges; gives charges for the various traffic; no maximum fixed by Act; requisite charge should be reasonable, or public can appeal; is an expensive process; thinks unless maximum was defined, there should not be a cheap mode of appeal. Considers system of terminal charge is misunderstood by public, in consequence of original object for which railways were constructed not being adhered to. Unless maximum fixed was unreasonable, would be averse to allow persons to appeal to Board of Trade. Would not object to maximum being fixed by Act; would be no difficulty in arriving at maximum. In 1861 this question was taken up by Lord Redesdale and by chairmen of various companies, but was abandoned in consequence of opposition from Durham coal owners; ground upon which they opposed, "Hands in a map showing distances within which railway companies are bound to deliver goods and rates for carting; tendency for cartage expenses to increase; discussion upon these charges; 12,586–12,604. 12,692. 12,694. 12,705–12,711. 12,807. 12,924. Reason why terminal is included in the rate. Persons sending goods pay only a mileage rate. 12,605–12,608. 12,687–12,689. Rates as set forth in Acts of various companies are not uniform. Object of classification for through traffic. Nothing against revising Parliamentary classification; but it would amplify all the Acts and render difficult any alteration operating against public. A general classification might be included in a General Act; was included in one or two lately. Rate laid down by Parliament varies very little. Reason why there are a greater number of classes in practice than those contained in Acts of Parliament; gives number and description of the classes; 12,609–12,621. Charges in each class are not always uniform from same two points; exception chiefly in articles coming in great quantities and at a low price. Company not compelled to find waggons for coal or coke, do generally find them, and charge 9*d.* per ton; if coal owners find them they can charge public anything they please; 12,622–12,625. 12,636. In what way terminal charges in London are increased; could not be fixed. Mentions despatch required in delivery of goods. Do not bind themselves to deliver within a particular time; pays for delay when usual time exceeded; if carried at owner's risk a reduction made. In some cases a difference made for large or small quantities. Do not carry less than a truck load of coals; is charged at same rate (3*s.* 8*d.* per ton per mile) as for 50 trucks; are generally carried in train loads; 12,626–12,635. Never detains private waggons; if coal owners detained those of company, demurrage would be charged. Course adopted by company when they delivered the coals in London; considers that when they were prohibited from doing so, the public had to pay more for the coals; object was to get traffic, and not to make a profit; did employ a few clerks, but made no additional charge to public; would not be worth while to undertake the delivery now, was undertaken in order to get rid of prejudice against inland

CLARKE, MR. SEYMOUR—*cont.*
coal; traffic much increased. Used to carry coal in own waggons for coal merchants; took the risk of bad debts, and charged only for carriage and delivery; 12,637–12,659. 12,663–12,667. Number of agents accommodated at station is only limited by space; is about making an extensive siding at Nottingham. Depôts are let; method adopted; 12,659–12,662. Great Northern do not show any preference to coal owners; how coal trade managed at the small stations, and nature of arrangements made with the coal dealers; 12,668–12,686. Would be no objection to making terminal a separate charge, provided it were fixed by Act of Parliament. General terminal for coal 9*d.*, charge in London is 2*d.* Where maximum charged; 12,690. 12,691. 12,693. 12,695–12,697. 12,712–12,715. Rates including terminal are much within those authorized by Parliament; if terminal authorized would not charge it, as it would prevent competition by water; 12,698–12,705. Has carried coal at ⅜*d.* per ton per mile for four years; applies only to long distances; minimum distance for which that rate should be charged, and how traffic managed so that power of engine not wasted; 12,716–12,722. Coal traffic for full train loads profitable; does not know cost per ton per mile to company; elements that must be taken into account in determining cost; 12,723. 12,745–12,751. Number of tons one of the new engines will draw; their advantages; weight of engine and trucks; same rate charged before their introduction; they make a difference in the profit. Constant aim of locomotive engineer to decrease cost of his train per mile; does not know present cost per train mile of carrying coal; average cost of all engines, about 11½*d.* Coal engines are not much more, as they travel slower, and the wear and tear is less; wear and tear of permanent way greater with coal than passenger traffic; 12,724–12,738. 12,752. Engines never move more than 200 miles a day. A saving in using coal instead of coke. No objection to coal if smoke consumed; 12,739–12,744. One engine will take 50 or 60 empty waggons as compared with 30 or 40 loaded; 12,753. Company have considered practicability of communicating between passengers and guard; witness examined 193 inventions; doubts whether the best will answer; one has been in use 6 or 7 months on South-western line; going to try it on line from London to Leeds; fears it will fail at the junctions. How communications are made; thinks it will be necessary to impose some penalty for wantonly operating upon signals; 12,754–12,762. 12,948–12,950. Believes that a hand-rail outside to enable guard to communicate with carriages would be dangerous; has been stopped in France. American system of passage through trains would not be liked in England; 12,762, 12,763. Thinks that no legislative enactment could be made to promote safety of travelling public; interest of companies to carry public as safely as they can. In what way system of levying damages is unfair. Would limit amount of compensation in cases where passenger had not insured against accidents. Liability of shipowners limited under Lord Campbell's Act. If amount of compensation were limited companies would not be less careful. Might adopt system of charging a high fare if company took risk; in such a case would pay to maximum amount in case of accident. Gives amount paid for compensation in half year ending June 1865; bulk paid was for passengers; also gives profit and dividend paid for that period. Paid 24,000*l.* for compensations in 1865; 12,764–12,781. If any legislative enactment were passed to improve punctuality of trains, they would go slower. Great Northern are going to duplicate some of the Scotch and Manchester trains; 12,782–12,786. Thinks by having Government inspectors to inspect permanent way, the responsibility of companies would be relieved. Interest of companies to keep it up. Gives number of miles exclusive of sidings, and amount spent in 1865 on permanent way. All companies paying a fair dividend give attention to their line; 12,787–12,795. Evils that would result from a uniform system of mileage rates. Has been no demand made upon Great Northern for one. Result of competition is generally to reduce rates; 12,796–12,806. No Parliamentary enactment is necessary for facilitating interchange of traffic and through booking. Never heard of inconvenience at Sandey from trains not fitting in with cross country lines; through booking is now established; 12,808–12,810. 12,925, 12,926. Practice of obstructing another person's traffic quite gone by; 12,811, 12,812. In case of Newcastle train arriving two minutes after Midland train to Lincoln leaves Newark, witness states that it is unavoidable; such inconveniences would exist if railways under one management; is not done to force public to come from London to Lincoln by Midland; passengers would have to wait about two

CLARKE, MR. SEYMOUR—*cont.*—
hours. Mentions other cases where like inconveniences occur; discussion as to why passengers at Derby should not be able to book through *vid* Nottingham and Grantham to London; 12,813, 12,814. 12,817–12,827. 12,829–12,836. Company will run trains to Cambridge by Royston till 1st of April; line belongs to Great Northern; 12,815, 12,816. Does not recollect having any complaints from public as to delay between Great Northern and other lines; 12,828. Number of interbooking that now goes on is calculated by millions; if principle were carried out further would almost destroy system. Has through rates on every part of Great Northern system. Reason Midland cannot give so many facilities for through booking as Great Northern; 12,837–12,842. Has no suggestions to offer as to how convenience of public might be increased; 12,843. Passengers' luggage is charged for when above weight allowed; if an unreasonable quantity brought, duty of porter to weigh it, and charge for difference; are very liberal in this matter. South-eastern and London, Chatham, and Dover are more rigid in these matters; 12,844–12,847. 12,871–12,874. Runs a great many excursion trains in autumn; would not interfere by enactment with these trains; doubts whether they are profitable. Objects to monster trains as being unwieldy, getting in the way of everything, and endangering traffic; do not allow them on Great Northern line; are divided and sent by two separate engines, which is better than putting two engines to one train. Under what circumstances two are put on; 12,848–12,860. 12,886, 12,887. Passenger fares by Great Northern ordinary trains are uniform throughout system, and nearly at maximum. Effect of competition with Midland during time of Manchester Exhibition. Reason Great Northern did not lose considerably by these trains; 12,861–12,870. Is not in favour of introducing into England the distinction with regard to goods traffic existing abroad between quick and slow transit; 12,875. Company very seldom send a half-loaded train; 12,875–12,877. In Lincolnshire, where line level, trucks are put on to most passenger trains. Confines the third-class to two trains; this traffic would increase if there were greater facilities of travelling, but believes it would be detrimental to shareholders. Cultivates third-class traffic only in Lincolnshire; 12,878–12,882. Why market trains in Lincolnshire were put on; the answer, and induce people to travel; 12,883–12,885. Would be impossible to lay down regulations by Parliamentary enactment, as to interval at which trains should follow each other; better to leave matters to responsibility of company. Has rules which compel a station master to detain a train five minutes if one immediately before it, and then caution signal is shown for five minutes. Should be an interval of five minutes between starting of trains; 12,888–12,895. Great Northern have a system of telegraphing from station to station; is about to be extended; same system on all lines out of London for a certain length; is done by the companies at great expense, but advantageous for working of traffic as well as safety of public. Have established intermediate signal stations; system applicable as far as Hitchin (42 miles); are four between London and Hitchin; 12,896–12,906. Was originally the intention to lay down four rows of rails for some distance out of London; the tunnels are only made for two; are making duplicate lines through a district not then served; 12,907–12,910. Reasons why witness is averse to Government purchasing the railways. Would depend very much upon the regulations whether it would be advantageous that Government should possess the railways, and lease out each separate district; believes result would not be beneficial to the public. Same answer would not apply in the case of line of one company being leased by another company. In what case it might be to the interest of a company not to develop traffic beyond a certain extent; 12,911–12,919. If various lines in Ireland were leased to some of the great English companies, they should be leased in perpetuity, otherwise they would only develop the traffic which paid; 12,920–12,923. Average cost per mile travelled on all the railways in England is about 2*s.* 6*d.* Cost of permanent way becomes heavier every year; 12,927–12,931. Some rails have been down 20 years and are good now, whilst others wear out in three years. Is a doubt whether steel rails, although more costly at first, would not be cheaper in the end; 12,927–12,936. Thinks there is no prospect of railway being constructed cheaper; 12,937, 12,938. In some cases company run a great number of carriages very partially loaded in passenger trains; which adds to the cost. Tendency by making carriages more commodious to increase their weight; 12,937–12,942. Thinks foreign railways are worked at less cost than English; elements that render them cheaper. Cannot enter into question whether they cover more than 30 miles an hour, for instance 210 miles in seven hours; 12,843–12,847.

Papers given in or referred to by witness:—Statements showing the charges for carriage of timber and deals, chemicals, sugar, and sundries, to and from Liverpool as compared with other places; *App.* A. Declared real value of total exports from ports of Bristol, Hull, Hartlepool, Grimsby, London, Gloucester, and Liverpool in 1863; *App.* B. Extracts from Act 8 & 9 Vict. c. 198, for consolidating the Bolton and Leigh, Kenyon and Leigh, Liverpool and Manchester, and Grand Junction Railway Companies; *App.* B*. Remarks by witness on Mr. Cawkwell's evidence, *App.* BT.

CLASSIFICATION OF GOODS AND CHARGES. *See* RATES AND CHARGES, &c., 1.

CLEARING HOUSE:

Witness considers arrangements of, so convenient, that he would carry them out by Act of Parliament; *Lees* 9464.

Suggestion that manufacturers should be admitted to benefits of; *Corbett* 10,896. Inconvenience from there being no clearing-house system between narrow and broad gauge; *ib* 10,910. Regulations of clearing house as to companies repairing damage done to other companies' stock; *Brown* 11,116. These should be made to apply to private owners' stock also; *ib.* 11,125–11,142. Discussion of this point; *ib.* 11,143–11,155.

Present composition of clearing house, and suggested modifications; *Sherriff* 16,409–16,411.

Clearing house terminal being, from the necessity of the case, merely a rough arrangement between companies, it could not possibly be adopted for the public; *Allport* 16,930. 16,937.

Statement from the Irish railway clearing house on the subject of sea risks between Great Britain and Ireland; *App.* BZ. General classification of goods by merchandise trains upon railways; *App.* CP.

COAL TRADE, BELGIUM:

Not nearly so advantageous as that of Prussia; the coal seams are much thinner, and prices are kept up by combination; *Mulvaney* 1206.

See also RATES AND CHARGES, &c., 6.

COAL TRADE, ENGLAND:

1. *Generally.*
2. *Great Northern Railway.*
3. *Great Western Railway.*
4. *London and North-western Railway.*
5. *Midland Railway.*
6. *North-eastern Railway.*
7. *North Staffordshire Railway.*
8. *South-eastern Railway.*

1. *Generally:*

Great want of accommodation for trade at Liverpool; *Clark* 48, 49; this is now being remedied. Explanation of a recent change in terminal charge; *Cawkwell* 11,442–11,447.

Rates are lower in Belgium than in England; *Fassiaux* 3117–3119.

Coal in London is double the price that it should be; can be carried from the north by rail at less than half the cost by ship; desirability of cheapening it to the general public, especially the poorer classes, also to manufacturers and shipowners; disadvantages under which the latter labour in London and other southern ports from its dearness; important letter on this subject; *Galt* 7382–7386. 7477. Impossible to carry coal at the prices Mr. Galt states; *Allport* 13,834–13,838. 16,943. It could be brought to London cheaper than it is at present; *ib.* 13,839. The annual supply to London is between five and six million tons, of which 2,300,000 come by railway; *Galt* 7387, 7388. Favouritism shown by railway companies, and impediments thrown in the way of coal owners in certain instances; *Wooler* 9567, *et seq.* Answer to this; *MacNay* 13,966, *et seq.* Obstructions by Midland Railway to coal trade at Nottingham; *Hutchinson* 9768–9808; *Brentnall* 9824, *et seq.* Witness thinks that coal is (or could be) carried at ¼*d.* per ton per mile; *Williams* 10,311–10,318. Witness (manager of Great Western Railway) knows of no such instance; *Grierson* 11,843.

COAL TRADE, ENGLAND—*cont.*

1. *Generally*—cont.

Defence of system adopted by Midland Company at Nottingham, in answer to complaints of Mr. Brentnall; *Allport* 12,502, 12,503. System of North-eastern Company at same place; *ib.* 12,504, *et seq.*

If a uniform mileage rate were adopted, the supply of coals to London would be greatly reduced and the price enhanced; some particulars of the present carrying arrangements and rates; *Cawkwell* 11,637–11,644. On London and North-western line coal owners find all the trucks; these generally go back empty; company return them free, but do not pay demurrage if they are detained on the line; *ib.* 11,645–11,650. Carrying rates on coal; *ib.* 11,651–11,654.

Particulars of matters which govern coal rates; *O'Brien* 12,003–12,014. ½*d.* a ton is barely a paying rate for 30 miles; *ib.* 12,015–12,017.

Stockton and Darlington Company carry coal and coke at ¾*d.* per ton per mile, and find waggons; witness does not think that a reduction in the rate would materially increase traffic; *MacNay*, 13,993–14,002. 14,012.

The only traffic materially affected by the gradients is coal traffic; *Hawkshaw* 14,405.

Companies are bound by law to forward coals, &c. within a given time, but there seems no obligation as to delivery; *Lancaster* 15,666–15,668. Desirability of uniform maximum rates on coal; *ib.* 15,669.

Details of a suggested plan for a separate economically constructed line from the north of England to the eastern side of London, by which 1,500,000 tons of coals could annually be conveyed at ¼*d.* per ton per mile, besides other matters. Line could be constructed for 10,000*l.* a mile. Speed of trains to be 15 miles an hour. History of attempt to establish such a line, and full statement of particulars, and advantages of scheme; *Bidder* 16,186–17,031. 17,046. Particulars of expenses, working, maintenance, &c., and of probable returns, tending to show the desirableness and practicable nature of line suggested; *ib.* 17,046–17,070. 17,139–17,143.

Observations by the proprietors of Wingerworth colliery, near Sheffield, on the railway companies' working of coal traffic; *App.* BV.

See also ALLPORT. CAWKWELL. GRIERSON. LANCASTER. MACNAY. NORTH-EASTERN RAILWAY. O'BRIEN. RATES AND CHARGES. WRAGGE.

2. *Great Northern Railway:*

Company make no difference in charge on account of quantity sent, but do not take less than a truck load; *Clarke* 12,632–12,635. They provide a large number of the waggons, and charge demurrage if they are delayed; *ib.* 12,636–12,638. Company at one time carried on a large trade on their own account in London, but were compelled by law proceedings, brought by coal merchants, to abandon it, in consequence of which price to consumer has considerably increased (to the extent, witness believes, of 3*s.* a ton). Company used to pay a contractor 2*s.* 6*d.* per ton for delivering within five miles; *ib.* 12,639–12,651. 12,662–12,667. It would not be worth the while of any railway company to go into the coal trade now; the chief object of Great Northern Company doing this was to break down the prejudice against inland coal; *ib.* 12,651, 12,652. Company carried for merchants as well as themselves, and made very few bad debts; *ib.* 12,653–12,657. The only limit to number of agents who can have their coals is the space, which is being continually increased. Particulars of letting of sidings and delivery of coals to traders; *ib.* 12,659–12,662. 12,669. Company give no preference to any collieries; *ib.* 12,668. Any one can send coals at the established price, but at small stations the number of occupiers of the depôts is necessarily limited; *ib.* 12,670, 12,671. 12,676, 12,677. Owners who send and merchants who receive coal brought by company; *ib.* 12,673–12,675. Further particulars of coal trade at the company's stations; *ib.* 12,678–12,686. Company's terminal charges; *ib.* 12,695–12,705. 12,712–12,715. Company have now for four years carried coal at three-eighths of a penny per ton per mile for long distances; *ib.* 12,716–12,722. Some think this is done at a loss, but witness thinks otherwise; *ib.* 12,723. By getting hauling power out of the tender as well as the engine, a much heavier load is now drawn, but the coal was carried at the above low rate before this was introduced; advantages to the coal traffic of this improvement; about 30 per cent. power is gained by it; *ib.* 12,724–12,728. 12,738. The above low rate has no doubt been brought about by the competition between railway and seaborne coal; *ib.* 12,729. Reiteration of witness's opinion that three-eighths of a penny per mile produces a profit; he cannot state the cost, but it could be ascertained; *ib.* 12,745–12,751. Mineral traffic wears permanent way more than passenger traffic; *ib.* 12,752. An engine can take 50 or 60 empty waggons as compared with 20 or 30 when loaded; *ib.* 12,753. Company now carry coal at ¾*d.* per mile; by a more economical working it might be done at $\frac{1}{16}$th less with a profit; *Sturrock* 17,878. Improved tenders for coal traffic; *ib.* 17,879–17,882.

3. *Great Western Railway:*

Company have a regulation requiring station masters to give immediate notice to owners of waggons of any break-down; company used to repair them in these cases themselves, and would prefer to do so, but that so many disputed accounts arose; *Grierson*, 11,894, 11,895.

Company, who have a large mineral traffic, now carry coal at ⅝*d.* per ton per mile, owners finding waggons. This only pays with full train loads, and over a very level country; *Gooch* 17,550–17,561; it has only been done since middle of 1865, and although tonnage has increased considerably, receipts have fallen off. Previous rates were $\frac{7}{16}$*d.* to ½*d.*; *ib.* 17,562–17,567. Alleged instance of an exorbitant rate charged by company; *Lancaster* 15,563–15,590.

4. *London and North-western Railway:*

Witness explains the case of the London and North-western Company giving rates for coal that would not admit of his sending them to London; *Bidder* 4363. London and North-western Company has no through arrangement with Irish companies with respect to coal, but about to establish a trade by joining some of the Lancashire coal owners in making low rates to Liverpool for purpose of shipping coal to Ireland. Coal owners have no shipping trade from Liverpool; is principally down to the northern ports. London and North-western Company have applied to Parliament for authority to make a line from Wigan to St. Helen's to join the St. Helen's railways, which will give an access to Widnes and Garston, considerable places for shipping purposes; *Cawkwell* 5237, 5238.

Complaint by manager of Cannock Chase and Lintz collieries of unsatisfactory working of their traffic by London and North-western Railway Company. Great delay in forwarding their waggons, entailing a loss of 3,000*l.* a year for demurrage, the waggons standing idle meanwhile, the work of the collieries sometimes suspended, and a large amount of business lost; *Brown* 11,070–11,093. Delay is caused by want of locomotive power and station accommodation. As railway companies are bound to pay demurrage on trucks of other railway companies, they give them the preference, and keep carriages of private owners waiting their convenience; *ib.* 11,094–11,099. A number of cases cited, in some of which waggons have been injured in transit, and delayed weeks and even months, owners having themselves eventually to repair them; *ib.* 11,100–11,115. 11,117–11,124. Clearing-house regulations as to companies repairing damage done to other companies' stock; *ib.* 11,116; these should be made applicable to stock of private owners also; *ib.* 11,125–11,142; discussion of this point, and of the question of supply of waggons for mineral traffic generally; *ib.* 11,143–11,155. If no delays took place, one-half the present number of waggons would suffice for the traffic; *ib.* 11,165. Great delay (especially at junctions) from want of through rates; *ib.* 11,183–11,195. Particulars of rates charged by companies; *ib.* 11,196–11,213.

5. *Midland Railway:*

Increase of coal traffic on Midland Railway in the last 17 years. Do not send any coals to Ireland. Mileage rate to London varies according to distance and circumstances; states *modus operandi*. Highest rate does not exceed 1½*d.* per ton per mile, lowest about ¾*d.* Rates do not include use of waggons or terminal charges; terminal charge in the country and in London. Same rate for large as for small quantities; *Allport* 5311–5324. 5336, 5337.

In answer to complaints that companies compel coal owners to find their own waggons, witness states that they have preferred to do so, that he is himself in favour of companies providing them; *Allport* 13,634. One or two collieries would like companies to find them, but if done

COAL TRADE, ENGLAND—*cont.*

5. *Midland Railway*—cont.

at all it should be general; *ib.* 13,635. A less number would be required and a great deal of labour saved; *ib.* 13,636–13,639. Trucks now carry five to ten tons; six or eight tons the most convenient to work; *ib.* 13,640–13,642. Denial to statement that Midland Company compelled alterations in waggons of Wingerworth Company, and allowed others to remain unaltered; *ib.* 13,643–13,645. Denial also to statement as to time occupied in taking coals from Clay Cross to Derby. Company have no control over the waggons, they are loaded by owners and consigned to their own people; *ib.* 13,646–13,650. It would cost too much now for company to buy up all the waggons; *ib.* 13,651–13,655. 13,686–13,690. If waggons belonged to railway company, there would be no difficulty in satisfying trade that they were fairly dealt with. Instances of companies owning waggons, and of the system working well; *ib.* 13,691,13,692. No goods waggons belonging to independent parties, the arrangement is peculiar to the mineral traffic; *ib.* 13,695, 13,696. Coals being frequently sent by owners before they are required, great delay constantly occurs in getting the waggons emptied; if company provided them they would rigidly enforce a fine for delay; such a regulation is in existence now, but is only enforced in extreme cases; *ib.* 13,697–13,702. Some do not agree with witness as to desirability of company providing waggons; it would scarcely make an appreciable reduction in price; *ib.* 13,703–13,710. Companies endeavour to get the greatest possible amount of work out of every waggon, it would be adverse to their interests to have the Wingerworth or any others idle; *ib.* 13,711–13,715. Reasons why witness wholly disapproves of one common stock of waggons for all the railways; *ib.* 13,715, 13,716. Hire of stock from rolling stock and waggon companies; *ib.* 13,717–13,721. Waggons are now more profitably worked than formerly; *ib.* 13,722, 13,723. Delay complained of by Wingerworth Company is caused by circumstances beyond control of railway company; *ib.* 13,664. Course adopted by Midland Company in cases of damage to colliery companies' waggons, and reasons for its adoption; *ib.* 13,664–13,667. Cause of Wingerworth Company's waggons getting more injured than others; *ib.* 13,668–13,670. Discussion of particular instances of damage to some of these; *ib.* 13,671–13,673. Explanation to show that company's rates are so graduated as to allow collieries to compete fairly with each other; *ib.* 13,674. Company make a reduction on gas-coal contracts of more than 500 tons per annum, or on a smaller quantity in certain cases; *ib.* 13,675–13,678. Company has no separate charge for large or small quantities. There is not the slightest foundation for statement that "lower rates are "given to large collieries for gas coals, and on quantities "which smaller collieries cannot raise;" *ib.* 13,679. Reason why at some colliery junctions a charge is made for siding accommodation and signalmen's wages; *ib.* 13,679–13,681. Communications from coal merchants at Nottingham, stating that company's arrangements there work very satisfactorily, and have not caused any advance in price; *ib.* 13,682, 13,683. In December 1864, out of 1,571 waggons sent to Nottingham, four only were from Wingerworth; *ib.* 13,683. Enormous development of coal district in the last 25 years from facilities afforded by Midland railway; a similar increase, witness believes, is going on throughout the country; *ib.* 13,790, 13,791. Company use every effort to extend their coal traffic; *ib.* 13,797. Some particulars of cost of conveying coals; it could not well be lower than it now is; average cost per train mile is 2*s.* 4*d.*, which is nearly doubled by waggons returning empty. Better to take 500 tons in two trains of 250 tons each than in one. Present prices of coal at the pit's mouth. Prices have risen lately, and are likely to continue to rise; *ib.* 13,834–13,857.

6. *North-eastern Railway:*

Partial conduct of company in conducting coal trade, to the great injury of witness; *Oxlade* 1876–1924. Denial of Mr. Oxlade's statements; *O'Brien* 12,061–12,064. Mr. Oxlade's statements are "scandalous and "untrue," "a fabrication from beginning to end—a "tissue of untruths, without one fact to hang them "upon." Evidence given in, and letters read to show this. Mr. Oxlade is "either revengeful or mad, witness "does not know which;" *Sherriff* 16,257.

History of main principles and system upon which North-eastern Company carry on their coal trade; discussion of its advantages, &c.; *O'Brien* 12,064–12,122.

COAL TRADE, ENGLAND—*cont.*

[*For detail, see* NORTH-EASTERN RAILWAY COMPANY.]

Company contend that they are not common carriers, and can therefore refuse to carry for any particular individual if they think fit; and that legal decisions confirm this view; *ib.* 12,127–12,135. Particulars of company's coal rates; *Harrison* 15,229–15,233. Discussion as to those between Cleveland and London and between Staffordshire and London; *ib.* 15,234–15,236.

7. *North Staffordshire Railway:*

From peculiarity of line North Staffordshire Company have found it desirable to provide all the waggons. This has given general satisfaction to the colliery owners. Witness believes it to be the best plan for mineral traffic; advantages stated; *Morris* 14,176–14,186. 14,192–14,195. Most of the mineral traffic of the country, however, is carried in owners' waggons; *ib.* 14,196. Company's terminal charges vary from 3*d.* to 6*d.*; causes of this variation; 14,273, 14,274. 14279. Company charge something extra where they have to find siding accommodation for marshalling and shunting freighters' trains, as that involves considerable outlay. If a uniform terminal were laid down, it must be so heavy as to act prejudicially in some cases; *ib.* 14,331–14,337.

8. *South-eastern Railway:*

Coal traffic into South-eastern Company's district is too small to warrant them in entering into extensive through arrangements; *Eborall* 16,102–16,117.

COAL TRADE, GERMANY:

Twenty years ago, in consequence of high rates, coal was not carried by railway more than 50 miles from certain parts from where, rates having been since reduced, it is now carried 500 miles. History of the struggle by witness and others to obtain this reduction, and conditions under which it is maintained; *Mulvaney* 1056–1060. 1063–1065. 1082, 1083. 1237–1239. The old rates exceeded the value of the coal carried; *ib.* 1061. 1073–1079. Perfectly successful working of the low rate; *ib.* 1062. In consequence of State jealousies the rates are not the same on all the lines. Reduced rate is rather less than $\frac{1}{2}d.$ per ton per mile (a little under the English rate), but in some instances a terminal charge is made of 3*s.* per waggon of five tons at each end of the system; *ib.* 1066–1069. The arrangement is very satisfactory to the railway companies. The Dutch-Rhenish line, from having no trade in coal, had last year 147,000 tons from Germany alone; *ib.* 1070, 1071. English coal is taken chiefly by canal to Berlin; *ib.* 1080. 1081. Highly satisfactory results of low rates; the system in consequence spreading; the collieries of Westphalia can now scarcely meet the demands upon them; particulars of these collieries; *ib.* 1091–1097. Discussion as to terminal expenses; *ib.* 1139–1147. Principles upon which coal rates were fixed; *ib.* 1261, 1262. Other produce not carried at the same rates; *ib.* 1263–1265. Witness believes coal could be carried to Paris as cheaply from Germany as from England; *ib.* 1280–1284. Circumstances connected with development of coal traffic not exceptional in Germany in consequence of the coldness of the country and the expense of fuel; the private consumption unimportant; before construction of railways wood was used for manufacturing and domestic purposes within a few miles of the coal pits. Increase of consumption of coal did not take place until rates were reduced; *ib.* 1863–1866.

COAL TRADE, IRELAND:

Rates for carriage of coal $\frac{3}{4}d.$ to 1*d.* per ton per mile; *Mulvaney* 1184. Witness believes that the free introduction of coal, coupled with low rates, by developing its mines, manufactures, agriculture, &c., would be the greatest benefit that could be conferred upon Ireland; *ib.* 1189–1195. Undeveloped mineral and other wealth of the country; *ib.* 1198–1204. In the eastern ports coal is generally cheap, but for a reduction of prices generally more facilities are required at ports for unloading, &c., and for distributing the coal throughout the country; *ib.* 1207–1218. Reasons why same principles cannot be applied in Ireland to produce low rates for coal as are acted upon in Germany; *ib.* 1266–1270. Introduction of English coal into interior of Ireland would lead to development of the coal districts which exist there; *ib.* 1847. Rate for coal double what it is in England; *Forbes* 1465, 1466. Coal trade very limited in consequence; *ib.* 1472–1521. Witness could not persuade company to reduce sufficiently; *ib.* 1489. Believes any loss from reduction of coal rates would be repaid in a year; *ib.* 1803. For use on railways,

Coal Trade, Ireland—*cont.*
coal preferable to peat; *Mallet* 2144. Most important to get coal into Ireland at a cheaper rate than at present; means necessary for accomplishing this; believes it could be carried profitably for distances of not less than 100 miles at ¼*d.* per ton per mile with back freights, and ½*d.* without; in England 1*d.* gives a profit of 200 or 300 per cent.; *ib.* 2146–2160. 2172–2177. 2181–2183. Believes back carriage could be obtained; *ib.* 2165–2171. 2191. Want of steam colliers and mechanical coal-whipping at Dublin materially increases cost; *ib.* 2162–2164. Class of manufacturing industry to which coal is chiefly applied; *ib.* 2186–2191. Cause of failure of attempt to smelt iron with turf; *ib.* 2197, 2198. High price of coal at Limerick; *Tinsly* 2469–2480. Reduction of rates would increase coal trade; would be ready to make a branch to certain mines in Tipperary if there were reasonable hopes of a return; *Longfield* 2824–2831. 2854–2860. Coal trade with Dublin capable of considerable expansion; rates; *ib.* 2916–2934.

Witness thinks a coal trade will never be established in the west of Ireland, as turf is so much cheaper, and is universally used; *Earl of Lucan* 3034–3037. Reason why coal is carried more cheaply from Waterford to Tipperary than from Limerick to Tipperary; *Malcolmson* 3507–3509. Witness believes that the railway carries all the minerals produced in the district; more proposals made to company to bring back coal for smelting purposes than to carry increased quantities of minerals; the trucks now bring back Indian corn and breadstuffs; *ib.* 3562–3568. Quantity of coal, though considerable, not increasing, there being few manufactories in the district; *ib.* 3569. Witness does not think with present gradients that coal could be carried for ¼*d.* per ton; is connected with a German company which carries at ½*d.* per ton, the gradients being good; *ib.* 3632, 3633. On English lines coal rate not more than ½*d.*, companies finding the waggons; on the continent they are not found; on Cologne and Minden line, coals are carried into Holland at ½*d.* per ton at a profit; in Ireland the rate is more than 1*d.*; from Waterford to Clonmel exactly 1*d.*, there being river competition; *ib.* 3636–3645. Introduction of coal into centre of the country becomes more important every year. Has observed a tendency to discontinue use of turf. If coal was cheaper, and the empty cattle trucks returned laden with same, the consumption would increase; *Hemans* 3921, 3922. If railway companies make a large reduction in cattle rates, and bring back coal from Dublin for ½*d.* a ton per mile in the same trucks, it would pay in the end; *ib.* 3923. Turf cannot be used so economically for steam-engines as coal; all attempts to compress turf into a small compass have commercially failed; three times the bulk of coke or coal. By the time good turf is dug, dried, kept, and sent to market it is not a cheap article; only burned on railways to light the fires; is possible, if you get an engine established near a peat bog, to drive it with turf at a low rate; *ib.* 3926–3932. Flax mills and cloth and woollen manufactories would be established if rates were reduced. Manufactories in England have been established near to where fuel is produced. A good deal of water power would come in aid of Irish manufactories; where there is large water power and auxiliary steam it ought to be able to compete with steam power. Thinks manufacturers in Ireland using water power could compete with English manufacturers using steam power; *ib.* 3933–3937. One engine would not take more than 210 tons of coal; *ib.* 3938–3942.

Where there is an increase of tonnage rates for coal and coke it must be attributed to wet years and difficulty in getting turf; *Ennis* 4117–4122. Witness dissents from opinion that by reducing rates for coal to ½*d.* per ton per mile it could be delivered to all parts of Ireland for 16*s.* or 17*s.* per ton, as that is the price paid at Dublin. Gives price at the quays, cartage paid, and cost of delivery to certain places; *ib.* 4123–4133. 4139–4142. 4146, 4147. Proportionate consumption would not increase by reducing to ½*d.* per mile; *ib.* 4134, 4135. Cheaper for witness to burn coal than turf. In wet seasons the latter is worthless; *ib.* 4136–4138. 4148–4150. Reasons why the masses could not use coal; *ib.* 4151, 4152. A full train load consists of 40 or 50 trucks; one locomotive would take about 120 tons of coal. Trade in coal does not exist, the quantity required being small and use of it opposed to habits of the people; *ib.* 4153–4159.

If rates for coal were same in Ireland as on the Great Eastern there would be a large increase in traffic. The rate from Peterborough, 100 miles, is 108 farthings, the coalowners finding the waggons, the terminal charge being 5*d.* If Irish cottagers could get coal they would use it. Consumption both for manufacturing and domestic purposes would increase. Witness thinks it could be delivered at stations in central parts of Ireland for ⅜*d.*, and 5*d.* for terminals; price at Dublin quays. Unless under 20*s.* the Irish poor would not use it; *Bidder* 4236–4245. 4364–4366. 4440, 4441. If coal were carried for ⅜*d.* instead of ¾*d.*, as at present, it would not require three times existing traffic to make up for reduction, as goods trains would then be filled; *ib.* 4334. If coal rates were reduced from 1*d.* to ⅝*d.* in a lead of 50 miles, 2*s.* 6*d.* per ton would be saved; *ib.* 4340. As to expediency of carrying coal at ⅜*d.* per ton per mile; *ib.* 4381.

Coal trade on Great Southern and Western a small but increasing traffic; rate, 1*d.* per ton per mile; *Haughton* 4539–4546. Use of coal in interior of Ireland chiefly confined to the gentry; *ib.* 4547. Correction of statement of a previous witness as to tonnage on coals; *ib.* 4721. Witness thinks coal traffic will steadily increase, though perhaps slowly; reduction of rates would slightly accelerate increase; classes who chiefly use coal; *Murland* 4739, 4740. 4799–4805. Coals brought to Drogheda by a good fleet of sail and steam; railway comes near to the water; prices; *ib.* 4806–4814.

No through rates for coal between London and North-western and Irish companies; *Cawkwell* 5237. If certain arrangement with Lancashire coal owners be carried out, coals will be much cheaper in Dublin and in the interior of Ireland, and a large trade will be established; *ib.* 5240–5245. If a free-trade policy were adopted, coal trade could be very much developed; *Allport* 5312. If a fair mileage rate established, witness believes Yorkshire coal could be delivered in Dublin for 12*s.* 6*d.* or 13*s.* per ton. If coals were conveyed to Ireland by screw steamers as they are between the north and London, with same rate for long distances as on Midland, the whole of Ireland could be freely supplied with English coal. Is aware that there is no communication in Dublin between railways and the wharves. Cartage makes a considerable additional charge. Assuming that railway charged ½*d.* per ton per mile, there is no reason why coal should not be sold at stations in extreme west of Ireland for about 16*s.* or 17*s.* per ton. Obstacles that prevent attempts being made. Boards and managers of some large English companies think that company could carry at ½*d.* per ton per mile; *ib.* 5325–5334. Has always found temporary loss follow reduction of rates, but generally there has been a gain in the end; *ib.* 5335. Occasionally still reduce rates and find it answer; no reason why it should not answer on Irish lines; *ib.* 5336–5339. Very little coal wanted for manufactures except in the north, water power being sufficient; *Dargan* 5597. Large increase of coal traffic on Derry and Coleraine Railway on reduction of rates; *Roe* 5744, 5745. Consumption of coal would increase and manufactures be encouraged by reduction of rates; *ib.* 5875–5878. Coal trade and rates on Belfast and Northern Counties system; *Lanyon* 6104–6110. As to effect of reduction of rates in increasing consumption; comparison of English and Irish rates and working; *ib.* 6114–6124. Price and description of coal used in north of Ireland; *ib.* 6125–6128. Great facility for coal traffic in Belfast harbour, tramway of Belfast and Northern Counties line running down to quays; *ib.* 6237. Coal not likely to supersede turf in the interior of Ireland; *Macfarlane* 6547–6550. Cheap coal would be a great blessing to Ireland; consumption increasing; witness considers 1*d.* per ton per mile a reasonable rate; *Parker* 6890–6893. Cheap coal would be a great boon; consumption in the interior rapidly increasing; very desirable to get it carried at ¼*d.* a ton per mile; 1*d.* is the present charge; reduction to ½*d.* would cause large increase; prices of coal; *Bewlay* 6930–6951. If rates reduced to ½*d.* a mile, witness believes that great advantage to the country would follow; is supported in this opinion by good authority; *Barrington*, 7221–7240. Variable prices and want of better arrangements for unloading vessels in Dublin; new arrangements in prospect; *ib.* 7241–7248. Discussion as to means of reducing price; *ib.* 7249–7254.

Increased traffic in coal may be expected; reasons; *Hancock* 7644, 7645.

Memorandum on coal trade, Ireland, by W. R. Sullivan, Ph. D.; *App.* BL.

Coleraine:

Injury to town from differential rates in favour of port of Londonderry as against Portrush; efforts now making to open navigation up to Coleraine, in order to be independent of railways; *Macauley* 7288–7315. Town has water communication inland; *ib.* 7328–7330. Population

COLERAINE—*cont.*
not much increased since railways opened; *ib.* 7331. Difficulties arising from there being so many companies concerned in conveying goods to England or Scotland; *ib.* 7333.

See also MACAULEY.

COLLECTION AND DELIVERY OF GOODS:
At Liverpool, may be done for 10*d.* a ton; *Clark* 117–124. This assertion called in question; *Cawkwell* 11,457. Should be conducted by private enterprise; *Fassiaux* 3073. Coal carted in Dublin at 1*s.* 6*d.* a ton; *Ennis* 4140. Particulars of, at Dublin; *Haughton and Murland* 4563–4572.

Traders cannot get a station-to-station rate and collect and deliver their own goods; companies allow a rebate if goods are brought to them, but insist on keeping delivery in their own hands; *Gibbs* 10,804–10,809.

A uniform charge should be fixed for cartage throughout the country, with one or two exceptions for such places as London, which should each have a special fixed charge. Companies should be under legal obligation to collect and deliver, with certain exceptions; *Brown* 11,251–11,269.

See also RATES AND CHARGES, 6.

COLONIAL RAILWAYS. *See* FOREIGN AND COLONIAL RAILWAYS, 5.

COMBINATION. *See* COMPETITION.

COMMERCIAL PRINCIPLE:
All railways should be constructed upon; *Hancock* 7610–7622.

If uniform mileage rates were adopted, present system of working on commercial principles must be departed from; *Smithells* 13,061.

Must be applied to railways as well as to other matters; *Bidder* 16,696–16,699.

COMMERCIAL SEAPORTS:
Comparison of the railway service in France and England between the metropolis and various commercial seaports; *App.* DM.

COMMERCIAL SPECULATIONS:
Table showing want of success of Irish railways as; *App.* AZ.

COMMUNICATION BETWEEN PASSENGER AND GUARD, &c. *See* SAFETY OF RAILWAY TRAVELLING, 3.

COMPENSATION:
Officers of Irish companies would object to amalgamation unless they received compensation; *Dargan* 5495.

Carrying trades injured by reduction of railway rates could not expect compensation; *Galt* 7581–7585.

COMPENSATION FOR ACCIDENTS:
The present unlimited liability of companies for accidents keeps fares higher than they otherwise would be, and hinders enterprise; if very valuable lives travel, value should be declared, and insured accordingly; *Hancock* 7697–7699.

Witness is not prepared to suggest any improvement in the present law, though he considers a jury a very unfair tribunal towards a wealthy railway company; *O'Brien* 12,311–12,314.

Amounts for which companies are liable should be limited; Great Northern Company had in one case to pay 13,000*l.* because the passenger killed happened to be the father of 13 children; they cannot protect themselves by charging a higher fare on a valuable life; *Clarke* 12,764–12,773. A plan suggested for carrying at a lower fare those who would travel at their own risk; *ib.* 12,774, 12,775. Great Northern Company in a recent half-year paid for compensations 9,627*l.* out of a profit of 264,000*l.*; *ib.* 12,776–12,780. In 1865 they paid 24,000*l.* (their capital being 16,065,000*l.*); *ib.* 12,781.

If Board of Trade should be invested with greater power over railways, companies should be released from present liability for accidents; *Huish* 15,954.

Witness considers that South-eastern line, of which he is general manager, has been considerably victimized, and thinks that some modification of the law is needed. There should be a maximum, beyond which companies should not be liable, and it should be regulated somewhat by amount of fare paid. London, Chatham, and Dover Company have such a provision in one of their Acts; *Eborall* 16,223–16,246. Amounts which companies

COMPENSATION FOR ACCIDENTS—*cont.*
have had to pay of late years have pressed heavily upon their profits. In the last 10 years South-eastern have paid about ½ per cent. this way. The Staplehurst accident alone will cost them nearly 70,000*l.*; *ib.* 16,247–16,252. If law allowed companies to pay by way of annuity, it would sometimes be fairer to them; *ib.* 16,254. Note given in by witness, entitled "Precedents "for the alteration of the law in regard to the liability "of companies in the case of accidents to passengers by "railway;" *ib. after* 16,254.

Sum to be paid for injury should be limited, and should bear some proportion to fare paid; *Teulon* 16,527–16,531. Present system leads to great immorality in class of men employed in obtaining compensation. In a recent instance, a gentleman who was (as he himself considered) liberally compensated with 300*l.*, had 1,000*l.* offered to him by his attorney on the risk of what he might be able to get from the company; *ib.* 16,532, 16,533. Witness believes that if amount were limited, the maximum would generally be paid. Particulars stated of a very gross case, showing liability of companies to imposture, and necessity for limit; *ib.* 16,534–16,538. A fair limit would be 1,000*l.* for first class, 500*l.* for second class, and 250*l.* for third class passengers; companies would rather pay this in most cases and avoid present risks and liability to legal and medical expenses; *ib.* 16,539–16,542. 16,550. 16,573. Such a rule exists in the case of horses, liability being limited to 50*l.*; *ib.* 16,543–16,549. Juries being generally adverse to companies, it is desirable that some other tribunal should decide amount of compensation, leaving to jury only question of fact; *ib.* 16,551–16,553. Taking a view of all the cases he has known, witness considers that compensation granted by juries is very excessive; *ib.* 16,569–16,571. Cases rarely occur in which parties decline to receive compensation; *ib.* 16,554–16,557. Liability under Merchant Shipping Act is confined to vessel and freight; *ib.* 16,532. 16,538. Companies have too heavy interests at stake to be less careful if law were altered as suggested; discussion of this point; *ib.* 15,559–15,568. If compensation limited as proposed there would be no objection to allowing a passenger to insure for a larger amount by paying a higher fare; *ib.* 16,572. Many cases are a mere question of fees and expenses; by proposed limitation much litigation would be avoided; *ib.* 16,575–16,578.

Present system of compensation very unjust. Everyone travelling should be charged an insurance rate equal to half the risk incurred, company bearing the other half. Persons valuing their lives above the ordinary rate to pay a proportionately higher sum; or, if a person chose to declare himself simply first, second, or third class, he should be entitled to, say, 300*l.*, 200*l.*, or 100*l.* respectively. Companies should be compelled to give facilities for insuring at every station. Parties should be able to insure for each separate journey, or for life; *Bidder* 16,862–16,876.

COMPENSATION FOR DELAY:
Some hundreds of legal proceedings a month are commenced against North-western Company alone for want of punctuality; a large proportion of these are most unreasonable and unjust, but company act liberally and frequently give what cannot be legally demanded rather than go into court; *Cawkwell* 11,710–11,716.

COMPETITION:
Want of, at Liverpool; *Clark* 61–67. 138. Want of, at Saltaire; *Stead* 589–592. Increase of rates at Saltaire through combination between railway and canal companies; *Stead* 441. 448. 451–454. 456–462. 532–537. Saltaire was chosen for extensive manufactories as competition was expected; *ib.* 472. Railway companies should not have the power to lease canals and amalgamate competing lines; *ib.* 538–585. Increase of dues in consequence of amalgamation of a railway and canal; *ib.* 551–562. Intended amalgamations should be made public; *ib.* 557. Railways own and influence canals, by which means they prevent competition; *Wright* 645–652. At Birmingham competition between the several railways has always been suppressed by combination; *ib.* 653–656. Remedy proposed, that the rates should be placed under the supervision of some independent board, and regulated by a graduated mileage rate; *ib.* 657–676. 688–707. 750. Injury to Hull from loss of competition; *Atkinson* 882, 883. In Prussia, competition was prohibited, but the Government are now changing the law, and promoting lines and canals in order to produce it; *Mulvaney* 1151–1154. 1277, 1278. Absence of competition for goods

COMPETITION—*cont.*
traffic by water at Rochdale, company having bought up canal; *Blackburn* 1331. Exceedingly high rates and fares at Rochdale for want of competition; *Blackburn* 1289 *et seq.*; *Fletcher* 1846 *et seq.*; *Lawton* 1414 *et seq.* Want of competition in Ireland injurious both to the railway interests and to the public; *Forbes* 1845. Tipperary is competed with by several water routes to Waterford and to Dublin; *Malcolmson* 3459. Coal is carried below average price between Waterford and Clonmel, there being river competition; *ib.* 3645. Permanent loss of portion of dividend on Dublin and Drogheda line from competition; competing line paying no dividend; *Murland* 4786–4788. Newry and Armagh Railway seriously injured by competitive measures of other companies; *Fearnley* 4965. Competing lines should not be permitted in Ireland; *Lanyon* 6174. Healthy competition in Ireland precluded by combination between certain railway companies, but Grand Canal still competes, as the effort to purchase it failed; *Perry, H. R.* 6819–6827. Steam-boats purchased by railway company and kept idle to prevent competition; *ib.* 6863. Successful competition in Ireland by cars, &c.; *Bewlay* 6963–6970. 6979, 6980; *Bagot* 7021–7023.

Parliament has always maintained its right to grant any competing lines it thinks proper; *Galt* 7409, 7410. No real competition between railways, nor can there be; *ib.* 7426, 7428, 7429; *Hill* 8041. Competition no cure for defects of Irish railway system; *Hancock* 7627. Sufficient traffic for competition between many points in England, but not so in Ireland; in the only instance of which witness is aware, it has been useless to the public and injurious to the companies; if commenced, probably the opposing parties would half ruin one another, and end by combining and raising the fares; *Cotton* 7916–7930. Where one line will suffice for traffic, a second is disadvantageous to the public as well as to the proprietors; discussion in which witness endeavours to prove the undesirability of competing lines; *Hill* 8154–8177. Unfair and unequal rates, delays, &c., from want of competition at Derby; *Cox* 8604–8608, 8611; *Renals* 8712–8715; *Nicholson* 8822. 8859; *Wheeldon* 8869, 8870. The Midland Railway Company have some influence over the water communication there; *Renals* 8752–8756; *Cox* 8609, 8610. People in Derby have to pay high rates to make up for loss from severe competition elsewhere; *ib.* 8613.

Want of competition with Great Western between Gloucester and London; *Nicks* 8940. Want of, at Lincoln; *Gentel* 9174–9205. Want of, for coal trade, at Nottingham; *Brentnall* 9890-9896. Railways have obtained amalgamation with canals to prevent competition; there is no permanent competition between railways, it always ends in combination; *Wilson* 9907–9911. 9935–9938. This is not so with canals, as the public can carry on them, which they cannot on railways, but when railway companies obtain possession of them they raise tolls sufficiently to drive off all traffic but their own, and generally work them at a loss to effect this; *ib.* 9912–9918. Since the passing of Mr. Cardwell's Act they cannot take a lease of a canal except by Act of Parliament; *ib.* 9919–9923. Purchase of canals by railways injures remaining canals and destroys competition. Reasons for thinking that Mr. Cardwell's Act cannot be evaded; *ib.* 9924–9930. Canals can compete successfully with railways if their feeders are not closed by them; amalgamation of railways and canals should be prohibited; *ib.* 9931–9934. 10,005–10,018. Public would be much better served by free competition between railways and canals; *ib.* 10,020. Competition of railways has brought about reduction of canal rates; *ib.* 10,108–10,110.

Competition generally ends in companies becoming friends and charging a little extra; *Williams* 10,247. Low rates from Middlesborough iron district through competition by water; *ib.* 10,248–10,264; and from Cardiff through competition between railway companies, *ib.* 10,267–10,273. Instances of advantages of competition in keeping rates down. Even when competing companies have combined, the rates have been lower than they would have been but for the competition; *ib.* 10,577–10,586. Want of competition at Wolverhampton although there are two railways; rates are identical; *Walker* 10,664 *et seq.* Competition between railways does not really exist; where more than one, they always eventually combine; *Gibbs* 10,765–10,774.

Injury to Staffordshire pottery trade from want of competition; railway companies should not have been allowed to purchase canals; *Hollins* 11,274 *et seq.*

Companies admit the principle of carrying at lowest possible rates where there is competition, and charging higher where there is none; witness points out how

COMPETITION—*cont.*
he thinks the public gain by this; considers a mileage rate would shut out competition; *Cawkwell* 11,407–11,409. 11,416. So many competing lines having been granted, no other system can now be adopted, and Parliament cannot reasonably interfere much in the charges; *ib.* 11,671–11,673. Competition has made rates higher and dividends lower than they otherwise would have been; 11,674–11,677. Public have had the benefit of competition to a great extent; *ib.* 11,678. Former unremunerative state of Lancashire and Yorkshire line not owing to competition; *ib.* 11,679, 11,680.

Where two lines of unequal length run in competition to a place, the shorter route generally governs the fare; *Grierson* 11,771.

The low rate for timber from Newcastle to Hull is caused by sea competition; *O'Brien* 11,979.

Instances given where competition has brought about increased charges; *Allport* 12,362. Low fares between England and Scotland from water competition; *ib.* 13,770.

The Great Northern Company now carry coal at the rate of three-eighths of a penny per ton per mile; this has been brought about by the competition between water conveyance and railway; *Clarke* 12,729. Competition has reduced charges to the public; even where companies combine after opposition, rates seldom get up to the original price; public would be aggrieved if they did, and companies do not like to displease the public; *ib.* 12,803–12,806. Competition has increased the cost of conveyance from the London termini to the outskirts; *ib.* 12,807.

Public have gained enormously in facilities by competition, even where rates have not been reduced; *Morris* 14,283, 14,284.

A reasonable amount of competition is desirable; *Stewart* 14,726. Effect of competition on fares; *ib.* 14,727–14,729. Trains between same points on different lines generally start at same time, though there is some advantage from having more than one route, as between those points; the convenience and development of the intermediate places, however, suffer for the sake of these more remote places; *ib.* 14,737–14,744. Discussion of this point, and of comparative advantage of present state of things, and what might have been the case had the old companies been allowed a monopoly of the country, and whether in the latter case charges might not have been much lower than they now are; *ib.* 14,755–14,759. A mitigated competition preferable to that which has existed; *ib.* 14,777. Instance of absurd competition; *ib.* 14,799. Evils of competition have for some time outweighed its benefits; *ib.* 14,886–14,888. There is no competition as regards postal services; *Page* 15,090.

"There is not a single instance at the present "moment where a line has been granted upon the "ground of affording competition that that competition "exists;" *Harrison* 15,302; and the ability to reduce fares has been lessened; *ib.* 15,303. The above statement refers to lines made solely for competition; *ib.* 15,303. No objection to competition where another district is served; 15,305. Instances of proposed lines which would not accommodate a single fresh place; discussion as to whether such lines should be granted; *ib.* 15,306–15,309. Instance of reduction of fares from fear of competition; *ib.* 15,331.

Competition, which is now general, is salutary for the public, and eventually will not be prejudicial to the companies; *Huish* 15,851. Has been largely increased by the extension and operation of running powers; *ib.* 15,852. Has necessarily brought down prices. Reasons why, after prices are reduced by competition, they do not reach the old standard on companies becoming friendly; *ib.* 15,877–15,883. Subsidies by one company to another to buy off competition; *ib.* 15,885–15,888. Where only between distant points, it has not reduced prices between intermediate places; *ib.* 15,889–15,896.

Great companies should not be prevented from making new lines, even though they invade other districts; *Bidder* 16,747–16,750. On the whole, competing lines have been beneficial; *ib.* 16,753–16,755. There are some cases of illegitimate competition; *ib.* 11,756–11,758. Effect of competition has been to reduce fares generally; *ib.* 16,759–16,760. Local inquiries needed on the subject of competition; *Chadwick, Addendum, page* 854.

Competitive reduction of rates, witness thinks, has ceased, but competition for accommodation still goes on. Rates and fares on the whole have been lowered by competition; *Gooch* 17,538–17,549.

CONDITION OF RAILWAYS:

In England permanent way is kept in excellent condition by means of strict daily inspection; companies could not afford to let it get out of order; *Cawkwell* 11,695–11,704. Witness has not sufficient experience to speak of Irish lines; *ib.* 11,705, 11,706.

CONGRESS OF GERMAN RAILWAY ENGINEERS:

Rules drawn up by the Congress of German Railway Engineers held at Berlin in February 1850, and revised and amplified at the Congress of German Railway Engineers held at Vienna in May 1857, for regulating the construction and working of and the conveyance upon the railways in Austria, Prussia, and the German States according to uniform principles; *App.* CA.

CONTINENTAL RAILWAYS. *See* FOREIGN AND COLONIAL RAILWAYS.

CONTRACT:

Copy of contract for working the North Staffordshire Railway (mentioned by Mr. G. P. Bidder in his answer to Question 16,794); *App.* CL.

"CONTRACTORS' LINES." *See* NEW RAILWAYS. SPECULATIVE COMPANIES.

CONVEYANCE OF TROOPS:

Statement by Mr. Milton, of the War Office, as to the payment to railway companies for the conveyance of troops; *App.* BX.

COOPER, MR. JAMES C. (*Analysis of his Evidence.*)

Has been engaged privately in cattle trade, and paid attention to transit of animals by railway in south of Ireland; 3648, 3649. If greater facilities were afforded, trade would increase; facts in support of this opinion; 3650, 3651. Reckons that whole stock of farmer travels once a year. If rates were lower, a large proportion would use railway that now travel by road. Does not agree with opinion that railways carry the greater part of cattle in vicinity of the line; discussion as to how much the cattle travel; 3652–3666. Complaints made of high rates, and opinion that a reduction of one-third would materially increase traffic; 3663, 3664, 3690. Rates nearly equal on all the railways; lowest on Waterford and Limerick, on which there is a great traffic; does not know rate on Midland line; 3665–3670. Almost all fat cattle go by railway; for distances under 8 miles they would go by road; 3671–3674. A reduction would not induce farmers to fatten more beasts; the increase would be in store cattle; 3675–3678. Calves are enumerated as horned cattle; 3679. Delay in movement of cattle in large districts where there are no railways; in those counties cattle are raised to be fattened in dairy counties, so that one of the journeys would be partially made through districts where there are no railways; 3680–3682. Points out certain places where store cattle are driven from 50 to 100 miles, although in the vicinity of railways; discussion thereupon; 3683–3689. 3697–3699. Compares rates on certain of the English and Irish lines; 3691–3696. 3700–3704. Thinks that only a small portion of the cattle driven along the road are disposed of on the way; 3705. Gives cost of driving cattle from western part of county of Limerick to Ballinasloe fair, compared with railway charge; 3706–3710. How calculation made that railway companies could reduce one-third; 3711–3713. Reasons why three-fourths of the pigs are sent by railway; 3714, 3715. Quotes certain rates for corn and hay, and states that if rates were reduced, corn would be sent by railway and not round the coast. Mentions certain complaints made by drovers against the companies; 3716–3729. Condition and weight of animals much deteriorated by sending them long journeys on foot; number of miles per day fat and store cattle should be driven; reasons why store cattle are sent by railway although driving by road is cheaper; 3730–3743. Unequal charges for turf and parcels on same line; there is a considerable expense at the stations for turf, and charge would be proportionately high for short as compared with long distances; gives examples; 3744–3751. 3756–3758. The Waterford line publishes lists of charges; has never compared them with the English; 3752–3754. 3759.

CORBETT, MR. JOHN. (*Analysis of his Evidence.*)

Is owner of Stoke Salt Works, near Bromsgrove, Worcestershire. Works contiguous to Great Western and Midland railways; 10,871, 10,872. Complains that rates are not in accordance with distance, and states that salt is conveyed from Stoke to London (129 miles) for

CORBETT, MR. JOHN—*cont.*

9*s.*, being at the rate of ¾*d.* per ton per mile, whereas from Cheshire Salt Works (156 miles) the charge is only 9*s.* 6*d.*, or ½*d.* per ton per mile; how difference is to be accounted for. Thinks that Stoke rates, although not exorbitant, should be diminished. Does about 75 per cent. of the London trade. Discussion as to whether, by establishing a uniform rate it would not drive Cheshire trade out of London. Cheshire traders could not get their salt to London at same price by any other route; they send it by cheap conveyance to River Mersey, and from Liverpool. Reason why, if rates were according to distance, witness would be able to compete with Cheshire traders to places on south coast; 10,873–10,880. 10,922–10,927. 10,937–10,945. 10,976–10,985. Assuming that whole charge is a mileage rate, witness is overcharged from 2*s.* to 2*s.* 6*d.* per ton; terminal charge is same in both instances. Does not know amount of terminal; thinks in case of salt it must be nominal, as trucks are loaded and unloaded by manufacturer; charge is merely from station to station; 10,881–10,889. 10,953–10,959. Gives amount of salt sent annually to London, by witness, and number of vans employed. Estimates loss from demurrage at 700*l.* to 1,000*l.* per annum; to what cause detention attributable. Railway companies give the preference as regards transit to their own waggons. Suggests two or three remedies with a view to better working of owners' waggons. If companies found waggons witness would be prepared to pay demurrage, or it might be charged to consignees; 10,890–10,899. Does not get through-rates from all the stations; inconvenience that results therefrom; would benefit places where salt or mineral articles are sent for exportation. Gets a through-rate to London. No salt sent to London by way of Great Western line; is sent by way of Reading to Bricklayers' Arms for supply of south side of London; rate is rather lower, but route more circuitous; is better to send by two or three railways, as it saves cartage; 10,900–10,904. 10,946–10,952. Mentions how serious loss is occasioned by break of gauge, particularly at Gloucester and Bristol. Salt is loaded invariably at Bromsgrove into narrow-gauge waggons, which sometimes belong to Midland Company. Finds rolling stock for all the railways, with exception of what goes to Gloucester and Bristol; how exception arises. In consequence of delay by Great Western, Midland Company have made a claim for demurrage; account sent to Great Western Company, which they repudiate. Has only trucks on the narrow-gauge lines; would not be worth while to have them on the broad-gauge; 10,904–10,907. Is only narrow gauge from witness's works to London viâ Birmingham and viâ Oxford; 10,918–10,921. Charges from Stoke to Plymouth or Devonport is rather more than London rate. Gives rate to Bristol; no difference made if trucks are found by sender; 10,928–10,931. A uniform mileage rate would give advantages to Worcestershire salt works to certain districts, but not a monopoly of the trade. Public would have to pay about the same. Charge for salt differs 9*s.* or 10*s.* per ton; difference caused by carriage; 10,932–10,936. Has a large foreign trade to the Baltic; ships from Gloucester and Bristol. Has a shipping rate to London, and obtains a drawback when salt is going to a certain foreign part; reason why this is given; is not inconsistent with a uniform mileage rate. Witness does not send to Liverpool by railway. Reason why railway companies, in fixing rates, should take into consideration price at which article could be sold; 10,960–10,975. Complaints have been made to companies of unequal rates, but no alteration made; 10,986, 10,987. There should be some special tribunal before which differences between public and railway could be brought and adjusted. Differences sometimes arise by companies giving preferential rates to individuals; by so doing they benefit the manufacturer, the public, and the railway. This shows that variable rates are beneficial. Has applied for a special rate in order to compete with sea-borne salt in towns on south coast, and in one or two cases of little importance it has been met; 10,988–11,001. Does not object to special contracts being made with manufacturers, provided it is open to all; 11,002. Longest distance witness sends by canal is from Stoke to London (155 miles). Cost of sending by canal as compared with railway, depends upon what part of London the salt is going to. Canal does not belong to any railway company. No agreement as to rates between them. Would not require same reduction to be made by canal as by railway; doubtful if any further reduction could be made. If railway rates were reduced would not draw off traffic from the canal, as in some cases it saves cost of cartage;

Corbett, Mr. John—*cont.*

11,003–11,009. Has had great experience in carriage by canal; gives cost of carrying goods by canal; 11,010–11,017. Shorter distances could not be worked so economically. Has no toll-free river. Rates on Severn about the same as by canal; distance 10 or 15 miles more on a total distance of 37 or 38 miles; 11,018–11,023. Hands in table showing average time vans and trucks are in transit to and from Stoke Works and certain places, for six months to December 1865. As a general rule, thinks delays shown in table are not caused by consignees neglecting to take their goods away promptly. Source from which table has been prepared; 11,024–11,037. 11,047. Cannot account for these delays. Discussion upon those that take place at Reading. Better working arrangements between companies, and making them pay demurrage for trucks which are not returned, would secure a more rapid return of the vans; 11,038–11,046. 11,048, 11,049. 11,068, 11,069. Thinks if companies were compelled to find trucks for working traffic, they would deliver goods quicker. When the Midland, or Oxford, Worcester, and Wolverhampton companies found the trucks there was then not so much delay. Takes now 50 per cent. more stock to work same amount of traffic; this materially increases the expense; thinks delay arises from want of locomotive power. For want of stock, has had salt lying 17 or 18 days at Gloucester; was a common detention at one time. Companies give the preference to the more remunerative traffic; 11,050–11,056. Law between public and railway companies most unsatisfactory. Would be an advantage if railways were subject to same rules as common carriers; they can now refuse to take goods, and charge maximum rates which in many cases would be prohibitory; 11,057–11,061. Discussion as to whether companies could refuse to carry coals for one party if they carried for others, or charge a higher rate in one case than in the other; 11,062–11,066. Witness delivers in a statement containing certain recommendations as to revision and amendment of the law, moderate maximum tolls on different classifications of merchandise and minerals, through rates and unity of action in interchange of traffic, companies either to find rolling stock or admit that of manufacturers to clearing house on usual conditions, and establishment of some special court of appeal; 11,067.

See also Allport, Further Examination (1.) Grierson.

Cork and Bandon Railway:

Badly managed, and neighbouring country undeveloped, in consequence of original cost being so great that it is entirely in hands of preference shareholders, who have no interest in raising profit above a certain point; *Shaw, W.* 6385–6389. Traffic might be much increased; *ib.* 6390. State of line impedes construction of extensions; *ib.* 6391, 6392. Line cost between 17,000*l.* and 20,000*l.* per mile; might now be made for 6,000*l.* or 8,000*l.*; ought to have been taken over a more level country; *ib.* 6397–6403. Ordinary shares very low; *ib.* 6409. Traffic might be much increased by being looked after, and reducing charges; *ib.* 6414–6421. Length of line, management, &c.; *ib.* 6422–6429. It might be advantageous to amalgamate with Great Southern and Western; *ib.* 6430–6433. Rates higher to Belfast than by sea; *ib.* 6436–6449. Want of through arrangements; *ib.* 6454–6457. Suggested improvements; *ib.* 6456–6460. Importance of line to West Riding of Cork; *Jones* 6463, 6464. Difficulties before line could be opened, and great cost of construction; entirely in hands of first preference shareholders; directors chiefly non-resident; *ib.* 6465–6469. 6494. 6514. Heavy debts; depreciation of original shares; *ib.* 6471–6476. Fair amount of traffic on the line; *ib.* 6477. Company helpless as to improvements for want of money; *ib.* 6481. Particulars of attempted extensions; one of 18 miles quite stopped at present for want of funds for the last half mile; *ib.* 6480–6484. Heavy cost of line from its being constructed without capital; very badly made; *ib.* 6485–6488. Interest upon loans has been regularly paid; *ib.* 6493. Had extension been made for a reasonable sum it would pay well; as it is, probably the preference shareholders only will get a dividend; branches would be an immense benefit; *ib.* 6495–6499. If rates were reduced and extensions made a great increase of traffic would result; *ib.* 6500–6507. The remedy for present state of things would be for Exchequer Loan Commissioners to buy up preference shares; *ib.* 6508–6513.

Reply received from company to extracts from evidence sent to them for explanation or remark; *App.* AW.

Cork and Bandon Railway—*cont.*

Returns showing company's charges for various kinds of goods; *App.* BH.

Cork and Kinsale Junction Railway:

Returns showing company's charges for various kinds of goods; *App.* BH.

Cork and Youghal Railway:

Lately sold for less than half its cost; *Hancock* 7608, 7609.

Returns showing company's charges for various kinds of goods; *App.* BH.

Cork, Blackrock, and Passage Railway:

Returns showing company's charges for various kinds of goods; *App.* BH.

Corn and Breadstuffs:

Annual cost of, at Liverpool, greatly increased by the heavy railway rates; *Patterson* 233–237. Exception taken to this statement; *Cawkwell* 11,466, *et seq.* Brought as back traffic to Limerick; *Malcolmson* 3568.

Statement (referred to by Mr. John Patterson) prepared by the Association of the Liverpool Corn Trade, showing imports and exports of breadstuffs, and stocks held in Liverpool in each year from 1858 to 1864; *Apps.* C. and K. Tariff of rates of railway carriage of grain proposed by the association from station to station; *App.* C. Rates from certain places of railway carriage existing and proposed; *ib.* Comparative statement of Great Northern grain rates to Lincoln; *App.* BI. Comparative statement of grain rates from the Lincoln, Sleaford, and Bourn districts with Northampton, Norfolk, and other barley districts to Burton-on-Trent; *ib.*

Corn Merchants, Birmingham:

Memorial from; *App.* E.

Corn Trade, Ireland:

Large trade in corn from Cork to Dublin; carried chiefly by water, freight being only 6*s.* per ton, which would not pay railway, the distance being 168 miles; *Haughton* 4537–4655. If a large and continuous traffic, it might pay railway; *ib.* 4662. 4666. Rates on grain too high; should be reduced one-third; this would not pay at first, but it would eventually; *Perry, H. R.* 6830–6843. Many mills at present idle, and less corn grown than there would be, in consequence of high rates; *ib.* 6844–6850.

Correspondence in Trains. *See* Interchange of Traffic, 1.

Cosgrove, Mr. John. (*Analysis of his Evidence.*)

Is manager to Messrs. Bass and Co., brewers, of Burton-on-Trent; appears to represent the trade generally; 15,674, 15,675. Complains that Midland, North Staffordshire, and London and North-western (but particularly the former) give preferential rates. Hands in a memorial upon the subject, showing grievances under three heads, viz., 1. Favouring rates, 2. Terminal charges and their abuses, and 3. Unequal rates; 15,676–15,680. States how an agreement made with Midland Company that they would put all brewers upon the same footing was violated by Messrs. Allsopp being allowed a drawback by London and North-western; hands in tables of three months overcharge sheets as sent by this company to Midland for verification, and contends that inasmuch as Midland were cognizant of these terms being allowed they committed a breach of faith. Have in consequence made a claim for overcharge from November 1859 for nearly 59,000*l.*, which Midland have admitted; are now battling for 3,700*l.* for interest; delivers in a copy of the agreement; 15,681–15,708. 15,711. Believes that all the smaller brewers will probably get treated with in the same manner; 15,709, 15,710. Unless companies had entered every rate in their books such private arrangement would not have been discovered; interest of London and North-western and Midland to keep arrangement secret; how this matter was found out; 15,712–15,724. How system of giving preferential rates might be prevented. If large traders get a rebate, small traders should be allowed same terms if they collectively guarantee as much traffic. Public should have access to the rate books, and that all arrangements should be entered in such books; 15,725–15,738. Messrs. Bass have claimed from 1st July 1862 to 30th January 1865 repayment of a sum of 16,000*l.* for terminal overcharge; other brewers have also made a claim for 14,000*l.*; reason claim made. Why memorial recommends that secretary of clearing house should be called to give evidence; 15,739–15,741. 15,752, 15,753. Terminals should be charged separately; should be con-

Cosgrove, Mr. John—*cont.*

tained in the rate book and accessible to public; 15,742–15,744. 15,834. Would have maximum terminal fixed by Act of Parliament; terminal of 4*s.* charged by Midland would have been very fair if it had included carting, but as the principal brewers have sidings in connexion with the railway only a station to station rate of 1*s.* 6*d.* should have been imposed. What services terminal charge should cover. Remuneration for capital expended for goods sheds should come out of general profits; 15,745–15,751. 15,762–15,766. 15,769–15,777. Negociated with Mr. Allport respecting these overcharges; this gentleman must have been cognizant of them. The sum of 77,000*l.* claimed as drawback from Midland Company does not include the 30,000*l.* claimed as drawback for terminals; reads two letters upon the subject; 15,754–15,758. Objects to companies getting rates that are beyond the fair cost of conveyance and fair profit added. Is aware that they are entitled to charge maximum parliamentary rates, but those rates are very wide of the mark. States how much sugar is charged below parliamentary rates; 15,759–15,761. Rates to a certain extent must be arranged with reference to capital invested; 15,767, 15,768. Quotes the rates per mile and charge per 100 miles for ale from Burton-on-Trent to stations on principal railways in the kingdom, showing that great inequalities exist in rates between Burton and various stations upon any one given railway, and that Midland have in many instances a variety of rates to one place, viz., the various points of junction with the other lines; gives several illustrations, but cannot give any reason for these variations; discussion thereupon; 15,778. 15,782–15,788. Thinks that inequality in one case cited was not because the beer going to Scotland had to compete with other Scotch beer. Companies study arrangements by which they can get the largest amount of traffic; the exigencies of the trade being a secondary question; 15,779, 15,780. 15,789, 15,790. Caused rate to Glasgow to be reduced by sending ale to Liverpool, and thence by steamer; 15,781. Uniformity of rates for beer under all circumstances would be an impossibility; would be better to have a uniform mileage rate all over country, if it could be done, but if not would like a modified uniformity, that is, taking the 13 first class railways, but eliminating the four that do not pay, and establishing a maximum rate upon the others; those should be bound to enter into amalgamation under Government control. Would not object to companies reducing below maximum; 15,791–15,801. Should not be bound to charge a mileage rate for 100 miles at same rate as if it were only 20; reads proposition under this head, and gives actual rate for ale and porter to London from various places, showing that trade of Burton is placed on a decided disadvantage in the cost of conveyance of its productions to London. Mentions the advantages in carrying this traffic as compared with grain traffic. Gives gross sum paid between some of the towns and London; 15,802–15,818. 15,836. Quotes rates for grain, showing inequalities from different places to Burton-on-Trent. Does not use water communication. Gets a commuted weight of six quarters to the ton or 3 or 4 cwt. over actual weight for grain carried from all places except Gloucester, where Midland charge actual weight; companies find the waggons; has been the custom for many years to carry at a commuted weight; 15,819–15,830. Believes traffic of brewers yields company above 300,000*l.* per annum. Hopes that Legislature will secure in the interests of trade and commerce and the public generally, the establishment of some wise and reasonable system of supervision of administration of railways, and that a permanent board of commissioners should be appointed to revise all rates from time to time, and form a summary jurisdiction to which busy men can appeal for correction and redress of all well-founded abuses and grievances; 15,831–15,833. 15,835. Before construction of railways, beer was conveyed from Burton to London by canal; the average price, including tolls and other charges, was 13*s.* 7*d.* per ton; in 1833 the rate charged was 25*s.*, which was reduced by degrees to 18*s.*; present charge by railway is 14*s.* 2*d.*, with a deduction of 10*d.* for drawback. Trade of Burton did not send ale by railway for some years, and not to London regularly until 1848. Before railways constructed had access everywhere by canal; 15,837–15,847. Reads correspondence showing difficulty in getting explicit answers from Midland respecting complaint against London rate; 15,848, 15,849.

Cost of Construction:

Has little or no effect upon carrying rates; *Galt* 7341; *O'Brien* 11,974.

Cost of Construction—*cont.*

Likely to increase rather than otherwise; *Clarke* 12,937, 12,938. It frequently happens that on costly lines fares are low; *Smithells* 13,048–13,051. Instance of a company obtained increased rates from Parliament on account of cost of line; *ib.* 13,070–13,072. There are numerous instances of special tolls authorized in consideration of peculiar circumstances of construction; *Morris* 14,225. Cost would be greatly reduced if lines could always cross roads on a level; *Harrison* 15,394. 15,400, 15,401. Case in point; *ib.* 15,402–15,404.

Cost of line should not influence rates; *Wragge* 15,445; *Eborall* 16,187.

Cost of construction frequently much enhanced by manner in which line got up; some have cost 30,000*l.* or 40,000*l.* a mile which ought not to have cost more than 10,000*l.* West Midland Company constructed a line themselves for 5,000*l.* or 6,000*l.* a mile, which in a contractor's hands would have cost 12,000*l.* or 14,000*l.*; *Sherriff* 16,396–16,401.

Statement of some particulars of cost of construction. The cheapest line witness ever knew was one of 5 miles constructed for 45,000*l.*; *Bidder* 17,171–17,178. Suggested cheap line for mineral traffic, which could be constructed for 10,00*l.* a mile; *ib.* 16,997.

Cost of construction is enormously enhanced by present Parliamentary procedure. Peebles Railway was constructed for 5,000*l.* a mile, and is paying 6 per cent.; *Chadwick* 17,181. Had proper surveys been made in the first instance, witness thinks that 20,000,000*l.* might have been saved to the country; *ib.* 17,197.

Cost of Conveyance and Working:

Companies are struggling every day to reduce cost, but expenses increase rather than decrease; *O'Brien* 12,288–12,292.

Average cost per mile travelled is about 2*s.* 6*d.*; *Clarke* 12,927, 12,928.

The prime cost of conveyance of a train per mile is about 2*s.* 6*d.*, though a very long train would cost far more. Cost of adding one carriage to a train of eight or ten would be about one-fifteenth. Method of ascertaining cost of running a train. Witness believes that railway accounts are kept in sufficient detail to show cost of running either a passenger or a goods train; *Hawkshaw* 14,426–14,445. 14,451–14,455. Actual cost is somewhat modified by gradients; *ib.* 14,450. Witness does not think that cost can be argued upon an average; *ib.* 14,457. Average could not be made the basis of any legislation; could not be applied to an excursion train of several thousand passengers; to arrive at the truth, special circumstances of any particular case must be taken into consideration; *ib.* 14,459–14,463. Where one company works line for another it is often done at so much per train mile; *ib.* 14,464. Cost of conveyance could be reduced by adopting the continental system, viz., by restricting the number of railways and reducing the number of trains. They could be reduced one half, though the public convenience would suffer; *ib.* 14,510–14,513. 14,524. Comparison of number of trains per day on English and on continental railways, showing the more economical working of the latter, by having a smaller number, the engine consequently drawing a better load; *ib.* 14,514–14,519. 14,545–14,550; but English travellers would not put up with this; *ib.* 14,523. 14,525. Excursion trains practically carry out the principle; *ib.* 14,521, 14,522. If number of lines had been restricted companies might have been compelled to carry more cheaply, but country has gained far more by the enormous extra accommodation obtained; continental system therefore not desirable; *ib.* 14,525–14,529. Trains cannot be lightened by reducing number of carriages, as public so strongly object to frequent change; *ib.* 14,530–14,535. From the preceding, there is little hope of reducing cost of conveyance; *ib.* 14,536.

From careful investigation witness is sure that railway interests are suffering, not from too low rates, but from undue cost of working. Statements in proof. Economy of full trains, if obtained, would be enormous; *Stewart* 14,786–14,792. On 12th and 13th September 1861 (which may be taken as a fair average), on North-western line 4,482 passengers were booked by trains containing 13,512 seats; *ib.* 14,821. If this waste of room in trains could be saved cost of conveying passengers would be largely reduced, and punctuality increased; *ib.* 14,829–14,835. Cost of working bears a larger proportion to receipts than formerly; *ib.* 14,877, 14,878. If the whole traffic of the country were worked harmoniously, a saving of 10 per cent. (which represents millions) might be effected; *ib.* 14,879. 14,884. The greater saving would be on passenger traffic; *ib.* 14,880. In some instances

COST OF CONVEYANCE AND WORKING—*cont.*
saving would amount to 20 per cent.; effects of such a saving; *ib.* 14,900–14,908.

Cost per mile of running a train; *Page* 14,933, 14,934.

Discussion of what should be included in cost per mile of running a train; *Page* 15,029–15,037.

Working expenses generally are on the increase, as public demand better accommodation, and the permanent way and rolling stock are better constructed, and higher wages paid, than formerly, but receipts increase also; *Harrison* 15,288–15,292. Expense could not be reduced by running fewer carriages, as public insist on ample room; *ib.* 15,293–15,296. Witness thinks that upon an average one-third of the seats are unoccupied; *ib.* 15,298. 15,300. Cost of working has been increased by granting competing lines; *ib.* 15,301. Unwise economy in working where lines are not paying well; *ib.* 15,327–15,330. Excitement as to new schemes and dearness of money increase cost of working; *ib.* 15,336. The cost of rolling stock for working a line is equal to one year's gross receipts for traffic; *ib.* 15,405–15,411.

Working expenses on Midland Railway are about 2*s.* 7*d.* per mile; *Allport* 16,939, 16,940. Heavier on goods than on passenger trains, from greater consumption of fuel, larger engines, and more wear and tear; *ib.* 16,956. Total working expenses about 50 per cent.; *ib.* 16,957.

Witness thinks that the most likely way of reducing working expenses will be by the use of steel rails; *Eborall* 16,220.

Companies have tried in various ways to reduce cost of running trains, but witness believes it likely rather to increase than to diminish. If public would submit to fewer carriages, a little saving might be effected; *Sherriff* 16,418–16,423.

Suggested cheap line for mineral traffic, which could be constructed for 10,000*l.* a mile; *Bidder* 16,997. Particulars of expense of maintenance, working, &c. of such a line; *ib.* 17,046 *et seq.* No reserve fund having been laid by for renewal of lines, cost is now falling very heavily on companies. Too late to have such a fund set apart now; *ib.* 17,034–17,042. Cost of maintenance due to heavy mineral trains, weight of engines, and rate of speed; *ib.* 17,048–17,050. Cost of working full train loads of 400 tons up a gradient of 1 in 400, 3*d.* per train mile; at present, owing to heavy cost for renewing lines (nothing having been put by for that purpose for some years after railways commenced), from 4*d.* to 6*d.* per mile; *ib.* 17,032–17,035. No prospect of reduction in cost of working on railways generally; *ib.* 17,085–17,089. Average charge of locomotion 8½*d.* per train mile; passenger cost rather less than goods trains. Engines are most economically used when worked about 120 miles a day; *ib.* 17,127–17,131. Further particulars of cost of locomotion. Copy of an old contract with the North Staffordshire line, which witness has given in, gives a fair idea of present cost, except that it is a little too liberal; *ib.* 17,132–17,138. Plan to reduce expenses suggested by witness of giving each employé an interest in economical working; this could be better carried out by a limited than by an ordinary company. Witness suggested it to Great Eastern Company, but they did not adopt it; *ib.* 17,144–17,148.

Statement under each head of cost per mile run, and various other expenditures upon Great Western Railway, for year ending Jan. 31, 1866; *Gooch*, 17,313–17,318. Total cost per train mile, 2*s.* 7·81*d.*; total miles run, 12,396,975; *ib.* 17,319. Further information upon, and discussion of items above referred to; *ib.* 17,320–17,327. 17,357. 17,359–17,364. 17,372–17,374. Cartage is not included in carrying account; *ib.* 17,375–17,377. Explanation of head "general charges"; *ib.* 17,378. Witness considers 160 miles a fair day's work for an engine, but on Great Western Railway they do not get more than from 110 to 120; *ib.* 17,330. 17,340. Train mileage given includes empty trains and shunting; *ib.* 17,341–17,343. Working expenses, maintenance of way, and repairs heavier on goods than on passenger traffic; *ib.* 17,354–17,356. 17,389, 17,390. 17,436.

Mileage of vehicles on Great Western Railway for several years; a carriage will run a great deal further than a waggon; *Gooch*, 17,365–17,371. Expenses of working joint lines amount to over 51,000*l.* a year; particulars of mileage worked by company; *ib.* 17,380–17,382. Cost of working could be reduced if goods trains were run at a lower speed; *ib.* 17,393. Discussion of bearing on cost of working of the use of steel rails; *ib.* 17,401–17,411. Mixed gauge has added very much to expense of maintaining way; *ib.* 17,422. Prospects of serious increase in cost of working, and discussion of reasons why, in England, it is higher than in Ireland or Scotland; *ib.* 17,426–17,434. Passenger trains on Great Western consist, on an average, of five or six carriages; expense of an additional carriage would be from ½*d.* to ¾*d.* a mile; the extra mileage hardly worth considering. Long trains pay best, but are not often practicable. The engine being the great portion of the weight of a train, a carriage more or less is of but little consequence; *ib.* 17,438–17,450.

Cost of locomotion on Glasgow and South-western Railway is less than 5*d.* per mile; causes of this low rate are cheapness of fuel in the district, long train mileage, and low wages. In above sum every possible expense is included; *Wainwright* 17,591–17,600. Expenses per train mile, 1*s.* 5½*d.*; similar causes to above account for this low sum; taxation is not included, that being usually placed under establishment charges; *ib.* 17,601–17,610. Witness gives in a paper, prepared from the Board of Trade returns, with reference to the total traffic receipts and expenditure of all the large companies, showing per-centage of expenses as compared with receipts; *ib.* 17,610. Fairest way of estimating expenses is by taking a per-centage on the traffic; *ib.* 17,611. 17,615–17,618. To some extent the short trains run will account for small expense of trains; *ib.* 17,612–17,614. Nearly half the traffic consists of minerals; *ib.* 17,619. As to apportionment of cost of maintaining permanent way; *ib.* 17,620, 17,621. Working expenses as between different companies might be reduced by arrangements to run a smaller number of trains; *ib.* 17,623–17,625.

While railway and stock are new, cost is less than when they arrive at an average condition; some expenses are constant, others varying; *Gregory* 17,634. 17,645. Last returns presented to Parliament show that average cost of all trains is 29¾*d.* per mile; items of cost quoted; *ib.* 17,635–17,637. Average earnings of passenger trains in the United Kingdom 56·56*d.* per mile, of goods trains 70·31*d.*; *ib.* 17,638. The greater cost of goods trains arises from the use of heavier engines with greater weight on the driving wheels, the irregular action of the wheels of the waggons (which are much inferior to passenger carriages); the larger staff necessarily employed, &c.; *ib.* 17,639–17,642. The inference from the above is, that the whole cost of conveying passenger trains is less than that for goods trains; *ib.* 17,643; 17,648–17,652; further reasons for this view; *ib.* 17,644. Enumeration of items of expense which are, or are not, increased by running of additional trains; *ib.* 17,645. As to expense of maintenance of way as compared with amount of traffic; *ib.* 17,646. Witness roughly estimates the cost per train mile of maintenance and renewal of way at 3*d.* to 4*d.*; *ib.* 17,647. Cost of locomotive power for passenger trains considered to be 25 per cent. less than for goods trains; discussion of the point; *ib.* 17,653–17,655. ½*d.* per mile a very liberal sum to allow for cost of maintenance of a carriage or van; *ib.* 17,656, 17,657. Discussion of other items of cost; *ib.* 17,658. Insurance against accidents is an item which should be added to cost of mail trains; *ib.* 17,660, 17,661. As to what other items should be added; *ib.* 17,662, 17,663. Increase of expense in proportion to increase of traffic greater on goods than on passenger trains; *ib.* 17,736–17,741. Running on a short branch generally costs more per mile than on a long line, but under some circumstances the reverse is the case; *ib.* 17,742–17,745. Witness's calculations are correct on an average of all the lines, but might be very fallacious in an individual case; *ib.* 17,746–17,748. Difficulty of distinguishing between charges dependant upon the traffic and those not so dependant; 17,754. Witness believes that cost of working mineral as well as goods trains exceeds that of passenger trains; this might be altered by adopting a lower rate of speed; *ib.* 17,755–17,759.

Items of cost of running a train; *Sturrock* 17,765. Average cost of engines on Great Northern has been 8½*d.* per train mile, but cost is now increasing; causes of increase; *ib.* 17,766–17,771. Cost of the two chief elements of locomotion, viz., labour and fuel, are seriously increasing. As railways grow older cost will increase, as more renewals will become necessary; *ib.* 17,771–17,777. Wages have increased 10 per cent. in the last 18 months; *ib.* 17,776. Figures given above are for working, maintaining, and renewing engines; *ib.* 17,779–17,784. New engines are charged to revenue account; the 8½*d.* covers the re-purchase; in fact, the keeping up the supply for ever; *ib.* 17,787–17,792. Price of new engines is increasing; *ib.* 17,785. Difficult to separate the cost of goods engines from passenger engines; *ib.* 17,793. Tank engines answer very well for short distances; *ib.* 17,796. Cost of engines in the Lon-

Cost of Conveyance and Working—*cont.*
don district is 8½*d.*, and including carriage repair 10¾*d.* per train mile; of goods engines taking 25 vehicles 8·99*d.*; *ib.* 17,796, 17,797. Above estimates include all expenses; *ib.* 17,799–17,802. Great Northern engines run 200 miles a day four or five days a week; *ib.* 17,803–17,807. Engines should not be run more than 20,000 miles a year, though company have latterly been obliged to run theirs 24,000; *ib.* 17,818–17,820. The various ways in which different companies keep their accounts preclude the making any reliable average of train mileage; *ib.* 17,808–17,813. Experiment of engine manufacturers working lines by contract has been found too expensive; *ib.* 17,815–17,817. 17,828, 17,829. Means necessary for keeping an engine in good order; *ib.* 17,821–17,823. Three months are required for rebuilding an engine; *ib.* 17,824. Engines should last 10 or 12 years; *ib.* 17,826, 17,827. Company have about 420 engines; *ib.* 17,825. Advantages of steel over iron in engines; good iron tires worn out with 40,000 miles' wear, whilst steel will last 120,000; the former cost 40*l.* per ton, the latter 65*l.*; *ib.* 17,832–17,836. Steel requires to be carefully applied; when properly put on it is safer than iron; *ib.* 17,840, 17,841. Use of steel crank axles; precautions against accident from breaking of axle. Witness has not yet applied steel tires to carriages, but has no doubt he shall do so; *ib.* 17,842–17,849. To sum up, the use of steel may be a means of reducing cost of working; *ib.* 17,850. The only other likely means of reducing cost would be to run shorter but well-filled trains at a lower speed; *ib.* 17,851–17,854. Speed adds largely to cost of running trains; particulars; *ib.* 17,855–17,857. Continental railways are worked more cheaply than English; *ib.* 17,864. Cost on Great Northern line of working a passenger train of 10½ carriages, 10·75*d.*, repairs of carriages, 2·21*d.*; cost of working a mixed goods train 11·59*d.* on the average; of a coal train, including engine and vehicles, 13*d.*; this latter, having to run one way empty, must be doubled; *ib.* 17,865–17,873. Speed of coal trains; *ib.* 17,874; these might be more cheaply worked if there were no passenger trains on the line; 15 miles an hour about the most economical rate of speed; *ib.* 17,875–17,877. Improved tenders another means of reducing cost; *ib.* 17,879–17,883. Limit of length of trains; *ib.* 17,884–17,887. Unavoidable damage to line from loose coupling of trains; *ib.* 17,888, 17,889. Cost of working goods trains increased by competition; *ib.* 17,891. Increase in cost of permanent way, &c.; *ib.* 17,893, 17,894. Particulars of recent increase in cost of running trains on Great Northern line; *ib.* 17,895, 17,896. The following tables handed in by witness:—"Cost of working a "train of 16½ mixed vehicles a mile on the Great "Northern Railway, to end of 1865;" "Statement "showing the cost per train mile for locomotive power, "from 1st January 1856 to 31st December 1865;" "Cost of repairing Carriages and Waggons, 1852 to "1865 inclusive;" "Value of Great Northern Railway "rolling stock, tools, &c., and estimated value of "shops and sheds on 31st December 1865;" "State-"ment of cost of maintaining the road, coaching, and "merchandise traffic expenses, &c.;" "Statement "showing the cost of working trains of various sizes "and descriptions;" "Calculation showing the cost of "hauling a train of coals with an ordinary engine, "compared with an engine fitted with an auxiliary "tender;" *ib.* 17,913.

Cost of Management:
General particulars and cost of management of Irish railways; *App.* AW.

Cotton and Cotton Goods:
Annual cost of, at Liverpool, greatly increased by the heavy railway rates; *Patterson* 235.

Cotton, Mr. John Edward. (*Analysis of his Evidence.*)
Is manager of the Belfast and Northern Counties railway; 7783. Works the Derry and Coleraine line at a mileage rate: states rates and limit to number of carriages; all expenses are included in the rate except renewal of the line, which is to be done by Derry and Coleraine Company. How renewal provided for; 7784. 7876–7885. 7898–7905. Contradicts evidence given by Mr. Roe, who states that when Northern Counties Company took up Derry and Coleraine line in April 1861 they increased the fares; they were increased 5 per cent. over whole system in December 1863. Hands in table showing the fares in 1861 and now. Reads a statement

Cotton, Mr. John Edward—*cont.*
made by Mr. Garrett (ticket clerk at Derry) stating that no alteration was made at that time. In several instances increased facilities were since given to the public. Long discussion as to whether the increase has not checked traffic and reduced receipt. Increase was only carried out upon the long distances, and witness believes that company made the whole of the 5 per cent. increase. Has not heard that increase inconvenienced the public. Population throughout Derry and Coleraine line decreased since 1863; 7785–7788. 7818–7823. 7829–7873. Cannot find that in Mr. Roe's time fourth-class fares for harvestmen and others existed; reads an extract from a letter written by Mr. Hamilton upon this subject; 7789. Hands in a time table of Mr. Roe's and one of last month, showing the increased accommodation; 7790. Explains certain statements respecting fares and management of the railway, and mentions the advantage that has arisen from having certain lines worked under one management; 7791–7793. Reduction of receipts attributable to state of country and other causes, and not to advance of rates as stated. Receipts have considerably increased this year. Gives receipts of the Derry and Coleraine line in each year from 1860, and explains cause of decrease; 7795–7808. 7814–7817. Is mistaken in supposing that Mr. Roe included in his receipts the profit on the coal traffic carried on the line; 7810–7813. Believes that on business lines a reduction in rates would be followed by a diminution in receipts. Fares cannot be too low for short pleasure lines. Issue tickets to certain watering places in summer time at very low fares; also market tickets at single fares; cannot find that there was anything of the kind in Mr. Roe's time. Gives rates per mile for each class, and states that low wages prevent the labouring classes from travelling. Their position is improving; 7824–7828. Only closed two small stations upon taking the railway from Mr. Roe; the earnings were very small; was advised by that gentleman to close these and one or two others; 7874, 7875. Number of trains have been reduced on whole system since 1863; 7886–7889. Gives number of passengers the carriages will convey, and the width of gauge; 7890–7892. Does not know whether Mr. Roe made a profit of the line after paying a rental of 10,000*l.* a year; considers that their company lost money by working it; felt most the renewal of the line, which required new rails and sleepers; 7893, 7894. Explains how receipts of line are disposed of; is not sure whether the balance this year will pay the bond-holders; ordinary shareholders will get nothing; thinks they do not expect anything; 7895–7897. With one restriction Derry and Coleraine line may alter the rates; 7906. With what lines witness's railway is connected; not with any to the south. Line being constructed from Antrim to Lisburn, which will connect the Ulster and all railways as far as Dublin, will be an advantage to Belfast. In consequence of there being a shorter route, Northern Counties line would stand no chance by running trains direct from Dublin to Londonderry. Bill passed last year for connecting lines at Belfast. Shares are not yet issued; 7907–7915. 7932. Has had some experience in railway competition; in Ireland there is not sufficient traffic to support competing lines; is different in England. Reason why having a second communication between Belfast and Londonderry is of no advantage to either place; is a benefit to those who live between Omagh and Dungannon. Although no advantage to public living at the terminal towns from the competing lines, has injured both the Derry and Coleraine, and Northern Counties lines; 7916–7928. If two companies competed in an Irish rural district, they would half ruin one another, and then combine and raise the fares; 7929, 7930. Scheme before Parliament last session for making a line from Cookstown to Armagh; 7931.

Papers given in or referred to by witness:—Return of fares received by Londonderry and Coleraine Railway, 1861 to 1865, and increase in 1865; *App.* BB. Summer excursion arrangements made by same railway in 1860 and 1865, and traffic receipts from all sources, 1860 to 1865; *ib.* Receipts from all sources of traffic on Belfast and Northern Counties Railway from 1861 to 1865; *ib.* Mr. Roe's remarks in reply to witness's evidence before Royal Commission; *App.* BC.

Court of Appeal. *See* Appeal, Court of.

Cox, Mr. William Thomas, M.P. (*Analysis of his Evidence.*)
Is a lead merchant; attends on behalf of the Derby Chamber of Commerce; 8575–8577. Complains of the inequalities of the rates by the Midland Railway Company

Cox, Mr. William Thomas, M.P.—*cont.*
as between place and place, and also as between different classes of goods; gives several instances; seriously affects witness's trade; sometimes caused by want of competition or from companies reducing rates below those stated in their Act; 8578–8589. 8595. 8604–8610. 8613. 8619–8625. 8643–8646. Rate for transport of goods should be in proportion to mileage, notwithstanding difference in cost of the lines or in quantity of traffic carried. Does not know how such a plan would affect the railways; 8590–8594. 8602, 8603. Equal charges would be more profitable to companies; right in principle that directors should adopt the most productive charges; 8596–8601. Derby only connected with Midland system; attempts made to connect it with others; another line now projected; 8611, 8612. Is not aware that variation of rates result from desire to favour anyone in lead trade; are fixed by company in what they consider their own interests; 8614–8618. Uniform rates could not be preserved unless companies were prohibited from lowering them; 8626–8631. Charges made for carrying lead between Matlock and Derby do not include the collection and conveyance to the railway or cartage. Does not know sum charged for terminals, or maximum rates allowed to be taken by their Act; 8632–8642. Comparatively low railway charge from Derby to London in consequence of there being competition by canal; does not know the canal rates; 8647–8653. Complaints have been made of the unequal charges, but no alteration has been made; 8654. Not fair to charge one uniform rate irrespective of value or quality, but only in the case of all heavy goods; nor right to charge more for shot than for pig lead; companies look upon former as perishable; need only be kept dry; a small bag is occasionally stolen; 8655–8664. Great delay in the delivery of goods on some of the branch lines; names them; is a serious inconvenience to customers, and in some cases leads to a transfer of orders. Companies will not send trucks unless they are loaded. Mentions delay that took place last year in sending a cow to the exhibition. Companies should be bound to deliver goods within a certain time or pay demurrage. Would not expect to pay anything for a warranty if time were set down in time-table; 8665–8678.

See also Allport, Further Examination (1.)

D.

Damage:
Liability of goods to damage, and responsibility of railway companies for the same; *Wright* 763–772.
Clearing house regulations as to railway companies repairing damage done on their line to other companies' stock should be made applicable to stock of private owners also; *Brown* 11,125–11,142.

Dargan, Mr. William. (*Analysis of his Evidence.*)
Is a contractor; is now chairman of the Dublin and Wicklow Railway, and was for several years a director; 5453–5455. Has paid much attention to Irish railways generally; 5456. Fares will not admit of reduction unless companies are aided. Most Irish railways are in debt. Fears reduction of rates would be attended with permanent loss to the companies. Founds his opinion upon absence of population. If all the railways were finished for which powers have been obtained, Ireland would be well supplied; 5456–5459. 5483–5488. Quotes rates for passengers and the four classes of goods; all the Irish railways adopt same classification. Minerals are charged less than first-class goods. Explains that there is much work to do for this traffic besides haulage; calculates expense of extra work at about 1*s.* 3*d.* per ton. Haulage is expensive, in consequence of the bad inclines and short distance; 5460–5467. 5622. 5631–5636. Return tickets at a fare and a half are issued to third-class passengers, and third-class carriages are run by every train. Passengers (chiefly artizans and labourers) are carried twice a day to Dublin, Kingstown, and Bray for ½*d.* a mile. Carrying passengers on that portion of the line answers, numbers being much greater. Low fares have been in operation for 12 months; no increase in the gross receipts, but large increase in traffic; very little additional expenditure. Other places of importance on line, but no difference made; 5468–5482. By amalgamating several small companies into one, a considerable saving would be effected. Thinks Irish railways at their present rates might be worked for a little over 40 per cent. of the gross receipts. Average cost of working English railways 50 per cent.; explains how saving

Dargan, Mr. William—*cont.*
would arise; 5489–5492. 5609–5615. Thinks amalgamation could be carried out at some future time without Government or Parliamentary interference. No difficulty in whole of Irish railways reducing themselves into two or three systems. The directors would consent to any scheme that would put their property in a better condition, but the officers would object unless they received compensation; 5493–5503. Has considered proposition of Government purchasing Irish railways. If Government brought to their aid their better credit, and obtained money at a low rate of interest, great good might be done; Government ought not to sustain a loss. If Dublin and Wicklow Company were assisted in this way to the extent of a million and a half, they would not object to reduce rates 30 per cent. on certain traffic. Good security would be given. Peculiarity of this railway; 5504–5511. 5655, 5656. If extensive reductions made, there will be permanent loss; reduction of one-third would cause temporary loss. Could not reduce to this extent without Government help. Thinks it could be proved that Government would incur no risk in making advance; money would be employed in completing line and reducing interest upon money borrowed; 5512–5517. Quotes dividend paid and amount of capital. Cannot say how the Government by guaranteeing new preference capital would relieve companies from any amount of interest; 5518–5525. How railways paying no dividend should be dealt with; 5526. About 26 millions already laid out upon Irish railways; believes the whole could be bought without compulsion for about 22 millions; data upon which estimate formed; 5527, 5528. 5551–5557. Upon amalgamation there would be a saving of one-fifth in the working expenses. Does not think any company would refuse to sell to Government if a fair offer were made; 5529–5534. Amalgamation would not interfere with further extensions. There are bills now before Parliament for the construction of railways; justification for applying for those lines in county of Wexford. Very few districts that would justify a railway being made; 5535–5540. Shares of insolvent companies have a nominal price in the market; some of them are as low as 15 per cent. Is sorry that rule laid down has been abandoned, that parties applying for a Bill should prove their capability of making the line; discussion as to how solvency should be proved; 5541–5545. 5548–5550. Where new and old lines have come into competition they have damaged each other; 5546, 5547. If Government purchased railways, a special board might work them. Leasing them to any private company would not be an improvement as regards the country. Does not understand how such a board would be subject to political influence. How it should be constituted. Would rather place railways under private management if conditions could be inserted in lease to protect the public, and the property and interests concerned; 5558–5567. 5576. If Irish railways became the property of Government, some of the great English companies would become competitors for the lease; they might meet a little loss upon Irish side, but recoup themselves on English side. Whether a benefit would accrue to Ireland would depend upon conditions of lease. Would work well if parties applying for lease were to tender to work lines under certain maximum rates fixed by Government; the lowest offered should be taken; 5568–5572. Dublin and Wicklow is a line of 120 miles; has equal mileage rates both for passengers and goods, with exception of working people's train; 5573–5575. 5648, 5649. Certain landholders have made advances to promote construction of railways in parts of Ireland; 5577. Landholders and agriculturists would be greatly benefited by an extensive reduction, but would not be willing to give any security to carry out scheme; 5578–5582. If companies could not find security to justify Government in applying funds of United Kingdom, cannot suggest how Irish people could assist themselves. Objection might be made if a Government subsidy were granted to Irish railways and not to railways or other industrial undertakings in England, but exception should nevertheless be made; 5583–5592. Very little coal wanted for manufactures in Ireland, except in the north, there being plenty of water power. Manufacture of wool and flax would not be much affected by a reduction of rates; 5593–5602. Peasantry are not likely to do injury to railways, if property of Government; 5603–5605. If matters left as they are, amalgamation will be very slow; 5606–5608. Average cost of keeping up permanent way in Ireland about 80*l.*; more in England; upon Dublin and Wicklow line about 85*l.*; 5616–5621. Is supplied with a large quantity of traffic from mines at Vale of

DARGAN, MR. WILLIAM—*cont.*

Avoca; increase since accommodation afforded; rate charged fairly remunerative; mining companies pay high dividend; not a fair test of charge to reckon rate as a per-centage in value upon goods carried; 5623–5630. A partial reduction might be made without loss; Dublin and Wicklow would be better pleased to get one-third of the assistance required, and reduce rates 10 or 15 per cent., than to have full amount and reduce 30; reason why this railway is in a peculiar position to test principle; 5637–5639. 5650–5652. Rate reduced within last two years, but not much benefit has accrued; 5640, 5641. Parcel rate low; season ticket holders get theirs carried for nothing; is not a good system, being open to abuse; parcels are not delivered by company; number carried by season ticket holders; 5642–5647. 5650. 5653, 5654. Doubts whether third-class fares could be so low as to take away inducement to walk. Irish labourers have no occasion to travel, small shopkeepers do. There would be a great advantage in reducing third-class fares; 5657–5662. Purchase of Irish railways by Government should be voluntary on company's part; a few might stand out, but traffic might be so worked as to force them in; Government offer should be conditional upon all the railways accepting it, otherwise small companies might stand out. Some precautions would be necessary to prevent impediments being thrown in the way of traffic being worked over lines of those railways holding out; 5663–5675. Midland Railway Company leased their line at one time, and their rolling stock and permanent way were allowed to get into bad condition. The public were served properly. There were clauses in lease to prevent deterioration, but they were found to be defective; companies leasing a line would look more to present than ultimate profit. There would be no difficulty in securing owners of railways against injury; 5676–5687. Leasing company should have a maximum fixed, but should be allowed to reduce as much as they liked. Maximum should be lower than present rates. Would make an uniform charge per mile, and allow a terminal charge that would regulate it; there would be a higher rate per mile for a short distance than for a long; 5688–5699. Would have a fixed terminal charge at a particular place; cartage and labour should be separate. Terminals include only loading and unloading at stations. Should be a maximum rate for terminals. Would allow companies to carry any particular description of traffic at any rate they pleased, but they should not carry between same places at different rates for different persons. Not fair to carry at a less mileage rate into one district than over line generally. A discount might be allowed for quantity. If all railways were in the hands of one company Board of Trade should prescribe and equalize rates. Special rates could not be prohibited. All rates should be published; 5700–5718. If railways in hands of one company, and they found upon one part of their system they could get traffic at 1*d.* per mile, whilst upon another it could not be got if charge more than ½*d.*, they should be left free to act, provided they did not exceed maximum, and treated all alike; 5719, 5720. System of discounts places small traders at a disadvantage; allows a differential rate upon a single waggon, so that it does not affect the poor man so much as it did; 5721–5724.

Letter from witness on Irish railways; *App.* AY.

DARLINGTON:

Complaint of irregularity in passenger fares between Darlington and Newcastle; *Wooler* 9556–9566. 9698–9703. Answer to this; *O'Brien* 12,152.

DEAD MEAT TRADE:

With proper traffic arrangements, a considerable trade in dead meat might be carried on from Ireland; this would increase value of cattle; *Cawkwell* 5144, 5145.

DEBENTURES. *See* BORROWING POWERS.

DECLINE OF TRAFFIC:

Steady decline in passenger and goods traffic in proportion to increase of mileage upon all the Irish lines; this may be attributed to high rates. Conflicting opinions prevent reductions; *Sullivan* 2019–2026. 2048. Decrease of traffic latterly on Irish Great Northern and Western Railway; *Earl of Lucan* 2962. Considerable decrease of passenger traffic on Waterford and Limerick railway in 1863; *Malcolmson* 3537.

DELAHUNTY, MR. JAMES. (*Analysis of his Evidence.*)

Is managing director of the Waterford and Kilkenny and Kilkenny Junction railways; 5011. As far as Waterford is concerned there is great difficulty in approaching

DELAHUNTY, MR. JAMES—*cont.*

the interior of Ireland from want of railway communication. Complains of want of accommodation from Great Southern and Western Company not running trains from and to Kilkenny at convenient hours; gives instances and suggests a remedy; 5011–5014. 5018–5026. Passengers from Waterford and Dublin cannot go by way of Kilkenny and return same day. Great Southern and Western the only line from Dublin to Waterford. This railway has always opposed any scheme for connecting the North Midland Railway of Ireland with Waterford; nevertheless an Act was obtained in 1860 for making a line from Kilkenny to Maryborough; constructed as far as Abbeyleix, and traffic of the district in eight weeks has increased 33 per cent. Object of the Great Southern and Western in opposing; 5015–5017. 5027–5032. London and North-western and Great Southern and Western have lately entered into an arrangement with Mr. Malcomson (a large steam-packet owner in Waterford), for the steamers, and Limerick Railway Company allowing them 30 per cent. of all monies received for traffic brought by Dublin to allow it to go by Dublin, although they may do nothing to earn it. Hands in heads of arrangement, and shows how it has the effect of diverting traffic of district through England by Dublin and Holyhead, and injuring communication between southern parts and England. There should be some tribunal to prevent railways diverting traffic, and a large company subsidizing a small one; 5033–5047. Mr. Malcomson is a resident of Waterford, and has a large interest in the railways and steamers. Thinks the London and North-western must have entered into arrangements with him, not alone in connexion with Waterford interest, but in connexion with their other interests; 5048–5050. Arrangement, though not illegal, is exceedingly injurious to the public interests. Reads a resolution adopted at a meeting of merchants, traders, and citizens of Waterford; 5051, 5052.

Report (referred to by witness) of a committee appointed to inquire as to the best means to be adopted to promote, protect, and develop the trade and commerce of Waterford; *App.* AL.

DELAY. *See* EXPEDITION, 1. PUNCTUALITY IN RAILWAY TRAVELLING.

DEMURRAGE. *See* COAL TRADE, ENGLAND.

DERBY:

Unfair and unequal rates charged by Midland Railway Company, and occasional extraordinary delay, severely felt by tradesmen at; *Cox* 8575 *et seq.*; *Renals* 8684 *et seq.*; *Nicholson* 8796–8798; *Wheeldon* 8863 *et seq.* Some have been raised within the last few years; *Renals* 8748–8751. Want of competition one cause of this, there being no railway at Derby but the Midland; *Cox* 8604–8608. 8611; *Nicholson* 8822. 8859; *Wheeldon* 8870. 8908. Attempts are being made to introduce another line; *Cox* 8612; *Wheeldon* 8871. Loss of trade at, from delay in transmission of goods; *Cox* 8665–8669. Injurious effects of want of railway competition; *Renals* 8712–8715. Disadvantage at which Derby stands as compared with Sheffield in obtaining goods from port of Bristol; *ib.* 8738–8747. The best remedy would be a competing line; a scheme to effect this object thrown out by Parliament in 1865, but another is to be introduced in 1866; *ib.* 8757–8762.

Witnesses are in error who state that the Midland are the only company at Derby; the North Staffordshire are there, and give rates to Derby traders for various places. Midland Company never carried goods between Derby and Manchester until lately; *Allport* 12,368–12,372. Sheffield rates lower than Derby in consequence of the much larger trade and the cheap water communication; *ib.* 12,474.

Derby is well supplied with coal and water power, but excessive railway rates neutralize these advantages, although the Trent Navigation has helped somewhat to keep them down; *Wheeldon* 8903–8907. 8916. In 20 or 30 years, population has nearly doubled, and yet trade has decreased; *ib.* 8915, 8916.

Answer on the part of the Midland Company to Mr. Cox's and Mr. Renals' complaints; *Allport* 12,449 *et seq.*; 13,744 *et seq.*

See also ALLPORT, Further Examination (1.) MIDLAND RAILWAY. RATES AND CHARGES, &c., 5.

DERRY AND COLERAINE RAILWAY:

Successful working of, by witness, who held it on lease from Loan Commissioners; by reducing rates and fares,

Derry and Coleraine Railway—*cont.*

and improving management witness, from a state of insolvency, brought it to produce a profit of several thousands a year; witness's policy since reversed, with disastrous results; *Roe* 5727 *et seq.*; Belfast and Northern Counties Company took a four years' lease of line after last witness, but they lost considerably by it, and gave it up; have now entered into working arrangements, and still manage it; a competing line has latterly helped to reduce profits; *Lanyon* 6077–6101. Line is in a very bad state. and was so when transferred from Mr. Roe, especially the bridges; *ib.* 6130–6138.

Contradiction of Mr. Roe's statement that fares and rates were raised when Belfast and Northern Counties Company took line of him. No increase took place till December 1863, when fares on their whole system were raised 5 per cent. Statement given in showing this, and testimony of railway officials quoted to same effect. Line better managed now than by Mr. Roe; *Cotton* 7783–7788. 7791. 7829–7833. Greater facilities for excursionists, &c., and better accommodation for passengers now than during Mr. Roe's time; *ib.* 7789, 7790. Reasons for working line at a mileage rate; third-class return tickets now issued, also through traffic with England. Denies that company are uninterested in line; *ib.* 7791, 7792. Reduction in receipts not attributable (as Mr. Roe states) to advance of fares and rates, but to two or three bad years, and to competition. Statement of receipts for several years, and of arrangements with Dungannon and Omagh Company to avoid competition; *ib.* 7794–7809. Company paid Mr. Roe for giving up his lease; *ib.* 7810. Derry cartage being included in Mr. Roe's account, witness also includes it in his; *ib.* 7810. 7814–7817. Mr. Roe having given 1½*d.*, 1*d.*, and ½*d* and a fraction, as his 1st, 2nd, and 3rd class fares, witness directly contradicts this, stating them to have been 2*d.*, 1½*d.*, and nearly 1*d.*; *ib.* 7818–7823. Witness believes that the increase of 5 per cent. mentioned above has not checked traffic, but that the company have made the whole of the money; reference to statistics and discussion of this point; *ib.* 7834–7852. Further discussion of the question, in which witness endeavours to show that although less money has been taken, the circumstance is due to causes other than the advance in fares; *ib.* 7853-7872. Witness believes population of the district to be decreasing; *ib.* 7873. One or two small stations closed since company have had line; this suggested by Mr. Roe; *ib.* 7874, 7875. Particulars of the mileage rate at which line is worked; *ib.* 7876–7885. Number of trains on the whole system was slightly diminished in 1864, but now restored; carriages hold an average of 35 to 40 passengers each; *ib.* 7886–7892. Mr. Roe stated that he worked the line at a profit, but since company have had it, it has barely paid expenses; particulars of arrangements between the two companies; *ib.* 7893–7906.

See also Cotton. Lanyon. Roe.

Differential Rates. *See* Rates and Charges, &c., 2, 5.

Disputes:

Proposed tribunal for settling disputes between companies without delay, or recourse to courts of law; *Lees* 9470 *et seq.*

Suggestion for the establishment of a tribunal for settlement of disputes between railway companies and the public; *Williams* 10,342 *et seq.*; *Corbett* 10,988.

Discussion of a tribunal for modifying rates or investigating complaints as to them. Witness considers that present courts afford ample protection to the public. County Courts very convenient and inexpensive for this purpose. Public opinion is sufficient to deter companies from exceeding powers. Such a tribunal would upset provisions of companies' Acts; *Smithells* 13,090–13,095. Companies generally acquiesce in decisions of County Court; *ib.* 13,097, 13,098.

Diversion of Traffic from its natural Channel:

From Liverpool, by unequal charges, &c.; *Clark* 44, 45. 50–53. 67–69. Also by companies being interested in docks, &c. at rival ports, to favour which they carry at unfairly low rates; *Patterson* 255–300. Railway companies should not have power to divert traffic; *Sturge* 775–784. Witness, who is general manager of the London and North-western Railway, states that the company having constructed a railway to Fleetwood, and spent money in making a port there, charge a very low rate, in order to bring traffic in that direction; *Cawkwell* 11,402–11,406. Answer to Mr. Clark's charge as to Liverpool; *Allport* 12,347. The natural traffic of Hull diverted by North-eastern Railway Company to bring trade to their docks elsewhere; *Atkinson* 881, &c., 946–961. Statement in answer to this, to show that public were benefited by diversion complained of; *Cawkwell* 11,526–11,530. Statement to show that Company have benefited Hull, and supported the docks there; *O'Brien* 11,963 *et seq.* Great inconvenience results from Waterford and Limerick Company trying to force traffic in a certain direction; *Ryan* 2684; *Longfield* 2914, 2915. Preceding statement partly incorrect; *Malcomson* 3453. Injury to Newry and Armagh Company by Ulster Company diverting their traffic; *Fearnley* 4965, 4966. Diversion of traffic between southern parts of Ireland and England by Irish Great Southern and Western Company; there should be a tribunal to prevent diversion of traffic, &c.; *Delahunty* 5033–5047. If Irish railways managed by one company they should not be allowed to divert portions of traffic to and from England in order to bring it all to one port; *Grierson* 5951–5953. Injury to Coleraine from differential rates to endeavour to force traffic through port of Londonderry; *Macauley* 7288–7315.

See also Smithells.

Dividends:

Statement of Irish railways classified according to the dividends paid; *App.* BG. Comparison of dividends paid by English and continental railways; *App.* CN.

Docks:

Railway companies should not be allowed to hold; *Sturge* 839. Injurious effects to Hull of railway company possessing; *Atkinson* 881, 882. 946–961; also to Nottingham from same cause; *Hutchinson* 9730.

Justification of railway company possessing docks, and charging equal rates to various ports; *Harrison* 15,169 *et seq.* Among the Hull people there is a great difference of opinion on the subject; *ib.* 15,185.

General list of Acts passed from 1801 to the end of the session of 1866 for docks owned, leased, or worked by railway companies; *App.* EK.

See also Harrison. O'Brien.

Dublin:

Seven-eighths of the traffic north and south of Ireland pass through Dublin; a more direct communication needed; *Roe* 5849, 5850. Present goods and passenger through rates act very injuriously on Dublin; for instance, a London return ticket costs 5*l.* 3*s.*, whilst one from Belfast may be had for 2*l.* 10*s.*; *Parker* 6878–6889. Further information on and discussion of this question; goods carried greater distances for less amounts, &c.; some of the causes pointed out; *Bewlay* 6902–6923; *Pim* 7094–7098. Unfair pressure of present arrangements upon trade of Dublin; *Bagot* 6994, 6995; *Barrington* 7131–7147. Desirability of lower fares shown; *ib.* 7001–7003. Parcels rates recently raised; *ib.* 7020–7025.

E.

EBORALL, MR. C. W. (*Analysis of his Evidence.*)

Is general manager of South-eastern Railway Company; 16,086. Captain Gordon's complaint that company will not undertake delivery of Government stores beyond limits of their own line is not strictly correct; has never refused to carry goods through, but only to carry them through in a specified time; no difficulty in companies making arrangements to secure the speedy forwarding of these stores. Suggestions should come from Quartermaster-General or storekeeper. Could not send special trains with them; 16,087–16,091. 16,101. Cannot send a gun from Woolwich to Portsmouth under 48 hours; its course; and cause of delay; 16,092–16,099. No unwillingness to form through booking arrangements with London and South-western; 16,100. Explains why company object to make through rates for carriage of coal; 16,102, 16,103. 16,106. 16,113. Has through booking arrangements with all companies for goods; is in the clearing house; 16,104, 16,105. At what points London and North-western and Great Western could deliver coal upon witness's system. Has a communication with Clapham junction, but does not send traffic; Brighton Company carry coal that way; 16,107–16,112. Seaborne coal can be delivered cheaper at ports of Whitstable and Dover than at Brighton; 16,114–16,117. Has through rates with railway companies north of London for general goods, not through rates to all stations on South-eastern line; very little inconvenience therefrom. Has them with Great Northern, North-western, Great Western, and Midland to all important stations; 16,118–16,121. Principle upon which terminal charges are made; 16,122–16,125. 16,127, 16,128. No objection to a maximum terminal charge being fixed by Act of Parliament; 16,126. No terminal for passengers; are not prohibited from charging one; would be justified in doing so; why distinction made between passengers and goods; 16,127–16,136. Companies not likely to charge more than their maximum fares; South-eastern charge 20 or 25 per cent. below for passengers for all stations; only half maximum charged at many. Places where maximum fares are not charged by parliamentary trains; are not charged to Folkestone. Gives fares to Folkestone and Dover, and states that gross charge not more to places short of Dover than to Dover itself; 16,137–16,149. Has prepared and puts in a statement showing comparison in different cases between English and continental railways; 16,150, 16,151. More favourable principle with regard to return tickets in England than in France. First and second-class single continental fares much below English; excursion fares much higher, and are only run occasionally in France. All above 30 kilogrammes (65 lbs.) of luggage is charged for; weight allowed in England. Compares fares in England to those in France and Belgium; are from 15 to 20 per cent. higher in England, but taking into consideration frequency of trains, greater speed, and greater weight of luggage allowed, charges are more beneficial in England; 16,152–16,163. 16,170–16,178. Cannot say what would be a fair average allowance to make for luggage upon 100 first-class passengers. Passengers going abroad carry more than others; 16,164–16,166. French railways cheaper than Belgian; 16,167–16,169. Would be better for the Belgians to charge more money and travel at greater speed, and give more convenience with regard to change of carriages; 16,179, 16,180. Number of trains between Dover and London and Boulogne and Paris; comparison in favour of England. English railways have cost more than double those of France and Belgium; to what increased cost attributable. Gives cost per mile on certain continental and English railways, number of passengers carried in the year, and length of lines. French Government has given great aid in the construction of railways. Do not take cost of line into consideration in fixing fares; only consider what will bring in the largest return to company; 16,177. 16,181–16,189. Large proportion of passengers carried by South-eastern are from London and 20 miles round; are not merely passengers travelling between London and Greenwich; 16,190, 16,191. Working expenses per mile more on South-eastern than on railways in France and Belgium; to what cause increased expense due; hands in statement of "Regulations and Obligations of Railways in "France;" 16,192–16,201. 16,219. Source from which figures in statement drawn up are taken; 16,202. Book through only with Northern of France, and with Paris, Lyons, and Mediterranean as far as regards Marseilles. Through rate from London to Paris is the full local rate on both railways; public only get a through ticket; if rate were divided on mileage basis Northern of France would get a greater benefit. South-eastern share higher in proportion than Northern of France; reasons. In France before rates are charged or altered the sanction of the Minister of Public Works has to be obtained; 16,203–16,217. Goods traffic goes quicker in England; 16,218. If steel rails were cheaper expenses of keeping up permanent way would be reduced; could divide cost of working between different heads of expenditure; 16,220–16,222. Thinks trains are not run only partially occupied; if public had less accommodation in that way there would be no material saving in expense; 16,223, 16,224. Goods traffic small on South-eastern line; has from 130,000 to 140,000 tons a year of mineral traffic. On list of articles given in, charges are 12 or 15 per cent. higher on South-eastern than on French railways. Passenger fares are not higher than upon other English railways; 16,225–16,228. Average charge per mile for ordinary first-class passengers on South-eastern is 2½*d.*; on all the great lines of country the average is 2*d.*; 16,229–16,232. South-eastern have been great sufferers from accidents; some modification of the law with reference to compensations necessary; would be desirable if Legislature could fix the amount to be paid. In London, Chatham, and Dover Act claim is not to exceed 100*l.* for working men; why they obtained this special exemption; 16,233–16,236. Would limit the liability of all railway companies; how question might be determined. If limit of compensation fixed same amount should be paid to passenger whatever the cause of accident; such a course would do away with an enormous amount of litigation; mentions a case where heavy compensation was awarded and the person afterwards got comparatively well. Amounts companies have had to pay have pressed heavily upon profits; gives sum paid in the last 10 years by South-eastern, and to what extent the dividends are affected in consequence. Last accident will cost company nearly 70,000*l.*; 16,237–16,252 If liability limited a passenger should be allowed to insure to a reasonable amount; 16,253, 16,254. Witness subsequently added some remarks headed, "Precedents for alteration of the "law in regard to liability of companies in case of "accidents to passengers by railway."

Paper referred to by witness:—Information as to the obligations and conditions of transport of railways in France; *App.* CK. Letter from witness on Government and private aid given to French railways; *App.* DH.

EMIGRANTS:

Reduction of fares to, on Belgian railways; *Fassiaux* 3138. Witness does not think Irish railways have suffered from the emigration; perhaps they have benefited; *Murland* 4844, 4845. Emigration has caused rise in wages throughout Ireland; no one now need be unemployed; *Earl of Clancarty* 6379–6381. Emigration to America shows how low fares will induce people to travel; *Parker* 6865.

If system of uniform mileage fares were adopted, it would stop certain facilities now given to emigrants for reaching their port of embarkation; *Grierson* 13,287–13,289.

EMIGRATION:

Has not affected railway traffic in Ireland; *Hancock* 7643.

ENNIS, MR. JOHN, M.P. (*Analysis of his Evidence.*)

Is chairman of Irish Midland Great Western Railway; 4011. Was its originator, and has been for 20 years connected with railway and paid much attention to its affairs; 4012, 4013. Question of reduction of fares has often been submitted. Thinks traffic in Ireland a limited quantity, and that any reduction would not bring a compensating receipt in money. Admits that his

ENNIS, MR. JOHN, M.P.—*cont.*
company do not carry all that could be carried; 4014, 4015. 4066–4068. 4212. No experiments have been tried, the fares being low. For many years harvest labourers have been carried at ½*d.* per mile; a great many still walk or go by car; gives distance and rates by the cars. If a large reduction were made in fares, the receipts might recover in four or five years, but shareholders would not like to go without a dividend for that time; 4016–4024. Would not pay to charge such fares as are charged on some of the excursion lines in England; 4025, 4026. Not aware that low fares have been tried on the Londonderry and Coleraine line. In Ireland passenger and goods rates nearly uniform. When a railway is subsidized low fares can be introduced, as shareholders do not suffer; 4027, 4028. Third-class passenger fare is ½*d.* and one-tenth per mile; is not in excess of the Act. Parliamentary trains are run one each way daily at 1*d.* per mile; 4029–4032. Harvest men are generally carried by ordinary train; sometimes sent by special; this traffic has increased; gives number carried in three half years. Reason why they are not taken by fast train. Doubts whether ½*d.* a mile would pay. Could take them for half-price if a certain number came in a day or week; 4033–4035. 4072–4081. Number carried during latter half of 1864. Third-class passengers increasing; attributes this partly to emigration; 4036–4039. Cattle traffic at a standstill; arises from scarcity. No reduction of fares would increase traffic; considers rates reasonable; has lately made a small reduction. Reasons why fat cattle are sometimes driven; gives number of miles they go, and states that injuries received in trucks are not comparable to wear and tear along the road; could not drive cattle so far in summer time; 4040–4049. 4053–4059. If rates were reduced there would be an increase in store cattle traffic, but doubts whether it would be profitable. Facilities at every station for putting cattle into trucks. A great number of store cattle still travel by road. Quantity carried regulated by number of trucks possessed; at Ballinasloe fair the supply deficient, but at other fairs, when supply ample, do not get all the traffic; sometimes borrows rolling stock from other companies; 4050–4052. 4060–4063. 4069–4071. Does not know proportion that travel by railway and by road, or proportion of the whole cattle that travel in a year; 4064, 4065. In 1860, at the suggestion of Mr. Forbes, passenger fares were advanced 10 per cent.; receipts considerably increased; does not know whether the passenger traffic diminished. Last half year revenue fell off; ascribes this to impoverished state of the country; 4082–4085. 4094–4099. Return tickets are issued from market town to market town. A considerable number avail themselves of them. Principal market towns on line; 4086–4088. All persons who will travel by these harvest trains are treated in the same way. Women and children would not be refused if they came. They are all through passengers; 4089–4093. Would like to see amalgamation tried, as it would diminish expense of management; 4100, 4101. Gives length in miles of Midland Railway proper, and names small lines rented, &c. by that railway. Equal mileage rates over whole line; 4102–4105. Lord Clancarty was so persuaded that low fares would be remunerative that he proposed to try a reduction between Athlone and Galway, guaranteeing the company against loss. Difficulties in the way that caused proposition to be declined. Discussion as to responsibility of grand jury of Galway in consequence of Loan Act of 1849; 4106–4116. Where there is an increase of tonnage and receipts for coal and coke it must be attributed to wet years and difficulty in getting turf; 4117–4122. Dissents from opinion expressed by Mr. Forbes that by reducing rates for coal to ½*d.* per ton per mile it could be delivered to all parts of Ireland for 16*s.* or 17*s.* per ton, as that is the price paid at Dublin. Gives price at the quays, cartage paid, and cost of delivery to certain places; 4123–4133. 4139–4142. 4146, 4147. Proportionate consumption would not increase by reducing to ½*d.* per mile; 4134, 4135. Cheaper for witness to burn coal than turf. In wet seasons the latter is worthless; 4136–4138. 4148–4150. Reasons why the masses could not use coal; 4151, 4152. A full train load consists of 40 or 50 trucks: one locomotive would take about 120 tons of coal. Trade in coal does not exist, the quantity required being small, and use of it opposed to habits of the people; 4153–4159. Groceries, wines, and spirits are the leading articles of the goods traffic. Carries a good deal of corn, but the trade is variable. Does not carry turf, it is taken by the Royal Canal, which is owned by the Midland Great Western Company; they do not interfere with the traffic on it, but leave that to the

ENNIS, MR. JOHN, M.P.—*cont.*
option of freighters and private enterprise; may charge any rates it thinks proper. The Grand Canal are empowered to charge from 10 to 15 per cent. lower than the railways, and the freighters may charge what they like; 4160–4180. 4210. As soon as company came into possession of the canal (about 18 years since) they reduced the rates in order to secure traffic which before was sent by road; there was a large increase in traffic and receipts, which continued until company ceased to be carriers on the canal, and threw it open to public competition. From that time the tonnage receipts have not increased; 4181–4183. 4186, 4187. 4190–4197. Does not obtain an income from canal equal to interest parted with in price paid for it, but was enabled to make part of railway on banks of the canal. Expense of keeping canal in repair small; 4184, 4185. Has an agreement with Mr. Wallace to receive and deliver goods in Dublin, Galway, Sligo, and Athlone; 4188. Cannot state relative rates of charge for cartage and by railway conveyance; 4189. There are no mills in neighbourhood of line of railway. Offered some time ago to take minerals at a very low rate, but in consequence of difficulty in getting them to railway they were not sent. Has had no other application for special rates; 4198–4203. Fish traffic an advantage. Valuable fish travel by night trains; inferior is taken at very low rates. Explains why Galway fisheries are totally neglected. Unproductive state not owing to want of facilities by railway companies. If English fishermen went to west coast of Ireland they would not be allowed to fish; 4204–4209. Has an arrangement with Great Southern and Western Company by which steamers are prohibited from plying upon any navigation; 4211. If low rates and fares were tried, it could only be done at expense of shareholders; 4212.

ENNISKILLEN, BUNDORAN, AND SLIGO RAILWAY:
Memorial from Mr. H. M. D'Arcy Irvine, as to the; *App.* BS.

ERRORS OF RAILWAY SYSTEM:
The fundamental error of our railway system is that the country has to adapt itself to it, instead of its being adapted to country; instance cited; *Galt* 8509. Many unnecessary lines have been made; *Stewart* 14,863.
Witness objects, on administrative principles and public economy, to giving up main lines of communication to trading companies as a monopoly, and for profit; *Chadwick*, 17,179.

EXCURSION TRAINS:
On Belgian railways; *Fassiaux* 3061.
On Irish Great Southern and Western; *Haughton* 4491–4493. Cheap Sunday excursion trains between Cork and Limerick; *ib.* 4689–4691. Third-class people will only avail themselves of excursion trains at holiday times; trains are then crowded, and financially satisfactory; *Murland* 4950, 4951. But little pleasure traffic in Ireland; excursion trains should be frequent; *Bewlay* 6977, 6978. Excursion trains have recently been tried on Irish Midland Great Western with most satisfactory results; *Barrington* 7108–7112; also on Great Southern and Western, but not so successful; *ib.* 7117–7120. No difficulties in the way of excursion trains in Ireland; *ib.* 7121–7123. Desirable, even if fares were one third what they now are; *Galt* 7485–7489.
Summer excursion arrangements made by Londonderry and Coleraine Railway in 1860 and 1865; *App.* BB. Statements in reference to excursion trains, Ireland; *App.* BY.
Excursion trains not a very profitable traffic; they are too numerous and frequent; those confined to one day pay best; one company will often run them because another does so; *Cawkwell* 11,619–11,632.
Excursion trains on some lines have been carried too far; when they are so very heavy they get in the way of everything and endanger the ordinary traffic; and as far as company is concerned they are not all profit; *Clarke* 12,849–12,857. 12,866; but witness would not have Government interfere, either to enforce a certain interval between starting of trains, or in any other way, the railway people being the best judges; *ib.* 12,886-12,892.
Reason why witness thinks that, except in thickly-populated districts, you could not induce people to travel for any long period or continuously. Excursion trains scarcely pay towards end of season; would limit them to holiday excursions if it were possible; is certain they induce parties to travel who would otherwise pay full fare; *Grierson* 13,292–13,299.
Very considerable excursion traffic on Lancashire and Yorkshire Railway, which company consider answers

EXCURSION TRAINS—*cont.*

their purpose, and does not much interfere with ordinary traffic; *Smithells* 13,186–13,189.

At end of season excursion trains scarcely pay; *Gooch* 17,847.

EXPEDITION:

1. *Delay.*
2. *Rate of Speed.*

1. *Delay:*

By Midland Railway Company in transmission of goods; *Cox* 8582. Injurious effects of, to trades of Derby, as neighbouring towns can be supplied from a greater distance in less time: 5 or 6 days are sometimes occupied in conveying goods 45 miles; this is probably caused by waiting to make up a full train load; they nearly starved a cow belonging to witness from delay on the line, and he could obtain no compensation; *ib.* 8665–8669. Companies should be compelled to name a reasonable time, and should be bound under a penalty to deliver goods within it; no higher rate should be allowed for this; they are themselves particular enough in charging demurrage to others; *ib.* 8670–8678. Complaints of delay on the part of the Midland Company at Nottingham; *Hutchinson* 9757–9787.

Answer to Mr. Cox's complaint of delay; *Allport* 12,477–12,480.

Frequent delay by railway companies in forwarding salt vans belonging to witness, entailing a loss of 700*l.* to 1,000*l.* a year for demurrage; probable causes; suggested remedies; *Corbett* 10,892–10,899. 11,053. Tabular statement showing loss to witness in several ways by these delays; *ib.* 11,025. Discussion of various points brought out by this table; delay is always with the companies, not with the consignees; *ib.* 11,026–11,047. Greatest delay occurs at Reading, probably from misunderstandings between companies; *ib.* 11,045, 11,046. Remedy would be better working arrangements, making companies liable for demurrage, and compelling them to provide all the trucks; *ib.* 11,048–11,050. Special instances of delay; *ib.* 11,051–11,056. After inquiry, witness believes that there has been very little detention of Mr. Corbett's waggons; on the contrary, company complains of traders' delay in unloading their waggons; *Grierson* 11,898–11,901. Company now have information which will enable them to trace the cause of any delay with traders' waggons; some delay arises from neglect of consignees to take delivery; witness thinks Mr. Corbett's suggestion of charging siding room to consignees where delay occurs a very good one, and wishes it could be carried out; *ib.* 11,906–11,914; but it is doubtful whether company have power to enforce it; *ib.* 11,915. Discussion of this point. Witness thinks if consignees could thus be charged for delay, company still ought not to be liable for demurrage; it is desirable that the above doubt should be cleared up; *ib.* 11,916–11,926. When company's waggons are used, company can compel consignees to empty them promptly; *ib.* 11,927, 11,928.

Complaints of serious injury to Cannock Chase and Lintz colliery owners from delay in forwarding their waggons, railway company giving an unfair preference to their own and those of other railway companies; *Brown* 11,070 *et seq.* If consignees delay to unload, the companies charge immediately for their station room; *ib.* 11,163. If no delays took place, one-half present number of waggons would suffice for traffic; *ib.* 11,165.

Denial to any statements that undue delay takes place in delivery of goods from London and North-western Railway. Goods received during the day are almost invariably sent off the same night; *Cawkwell* 11,662–11,670.

Statement of Cannock Chase Colliery Company's waggons damaged or delayed by certain railway companies; *App.* BN. Reply of the North British Railway Company to the charges of delay in delivery of goods; *App.* DX. Complaints from the South of Scotland Chamber of Commerce as to delays in delivery of goods by railway; *App.* DX.

See also ALLPORT. MIDLAND RAILWAY.

2. *Rate of Speed:*

On German lines very good; perhaps about the same as on Irish; *Mulvaney* 1148–1150. Of express trains in Belgium about the same as in England; *Fassiaux* 3063, 3064.

First-class trains travel faster in France than in England; but second and third class much faster here than in France; *Stewart* 14,665–14,673. Speed of various trains given; *ib.* 14,689–14,692.

Uncertain and unsatisfactory state of the law as to speed which Post Office may demand for mail trains; *Page* 14,968.

Speed higher here than on the continent; *Eborall* 16,166. 16,174, 16,177.

The most economical rate of speed is about 15 miles an hour; *Bidder* 17,006–17,008. Ordinary mineral trains run up to 40 miles an hour at present; *ib.* 17,047.

Speed for goods trains, to be economical, should not exceed 15 miles an hour, but this is impracticable, as they must keep out of the way of others, and public are impatient for their goods; *Gooch* 17,391–17,396. Companies have at present the strongest possible inducement to forward goods quickly, viz., their own interest. They are punished very severely for delaying perishable articles, and the trains are organized specially with regard to them; *ib.* 17,516–17,522. Present railway legislation presents obstacles to speedy transit and distribution of goods throughout the country; *Chadwick* 17,260.

Comparison of the speed of trains by English and continental railways; *App.* CN. Statement of, on certain English railways; *App.* EE.

See also FOREIGN AND COLONIAL RAILWAYS.

EXPRESS TRAINS:

Speed of, in Belgium, about the same as in England; *Fassiaux* 3063, 3064.

Express fares abandoned on most of the trains on the London and North-western system; this has made trains less punctual, and sometimes unwieldy; *Stewart* 14,730–14,734.

See also RATES AND CHARGES, &c., 3.

EXTENSION OF RAILWAY SYSTEM:

Although a great many unnecessary lines have been made, a very much larger amount of accommodation will yet be required; among others, cheap single lines in agricultural districts; *Stewart* 14,863–14,867. How these cheap lines are to be constructed; *ib.* 14,872. Serious abuse in present system of obtaining Acts prevents *bonâ fide* investors from embarking in railways, and discourages making lines which are really needed. Old companies should be in a better position, and they would then give the necessary accommodation; competition, cost, &c. have greatly reduced dividends, and discouraged old companies doing this; *ib.* 14,873–14,876.

Extensions should only be made where landowners are disposed to assist by taking shares; then company in whose district it comes should be bound to work it at 50 per cent. Present regulations sufficient to ensure their being of a *bonâ fide* character; *Bidder* 16,739–16,743. Speculative lines not on the whole objectionable; *ib.* 16,744–16,745. Great companies should not be prevented from making new lines, even though they invade other districts; *ib.* 16,747–16,750.

The benefits derivable in future from the cheaper and better use of existing railways, and from extensions, will be as great as any that have resulted from existing system, but these benefits are in a great measure prevented by false principles of legislation. In many cases, both in large towns and for agricultural purposes, but especially the latter, witness believes an extensive system of tramways worked by horses would be highly serviceable, but Parliamentary expenses are so enormous, even when there is no opposition, as to amount to a prohibition of anything of the kind; *Chadwick* 17,181–17,183. Suggestion that new lines might be constructed and maintained by local authorities, in a manner analogous to system of gas supply at Manchester; or as public roads are made in Ireland; viz., by public rates; *ib.* 17,215–17,224. 17,266–17,269. Present difficulties in the way of such extensions as witness suggests are the enormous obstructions in obtaining Act, and uncertainty as to the opposition which may spring up; discussion as to analogy between gas and water supply and railways; *ib.* 17,236–17,243.

See also NEW RAILWAYS.

F.

FAMILY TICKETS. *See* TICKETS.

FARES, REDUCTION OF. *See* RATES AND CHARGES, &c., 3.

FASSIAUX, M. CHARLES ALBERT. (*Analysis of his Evidence.*)

Is director-general of the posts, railways, and telegraphs in Belgium, 3058. Return tickets are issued in an exceptional way. No season tickets, but tickets are issued to encourage travelling; 3059–3062. Gives speed on Belgian lines. Profit 7 per cent. upon capital expended. For several years there was no profit, but Chamber of Deputies decided that to make them pay more money must be spent; 3064–3070. The State should have the management of railways, and of the transport of goods, but the collection and delivery should be left to private enterprise; 3071–3073. Proposal to buy up railways was rejected. Several railways are worked by and belong to companies; public say they are not worked so well as by the State; 3074, 3076. Government has control over times of running trains on private lines; competition between them; difficulties felt in consequence of parallel lines running in rivalry; under consideration to take these lines; 3078, 3079. Enumerates certain articles which are carried without any profit; 3080–3082. Rates are published; a few special arrangements for rates are made, which are to be abandoned as being objectionable; similar arrangements are made by private companies; 3083–3088. Goods are loaded and unloaded at station by the agents of the administration, cost included in tariff, but coals and all goods loaded by shovel, and travelling uncovered, at the expense of agent, sender, or receiver; when Government assists in unloading, charge is included under head of "extra expense;" 3089–3093. Private companies do not pay so well as Government lines; the latter, with one exception, possess all the great lines: 3094–3096. Less than a year ago the tariff on certain goods was considerably reduced; result to present time satisfactory; 3099–3101. Railways for the most part run through manufacturing and mining districts; there are some through purely agricultural parts. Statement being prepared showing result of reduction of rates, both in the manufacturing and agricultural districts; 3102–3104. Would have made reduction even if Belgium had been an agricultural country like Ireland; 3105, 3106. Transport of goods not considerable in Belgium; 3107. Discussion upon a statement laid before Chamber of Representatives of Brussels, determining tariff for passengers' luggage on State railways, showing that from 1856 to 1864 considerable reductions were made in rates for goods. Result so satisfactory that Government intend reducing the passenger rates; 3108–3116., 3138–3143. Rates for coal lower in Belgium than in England; 3117–3119. Experiments have been made to send coal from Liège to Paris; it has been proposed to send coal from Minden to Paris, and from Westphalia to Minden. Is surprised that cast iron has been transported from Belgium to England, where it is produced cheaper; 3120–3124. Certain places to which there are through rates for goods; 3125. No difficulty in getting foreign railways to reduce rates. Reduction did not extend to Austria and Prussia. How total rate is divided between Belgium and Prussia; discussion thereupon; 3128–3135. Result of reduction same upon all the railways. Winter more favourable for increase of traffic on railways, as the canals are closed, and roads not easily traversed; 3136, 3137. Lines worked by Government afford greater facilities for postal service. Mails go by any train; 3138–3145. Parcels are carried by railway, and delivered at persons' residences; in Prussia there is a parcels post; states how collected and to what distance delivered by Government; 3146–3152. Post-office can send bags by all railways, and by any train without paying rates. Letters by all railways are free. Under special circumstances post-office allow private companies a special sum; 3153–3160. Soldiers upon service or leave, not Government employés, are conveyed at a reduction of 50 per cent. Special service organized by Government for keeping up rolling stock and engines. Manufacture of locomotives by private enterprise; 3165–3167. Position of persons employed on railways as to salaries and pensions, and how appointed; 3168–3176. One private railway has been bought by Government; how value estimated; 3177–3179. Names certain railways in course of construction; 3180, 3181.

Memoranda on Belgian railways, communicated by one of the Commissioners, and referred to by witness; *App.* M. Particulars furnished by witness as to the capital, &c., of railways in Belgium; *App.* DO.

FAVOURITISM. *See* RATES AND CHARGES, &c., 2.

FEARNLEY, MR. BENJAMIN. (*Analysis of his Evidence.*)

Is secretary of Newry and Armagh Railway Company. Traffic is very seriously interfered with by competitive measures of certain companies with which this railway is connected. Mentions companies which divert the traffic. Through rates have been refused by these companies. Business communications and trade with port of Newry lies in Monaghan and Clones districts; chiefly inward coal traffic; a great deal of traffic in grain and bread stuffs in that district and some extensive mills, also a traffic in slates, timber, and agricultural produce; 4965–4970. Companies desire equal rates by both routes to Monaghan, and division of traffic. Difference in distance in favour of Newry and Armagh getting passenger traffic; 4971–4975. Doubtful whether Monaghan district would be better provided for by amalgamation with Ulster company. Newry and Armagh a local company; chiefly English capital; 4976–4979. Thinks the Cardwell Act does not meet evil complained of, but has not tried its efficiency; discussion thereupon; 4980–4983. 4991–4998. 5005, 5006. If a through rate were established, there would be a great traffic in grain and minerals. Where grain sent to, and for what purpose; 4984–4987. When railway made, expected to be able to make arrangements with other companies. Why company did not form a station at Armagh; 4988, 4989. When section from Gorah wood opened, has had no through rate since. Population of district lying between Gorah wood and Newry is denser than any other part of known world, except China; 4990. 4999. Quotes fares for third-class passengers between Newry and Armagh (22 miles). Gets all the direct passenger traffic. Reason why does not get all goods traffic; 5000–5004. Amalgamation would not cure all the evils of present system; it would then be the joint interest of companies to get as much traffic as possible upon each railway, but not to develop all the ports equally. A powerful port like Belfast would very likely have a greater interest in a long route than a small port like Newry. Reads and hands in correspondence received, illustrative of inconvenience of not having through rates. Has complied with every request made for exchange of through rates; 5007–5009.

FIELD, REV. J.:

Statement as to want of correspondence of trains on different lines in the Midland counties; *App.* Q.

FISHBOURNE, MR.:

Explanation from, in reference to certain statements made by Messrs. Haughton, Murland, and Forbes, *App.* BC.

FISHERIES AND FISH TRAFFIC. *See* IRISH FISHERIES.

FLAX TRADE, IRELAND:

Would be greatly stimulated by better railway arrangements and a reduction of rates and fares; *Sullivan* 2121, 2122. Very little flax brought to Limerick by railway; *Tinsly* 2582. Clonmel is the most inland town in which witness has established flax manufactories; *Malcolmson* 3574, 3575. Flax mills would be established if rates were reduced; *Hemans* 3933. Cultivation of flax might be stimulated by reduction of railway charges; *Murland* 4761. Great traffic in; extension in growth and manufacture of; *ib.* 4856–4861. Manufacture of wool and flax would not be much affected by a reduction of rates; *Dargan* 5594-5601. Large increase in produce of flax in the south; *Roe* 5850. Loss of flax trade on certain lines from want of proper traffic arrangements; particulars of trade, growth, &c.; *Shaw, W.* 6433–6450.

FLEETWOOD. *See* LIVERPOOL.

FLETCHER, MR. JAMES. (*Analysis of his Evidence.*)

Is secretary to the Rochdale Merchants' and Traders' Association; 1345. Complains of the insufficient number of trains as compared with the neighbouring towns. Representations were made to the directors of the Lancashire and Yorkshire Railway Company, and an extra train was put on; 1346–1353. Great competition at Oldham and none at Rochdale; in consequence, passenger fares are very high; gives instances. In some cases they are higher than the legal fare; 1354–1384. The rates are equally high for goods; the charge on the same line for cotton from Liverpool to Rochdale is 12*s.* per ton, and to Heywood (three miles nearer) 10*s.* per ton. There is a canal to Heywood, but the rates are the same as by railway; 1385–1395. A considerable amount of cotton is brought from Liverpool to Rochdale in the year, and the aggregate amount of loss arising from difference in carriage would form a very serious sum if the trade was in its usual state; 1396, 1397. The rate was formerly 9*s.* to Heywood and 13*s.* to Rochdale, but there was a

FLETCHER, MR. JAMES—*cont.*
remonstrance, and 1*s.* was taken off to Rochdale, and 1*s.* 2*d.* put on to Heywood. For produce such as sugar, it is 13*s.* per ton from Liverpool to Rochdale, and 12*s.* to Oldham; 1398–1401. There are two lines from Liverpool to Oldham, the London and North-western and the Lancashire and Yorkshire; most of the produce comes by the latter to Rochdale. The London and North-western do not go to Rochdale; they go to Oldham, but do not carry goods; all the cotton practically comes by the Lancashire and Yorkshire; 1402–1405. Witness was told by a timber merchant that he could have had one heavy cargo of timber carried to Oldham for 90*l.* less than he paid to Rochdale; the consequence is that the timber merchants at Oldham can undersell those at Rochdale, the carriage making a very great difference; 1406, 1407. For machinery for export from Rochdale the rate is 13*s.*, and from Oldham 12*s.* 3*d.*; in fact, the same principle applies throughout; 1408–1411.

See also SMITHELLS.

FORBES, MR. WILLIAM. (*Analysis of his Evidence.*)
Has been engaged 20 years in the management of railways in England and Ireland, and until recently was manager of the Midland Great Western and the Great Northern and Western lines; 1453–1456. Is familiar with all the systems of railways in Ireland. Present rates are prohibitory of any development of traffic. Irish rates, both for passengers and goods, are as high, and in some cases higher, than English rates; if they were lower there would be a large increase in traffic, and the country would be greatly benefited. Has proposed to the directors a reduction of 50 per cent., but as there would be a temporary loss of dividend, they did not accede to the proposition; 1457–1463. The rate for coal is double what it is in England; rates for coal and grain stated; 1464–1475. Thinks coal could be carried all over Ireland at a rate of ½*d.* per ton per mile; if so it could be sold for 16*s.* or 17*s.* per ton; 1476, 1492. Coal traffic very limited. The Midland Great Western system extends over about 330 miles, and the traffic in coals is only 200 tons a week. The gradients upon that line are very fair, but near to Dublin the curves are bad; 1477–1482. Believes that if coal could be had for 1*l.* a ton, it would supersede turf and be more economical. Discussion as to how present rates prevent this result; 1483–1485. 1537–1548. The gradients on the Great Northern are as adverse for some short distances only as those on the Midland Great Western. The cost of carrying coal depends very much upon the gradients; 1486–1488. Recommended the directors to reduce the rate upon coal from 1¼*d.* to ½*d.* per ton per mile; they made it ¾*d.*, and the traffic increased 25 per cent. without creating any loss. Anything short of ½*d.* per ton would be of no use; reasons for this opinion; price of coal in Galway, Dublin, and Cork; 1489–1514. 1524–1527. 1549, 1550. An uniform rate of ½*d.* per mile would be remunerative to the companies; they would get full train loads, one engine taking about 315 tons; 1515–1521. The directors refused to make a general reduction in the tolls, being afraid of a loss of income. Opening a new piece of line at a reduced rate would create dissatisfaction; 1522, 1523. It is a common opinion among the Irish directors that there is a fixed quantity of traffic, and that no reduction of rates will increase it; 1528, 1529. Witness calculated that if the rates were reduced to ½*d.* per mile, the coal traffic would have increased ten-fold; 1530–1534. Suggested to the directors to become coal merchants, but they refused; 1535, 1536. If a reduction were made of 50 per cent. there would only be loss for two or three years. Reduction could not be made piecemeal for passengers. There would not be the same loss upon coal; but in the case of passengers there would not be such an increase as would recoup the loss until after expiration of two or three years; 1551–1560. Considers that the entire traffic of the country might be increased by a reduction of rates; 1561. Coal is a very important article of traffic. If rates were lower, cattle might be carried by railways. Gives present rates; 1562–1568. On the Midland Great Western the profits from passengers and from goods are about equal; 1569–1573. Has been told that if the rates were reduced 3*d.* a waggon per mile (50 per cent.) all the store cattle would be put upon the railway. This would be worth the companies' while for a distance of 20 miles; 1574, 1575. If experiments were made there would be a loss for some time upon the general traffic. Does not think the directors are to blame in not acceding to such a reduction; 1576–1580. Proposes that the earnings of a full waggon should be 3*d.* per mile. Gives calculation

FORBES, MR. WILLIAM—*cont.*
as to expense of conveying loaded trains. States that this sum would be remunerative to the companies. Discussion thereupon; 1581–1616. 1626–1633. Midland Company have a canal of their own running alongside the line from Dublin to Mullingar, and to Longford. A little coal and turf is carried upon it, but the company ceased to work it, because there was not sufficient traffic for both; 1617–1622. The Great Southern and Western Company compete with the Grand Canal. Competition had the effect of lowering the rates, but in the last two or three years they have come to an agreement and work on differential rates; 1623–1625. About 10 loaded trucks go daily through from Dublin to Galway. Thinks the number would be doubled by a reduction of 50 per cent. At a moderate rate, they would carry an enormous quantity of potatoes into Dublin, and also for the English markets, and there would be a great increase in agricultural produce generally, and in manufactured goods from England; 1636–1638. 1641–1644. The grain that is consumed on the Midland Great Western line comes from the districts about Sligo, and from up to Longford; 1639, 1640. Through rates to a small extent between manufacturing districts of England and ports of Ireland upon almost everything but cattle have been in existence for a year and a half upon the Midland Great Western. Companies will not agree to a mileage division of rates. Gives some particulars; 1645–1650. The reason why there is no through rate for cattle on the Midland Great Western and Great Southern and Western lines is that they have to make good any loss that may arise, whereas steam packet companies are protected by their bill of lading, and will not join the railway companies in the risk. Railway companies have not had to pay a heavy sum under this system; 1651–1658. Great Western Railway passes through a limestone district, but there is no traffic in lime. In Cavan there are some minerals which could be worked at a moderate rate, if coal could be got to them. On some of the northern railways a considerable quantity of coal is carried; 1659–1666. The third-class passenger traffic is capable of the greatest increase by adopting low fares. There are no third-class return tickets issued by the Great Southern and Western and the Midland Great Western. The latter runs a train on market days at a single third-class fare. Third-class return tickets are issued by some of the English railways; 1667–1669. 1683. Excursion trains have been tried on the Midland Great Western to a very limited extent. Excursion tickets, in connexion with English railways, are issued at single fares; 1670–1673. No passenger duty in Ireland. It is 5 per cent. in England; 1674–1676. Second-class carriages until recently better, and more generally used, in Ireland than in England; 1677–1680. Third-class fare in Ireland 1*d.* per mile. There are no regular express trains; 1681–1684. States plan adopted by Mr. Bianconi to make his cars pay; 1685, 1686. Average speed upon Irish railways less than upon English; 1687, 1688. Two months before and after harvest time a large number of men are carried from Ireland to England at the rate of ½*d.* per mile; 1689, 1690. If a charge of ½*d.* per mile for third class were universal, travelling would be considerably increased. Season tickets have been tried, but without result. There is a large traffic from them on the Dublin and Wicklow line; 1691–1694. Companies do not run a sufficient number of trains for the accommodation of passengers. Has recommended the directors to put on more, but they refused; 1695–1698. Population of Athlone and Castlebar small, the intermediate places of importance are Roscommon and Castlereagh; 1699, 1700. Has never heard of any attempt to create a traffic in milk; 1701, 1702. No parcels traffic of any great importance; 1703. There is only one passenger train from Castlebar to Athlone per day. There should be at least three; 1704–1706. In consequence of the number of interests, railway reforms difficult in Ireland. There are 18 boards to control 1,700 miles of railway, earning 1,520,000*l.* a year, whereas the London and North-western, with 1,200 miles, earning 5,300,000*l.*, has only one; 1707, 1708. Thinks Irish railways would work better if they were all amalgamated in one company. Traffic in England better developed in large enterprises than on smaller lines; 1709–1713. 1724–1726. Does not know the amount of capital expended in Ireland. Discussion as to working Irish railways; 1714–1723. If a law could be passed to compel companies to reduce their rates a guarantee should be given to them for the loss that would arise. States mode by which this might be done. Discussion thereupon; 1727–1729. 1733–1748. Government should not assist companies in carrying traffic below cost price; 1730–1732. The

FORBES, MR. WILLIAM—*cont.*
manufacturing industry of Ireland is principally in the north, near the seaports. There would be little railway traffic with regard to it; 1749–1751. By the establishment of facilities you might create a manufacturing population. If Galway was the seat of manufacturing industry the trade of the port would be considerably increased, as well as the wealth of the place, and the receipts of railway companies; 1752–1759. Midland Great Western Company paid last half-year 2 per cent.; has paid 5. Diminution from increase of working expenditure, and renewals of the permanent way, and not from any great falling off in the traffic; 1760–1767. The line from Athlone to Castlebar is only worked by the Midland Great Western. If more trains were run between the two places the dividend would be increased; 1768, 1769. Increase of agricultural traffic must arise from increase of production; 1770–1773. Difficulties in the way of transit and transport prevent an increase of manufacturing industry in Ireland; 1771–1784. If moderate rates were established it would lead to an increase of fish traffic. Gives reasons; 1785–1793. Poultry and vegetables are mostly brought into Dublin by railway; 1794–1797. Railway companies very reluctant to reduce fares unless they think such reduction will be accompanied by an increase of traffic; 1798, 1799. Believes there will be no change unless Parliament interferes. Gives an idea as to what that interference should be; 1800–1802. Thinks the directors would be repaid in about a year for any reduction they might make upon coals. It is not so much loss of dividend as an aversion to change. Could carry treble the quantity with the same rolling stock; 1803–1808. Through rates in connexion with English railways would develop traffic, and would be equivalent to a reduction of the local rates; 1809–1811. Universal complaints of mismanagement of Irish railways. Principally of the high rates; 1812–1814. 4*d.* per mile is the ordinary cartage rate, but no analogy exists between carting and railway carrying; 1815–1819. Terminal charges in Ireland considerably lower than in England. The companies do not cart, it is done by agents who charge what they please, sometimes as much as 75 per cent. of the railway charges; this state of things would not exist were there through rates; 1820–1828. Is in favour of the amalgamation of Irish railways. In consequence of loss of patronage, &c., the directors are opposed to the system. Does not agree with Mr. Dargan as to the sum that would be saved by the amalgamation of all the Irish lines; 1829–1837. Average working expenses of Irish railways 49 per cent.; by better management could be reduced 5 to 7 per cent. About 50 per cent. in England; 1838–1844. Want of competition injurious both to the country at large and to the railway interests; 1845.

Explanation from Mr. Fishbourne in reference to certain statements made by witness; *App.* BC.

FOREIGN AND COLONIAL RAILWAYS:

1. *Foreign Railways generally.*
2. *Belgian Railways.*
3. *French Railways.*
4. *German Railways.*
5. *Canadian Railways.*
6. *Russian Railways.*

1. *Foreign Railways generally:*

By the continental system of restricting number of railways and limiting number of trains, cost of conveyance is reduced, but this could not be done here; *Hawkshaw* 14,511–14,529.

Witness has prepared and will give in a comparative statement of some particulars of English and continental railways; this will show that continental 1st and 2nd class fares are much below English, but that they have nothing like our excursion fares. Also, that our system of passengers' luggage is much more liberal than theirs; *Eborall* 16,150–16,165. Speed higher and trains more frequent here than on the continent; *ib.* 16,166. 16,174. 16,177. Various comparisons as to charges, luggage, speed, return tickets, &c. between French, Belgian, German, and English railways; *ib.* 16,167–16,178. Comparison much in our favour; *ib.* 16,181–16,183. Cost of construction of English railways double that of French or Belgian; reasons; *ib.* 16,183–16,186. 16,189. Proportion of passengers on English and continental lines; *ib.* 16,188. Working expenses 25 per cent. less on French and Belgian railways than on South-eastern; reasons. Though against the rules, more fees are received by railway servants there than here; *ib.* 16,192–16,199. Some particulars of through arrangements between French and English railways; *ib.* 16,203–16,217. Speed of goods trains greater in England than in France; *ib.* 16,218.

Witness has never seen anything upon foreign railways that would make him wish to exchange our system for theirs; *Sherriff* 16,424.

Lines are worked more cheaply on the continent than here; French and German workmen are rapidly improving as mechanics, and are now nearly as skilful as our own; *Sturrock* 17,858–17,864.

Memoranda on foreign railways by Mr. W. K. Sullivan; *App.* AE. Comparison of the rates charged for passengers, goods, and passengers' luggage on English and continental railways; speed of trains; number of passengers carried; receipts per mile; dividends, &c., &c.; *App.* CN.

See also SWITZERLAND.

2. *Belgian Railways:*

Some return and excursion tickets issued, but no season tickets at present; *Fassiaux* 3060–3062. Speed of express trains about the same as in England; *ib.* 3063, 3064. Profit 7 per cent. on capital expended; for several years there was no profit, but Chamber of Deputies decided that to make them pay, more money should be spent; *ib.* 3064–3070. The public say the State railways are better conducted than those managed by companies; *ib.* 3076. Government control rates, times of running trains, &c., on all the lines; competition between Government and companies; Government manage their railways more with a view to the public good than to profit; some articles are carried without any profit; *ib.* 3077–3082. Some preferential agreements exist at present, but are to be abolished; *ib.* 3083–3088. Loading and unloading trains; *ib.* 3089–3093. The Government lines pay better than the private ones; Government possess all the principal lines; *ib.* 3095, 3096. A gradual reduction of rates has been made, with highly satisfactory results; *ib.* 3097–3101. 3112–3115. Witness would make the same experiment in Ireland; *ib.* 3105. Government contemplate reducing passenger fares; *ib.* 3116. Rates for coal lower than in England; *ib.* 3117–3119. Through rates with Prussia, &c.; *ib.* 3125, 3126. Some particulars of the traffic in neighbouring countries; *ib.* 3127–3136. More traffic in winter, as other means of communication are less available; *ib.* 3137. Passenger fares and luggage; reduction to emigrants; *ib.* 3138–3143. Great postal facilities; mails go by every train, and are carried free. Great facilities also for parcels; *ib.* 3144–3162. Soldiers are conveyed at half price; *ib.* 3163, 3164. Manufacture and repair of stock; appointment of employés; administration; salaries; *ib.* 3165–3176. Purchase of a railway by the Government; railways now under construction, both by Government and by private promoters; *ib.* 3177–3181.

Belong to the State; cheapest on the continent for travelling upon; good financial position of; *Galt* 7374, 7375. Comparison of English and Belgian passenger fares; *ib.* 8415 *et seq.*

Witness "cannot imagine anything worse or more "infamous than the travelling in Belgium." "They "think of everything but the passenger's convenience;" *Hawkshaw* 14,535.

Inconvenience and delays on Belgian railways; *Eborall* 16,179, 16,180.

Memoranda communicated by one of the Commissioners, and referred to by M. Fassiaux, on Belgian railways; *App.* M. Statement laid before the Chamber of Representatives at Brussels on March 7, 1865, concerning the tariffs for passengers and luggage on the railways of the State; *App.* N. Official collection of tariffs for the transport of goods, finances, equipages, horses, and cattle on the State railways of Belgium; *App.* AS. Conditions and fares for the transport of passengers on the State railways of Belgium; *App.* CT. Particulars as to the capital, &c., of the railways in Belgium; *App.* DO.

3. *French Railways:*

Speed of 1st class trains less, but fares about the same as in England; 3rd class fares lower than here; charge made for passengers' luggage; *Stewart* 14,665–14,774. 2nd and 3rd class passengers are considerably better off

FOREIGN AND COLONIAL RAILWAYS—*cont.*

3. *French Railways*—cont.

than in England; *ib.* 14,675. Comparison of fares, amount of passengers' luggage, speed, and number of trains per day, of French railways as against English; *ib.* 14,676–14,679. French carriages not much superior to English; *ib.* 14,680–14,682. 2nd and 3rd class fares lower, and more frequent trains, as a rule, in France than here; *ib.* 14,683–14,685. 14,688. Speed of 2nd and 3rd class far greater here than there; *ib.* 14,689. Between intermediate stations greater accommodation in France than here; *ib.* 14,699. Goods traffic; *ib.* 14,701; a different charge is made when carried by passenger trains; no comparison can be instituted between their rates and ours; *ib.* 14,706–14,710. Government have greatly assisted the railways, and they are much under its control, by which means competition is prevented. Fares cannot be altered without leave of the minister, but this can be readily obtained when any reasonable change is desired. Any differences between companies are submitted to him, which frequently prevents litigation; *ib.* 14,711–14,716. Government guarantee and have a reversionary interest in nearly all the railways; *ib.* 14,718, 14,719. There are some over which they do not exercise any control; *ib.* 14,720. Though they control, they do not work them. They are managed very similarly, but pay better than ours; *ib.* 14,722–14,725.

Witness hands in a statement entitled "Regulations and Obligations of Railways in France," *Eborall* 16,201; [*a fuller translation will be found in the Appendix*]. Arrangements as to obtaining sanction of Minister of *Travaux publics* and publication of rates, witness thinks fetters business very much; *ib.* 16,217. Coal is carried from Dunkirk to Paris at ⅜*d.* per ton mile; *Bidder* 16,684.

Alleged superiority of method of authorization of lines in existence in France, and discussion of system; *Chadwick* 17,191–17,197. Government there maintain lines, and let them to contractors under surveillance. Discussion of advantages and disadvantages of this system, and advocacy of adoption of some such plan here; *ib.* 17,201–17,215. Superiority of French system of accounts; *ib.* 17,274.

Regulations for the transport of passengers and goods on the French railways; *App.* CH. Information as to the obligations and conditions of transport of railways in France; *App.* CK. Answers to certain questions regarding French railways. (*These answers apply to the lines from Paris to Lyons and the Mediterranean*); *App.* DB. Letter from Mr. C. W. Eborall, Manager of the South-eastern Railway, on Government and private aid given to French railways; *App.* DH. Comparison of the railway service in France and England between the metropolis and various naval arsenals, commercial seaports, suburban districts, royal palaces, celebrated cathedral towns, large and small provincial towns; *App.* DM. Examples of the French railways' classification of goods; *App.* EC. List of actual rates per ton charged for certain goods between certain towns in England, and comparison of the same with the French rates for corresponding distances; *App.* ED.

4. *German Railways:*

Ownership of. The German Unions of railways fix all through rates; *Mulvaney:* 1084–1090. Incomes of, much increased through lowering rates for coal and other merchandise. Report of Cologne and Minden railway shows that every reduction in either passenger or goods rates has increased the dividend. The Governments in some cases having made large advances have the option of taking possession of them after a certain number of years. Particulars of earnings, mileage, capital, &c. of some of the German railways; *ib.* 1098–1115. 1161–1164. Low passenger rates; *ib.* 1116–1118. Very few return or season tickets issued, or excursion trains run; *ib.* 1121–1123. The passenger rates are decidedly lower than on the Irish lines; *ib.* 1116–1130. Tariffs are published, and no variations allowed; *ib.* 1131–1138. Governments only control those lines in which they have an interest; *ib.* 1136–1138. 1165–1169. Rate of speed very good; *ib.* 1148–1150. Competition is now promoted in Prussia; *ib.* 1151–1154. Cost of obtaining authorization much less than in England; *ib.* 1155. The construction of a railway in Prussia rests with the Minister of Commerce and Public Works; *ib.* 1156, 1157. Government guarantees; *ib.* 1158–1160. Governments fix rates more with a view to the interests of the public than of the companies, but they would not sanction reductions that would be a loss to the companies; *ib.* 1170–1174. Full train loads frequently a condition for low

FOREIGN AND COLONIAL RAILWAYS—*cont.*

4. *German Railways*—cont.

rates; *ib.* 1195–1197. Principles upon which coal rates are fixed; other produce not carried at same rates at present; *ib.* 1261–1265. Back carriage scarcely ever charged; *ib.* 1272. German Unions are for through traffic and uniform rates; *ib.* 1273–1275. Statistics, &c. of, given in; *ib.* 1277–1279. Level crossings too prevalent in Germany; *ib.* 1847.

Rules drawn up by the Congress of German Railway Engineers for regulating the construction and working of and the conveyance upon the railways in Austria, Prussia, and the German States according to uniform principles; *App.* CA. Regulations for the working of the Prussian State railways; *App.* CB. Memoranda on the connexion of the Austrian Government with the railways in that country; *App.* DG. Further information from Mr. Mulvaney in regard to German railways; *App.* DT. Particulars of railway service between various towns in Prussia; *App.* DN.

See also COAL TRADE, GERMANY.

5. *Russian Railways:*

Plan of first-class carriage in use on Russian railways; *App.* CJ.

6. *Canadian Railways:*

Principal lines have received from Government aid. Amount afforded, capital expended, and interest to be paid; *Brydges* 5376–5380. At first Government appointed a certain number of directors to control railways, but they are now managed by parties appointed by share and bond holders. Government directors found inconvenient politically; Government now exercises no control beyond any included in the Act authorizing the railway. Can only interfere in regard to the rates, a maximum rate being fixed by Act for one portion only of Grand Trunk Railway. Fares actually charged are much lower than those over portion of the line from Montreal to Toronto. Competition as strong there as elsewhere. From Quebec to Portland passenger rates vary but little; there is a regular scale for goods; *ib.* 5381–5392. Average rates for passengers; only two classes. Return tickets at a reduction of 25 per cent. are only issued in some cases to lower class, but almost invariably to first class. An emigrant class also, which is used for one description of traffic; *ib.* 5393–5401. Fares have been reduced 25 to 30 per cent. in the last three years, and there has been a considerable increase of traffic, and also in the receipts; *ib.* 5402–5407. Fares and rates must be submitted to Governor-General in Council, who may direct something lower. There never having been an appeal, proof that public is satisfied; *ib.* 5408–5412. Considerable cattle traffic; rates vary according to time of year; *ib.* 5413–5415. In some cases through rate 30 or 40 per cent. lower for passengers and goods than usual rate. Rates lower than in England; description of traffic. Rates generally rather lower than on American railways, as Grand Trunk competes for rather shorter distances to get to same points, and has more direct water competition; *ib.* 5416–5423. Post Office send mails by the railway; how rate of payment determined, and number of mails per day; *ib.* 5424–5436. With an exception, railways are as free in respect of charging rates as English companies. Question never been raised to reduce maximum rates. Thinks there is general satisfaction with rates. Lines in Canada in hands of three or four companies; names and routes; *ib.* 5437–5441. Grand Trunk Railway has no security for a limited period or a perpetuity against competing lines. Is at the risk of Canadian Legislature sanctioning competing lines. Competition, principally by lake or river, over nearly the whole of the system; *ib.* 5442–5451.

FOX, MR. EDWARD. (*Analysis of his Evidence.*)

Is a stockbroker in Dublin. Has been engaged in that capacity for 20 years. Has had extensive opportunities of becoming acquainted with value of Irish railways. There are 26; 14 pay an average dividend of 3¼ per cent. and 12 none at all, equal to dividend of 1¾ upon the whole. Net receipts of Irish railways about 770,000*l.* upon a total of 24,000,000*l.*, or about 3 per cent., including debentures, but excluding Government loan, which would reduce average. Does not know extent of Government loan; 6561–6571. Strong desire of the shareholders and the public that Government should purchase the railways. If so disposed, commissioners

Fox, Mr. Edward—*cont.*
should be appointed to negotiate with present directors. Boards of Directors would be willing to dispose of railways upon equitable terms. Government would receive warm support from non-paying dividend lines. How value of these railways might be estimated, and what per-centage of original capital offered. Shares are not likely to rise under any system that shareholders would have it in their power to see enforced. Compulsory sale could not be carried out; 6572–6589. 6685–6688. Public complain very much of bad working of Irish railways; 6590, 6591. Could give average price of shares of non-paying dividend lines, and in most cases average price of debentures for a particular year. No great difficulty in estimating value from interest actually paid. Mentions market value of shares and interest paid by certain low-paying dividend lines; discussion as to amount Government should pay for these and for those paying a dividend; 6592–6626. Great disinclination to invest money in Irish railways. Explains why some new schemes are brought forward. Latterly all efforts have failed to induce Irish public to absorb the capital of these companies; have been entirely worked out through instrumentality of railway contractors, who are tempted by the high prices for the works. These schemes are financed in the City of London; no market found for the shares. Much higher prices are paid to the contractor than if company had had the capital and been free to enter into contracts. Contractors paid in shares and bonds. System greatly enhances cost of railway. Recommends, nevertheless, that nominal cost of each railway should be groundwork for determining price. In case of non-paying dividend lines Government might give 50 per cent.; 6627–6640. Railways have been beneficial to Ireland; 6641. Many of the companies in Ireland have had recourse to Lloyd's bonds; how they appear in the accounts; 6642–6647. Government could relieve Irish railways by assisting in financing upon their higher credit. Thinks Government could purchase whole of railways for about 18,000,000*l.*, and could borrow the money at about 3½ per cent.; this, taking last year's return of receipts, would give them a clear profit of 140,000*l.* They would lease lines to one company, themselves keeping perfect control; should be worked with greater regard to public interest and with reference to postal arrangements; there should also be a fixed rate for merchandise and passengers; would reduce maximum fares 50 per cent.; there would be more traffic at these fares. Present directors will not enter upon such sweeping reforms unless aided by Government. In five or seven years the company would recoup itself. Benefits that would arise from such reduction; 6649–6654. 6709–6722. Makes provision in plan for Government purchasing railways out of present receipts; 6655, 6656. If Government purchased railways for 18,000,000*l.*, 12,000,000*l.* would represent the preference shares, debentures, and original stock of railways paying a dividend at par, and six millions would represent the original stock of those lines paying no dividend, being a reduction of 50 per cent upon original capital invested; discussion thereupon. It would not be quite equitable to take as a standard of value the market price of shares at a time of depression. Great Southern and Western included in those at par. The largest preference stock in Ireland belongs to this railway; is 4 per cent. perpetual, and sells at 94*l.*; 6657–6683. 6702. 10 per cent. upon price quoted would not be sufficient; 6684. Would not be liberal to take present value as real value; 6689, 6690. In one particular instance market value of shares above real value; 6691–6693. Irish shareholders have no privileges in travelling; only advantage they obtain or expect is a dividend, and yet a share to which a dividend of 5*s.* per annum is attached sells for 16*l.* If an average for a certain period were taken of dividend paid to ordinary shareholders and interest paid to preference shareholders and debenture shareholders, and Government were to add a sum somewhat in excess of this, shareholders would be satisfied, as they would be glad to receive a fixed Government rate of interest, even if it were a little lower than they have been receiving. There would be no difficulty in ascertaining payment of past years. Difficulty with the railways that pay no dividend. Shareholders would be satisfied with a small annual payment. Would not do to take average receipts of last five or ten years as a basis for valuation, as those receipts have not admitted of any dividend. If Government came in they would create a market for this property, and consequently the parties ought to be dealt with upon very liberal terms. Generally speaking, the dividends have been decreasing year by year; therefore if Government agreed to pay a sum equal to average receipts of past years, they would be paying a larger dividend than

Fox, Mr. Edward—*cont.*
the shareholders now receive, this of itself would be sufficient bonus; 6694–6708. If Government purchased Irish railways nothing unreasonable to ask Irish public to guarantee them against loss; does not think there would be any, as there would be a large indemnity found to start with, and a great saving effected in management by amalgamation; if there were, might be met by increasing income-tax. Company would probably require the lease for 21 years; 6723–6725. 6727–6731. Amalgamation of any of the small companies with larger ones would not be of much benefit; 6726.

French system of altering rates but once in three months seriously interferes with English companies making through arrangements with them; *Allport* 13,822–13,833.

G.

Galt, Mr. William. (*Analysis of his Evidence.*)
Is author of a pamphlet, published in 1843, entitled "Railway Reform." States purport of his evidence given before a Committee of the House of Commons appointed in 1844 to investigate subject of railway management; upon recommendation of such Committee a Bill was introduced by Mr. Gladstone, and after very strong opposition, passed, recognizing the expediency of Parliament at some future time considering the question of purchasing the railways. Quotes extracts from speeches made by Mr. Gladstone and Sir Robert Peel upon the introduction of the Bill; 7336–7340. 7346, 7347. In consequence of certain erroneous opinions then prevalent the Bill did not receive much support from the public generally; 7341. Gives mileage and capital invested in railways in 1844 and 1865. Dividend of 8 or 10 per cent. was paid in 1844; 7342–7345. Until recently the Act has not engaged attention of public; 7348. Meaning of "Railway Reform"; 7349. Passenger fares not more than half what they were formerly by coach, but much higher than on the continent; delivers in table showing fares in different countries. Does not know whether less numbers travel in this country; 7350, 7351. 7479, 7480. Fares should not be regulated by those on the continent; 7352. Delivers in table showing how expense of conveying passengers can be calculated; 7353, 7354. Proposes that passenger fares should vary from 2*d.* down to ¾*d.* per mile by express trains; hands in table giving proposed fares by all trains, including excursion trains, which are generally about one-third of the ordinary traffic, and also tables showing fares on the principal railways in the United Kingdom; discussion thereupon; 7355–7357. 7371, 7372. 7457–7468. 7481–7489. Accounts for the great difference in fares by various companies; former system of calculating them not followed now to same extent; 7358–7360. In 1844 witness arranged and classified several cases, showing the very little variation made in the charges by each company; instances the Glasgow and Greenock line, and effect the alteration had upon the dividends. Mentions the case of four railways running for a short time (in consequence of competition) at extremely low fares, and influence such reductions had upon the dividends. Doubts whether one of the companies would ever have recovered their expenses. These experiments not a fair trial of the low fare system. Amount of traffic between two places diminishes rapidly in proportion as the distance increases; 7362–7364.

GALT, MR. WILLIAM—*cont.*

7490–7496. No probability of proposed tariff being adopted under present system; quotes from Mr. Gladstone's speech upon this subject; 7365. Reasons why it is desirable that the fixed effect of a low tariff should be ascertained, even though the railways were not purchased by the State; 7366–7368. Upon what lines and through what districts the experiments might be tried; Government should guarantee the companies against loss. Discussion upon the question as to whether it would be possible to find a line upon which the experiment could be fairly tried, in consequence of the lines being so intermixed with one another; 7369, 7370. 7469, 7470. 7573–7580. Would reduce annual and season tickets one-half of present average; 7373. Belgian railways belong to the State; their present financial position; 7374, 7375. Amount paid last year for passenger and goods traffic in the United Kingdom; 7376, 7377. In most cases charges for goods are excessively high; gives authorized charges for four classes of merchandise, and believes that in many cases they are enforced; the actual cost of conveyance is about 1*s.* 4*d.* per mile for 100 tons; 7378–7381. Rate at which coal brought from northern counties to London could be sold. In reality there can be no competition between railway and shipping; 7382–7384. High price of coal prevents London manufacturers competing with those in the north; affects also the steamers that take in their supply in London or any of the southern ports; reads a letter from the firm of Harrington and Co., upon this subject; 7385, 7386. Gives annual supply of coal, and quantity carried by railway; 7387, 7388. Reduction for conveyance of merchandise should not be same as for passengers; principle which ought to govern the fixing of the rates; 7389, 7390. Considerable reduction should be made in parcel and package rates; should be uniform throughout the kingdom; question discussed; 7391–7395. If proposed rates were carried out public would pay about one-third of present prices; 7396, 7397. If railways belonged to the State there would be a great improvement in postal matters; quotes a discussion which took place in the House of Commons in April last, upon the imperfect postal communication between certain places; 7398, 7399. Act of 1844 comes into operation on 1st January 1866; is not desirable or even possible to carry it out by compulsory means. Shareholders would be very glad to part with their property on good terms; are not satisfied with their present position. Dividends have improved within the last year or two; 7400–7407. 7413, 7414. 7440, 7441. Promoters of new lines have very great advantages over proprietors of old lines. No restriction upon State with regard to granting competing lines; 7408–7411. Course to be pursued if proprietors refuse to sell to Parliament; if consenting, how they should be paid; provision made in the Act for calculating the value of the property. Proper test of the value of a railway, what it brings in the market. Bonus that should be given to the shareholders; 7412–7419. 7442, 7443. Class of directors who would favour or oppose the carrying out of the Act. English people generally opposed to Government interference or to system pursued by continental Governments in such matters. The State should have the supervision of all railways; 7420–7424. Does not charge the directors with having abused the trust reposed in them by the Legislature, or with having broken faith with the public; thinks they are bound to do the best they can for their shareholders; 7425. Not much competition between the companies, but only a division of monopoly; difference between railway competition and competition between rival lines of steamers. Free trade in the construction of railways would not destroy the monopoly; 7426–7429. If the amount paid by the public to railway companies be about 36 millions, reducing the rates to one-third would be tantamount to a reduction of 24 millions in taxation. By guaranteeing a certain dividend to companies, inducements to economy and good management would be taken away. Profit that would accrue to State if Act were carried out; would make up any loss consequent upon reduction of rates. Large increase to national debt would not affect the national credit; 7430–7434. 7571, 7572. Reform proposed analogous to a certain extent to that of Post office; 7435. At present time country not prepared for such a change; how it could be brought about; thinks there is now an indication of a change; 7436–7439. 7568. Annual interest on purchase money of railway should be paid out of general taxation. All railway property should belong to the State, and leased to companies on certain conditions, the lessees paying the Government a rent equal to the

GALT, MR. WILLIAM—*cont.*

interest paid, which would be about equal to the dividend now received by shareholders. If Government could not get anyone to lease them, they could be put in commission; how commission should be constituted; question discussed; 7443–7456. 7497–7511. Doubts whether the traffic of the great staples of the country would double or treble in any very short time. There should not be an absolute reduction in rates for merchandise, but that each case must be dealt with as necessity arises. Commission would make a reduction for the public good; 7473–7476. Travelling and everything else should be as cheap as possible; 7477, 7478. Thinks the poor man would be the greatest gainer by a reduction in the rates; 7512–7520. The company leasing the railway would be bound to keep up permanent way, rolling stock, &c., but State should undertake improvements and rebuilding of stations; 7521–7528. 7538, 7539. 7554–7556. Companies would expect to make a profit; 7529. Politics would have nothing to do with the letting of the lines. The highest bid should be taken, provided there was proper security. Railways have great patronage, but companies would be quite independent of the Government. Discussion as to whether Government would interfere for political purposes; 7529–7536. 7540–7552. Would be preferable to divide England into four sections, as there would be very little competition if the whole were put up. The responsibility of each would be about eight millions. Lessees should have 5 per cent. allowed for profit. Does not think that the practical result of this would be that the saving in management would be absorbed in indemnifying the lessees; 7557–7567. If Government tried the experiment of low fares on the Blackwall railway, it would ruin the omnibuses, or if coals were brought at low fares from Newcastle, the collier trade would be destroyed; would be a hardship in each case, but does not think either should be recompensed; 7581–7585. Has not considered the result of Mr. Gladstone's scheme upon further extensions; if it were fully carried out, would put an end to all private enterprize, but not to extensions. Mr. Gladstone contemplated a reduction to one-third of the average charges; 7586–7590. New lines should be constructed by new companies and afterwards bought by the State at a valuation; how value to be determined; 7591–7593.

Further examination.

Corrects former evidence wherein he assents to proposition "That if Government paid a bonus to the share-" holders, the interest would be about equal to dividends " they now receive;" his answer should have been " No, " the profits would have been divided between share-" holders and Government, the former having one-third, " and the latter two-thirds;" gives an illustration; 8413, 8414. Discussion as to the correctness of Table No. 1, "average fares per 100 miles," wherein it is shown that lowest fares are demanded in Belgium, and highest in United Kingdom. Cannot dispute certain conclusions drawn by the Commissioners; is prepared to correct the Table. Correction materially disturbs proportions previously given; 8415–8440. Taking into consideration that in Belgium very few return and excursion tickets, and no season tickets are granted, and a charge made for luggage when taken care of by administration, fares are rather less in this country; discussion thereupon; 8441–8463. Thinks answer to question 7632, given on previous examination, explains Table No. 6, which was made up to show that large deductions have been made in charges on certain important lines with very small diminution of dividends; 8464–8470. Has directed his attention to subject of Irish railways; their construction of more recent date than English ones. In 1837 a commission was appointed to investigate subject of railway construction in Ireland; made a report (popularly called Lieut. Drummond's report), recommending that Government should take steps for the purpose of having railways made there; reads an extract from the report; 8471–8474. In 1844 the first movement was made for their construction; the Great Southern and Western Railway Bill passed in that year, and in the following year Bills were passed for making the principal main trunk lines. States present financial condition of the Great Southern and Western Company; 8475–8477. Cause of management of fares not being popular in Ireland; are higher in Ireland than in England or Scotland; gives instances; 8478–8481. High fares materially affect public travelling; taking population into account, there is an enormous disproportion between number of people travelling in Ireland, as compared with England and Scotland. Reads a letter from a merchant in Coleraine, detailing certain grievances

GALT, MR. WILLIAM—*cont.*
under which the people there labour, and suggesting certain rates for passengers; 8482–8486. 8532–8540. There are a great many independent lines, having separate managements; reasons why they do not amalgamate; 8487, 8488. Tried last summer to get up a feeling to carry out Act of 1844; 8489, 8490. Has prepared a detailed scheme for purchase of Irish railways; divides them into three classes, and states how each should be dealt with; discussion thereupon; loss, if any, should be made up by imposing a tax upon Ireland; 8491–8507. How the railways should be managed when Government acquired possession; 8508. 8517. States fundamental error of our railway system; gives an instance; 8509. Would be exceedingly desirable that benefit of system of low fares, and use of national credit, should be applied also to England and Scotland. Thinks if experiments were made on a few lines of very low fares, the result would be satisfactory. Fares might be advantageously reduced upon London and Blackwall, and Liverpool and Manchester lines. The former not supported by the poorer population; 8510–8513. 8527–8531. No injury in trying experiment first in Ireland. Should be allowed to adopt system there as an institution; as the people are willing to bear any loss. The greater benefit would be in large towns, such as between Edinburgh and Glasgow, Liverpool and Manchester, &c.; 8514–8516. 8541–8543. 8566–8569. There might be a loss for two or three years, but that revenue would recover itself; 8517. Experiments could only be made by Government taking the whole of the Irish lines. There is no line that does not more than pay its working expenses; 8519–8526. The present high rates prevent full development of the mineral resources of Ireland. Copper from mines of Wicklow and Waterford is carted alongside the railway. Cattle are driven along the roads instead of being carried by railway; 8544–8556. Must be an Act passed compelling companies to sell the railways upon certain conditions. Should be an uniform tariff for passengers, and for goods a tariff according to necessities of each case. Reason why witness does not think that if railways were under Government management, there would be any difficulty from the different interests of the several parts being brought to bear upon the Government; 8557–8565. 8571–8574.

See also ALLPORT [13,834.] CHADWICK.

GAUGE:

Abolition of the present varieties of, desirable; broad preferable to the narrow; *Hill* 8221–8231. Witness believes the broad is ill adapted to goods traffic; *Nicks* 8998. 9000. Inconvenience and damage from break of gauge; *ib.* 9003.

Injury and inconvenience to salt trade of Worcestershire from break of gauge; *Corbett* 10,905–10,921.

Trouble, delay, and expense occasioned by the break of gauge; Great Western Company, witness thinks, would be glad to alter to narrow if they could. It is of so much general importance that the public might be called upon to assist; *Cawkwell* 11,734–11,740. Altering the line would probably cost about 3,000*l.* a mile, besides stations and rolling stock; *ib.* 11,741–11,745.

The most serious inconvenience that Midland Company have to contend with on that part of their line is the break of gauge at Bristol and Gloucester; the public interests also undoubtedly suffer; instances in point: *Allport* 12,530–12,535.

Break of gauge objectionable, but not many delays arise from it, or much damage caused in loading or unloading the goods. Gives cost of loading and unloading; service is done by agents of colliery owners. Coal is brought from Staffordshire to London both by broad and narrow gauge; *Grierson* 13,516–13,523. As far as Great Western is concerned, traffic on the double gauge is diminishing; company are increasing narrow-gauge stock much more than the broad. Found it a great inconvenience when there was only one gauge. Cannot tell the cost of altering the gauge; alteration of the rail would probably cost 500*l.* to 750*l.* per mile; a certain part of rolling stock would still be available. Great Western broad-gauge rolling stock has cost about 1,000,000*l.* Dead weight not so much on broad gauge as narrow; *ib.* 13,527–13,532.

Great inconvenience from break of gauge, but the two-feet gauge does very well for slate railways; *Stewart* 14,868–14,871. A 2½-feet gauge to some of the slate quarries in Wales answers its purpose, but could not be generally adopted; cost is somewhat less than ordinary gauge, but the difference is hardly that between a paying

GAUGE—*cont.*
and a non-paying line; *Harrison* 15,384–15,389. A somewhat similar one is in successful operation in India; *ib.* 15,390–15,392.

Engines on broad gauge do a great deal more work than those on narrow. Mixed gauge greatly increases expense of maintaining permanent way; *Gooch* 17,421–17,423. Great Western Company will have either to change or to double their gauge to a great extent, which is a very serious question for them; some of the rolling stock might be altered, but engines could not; *ib.* 17,510–17,515.

Statement of broad and mixed gauge lines, of narrow gauge lines belonging to the Great Western Railway Company, and list of places where broad and mixed gauge lines meet narrow gauge; *App.* CZ. Map showing distribution of broad and mixed gauge lines in the West of England; *App.* DA.

GAUGE IN IRELAND:

Witness trusts that the Irish Railway Act requiring all tramways to be of same gauge will be repealed. A permissive power to construct railways on a gauge not exceeding 3 feet would be of importance in many of the poor districts. For quarry purposes a gauge of not more than two feet would be desirable; *Mallet* 2216–2218. 2225. Would make railways in connexion with existing railways through a poor district as feeders; *ib.* 2219. Having a narrower branch line would involve a break of gauge, but that should not prevent its adoption in certain remote districts; *ib.* 2221–2224. Discussion of the narrow gauge and cost of transhipping minerals and coals from these to the ordinary gauge; *ib.* 2225–2236. Additional lines are required in Ireland upon the broad gauge; reasons; *ib.* 2237. Irish gauge an impediment to working lines economically. Advantages of traffic as great as in England. Only accommodates four abreast, same as English narrow gauge. Carriages much heavier. An advantage in constructing locomotives; *Hemans* 3764–3766. 3780, 3781. English narrow gauge preferable. Impossible now to alter Irish gauge; *ib.* 3767–3769. Expense of working greater, increased by cost of coal and dead weights. Rolling stock also dearer. Cost of running a train per mile not quite so much in Ireland as in England. Irish gauge does not make much difference in the construction of a line; *ib.* 3770–3775. Cost of carrying a given number of passengers or goods rather greater upon an Irish than upon an English railway. If carriages were filled the working expenses would still be heavier in proportion to number of persons carried; *ib.* 3776–3781. Cost of keeping up permanent way less in Ireland than in England; *ib.* 3784. Gauge would be no obstacle to proposal of witness for amalgamation of railways; *Bidder* 4454–4458.

GENTEL, MR. THOMAS. (*Analysis of his Evidence.*)

Is a partner in the firm of Dawber and Gentel, corn factors and maltsters in Sleaford and Lincoln; 9174. Was at a meeting held to consider question of unequal rates charged by different railway companies; 9175. Rates for corn and malt between Lincolnshire and manufacturing districts in some cases 75 per cent. higher than in other districts; 9176–9178. Delivers in table of actual payments made by firm, which shows that charges are not based upon any fixed principle. Gives instances of inequalities, and states that rates by Great Northern and North-eastern for foreign grain from Newcastle-upon-Tyne to Lincoln are 8*s.* 4*d.* per ton, but if English grain is sent from Lincoln to Newcastle-upon-Tyne they charge 14*s.* 2*d.* Undue facilities are given to the French grain trade by the Manchester, Sheffield, and Lincolnshire company to the injury of witness's trade; long discussion as to company's reason for thus acting; 9185. 9189–9204. 9227–9238. Rates do not in every case vary according as there is competition or not; nor according to gross quantity sent; 9186–9188. Asked Manchester, Sheffield, and Lincolnshire and the North Staffordshire railways for a reduction of rates, but they refused; reads the letter sent to the secretary and his reply. The route belonged to both companies, but arrangement exclusively in the hands of the first-mentioned company; 9205–9207. Hull and Grimsby are in direct competition with Manchester, but grain rarely sent from Hull to Manchester. The exceptionally low fares for grain from France were not the result of excessive competition for large consignments. If this grain had been delivered at Hull instead of Grimsby, would not have complained, though French traders would then have got lower fares to Manchester than the Lincoln people; 9208–9211. 9221–9226. No competition from Lincoln to Manchester.

GENTEL, MR. THOMAS—*cont.*

Manchester, Sheffield, and Lincolnshire company have not larger interests at Grimsby than at Lincoln; the latter is their best station; have larger property at Grimsby; their interest to develop the Grimsby shipping trade; may on that account have given extra facilities for traffic; 9212–9217. No disadvantage to Lincoln that railway company should own docks at Grimsby. When reduction made over one portion of line, should be made applicable to whole line. Delivers in table showing disadvantages under which Lincoln labours as compared with other towns; 8218–8222. 8239. Sends full 4,000 quarters of grain per week to Burton-upon-Trent; gives rate per ton; has been reduced within last twelvemonths. If lower rates were raised up to higher standard it would be beneficial; would not throw trade into other channels, or be any loss to the railway companies; 9240–9248. For the purpose of attracting traffic on to their lines, companies allow to parties doing a large trade a discount at the end of the month. Has tried to get a discount from the Midland Company, but failed; principle in trade to make some slight rebate under such circumstances; 9249–9259. When low rates are given it is generally because there is competition or a desire to secure traffic. Thinks system of uniform rates would not bring them back to old standard; question discussed. Has never known a case where rates have been raised after having been once reduced; 9260–9272. No reason that if one company reduced rates, another company should not be compelled to do same; 9273. Mentions that rates are very unequal from Sleaford into Lancashire district and from Bourne to Warrington. Passenger fares between Lincoln and Nottingham higher than those imposed after leaving Nottingham; 9274–9277.

Appendix to evidence:—Comparative statement of Great Northern grain rates to Lincoln; *App.* BI. Comparative statement of Great Northern grain rates from the Lincoln, Sleaford, and Bourn districts with Northampton, Norfolk, and other barley districts to Burton-on-Trent; *ib.*

GERMAN RAILWAYS. *See* FOREIGN AND COLONIAL RAILWAYS, 4.

GERMAN STATES:

Rules drawn up by the Congress of German Railway Engineers for regulating the construction and working of and the conveyance upon the railways in Austria, Prussia, and the German States, according to uniform principles; *App.* CA.

GERMANY:

Particulars of railway service between towns in Rhenish and Central Germany; *App.* DN.

GIBBS, MR. EDWARD J. (*Analysis of his Evidence.*)

Is secretary to the Wolverhampton Chamber of Commerce. Delivers in certain resolutions passed at a meeting of that chamber held on Tuesday, 31st Oct. 1865; 10,746–10,748. Complains of the inequalities of rates charged for hardware and general merchandise. Quotes certain charges for these goods, and rates per ton per mile. Thinks 5*s.* per ton sufficient for cost of collection and delivery, station room, clerks, &c.; might not be sufficient in London, but companies deliver only within a limited radius; 10,749–10,759. Chamber of Commerce thinks that there should be a uniform mileage rate from station to station, whether traffic great or small; does not himself think that a uniform rate could in all cases be adopted; 10,760–10,763. 10,830–10,838. Companies do not charge rates on purely commercial principles, but that maximum and minimum rates are made to support and counterbalance each other. Practically they have a monopoly because where more than one railway enters a town they can combine and charge what rates they please; are subject only to Parliamentary limit; 10,764–10,766. If it is profitable to charge in one case ¾*d.* per ton per mile, it will be profitable in another case to charge something less than 2½*d.* per ton per mile. Would not have them carry anywhere at a loss, because they would be sure to reimburse themselves by charging high where no competition existed. Object of company carrying for long distances at very low rates; thinks they are only given where there is sea competition; 10,767–10,773. 10,775–10,779. Discussion as to what course should be pursued by Parliament in order to prevent inequalities in the rates. If a practical monopoly of the carriage of goods is granted, they should be carried at the lowest remunerative price. In future Acts of Parliament there should be a lower maximum, but thinks object would not be attained unless a minimum was fixed, as traders in certain places far removed from seaboard have more interest in a fixed minimum; 10,780–10,794. 10,839–10,846. Explains how mileage rates for the conveyance of goods should be fixed. Would not allow companies to treat one firm differently from another. Would not object to a fluctuating scale for large or small quantities; 10,795–10,799. Companies should not charge more than a certain profit after they have paid expenses for rent of stations, clerks, waggons, and collection and delivery; 10,800–10,803. Companies are bound to give a separate rate if sender collects and delivers the goods. A rebate of 1*s.* 6*d.* per ton is allowed if goods are delivered at station at Wolverhampton end. The public have no means of knowing what is included under head of terminal charge. If goods were sent to station at one end of line, and taken away at the other end, remaining charge would be mileage rate, plus two terminal charges of unknown amount; 10,804–10,814. Thinks rates for hardware goods collected in London and taken to Wolverhampton (123 miles) and distributed there should not be the same as for like goods collected at same place and sent to Liverpool (200 miles); 10,815. States meaning of resolution that "a proper and sufficient charge for all "expenses which attach equally to long and short jour-"neys should be fixed." Companies should publish charges in separate items, so that public would know how total rate is made up; 10,816–10,826. Private opinion that Parliament should fix amount of terminal charge; 10,827. Companies should not in some cases carry at very much lower rates than those fixed by Parliament, and withhold them in others; 10,828, 10,829. Is not prepared to give evidence with regard to classification of goods. Railways should do for the public what the steamers do, carry as cheaply as they can consistently with a profit; 10,848–10,851. 10,866. Thinks it is probable that the productions of the country would be increased by a reduction in the rates; there would be no loss to the companies. Could not say what per-centage of reduction would increase hardware export trade from Wolverhampton; 10,852–10,861. Rates may be so high as really to injure profits of railway company, on the other hand they may be too low even for a profit; question is, what point between very high and very low rates would produce the greatest profit; 10,862–10,865. 10,870. Believes that there has never been an exception to the rule that where the price of any commodity has been reduced, there has not been an increased consumption; 10,867–10,869.

Supplementary evidence respecting some points in witness's former evidence; *App.* BO.

See also GRIERSON.

GLADSTONE, MR. W. E. (Chancellor of the Exchequer):

Letter from, requesting that facts connected with question of Irish railways may be at once collected and presented to the public; *App.* P.

GLASGOW AND GREENOCK RAILWAY:

Fares for lowest class reduced from ½*d.* to ¼*d.* per mile, with loss of only 1*s.* per cent. on dividends; but subsequently raised to ½*d.* again; *Galt* 7361.

GLASGOW AND SOUTH-WESTERN RAILWAY:

From a return given in by witness, and prepared by him from the Board of Trade returns, it will be found that per-centage of line, which is 47 per cent., is the exact average of the United Kingdom, and that, although per train mile company's expenses are exceedingly light, when taking per-centage of amount expended their per-centage is only the average; *Wainwright* 17,610.

GLOUCESTER:

Want of a competing direct line to London viâ Oxford; history of attempts made during the last 20 years, all of which have been frustrated by the Great Western Company, who, to prevent other Bills passing, have obtained powers which they have never exercised; *Nicks* 8940–8946. 8953–8955. High and unequal fares; *ib.* 8947–8952. 8976–8986. Return tickets are available for two days; *ib.* 8987. Gloucester people want a line viâ Cheltenham and Oxford; discussion as to advantages of this; *ib.* 8959–8963. A Bill for a line to get into Midland system failed in 1865, but is to be re-introduced in 1866; *ib.* 8964–8974. Agreement between three companies to prevent competition; *ib.* 8955. 8975. Facilities given to Newport have greatly injured Gloucester shipping trade; *ib.* 8993–8996. High rates for goods; witness believes that the broad gauge is ill-adapted for goods traffic, and that it would be a great convenience to

GLOUCESTER—*cont.*
Gloucester to have the narrow gauge; *ib.* 8998–9002. Great Western have powers for laying down the latter, but seem indisposed to exercise them; *ib.* 9004. Gloucester did not oppose the South Wales Direct line because they wished the traffic to come through the town, but because the proposed bridge would prevent large vessels passing, and so annihilate their trade; Parliament however sanctioned it; but witness still hopes that another scheme will be adopted, and the bridge be constructed elsewhere; *ib.* 9014–9021. 9040–9042. Necessity for lines to connect Gloucester with other districts; *ib.* 9022–9030. Above-named scheme is one by the Midland Company, who are trying to extend their system into South Wales; it would be very beneficial to Gloucester; reasons; *ib.* 9031–9040. The bridge, if made, should be for the common use of the Great Western and Midland Companies; *ib.* 9041.

Argument to show that a new line is not needed between Gloucester and London; witness considers that Mr. Nicks is not a fair representative of the opinions entertained at Gloucester, but that he is unreasonably hostile to the Great Western Company; *Grierson* 11,765–11,767. Particulars of fares between Gloucester and London, Worcester and London, and other places, with reasons for apparent discrepancies, chiefly in answer to Mr. Nicks. Some errors of last-named gentleman corrected; *ib.* 11,768–11,770. When two companies are competing to one place, the shorter route generally governs the fare. Explanations as to Hereford fares, and to several occurrences complained of by Mr. Nicks; *ib.* 11,771–11,774. Certain agreements between London and North-western and Great Western companies complained of by Gloucester and other towns shown to have been really advantageous; resulting in lowering of rates, &c. Favourable comparison (made by Mr. Nicks) of Midland rates on grain and timber, as compared with Great Western, shown to be incorrect. Tables given in in proof; *ib.* 11,774–11,785. Quotation of evidence given by Mr. Nicks, in which he speaks very favourably of the Great Western goods rates. Witness has not a word to say against that gentleman, except that he is a strong advocate for a competing line to Gloucester, which witness considers quite unnecessary; *ib.* 11,785–11,793.

Unfavourable position of Gloucester as a port is the cause of the cheap railway communication; *Allport* 12,347.

Declared real value of total exports from port of, in 1863; *App.* B.

GOOCH, MR. DANIEL. (*Analysis of his Evidence.*)
Was for 27 years locomotive engineer, and is now chairman of Great Western Railway Company. Has never been connected with any other railway; 17,309–17,311. Is conversant with details of railway administration. Gives various items showing working expenses per mile of trains, both for goods and passengers. Explains various items embraced in sums set down for maintenance of permanent way and locomotives; 17,312-17,324. 17,435. Cost of renewal of engines and new engines are debited to revenue account. Have engines still running that were had in 1839–40. An engine should run 160 miles a day, but they do much less on the average; is not so much a question of engines, but fatigue an engineman will bear. Wages of engine drivers, firemen, and guards; 17,325–17,340. 17,344–17,351. 17,358. Train mileage given includes both full and empty trains, as well as cost of shunting; 17,341–17,351. Cannot separate goods from passengers in working expenses per train mileage. Separates them in locomotive expenses. Excess arising from goods caused by a greater consumption of fuel and heavier repairs; 17,352–17,356. Explains items set down for repair of carriages and waggons, and for carrying account; cartage not included in carrying account; 17,357. 17,359–17,362. 17,372–17,377. Difference in cost of repairs between passenger carriages and goods waggons. Average number of miles run for the years 1858 to 1862. Can furnish a return showing division between passengers and goods. A carriage runs a great deal further than a waggon. Has not a return for the narrow gauge; was not quite so good. Can get some return of the number of miles per day run by carriages and waggons; 17,363–17,371. What items general charge embrace. Item of expenses of working joint lines and stations includes Great Western proportion of all working expenses of joint lines as well as maintenance of locomotives. Gives joint mileage worked by line; 17,378–17,384. Some of locomotive items slightly on the decrease. Wages and repairs and traffic charges have increased. Cause of increase; 17,385–17,387. Cost of maintenance of way has been for some time stationary. Goods traffic much more destructive to permanent way than passenger traffic. No difference between goods and passengers engines in this respect; 17,388–17,390. Considers the high speed for goods trains a most expensive operation; if run at about 15 miles an hour, cost of maintaining permanent way would be less. Why speed cannot be reduced. Description of goods waggons; wear and tear of line increased in consequence of wheels not being kept in such good order as those of the carriages; 17,391–17,400. Has had a few steel rails laid down, but not sufficient time to test their wear; thinks they would last 40 years; are double the cost of iron; would be desirable to use them, particularly if they could be made less brittle; their introduction would not reduce weight of rolling stock. Would not use a lighter rail than now; are much heavier than formerly; duration of an iron rail, and mode of fastening them to the sleepers; 17,401–17,419. Figures given as to average cost of trains would also apply to narrow gauge; engines are heavier on broad gauge, but goods trains do a great deal more work. Blending narrow and broad gauge together has added to cost of maintaining the way. Have worked mixed gauge about eight or nine years; 17,420–17,423. Majority of railway companies keep their accounts in such a form that items enumerated are nearly the same on all lines. Thinks Board of Trade returns furnish a fair comparison between different lines; 17,424, 17,425. Believes working expenses will increase. Cause which may make charge per train mile lower in Scotland and Ireland than in England; fuel rather lower in the latter; 17,426–17,430. If a company work another's line at less than average, there must be special circumstances in the contract; 17,431–17,434. Cost of passenger trains less per mile than goods; cost of a particular train depends on the number of carriages; average for passenger trains about five or six; difference in cost by adding or taking off a carriage. By running long trains expense would be much diminished; 17,436–17,450. A person ought to be able to ascertain rates upon application, but is not inclined to allow the inspection of the books. Rule and principle is to treat everybody alike for similar services. Would not be any particular objection to have rates from one station to another station accessible to anybody, but would take up time of the clerks; does not think public would pay a fee for inspection. If railway companies wanted to act improperly by public, no mere looking at books would be any check, as they would not show rebates and allowances made to certain traders. Publication of rates could be easily evaded. Has heard that companies allow advantages to certain parties by means of rebates. Only those traders whose accounts are large are allowed to open monthly accounts with the company, but no discount allowed; 17,451–17,472. Any reduction in the rates are at once made known to traders; interest of companies to do so; 17,473–17,475. Has not given his attention to matters of terminals; 17,476. Reduction in rates would be prejudicial to interests of companies; should be rather increased than reduced. Does not care so much about the gross receipts as the net divisible balance; would be better to carry less at a higher price. Would be a great advantage to companies if they could run less trains; are now obliged to run more than traffic requires. Average loading of passenger trains is about one-third; express trains out of London more than two-thirds. Thinks excursion traffic on Great Western does not pay, and greatly interferes with the regular traffic. Third-class traffic very good. Has third-class carriages to all ordinary and to some of the fast trains; 17,477–17,495. No more liability to accident with slow passenger traffic than with express traffic; 17,496. Much greater facilities afforded of late years for forwarding of goods and passengers between respective companies throughout England. Mentions advantages that would arise to companies and the public if facilities of interchange of traffic were extended. Would be materially advanced on witness's line if line were narrow gauge instead of broad. Thinks gauge will either have to be changed to a great extent, or made double. Change will entail a great expense in altering rolling stock; waggons and carriages might to a certain extent be adapted, but not the engines; could not be adapted either to the Irish gauge, or used by placing the wheels nearer together; 17,497–17,515. Is to the interest of companies to forward traffic quickly and regularly, and no railway legislation in this matter would be advisable. Companies are punished severely if perishable goods are delayed; but being a profitable traffic great efforts are made to secure it; 17,516–17,522. Bulk of mineral waggons belong to company; inconvenience and loss resulting from the employment of those of traders; 17,523–17,527. Signal system varies considerably upon different railways; no

Gooch, Mr. Daniel—*cont.*
benefit arising therefrom; but thinks establishment of a general system would not be attended with any great public advantage; 17,528–17,531. Has the block system from Didcot to London, where traffic thick; 17,532. Through booking carried on to a great extent upon Great Western; finds generally no unwillingness on the part of other companies; 17,533–17,537. Competition to a certain extent always exists, but system of competitive reduction of rates has ceased. Thinks rates generally have been reduced by competition; reduction not as a rule maintained, because low fares found more profitable; 17,538–17,549. Has a great deal of mineral traffic on Great Western line. Carries coal at $\frac{3}{8}d.$ per ton per mile; does not find waggons; previously charged from $\frac{3}{16}d.$ to $\frac{1}{2}d.$ per ton. Success of low rates greatly depends upon the gradients; gives number of tons carried, and gradients. Has only tried low rates since last July; tonnage has increased, but total receipts diminished; difficulty in going back to original rates; 17,550–17,567. Course that Parliament should adopt before sanctioning new lines. Costs railway companies large sums annually to fight against speculative lines. During the session Great Western goods manager and secretary spend almost all their time at Westminster. Great Western and North-western have decided not to take up any more of these lines; 17,568–17,577. Amalgamation of large companies have gone far enough; believes facilities afforded by amalgamations might in great measure be obtained without actual amalgamation. Great Western, North-western, and North-eastern are sufficiently large in themselves for any staff to control. Great Western system extends over 1,400 miles; if it were smaller it might be better managed than it is; does not get the full advantage of the long run. Reason why witness is averse to introduction of any system whereby passengers can communicate with the guard. In those exceptional cases where trains have caught fire, thinks the guards must soon have known it. Was a case on Great Western some years since, but allowing a communication with guard would be introducing a certain evil to cure an evil which in the case of Great Western has only occurred once in 27 years; 17,578, 17,589.

Goods Traffic:

Increase in mineral and goods traffic far exceeds increase in passenger traffic; *Allport* 13,794–13,798.

Returns by the several railway companies in Ireland, showing the traffic in passengers and goods in the year 1863; *App.* AA. Statistics deduced from the preceding return, and comparative summary; *ib.* Abstracts from the half-yearly reports of the Midland Great Western Railway of Ireland from July 1851 to June 1864, both inclusive, showing the amount realized from goods traffic; *App.* AG. Statement of goods traffic on Great Southern and Western Railway of Ireland from 1846 to 1864; *App.* AH. Particulars of goods traffic on Irish railways; *App.* AW. Regulations for the transport of passengers and goods on the French railways; *App.* CH.

See also Decline of Traffic. Interchange of Traffic, 2. Rates and Charges, &c., 5.

Goods Trains:

Organization of, at fixed times, has been found beneficial in Germany; *Mulvaney* 1847.

Details of a suggested plan for a separate economically constructed line from the north of England to the eastern side of London, by which heavy goods could be carried very cheaply (coals, bricks, and stone at $\frac{1}{4}d.$ a ton). Line might be constructed for 10,000*l.* a mile. History of attempt to establish such a one, and full statement of particulars and advantages of scheme; *Bidder* 16,186–17,031. 17,046. Particulars of expenses of working, maintenance, &c., and of probable returns tending to show the desirableness and practicability of line suggested; *ib.* 17,046–17,070. 17,139–17,143.

Railway clearing house:—General classification of goods by merchandise trains upon railways; *App.* CP.

Gordon, Captain H. W. (*Analysis of his Evidence.*)

Is principal superintendent of Her Majesty's Stores at Woolwich; 13,559. Important that warlike stores should be forwarded promptly direct to all out-stations and naval outposts. South-eastern will not undertake delivery or prompt action beyond limits of their own line, consequently stores are not forwarded by that railway; 13,560–13,562. Thinks companies are compelled to use all possible diligence in forwarding stores as far as their own lines are concerned. Are also bound to convey military stores at a certain charge per ton per mile, but Messrs. Pickford (the agents employed, and with whom there is a contract,) make their arrangements with them. Does not know whether Messrs. Pickford & Co. have attempted to make any arrangements between South-eastern and other companies, with a view to quick transit of stores. Goods are invariably carried to Nine Elms in preference to using South-eastern line; mode of conveyance quite as rapid but not so convenient. Have applied to South-eastern for a through rate, but have been told that they cannot be responsible or undertake to deliver beyond limits of their own line. Is not aware that any communications have passed between different railway companies on this subject. South-western have not refused to guarantee direct transit of stores; 13,569, 13,570. 13,574–13,578. 13,593–13,598. Complains of delay in delivery of goods, and contrasts time taken by Messrs. Pickford as against South-eastern railway. Have no power either against South-western or South-eastern; 13,571–13,574. Government should have power to compel railway companies to convey gunpowder at any time; at present some companies will only convey it once or twice a week, and none will deliver it except on certain days. Result of a Commission appointed some years since, composed of authorities of Horse Guards and some of the managers of the leading railways. Trucks containing munitions of war would be attached to the ordinary goods trains, except under certain circumstances; 13,579–13,584. 13,617, 13,620. Inconveniences that have arisen in consequence of company not guaranteeing delivery the next day. Frequently have to send stores to Portsmouth. Guns weighing 12 tons cannot be sent by South-eastern or South-western, as the trucks will only carry 8 tons; Great Northern and London and North-western trucks will take 30 tons; are used in their regular traffic for boilers, engines, and heavy guns from Elswick, &c. Both these railways are connected with manufacturing districts, therefore have a demand for powerful trucks; 13,588–13,592. Would propose as a remedy that, upon goods being sent to railway, company should guarantee to deliver them, even though place of delivery beyond its own line; 13,599–13,613. Goods to Sheerness generally go by barge. Thinks Government stores should have the preference rather than otherwise; 13,614, 13,615. Some companies provide special powder vans, others have none; 13,616. Route stores would take from Woolwich to Portsmouth; 13,617–13,619. Great expense in sending stores required for life-boats; railway charged 30*l.* for carrying 10 rockets to Aberdeen; demand being pressing they could not go by water; had to pay same as for two tons of gunpowder, at 8*d.* a mile; not so dangerous as oil or turpentine, they will not ignite unless fire be applied. Companies convey gunpowder at 4*d.* per ton per mile; do not charge less than for two tons; 13,621–13,628. Should be a new classification of combustible stores; how they might be divided. Companies would not object to such a classification. Believes that Messrs. Pickford send combustible stores, and Westley Richards and other gunmakers send ammunition by railway without declaring it; 13,629, 13,630. Has sent a gun by railway to Portsmouth; takes three or four days sometimes; 13,631–13,633.

See also Eborall.

Government Assistance: Purchase: Management: or Control:

The State should have the management of railways, and of the transport of goods; collection and delivery should be left to private enterprise; *Fassiaux* 3071–3073. Belgian Government control rates, times of trains, &c., on all the lines; *ib.* 3077. Great convenience to several English companies if Government would take the debentures; *Bidder* 4202.

Government should purchase all the railways, place them under one management, and adopt a uniform tariff at one-third the present rates; *Galt* 7349. 7482–7484. 7576. Increase would counterbalance loss; *ib.* 7481. Further development of witness's views as to increase of profits on reducing fares to one-third; *ib.* 7454–7469. Before adoption it should be tried experimentally; *ib.* 7470. This reduction contemplated by Mr. Gladstone in passing the Act of 1844; *ib.* 7590. In 1843 witness wrote a pamphlet advocating these views, which resulted in the Act of 1844; *ib.* 7335–7338. The railway interest was much opposed to the passing of the measure; the public were indifferent; *ib.* 7340, 7341. This indifference caused by two prevalent erroneous opinions, viz., that, railways having cost so much, fares could not be greatly reduced, and that if Government

GOVERNMENT ASSISTANCE, &c.—*cont.*
purchased, they must themselves manage them; *ib.* 7341. Chief reasons urged in support of Act were that railways would be a monopoly, and that 20 years' experience would show whether purchase by Government and reduction of tariffs would be desirable; *ib.* 7340. 7346, 7347. Desirability of trying experiment of a large reduction in fares, Government guaranteeing companies against loss; *ib.* 7366–7370. One great benefit to be derived from the State possessing the railways would be the carrying out fully Sir R. Hill's plan with regard to the Post Office (better transmission of mails in provincial districts, &c.); *ib.* 7398, 7399. Parliament has always maintained its right to grant any competing lines it thinks proper; *ib.* 7409, 7410. From fear of further competition, the unsettled state of railway property, and other causes, witness believes that directors having large investments, and shareholders, would be glad to sell on equitable terms; *ib.* 7404–7408. 7413, 7414. 7420. As to division of profits between shareholders and Government; *ib.* 8413, 8414. Procedure if they refused to sell; *ib.* 7412. Method and principle of payment to shareholders should Government purchase; *ib.* 7415–7419. Cannot be settled compulsorily; *ib.* 7440, 7441. Market price the true test of their value; *ib.* 7418. No objection to Government possession on the ground of centralization or of violation to principles of free trade; *ib.* 7421–7424. No real competition at present; *ib.* 7426; nor can there be; *ib.* 7428, 7429. Proposed lowering of fares equivalent to a reduction of 24,000,000*l.* of taxation; discussion of this proposition; *ib.* 7430–7435. The alteration would be analogous to the penny postage reform; *ib.* 7435. The public mind is not yet prepared for the change, but that it is moving in that direction is shown by municipalities taking gas supply, &c. into their own hands; the public should be well supplied with information on the subject; *ib.* 7436–7439. 7568. Price at which Government should purchase; *ib.* 7442, 7443. When purchased, they should be leased to a company; if none found to take them, they should be entrusted to a statutory commission directly responsible to Parliament; *ib.* 7444–7453. 7497–7499. Board of Trade to manage the letting the lines on conditions fixed by Legislature; should be put up to tender, and lowest offer accepted; *ib.* 7500–7504. In the improbable event of no company being found to take them, Government must themselves work them; or pay a company to do so; *ib.* 7505–7511. Discussion whether this would not amount to a subsidy in favour of those making most use of railways; *ib.* 7512–7520. Company should keep up permanent way, &c., but Government provide for extraordinary expenditure; company should be under substantial security to perform conditions, and at end of lease should return railways in good condition; *ib.* 7521–7534. 7554, 7555. Witness does not apprehend any danger of political jobbery from the circumstance of a powerful company being the tenant of the Government; if it arose, Parliament could check it; *ib.* 7535–7553. The railways of the country might be put up in four sections, and although each would be a very extensive transaction, witness believes there would be competition; lessees should be able to make a profit of 5 per cent.; *ib.* 7556–7567. Before purchasing, Government might try the experiment with a few lines, for a year, guaranteeing companies against loss; lines for experiment suggested; *ib.* 7569–7575. As railways passing through thinly-peopled districts would be bought proportionally low, no loss would arise in reducing fares to same extent as on those in more populous parts; *ib.* 7576–7580. If the omnibus trade, or the collier trade, be injured by the great reduction of railway rates, it is an incident of business,—they could not expect compensation; *ib.* 7581–7585. Bearing of this scheme upon future railways; *ib.* 7586–7589. New lines should still be constructed by companies, and purchased by State as soon as the true value could be ascertained; *ib.* 7591–7593.

Witness proposes acquisition of railways by Government; thinks that from their superior credit they could pay present dividends, and yet realise a profit; *Hill* 7987–7995. Transaction should be with assent of majority of shareholders; many advantages would accrue; *ib.* 7996–8001. 8232–8240. They should afterwards be leased by open competition to companies to work and keep in repair; *ib.* 8002–8006. No capital need be raised to effect this; as debentures fell in they could be re-issued on more favourable terms; *ib.* 8007–8010. A special department should be created, and the work accomplished gradually; *ib.* 8011–8015. If a small line remained obstinately obstructive, compulsory powers might be sought; *ib.* 8016, 8017. New lines should be formed as at present, and be subsequently acquired by the State if desirable; *ib.* 8018–8022. All parties might be expected to gain by witness's proposal; *ib.* 8023–8025. Witness believes that State credit would not be diminished by their new liabilities; they need not borrow at all; *ib.* 8026–8028. A great gain would arise in point of economy from better general arrangements, more harmonious management, less Parliamentary opposition, &c.; *ib.* 8029–8038. Re-consideration of terms if a new line be granted injurious to company during continuance of lease; *ib.* 8036, 8037. Witness believes that a large reduction of fares would ensue; *ib.* 8039. Summary of witness's opinions as to State becoming possessed of railways, and benefits resulting therefrom; *ib.* 8042. Shareholders would all receive their annuities direct from Government, without reference to any railway in particular; witness does not think Government securities would be depreciated from the creation, as it were, of so many additional stocks, they representing actual value; *ib.* 8043–8065. If desirable, they could be all consolidated; *ib.* 8066, 8067. Term and conditions of leases for working lines; discussion as to analogy between them and Post Office contracts with steamship companies; *ib.* 8068–8082; 8116–8121. Leases should be granted upon the best terms for the Government and the public; lessees should only be permitted to make agreements extending beyond their own term with consent of Government; *ib.* 8190–8196. All collateral obligations must be taken over; *ib.* 8262. Government need not prescribe exactly the trains to be run, but should have a controlling power, and prevent one company throwing obstacles in the way of another; *ib.* 8083–8090. When Post Office reserve right to regulate trains they pay heavily for it, but Government would not require an indefinite power; *ib.* 8091–8093. Railways to be acquired by Government gradually, as they and companies could come to terms, and leased separately until they obtained possession of the whole of them; *ib.* 8094–8099. Witness believes they would be better managed under this system, as a class of persons smaller in number and probably of more administrative ability than present boards of directors would conduct them; *ib.* 8100–8111. The lessees need not necessarily be capitalists, but they must give ample security; *ib.* 8112–8115; 8122, 8123. Form of security; *ib.* 8131. Witness cannot suggest what profit lessees should be estimated to make; *ib.* 8124–8130. Property should be liable to be assessed, and any falling-off made good; *ib.* 8132–8134. In letting railways Government should have a discretion, and not be bound by lowest tender; *ib.* 8135, 8136. Witness thinks that unfairness from political bias would be prevented by responsibility to Parliament; quotes Belgian and French railways in support of this view; *ib.* 8137–8143. One great advantage of scheme is that it allows any amount of competition, and on a safe principle; *ib.* 8146–8148; another is, that unnecessary lines would not be made; *ib.* 8149–8153. Where one line will suffice for traffic, a second is disadvantageous to the public as well as to the proprietors; discussion in which witness endeavours to prove the undesirability of competing lines; *ib.* 8154–8177. Had railways been purchased by State 20 years ago, no less a number would have been made up to the present time, but they would have been more advantageously distributed; *ib.* 8178. Witness proposes that where practicable passengers and goods may be conveyed on different lines; *ib.* 8179. Reasons in support of this proposition; *ib.* 8180–8189. Government leases should contain provisions for securing communication between passengers and guard, for uniformity in signals to prevent accidents, &c., also penalties against unpunctuality, and better provisions than now exist for running powers and correspondence in trains; reasons why these provisions should be contained in lease rather than in Act; *ib.* 8197–8220. Government possession would give facilities for abolishing the present varieties of gauge, which witness considers highly desirable; would prefer the broad gauge to the narrow; *ib.* 8221–8231. Witness believes that by State becoming possessed of railways, great additional postal facilities and an increased number of posts would be obtained; *ib.* 8241–8253. No hardship would be inflicted on canal companies by State taking railways; *ib.* 8254–8262. The circumstance of some foreign governments having sold their railways is no reason why English government should not acquire ours; *ib.* 8263–8267.

Low fares and use of national credit should be tried throughout the kingdom; witness believes result would be satisfactory; *Galt* 8510–8513. Line upon which they might be tried; *ib.* 8527. The greater eventual benefit would be to large towns; *ib.* 8514–8516. There might

GOVERNMENT ASSISTANCE, &c.—*cont.*

be a loss at first, but it would recover itself; *ib.* 8517. General supervision by Government desirable; *Smith* 9141. 9153. 9159. Necessity for Government supervision; an independent board should be established to redress grievances; *Wooler* 9657–9665.

Witness considers that inasmuch as certain large railways enjoy a sort of Parliamentary protection, they should be under Government control; *Hollins* 11,347–11,354. Would put all railways under a Government Board; regulations which should be made by Board for the safety and convenience of the public; would subject railways to this control without giving compensation; *ib.* 11,364–11,368. As to power of Board over tolls; *ib.* 11,369–11,376.

No doubt Parliamentary Committees on railways are actuated by a variety of principles in the decisions they come to; their duties would be equally well performed by a Government Board, and at far less cost. Enormous sums spent by companies in "protecting their interests." Parliament might not be willing to delegate its authority to another tribunal; *Hollins* 11,388–11,390. 11,396, 11,397. Contests might be shortened and difficulties lessened if there were some previous inquiry to determine what opposition ought to be heard. Would not exclude opposition if they could show some real and clear grounds beyond that of loss of traffic. Large companies would object to any tribunal short of the highest tribunal of appeal; if Court constituted, witness thinks that no appeal should be allowed from its decision; *ib.* 11,391–11,395.

It would not be to the public interest that all the railways in England should be amalgamated and worked as one concern, or that Government should purchase them; *Cawkwell* 11,684, 11,685. Systematic Government inspection of permanent way undesirable; companies would probably feel less responsibility, and not be as careful as they now are; *ib.* 11,695–11,704. *Clarke* 12,787–12,790. Witness (as a shareholder) would be delighted if Government would purchase railways; but that they should undertake their management, or lease them, witness thinks would introduce every possible evil; *Cawkwell* 12,316–12,319.

Interests of the public and of companies being identical, no Board of Trade regulations could enforce more convenience for the public than is already given. *Clarke* 12,843. Nor is Government interference necessary to ensure greater safety; *ib.* 12,886–12,892. Witness does not approve of the idea of Government purchase or management. If all were placed under one board, the same attention to the individual wants of the public could not be given as now. If leased to a company, they would probably do their utmost to make a profit out of good districts and neglect poorer ones. Discussion of this question; *ib.* 12,911–12,923. Witness thinks that Government taking to the railways would rather decrease the facilities to the public than otherwise; *ib.* 12,938.

Witness does not think that any additional safety could be afforded to the travelling public by conferring further powers on Board of Trade; best to leave full responsibility upon managers of companies. Thinks Board of Trade see the difficulties of the case, and therefore decline to lay down any rule; *Grierson* 13,548–13,550.

Suggestion that Board of Trade should have some authority over railways generally, with power periodically to revise rates and fares; *Low* 13,894.

Witness is strongly averse to Government possessing railways; the effect would be to diminish construction, and hinder development; *Hawkshaw* 14,562–14,564. If Government acquired them and leased them to companies or individuals it would lead to very lamentable consequences, and Government would gain no advantage. Argument in proof, and cases cited in illustration. If Government borrowed money and undertook to work railways, witness believes their credit would diminish; *ib.* 14,565–14,579. If leased to three or four individuals they might pay the rent for a few years, pocket an enormous sum, and let the railways go to ruin. Provision could not be made in lease for adequate maintenance of lines, and a double staff would be requisite; *ib.* 14,580–14,586. Witness has tried ineffectually to prevent injury to property in hands of leaseholders. The system, which prevailed extensively with large companies, has had to be given up; *ib.* 14,588–14,591. Witness has not heard any legislative measures suggested likely to lead to any good result; *ib.* 14,646.

When companies, in applying to Parliament, say they are only consulting public interests, witness (late secretary to London and North-western) does not believe them. Parliament might legislate beneficially for the public; *Stewart* 14,745. In advocating revision of rates irrespective of competing lines, witness was met by objection that Parliament would not show them any consideration from having adopted this course; *ib.* 14,748–14,783, 14,784. Discussion as to power of Parliament to reduce charges on old lines, except where paying 10 per cent. Witness would have reduction progressive, and dependent upon the dividend; *ib.* 14,762–14,776. Necessity for some authority other than Parliament for ratifying arrangements between companies, &c.; *ib.* 14,778–14,882.

GOVERNMENT ASSISTANCE, &c.—*cont.*

If Government tried experiment of reduction of fares on a large scale, it must be between populous places not far distant from each other; *Harrison* 15,208–15,213. If Government purchased railways they could not possibly carry them on; *ib.* 15,351. Witness views favourably the proposition of Government advancing money at low interest to enable companies to reduce fares, and believes they would gladly entertain the offer. If loan were for a limited period, and a difficulty arose at its termination, it might be continued for a time; *ib.* 15,352–15,358. 15,369. If offered to one company it should be to all; *ib.* 15,359–15,362. Ability to repay should be guaranteed before advance; value of security could easily be ascertained; *ib.* 15,363–15,365. Witness doubts if Government would be able to borrow to the extent necessary; *ib.* 15,366–15,368. Discussion as to reduction of rates and fares that might be made; *ib.* 15,370–15,373. If principle adopted, details could be easily arranged; *ib.* 15,374–15,377. Difficulties in applying principle to new projects; *ib.* 15,378, 15,379.

Proposal by brewing firms of Burton-upon-Trent that if Act of 1844 cannot be carried out, a permanent Board of Commissioners be appointed to revise rates from time to time, and to exercise summary jurisdiction over grievances; *Cosgrove* 15,831–15,835.

Witness is in favour of extending powers of Board of Trade to seeing that proper regulations are carried out for the safety of the public; *Huish* 15,929–15,933. One uniform code of regulations, drawn up by the clearing house and assented to and confirmed by the Board of Trade, should be adopted, with special regulations when necessary to meet special cases; *ib.* 15,933–15,935. 15,939, 15,940. Discussion as to utility of proposed extension of powers of Board of Trade. Power of Board ceasing after inspection has taken place, witness thinks some more stringent means of keeping companies' attention to state of line, &c. is necessary; does not think this would lessen their responsibility in the eyes of a jury; *ib.* 15,955–15,963. Would not give Board of Trade power over commercial questions; *ib.* 15,980. 15,999, 16,000. Government interference, especially purchase, would be disadvantageous, as it must lead more or less to Government management; *Bidder* 16,586. Government might guarantee fixed liabilities and convert them into terminable annuities, and without its costing them a shilling, in less than 50 years the income [6,000,000*l.* or 7,000,000*l.* a year] would lapse into their possession. This would be advantageous to all parties; *ib.* 16,589–16,593. 16,620–16,622. If Government guaranteed debentures, Government charge would be the first charge; *ib.* 16,616. Discussion as to mode in which Government would meet the differing commercial values of the various lines; some would, doubtless, be benefited more than others; *ib.* 16,623–16,627. There is such a certainty of enormous gain to the State that Government would be justified in giving aid, which they would not to other commercial undertakings. Calculations upon which witness bases his views as to Government realizing the 6,000,000*l.* or 7,000,000*l.* a year of which he speaks. Discussion as to soundness of these calculations, and of policy of terminable annuities; *ib.* 16,628–16,637. Scheme would not depreciate consols; would benefit all parties concerned. Negotiability of the new stock which would be created; *ib.* 16,638–16,642. Discussion of question in view of the present different prices of railway stock and the present value of money; *ib.* 16,643–16,650. When profit reached a certain point, witness would reduce some of the more onerous charges on goods traffic; *ib.* 16,651. Further explanations of scheme and of benefits to the State anticipated therefrom, also as to raising any new capital which might be required; *ib.* 16,653–16,656. 16,662–16,674. Scheme, if put in operation, should be compulsory upon companies. State should secure its own payment before allowing any other debts; *ib.* 16,660. Disposal of eventual profit is matter for future consideration; *ib.* 16,661. Discussion as to most advisable course in the case of companies unable to pay preference shareholders; *ib.* 16,665–16,670. Government guarantee of portion of a company's capital, witness thinks would be beneficial; *ib.* 16,752. If Government were to take railways and lease them, it

would not prevent certain difficulties at junctions complained of; also, it would involve such a mass of confusion that the country would suffer amazingly; *Allport* 16,954.

Control of railways should be, as public highways, in the hands of the State, and not of private speculators; *Chadwick* 17,180. Recent removal of toll bars about London and in Scotland supports the view that roads may be worked to public advantage; *ib.* 17,232–17,235. Statement to show that railways should not be constructed for private profit, but as a public means of communication, and discussion thereupon. Witness suggests a similar plan to that adopted on the continent (but free from its errors), that Government should lay out the best lines, and let them to contractors to make and also to work, Government exercising a surveillance over contractors to ensure their fulfilling their engagements; discussion of this proposition. Witness believes that many cases may be found of railways formed and worked as highways, without regard to the element of profit. The whole of the French system deserves to be looked into, and witness thinks that an inspector should be sent to examine it and other continental systems; *ib.* 17,198–17,215. Further particulars and advantages of suggested lease of railways under State control; by it competition would be secured; *ib.* 17,225–17,231. 17,244, 17,245. Witness advocates placing all the railways under one control, as in France, and believes that by unity of management 24 per cent. may be saved; *ib.* 17,270–17,273. It is considered by some that Government control, with adoption of French system of double accounts, would be a protection against frauds (such, for instance, as Redpath's); discussion of this point, and instance given of Public Works carried out under Government for 6,000,000*l.*, which would have cost 16,000,000*l.* if conducted by private enterprise; *ib.* 17,274–17,281. Witness believes that more frauds have taken place than people in general are aware of; these he thinks would be avoided if railways were under Government; *ib.* 17,288–17,294. Means of communication should be placed under responsible public management; *ib.* 17,298. Railways might be as well managed as Post Office; *ib.* 17,301–17,303. Parties engaged should receive no profit, but merely be paid for their services; *ib.* 17,304–17,306. In taking over railways Government should deal with shareholders direct; *ib.* 17,307. Witness, while coinciding with Mr. Galt on many points, cannot agree with him that any existing directories would be the most eligible parties for carrying out railway reform; *ib. Addendum, page* 855. Objections to reform on the score of Government patronage answered. Competitive examinations for appointments; *ib. page* 856. Army pensioners might be employed, and ordinary military force utilized in time of peace. How shareholders' interests should be provided for; *ib. page* 856. Suggestion of a distinct department for public railway business; *ib. page* 857.

Letter from Mr. C. W. Eborall, Manager of the South-eastern Railway, on Government and private aid given to French railways; *App.* DH. Memoranda as to the assistance given by the Governments of Prussia, Austria, and Holland to the railways in those countries; *App.* DK. Memoranda on the assistance given by the French Government to railways in that country; *App.* DL.

See also FOREIGN AND COLONIAL RAILWAYS, 5. MANAGEMENT OF RAILWAYS.

Ireland:

If railways compelled by law to reduce fares, they should be guaranteed against loss; *Forbes* 1727. Witness believes that if Government took them, a company would be found to work and manage them; *Mallet* 2298. It would be a great advantage if Government would guarantee the difference between high and low rates of interest upon debentures; *ib.* 2299, 2300. Railways should be amalgamated under a Government board, who might establish uniform rates; if purchased by Government, a temporary loss from reduction of fares might be met by an advance of public money; it would not be fair to tax districts through which they pass, people would sooner submit to present rates; Government preferable to local management; *Tinsly* 2587–2650. Government should buy up all the railways, especially the small and non-paying ones, and they should all be placed under one management; temporary loss should fall upon the country at large; *Ryan* 2656–2658. 2669. 2676–2680. Rates should be reduced and Government should give a guarantee, and have a voice in the management; *Longfield* 2870–2873. Suggested scheme of Government management, and system over which it might be tried; *ib.* 2884–2898. 2932. Government are arranging for the conversion into a 22 years' annuity of the money advanced by Loan Commissioners to Great Northern and Western Company; *Earl of Lucan* 2965. Government should buy up all the railways; the ordinary stock could be purchased at 50 per cent.; they should then be leased to some large English company; *ib.* 2980–3000. Particulars of capital, loans, shares, &c.; *ib.* 2980–3000. They should be in three groups, and managed by a board sitting in London; *ib.* 3001–3009. Difficulties in paying off money borrowed of Loan Commissioners; Government annuity scheme will be very hard to meet; *ib.* 3010–3017. Detail of witness's proposal as to purchase of railways by Government, and particulars of cost, &c., of Great Northern and Western line; *ib.* 3018–3029. If Government purchased railways, landholders, &c. would be willing to share loss consequent on reduction of rates; *Malcolmson* 3449–3452. Witness suggests that Government should advance money at a low interest to those companies which can show an income beyond working expenses; discussion of this proposition, as to saving effected, interest to be paid, and whether public would be benefited; *ib.* 3369–3393. 3598–3606. 3610–3622. All railways with which witness is connected have had loans from Exchequer Loan Commissioners; terms, and course of payment of instalments; *ib.* 3423–3437. Government advanced a large sum of money to complete Dublin and Galway Railway; *ib.* 3607. Grand jury of Galway desirous of getting rid of the operation of the Loan Act of 1849; *Ennis* 4112. Witness would be glad to sell to Government the railways with which he is connected at half their cost; thinks Great Southern and Western would not; *Malcolmson* 3623, 3624. If rates reduced, general feeling in Ireland that temporary loss should be borne by United Kingdom; under such an arrangement nine-tenths would be paid by Great Britain; *Hemans* 3877–3880.

Witness suggests that Government should purchase all the railways and lease them to a limited company, who should be bound under certain conditions as to giving facilities to the public, charging low rates for coal, dairy produce, cattle, &c. Particulars of this scheme fully entered into, rates to be charged; how different descriptions of stock should be dealt with, &c.; *Bidder* 4259 *et seq.* Is of opinion that Government would receive offers from proposed company, as undertaking would be profitable. Term of lease might be considered every 10 or 14 years, and readjusted upon net revenue of railway at that period; how to meet objection that by such plan it would not be for the interests of the lessees to stimulate traffic beyond a certain point; *ib.* 4255–4274. How extensions of railways in Ireland should be dealt with under scheme. Discussion thereupon; *ib.* 4256–4258. 4319. 4358–4362. If Government bought the railways they would have to pay more than market value; *ib.* 4272–4274. There might be loss for a year or two if scheme carried out; but saving in management, greater economy in working, better use of rolling stock, and stimulus given to traffic by reduction of rates, would ultimately relieve the State from loss; *ib.* 4275–4277. 4293, 4294. Has no doubt that the terms offered to State would cover interest of debt; *ib.* 4278, 4279. Reasons why this scheme preferable to plan either of allowing existing companies to borrow money upon the security of the State at a reduced rate of interest to pay off their debentures, or having compulsory amalgamation between leading companies. If companies were divided into two systems, it would be an improvement upon present system; *ib.* 4283, 4284. Would object to laying any charge upon the State in order to benefit Ireland. State can confer a benefit upon companies by borrowing at a low rate of interest and accommodating them with capital so obtained. If Government had supplied debentures at 4½ per cent. they could have raised the money for 3½, thereby making considerable profit; *ib.* 4285–4291. The answer that the contract has been made for a certain number of years would relieve the Government from any pressure put upon them to get new companies to work at unremunerative prices; *ib.* 4292. All the large English companies have consolidated themselves into great systems without State interference, but many years must elapse before same rule would work in Ireland; thinks State might step in and hasten operations; *ib.* 4295–4299. Advantage of concentrating all the railway companies into one would be felt in England as well as in Ireland. Does not think amalgamation in England yet complete; *ib.* 4300, 4301. In some respects

GOVERNMENT ASSISTANCE, &c.—*cont.*

Ireland—cont.

everything said as to Irish railways applicable to English. Great convenience to several English railway companies if Government would take the debentures; *ib.* 4202. Scheme applicable only to Ireland. In England could only deal with preference capital and not interfere with management; *ib.* 4303–4305. Irish railways in same condition as English when Manchester and Liverpool and London and Birmingham were separate lines. Market value of shares would be likely to rise if there was an expectation of scheme being adopted. Value should be taken at announcement of scheme; *ib.* 4308–4310. If railway traffic increased between first proposal of scheme and adoption, dissatisfaction would be felt by shareholders, but any terms would be an advance of present value; *ib.* 4311. Any company prepared with requisite capital and security should be allowed to compete for lease of Irish railways. The most eligible terms should be accepted. It might be necessary to appoint a board to receive and judge of tenders. Should not be an Irish board, though Irishmen might be members; *ib.* 4312–4317. If scheme carried out there would be many dissatisfied, having lost their influence; *ib.* 4318. Thinks that localities not now served by railways would have no difficulty in getting power to make them, provided they had a legitimate *locus standi*; *ib.* 4320, 4321. A large saving would be effected by consolidation of Irish railways; *ib.* 4373. Thinks rolling stock of Irish railways sufficient; *ib.* 4378. Discussion as to expediency of carrying coal at $\frac{3}{8}d.$ per ton per mile. A company might be found to buy up whole of railways in Ireland, but thinks scheme suggested would be preferable. Companies could not borrow on such easy terms as Government; *ib.* 4401–4413. In order to develop traffic unequal mileage rates must be adopted; *ib.* 4442, 4443. States amount set apart for permanent way, engine power, and carriages and waggons, and gives duration of rails and sleepers; *ib.* 4444–4449. Under proposed plan there would be an inducement to increase traffic. No company would lease railways unless they expected a greatly increased traffic; *ib.* 4452, 4453. Irish gauge would be no obstacle to working witness's proposal; *ib.* 4454–4458. The London and North-western and Great Western Companies might be represented in leasing companies. English companies would not get possession of Irish railways to work them to the detriment of all other companies without the sanction of Parliament. They would view it as a mercantile speculation; *ib.* 4459–4461. Thinks through traffic would be better developed if lease were in the hands of London and North-western company than in the hands of a mercantile company; *ib.* 4464, 4465.

Nothing can be done by Government unless they are prepared to advance money without getting any benefit from it; *Haughton* 4673. If Government would purchase railways, shareholders would be content with a smaller dividend, difference to go in reduction of fares; *Murland* 4952. Lines, though not in first-rate repair, would bear a much larger traffic; state of repair an important point if Government contemplated purchasing; *ib.* 4953–4956. Shareholders of non-paying lines would not make Government a present of them, but many would sell on very moderate terms; *ib.* 4956, 4957. If Government took Irish railways, English companies would be found to work them, and by allowing them 50 per cent. of the gross receipts they would have an interest in developing traffic; *Cawkwell* 5180. 5246–5249. Reasons why it is not advisable to lease lines to a limited liability company. Question discussed; *ib.* 5181–5185. 5189–5194. 5198–5204. 5207. Beneficial results have followed where Government have assisted railways in agricultural countries in Europe. No objection to Government proposing reduction and bearing loss until traffic increased; no ultimate loss; *ib.* 5208–5210. Irish system of management not satisfactory, and the mere conversion into two or three systems would not be attended with any important benefit without some alteration made in the boards or some control by Government; *ib.* 5211–5216. Has found it difficult to make arrangements, as boards of directors adhere to system of exacting local charges, cartage, &c. If Government appointed good commercial men as directors on Irish boards, matters would be improved; *ib.* 5217–5221. If Government assist Irish railways it should be on condition that they make proper through arrangements with English lines, and that there should be a standing arbitrator to authoritatively settle differences; *Allport* 5276–5290. Witness is averse to Government supervision or management; *ib.* 5284, 5285. Objects to Government purchasing Irish railways, as, if managed by Government officials, it would be inefficiently done, and if leased to a company it would be merely transferring them to Government in order that Government might hand them over to other parties,—a cumbrous and useless operation; *ib.* 5291–5305. If Irish railways were purchased by Government and leased to a company, they would be willing to wait with greater patience for result of experiment than could be expected from present boards of directors, though that would depend very much upon the terms of the lease; *ib.* 5370–5374.

Witness thinks that at some future time amalgamation might be carried out without Government interference; *Dargan* 5493. Respecting Government purchasing Irish railways, if Government brought to their aid their better credit, and obtained money at a low rate of interest, great good might be done; would not have Government sustain a loss. If Dublin and Wicklow Company were assisted in this way to the extent of a million and a half, they would not object to reduce their rates for certain traffic 30 per cent. Good security would be given. Mentions peculiarity of this railway; *ib.* 5504–5511. 5655, 5656. If extensive reductions made, there will be permanent loss; a reduction of one-third would be attended with temporary loss. Could not reduce to this extent without Government assistance. Thinks it could be proved that Government would incur no risk in making advance; money would be employed in completing line and reducing interest upon money borrowed; *ib.* 5512–5517. Quotes dividend paid and amount of capital. Cannot say how the Government by guaranteeing new preference capital would relieve companies from any amount of interest; *ib.* 5518–5525. How railways paying no dividend should be dealt with; *ib.* 5526. About 26 millions already laid out upon Irish railways; believes the whole could be bought without compulsion for about 22 millions; data upon which estimate formed; *ib.* 5527, 5528. 5551–5557. Does not think any company would refuse to sell to Government if a fair offer were made; *ib.* 5532. If Government purchased railways, a special board might work them. Leasing them to any private company would not be an improvement as regards the country. Does not understand how such a board would be subject to political influence. How it should be constituted. Would rather place railways under private management if conditions could be inserted in lease to protect the public and the property and interests concerned; *ib.* 5558–5567. 5576. If Irish railways became property of the Government, some of the great English companies would become competitors for the lease; they might meet a little loss upon Irish side, but recoup themselves on English side. Whether a benefit would accrue to Ireland would depend upon conditions of lease. Would work well if parties applying for lease were to tender to work lines under certain maximum rates fixed by Government; the lowest offered should be taken; *ib.* 5568–5572. If companies could not find security to justify Government in applying funds of United Kingdom, cannot suggest how Irish people could assist themselves. Objection might be made if a Government subsidy were granted to Irish railways and not to railways, &c. in England, but exception should be made; *ib.* 5583–5592. Peasantry not likely to injure railways if owned by Government; *ib.* 5603–5605. Dublin and Wicklow would be better pleased to get one-third of the assistance required, and reduce rates 10 or 15 per cent., than to have full amount and reduce 30; reason why this railway is in a peculiar position to test principle; 5638, 5639. 5650–5652. Purchase by Government should be voluntary on part of companies; a few might stand out, but traffic might be so worked as to force them in; Government offer should be conditional upon all accepting it, otherwise small companies might stand out. Precautions would be necessary to prevent impediments in the way of traffic being worked over lines of railways holding out; *ib.* 5663–5675.

History of witness's management of Derry and Coleraine Railway held on lease by him from Loan Commissioners; *Roe* 5734 *et seq.*

Government should advance money to Irish railways at a low rate of interest to pay off debentures, and rates should then be reduced to the extent of the saving; though some English railways greatly require assistance, Irish railways have not the same advantages; *Lanyon* 6230–6235; but, in fairness, if Irish railways assisted, those in England needing it might have similar help; *ib.* 6249. Government interference should be for the benefit of the public; *ib.* 6251. Irish railways should all be under Government control; had this been the case hitherto, more useful lines would have been constructed, and useless ones avoided; *Earl of Clancarty* 6326–6331.

GOVERNMENT ASSISTANCE, &c.—*cont.*

Ireland—cont.

6355. Government management would be better than directors'; they should become the absolute owners; *ib.* 6339–6342. Advantages which would result; *ib.* 6343. Best plan for management, witness thinks, would be by two boards of inspectors, one for the north, the other for the south; 6343–6348. Great necessity for the railways being harmonized into one system; *ib.* 6350. Unsatisfactory management of Shannon drainage by board; *ib.* 6351–6354. Any loss to Government by purchase might be met by a uniform rate over the whole of Ireland; *ib.* 6356, 6357. Discussion of basis and conditions of a Government purchase; the Government should not lose by the purchase, and the shareholders should be benefited; *ib.* 6358–6376. Government control and supervision necessary in the interests of the public; *Macfarlane* 6551–6555; should have power to compel arrangements necessary for the safety of the public; *ib.* 6556–6558.

General desire that Government should purchase Irish railways; directors would be willing to negotiate; upon what terms; compulsory sale impracticable and unfair; *For* 6572–6589. 6685, 6686. Present price and value of shares; discussion of basis on which Government might purchase; *ib.* 6592–6623. 6638–6640. There need be no risk of loss to the public; shares do not fetch their fair value in the market; *ib.* 6624–6626. Cost is greatly enhanced through contractors being paid in shares; 6632. If Government did not purchase, it might assist by lending its credit; 6648. 6653, 6654. Witness believes Government could purchase the lines at a remunerating price to owners, lease them to a company, keeping a proper control over them, and make a considerable profit; *ib.* 6649–6652. Further particulars and full discussion of this scheme, especially as to actual present value; *ib.* 6655–6696. The greatest difficulty would be with the non-dividend paying lines; the dividends generally diminishing; dividend-paying lines might be satisfied if they were paid an annual amount equal to dividend of last few years; *ib.* 6697–6708. If purchased by Government, they should strictly control company to which leased, and should reduce all rates and fares 50 per cent., which would benefit the country immensely; *ib.* 6709–6714. 6719–6722. This course would pay present directors, but they have not courage to try it; *ib.* 6715–6718. Irish public might fairly be taxed to make up any unexpected loss to Government; *ib.* 6723. 6728–6737.

Witness advocates Government taking all the railways, and working them by a board of three commissioners sitting at Dublin; they would be better and more harmoniously managed, and the saving would be very great, there being at present 430 directors, 56 secretaries, over 100 engineers, &c., to be paid; *Meldon*, 6735, 6736. 6747–6751. 6801. No prospect of amalgamation except under Government; directors opposed to it, though shareholders might favour it; *ib.* 6752–6756. Discussion of terms on which Government might obtain railways; it need not cost the country anything; *ib.* 6756–6762. If a few companies objected at first, they would soon see it their interest to come in; or compulsory power might be given if necessary; *ib.* 6763–6767. Special legislation would probably be necessary; *ib.* 6770. Acceptance or rejection of proposal would be mainly with ordinary shareholders, but preference and debenture holders must not be allowed to suffer by it; *ib.* 6771–6781. If amalgamation took place, it need not prevent other parties subsequently starting new lines if needed; *ib.* 6782–6783. Basis of valuation of lines paying little or no dividend; something should be allowed for prospective value; *ib.* 6784–6790.

A bold reduction in rates and fares would be an immense benefit; an enormous passenger traffic, witness believes, would be developed; although it would pay and improve position of companies in a year or two, they are afraid of the experiment; witness therefore pleads for Government help, which he thinks could be given without any loss to the Exchequer; *Parker* 6865–6875. Witness would like to see fares reduced 75 or 80 per cent., the temporary loss to be sustained by the Government; it might be borne by Ireland alone, but witness would prefer the former; reasons; *Bewlay* 6952–6962. Cannot conceive of there being a loss in the long run; *ib.* 6963.

Government help and control desirable, so that people may travel third class at ½*d.* a mile; *Bagot* 7026. 7040, 7041. A large reduction of passenger fares should be made, which would greatly benefit the country, but as this might not pay, the nation should bear the risk; if successful, same plan should be adopted in England; better concert between companies also needed; *Pim* 7052–7058. New railways should be made at expense of

GOVERNMENT ASSISTANCE, &c.—*cont.*

Ireland—cont.

Government; *ib.* 7079. Difficulties in the way of reducing fares without Government help; effects of reduction; *ib.* 7087–7093. Irish railway grievances call for Government intervention; *Barrington* 7148; Irish opinion divided on this subject; *ib.* 7149–7166. If Government should take them and reduce charges, a penny income tax might fairly be laid upon Ireland to meet loss until recouped by increased traffic; *ib.* 7166–7179. Discussion of this proposition, especially as to its bearing on landowners; *ib.* 7180–7202. 7204, 7205. 7255. If once adopted, must be adhered to; some present heavy expenses saved by railways being under one management; *ib.* 7203. Any new railways must be under same system, but none should be constructed without a reasonable prospect of low charges being remunerative; reasons; *ib.* 7206–7216. 7218–7220. Discussion as to willingness of people to bear proposed tax, and as to eliciting public opinion on the subject; *ib.* 7264–7272. If Government purchased Irish railways, witness is inclined to believe that increased traffic would prevent any loss arising from reduced charges, but if not, thinks Irish people would object to bear the loss alone; *Macauley* 7316–7327.

Witness suggests that Government might take possession of bad and unfinished railways, and advance money to work or complete them, if they would pay 3½ per cent., or if not, if the locality were willing to make up that amount, but Imperial Exchequer not to suffer; *Hancock* 7646–7656. If locality not willing to do this, these lines must be left to their fate; *ib.* 7657–7661. Terms upon which Government might also take certain other lines which at present pay badly; *ib.* 7662–7665. 7667. With paying lines Government need not interfere; *ib.* 7666. Reasons why Government should make experiment on unsuccessful lines; *ib.* 7754, 7755. Government might contract with solvent companies to carry on lines they took possession of; *ib.* 7668. Government might make an advance to any locality desiring a new line, but locality to guarantee part of cost; the line to be public property; *ib.* 7669, 7670. Principles upon which fares should be founded; *ib.* 7681–7694. Government should first take the unsuccessful lines and eventually the whole, and work them on a system similar to the Post Office; *ib.* 7709–7721. If fares could not be made wholly uniform, the public would more readily submit to variations under Government management than under companies; *ib.* 7722–7729. Urgent necessity for State management; *ib.* 7730–7732. Undue influence upon Government to reduce fares might perhaps be prevented by Ireland itself having to make up any loss; *ib.* 7737–7739. Fluctuations in shareholders an impediment to a present sacrifice for a future good; *ib.* 7740–7744. Reasons for thinking that Government management would be better than that of companies; *ib.* 7745–7747. Certain small lines might perhaps do as well by amalgamating with a larger one as by Government taking them, but such amalgamation not likely to take place; if Government took them, they might advantageously employ the larger line to work them; *ib.* 7761–7766.

Commission of 1837 reported strongly in favour of Government taking steps for construction of railways; *Galt* 8471–8474. Witness details a scheme prepared by himself for purchase of Irish railways; would divide them into three classes, and states how each should be dealt with; discussion thereupon; any loss to be made up by imposing a tax upon Ireland; *ib.* 8491–8507. Benefit of low fares, and use of national credit should be made in favour of English and Scotch as well as of Irish railways; believes that result of an experiment, if tried, would be satisfactory; *ib.* 8510–8513. Experiment might be first tried in Ireland; the system should be adopted there as an institution, as the people are willing to bear any loss; *ib.* 8514, *et seq.* Experiment could only be made by Government taking the whole of the Irish lines; there is not one that does not pay more than its working expenses; *ib.* 8519–8526. Present high rates prevent full development of the mineral resources of Ireland. Copper from mines of Wicklow and Waterford is carted alongside the railway. Cattle are driven along the roads instead of being carried by railway; *ib.* 8544–8556. Must be an Act passed compelling companies to sell the railways upon certain conditions. Should be an uniform tariff for passengers, and for goods a tariff according to necessities of each case. Reason why witness does not think that if railways were under Government management there would be any difficulty from the different interests of the several parts being brought to bear upon the Government; *ib.* 8557–8565. 8571–8574.

GOVERNMENT ASSISTANCE, &c.—*cont.*

Ireland—cont.

Suggestion to group all the Irish railways into four or five systems, and give them some Government help, but not for Government to purchase them. Would rather be under English Board of Trade than Irish Board of Works; *Huish* 16,011 *et seq.*

Witness has recommended purchase by Government of Irish railways upon certain terms, and their being worked by a commercial company; *Bidder* 16,587, 16,588.

Statement from the Public Works Loan Board of loans advanced by Government to Irish railways, made up to 26th May 1865; *App.* AO. Letter from Irish North-western Railway Company offering to reduce fares if Government advance, at a low rate of interest, a sum sufficient to discharge the bonds and debentures of the company; *App.* AP. Offer from the Waterford and Limerick Railway to reduce their fares on certain conditions; *App.* AT. Irish railways:—Government loans. Memorial of certain of the Irish railway companies to the Lords Commissioners of Her Majesty's Treasury, praying for legislation to enable Government to lend money to pay off their debts, &c., and finish the construction of their railways; also financial and statistical statement in relation thereto. April 1866; *App.* CX.

GRAND JUNCTION RAILWAY. *See* CLARK, MR. C.

GREAT NORTHERN RAILWAY:

Company in a recent half year paid for compensations 9,627*l.* out of a profit of 264,000*l.*; *Clarke* 12,776–12,780. In 1865 they paid 24,000*l.* (their capital being 16,065,000*l.*); *ib.* 12,781. Arrangements making to ensure greater punctuality; *ib.* 12,782–12,786. Line is kept in a high state of perfection; is carefully inspected every day; 187,000*l.* spent upon it (434 miles) in 1865; *ib.* 12,787–12,792. Witness states that a certain arrangement of trains spoken of is not made with a view of forcing public to travel from Lincoln by the Midland; *ib.* 12,815–12,821. Explanation of some of Great Northern train arrangements with Midland Company; *ib.* 12,820–12,826. Discussion of arrangement which causes present difficulty in getting from Grantham to Lincoln; *Allport* 13,804–13,810. No complaints from public as to distance between stations of two last-named companies at Newark; *Clarke* 12,827, 12,828. Reasons why through tickets for certain routes cannot be issued; *ib.* 12,829–12,836. Through rates are already calculated by the million; *ib.* 12,837. Company have through booking throughout the whole of their own system; *ib.* 12,839. Company are very liberal in the matter of passengers' luggage; *ib.* 12,844–12,847. 12,871, 12,872. Company run a great many excursion trains; *ib.* 12,848. Witness considers that on some lines these have gone too far; the very heavy trains get in the way of everything and endanger the others; *ib.* 12,849–12,856. Fares are pretty uniform and near the maximum; severe competition some years ago between company and Midland Company, and its effects; *ib.* 12,861–12,870. Only two third-class trains a day, as a greater number would injure second class; market tickets are issued in Lincolnshire; these induce people to travel; *ib.* 12,879–12,885. System of signalling, &c. in operation for ensuring safety of trains; *ib.* 12,893–12,906. Company have four lines out of London to some parts; this enables them to accommodate a local traffic independently of their through traffic; *ib.* 12,907–12,910. Company are re-laying a portion of their line year by year, their rails being worn out; *ib.* 12,929–12,932.

Comparative statement of the rates for grain to Lincoln; *App.* BI. Comparative statement of grain rates from the Lincoln, Sleaford, and Bourn districts with Northampton, Norfolk, and other barley districts to Burton-on-Trent; *App.* BI.

GREAT SOUTHERN AND WESTERN RAILWAY OF IRELAND:

Excursion trains on, but no market trains; *Haughton* 4490–4493. Particulars of passenger and goods traffic on, showing considerable falling off as compared with

GREAT SOUTHERN AND WESTERN RAILWAY OF IRELAND—*cont.*

increase of mileage; *ib.* 4493–4510. Being no local traffic, company do not alter trains between different towns; *ib.* 4511–4513. Hardly any traffic except between Dublin and large towns; *ib.* 4514–4520. 4580–4584. For two years vigorous competition between company and Grand Canal Company, which brought greatly increased traffic, but much reduced income; *ib.* 4521–4528. Line has always paid fairly; *ib.* 4529–4532. Through traffic arrangements; *ib.* 4550–4568. Variation in rates; *ib.* 4573–4579. Particulars of cattle traffic; *ib.* 4595–4600. Work harmoniously with some small lines, with which they have through rates, without much inconvenience to the public, though not amalgamated; *ib.* 4601–4607. Traffic of company's system already developed, reduction of charges might increase it slightly; *ib.* 4617–4619. Have never opposed Bills in Parliament; *ib.* 4629. Have paid off all their debentures on the Government loan; *ib.* 4631. Some lines amalgamated with them still have debenture debts; *ib.* 4634. Government interference undesirable; *ib.* 4703. Opinion of company that rates could not be lowered without ultimate loss; *ib.* 4724. Inconvenience to the south of Ireland generally, and Waterford in particular, from company refusing to run trains in harmony with Waterford and Kilkenny Company; passengers from Dublin cannot go and return in one day; *Delahunty* 5011–5025. Great Southern and Western the only line from Dublin to Waterford. Have always opposed any scheme for connecting the North Midland of Ireland with Waterford, but an Act was obtained in 1860 for making a line from Kilkenny to Maryborough; this is already constructed as far as Abbeyleix, and the traffic of the district in eight weeks has increased 33 per cent. Object of company in opposing; *ib.* 5027–5032. Witness believes that the condition of the line is admirably attended to; *Lanyon* 6140.

Statement of traffic on, from 1846 to 1864; *App.* AH. Reply received from company to extracts from evidence sent to them for explanation or remark; *App.* AX. Returns showing company's charges for various kinds of goods; *App.* BH.

GREAT WESTERN RAILWAY:

Total cost of railway, including branches, 45,000,000*l.*, of this about 6,500,000*l.* has been for stations and sidings; of the latter there are about 357 miles; *Grierson* 13,495, 13,496. Company's traffic on the double gauge is diminishing. Company found having only one gauge very inconvenient. Value of broad gauge rolling stock; *ib.* 13,527–13,531.

Persevering opposition of company to competition between London and Gloucester; *Nicks* 8940–8946. Complaint also, as to fares and rates; *ib.* 8947–8952. 8989–8992. Charge much higher rates than the Midland; *ib.* 8991. Unequal rates charged by company in South Staffordshire district; *Williams* 10,115 *et seq.* Explanations in answer; *Grierson* 11,765 *et seq.*

Answer to complaint of Messrs. Howard (contained in the Appendix) as to declining to grant them special rates; also respecting through booking and correspondence of trains at junctions, stating that the former is only a question of time, but the latter is very difficult to accomplish; *Grierson* 11,794–11,806. 11,809. Answer to Mr. Williams's complaints as to rates in Staffordshire iron districts; *ib.* 11,810–11,824. No advantage in rates is allowed to officials who may carry on their own account. No unfair special rates ever granted by goods managers to witness's knowledge; *ib.* 11,862–11,866. Answer of company to complaint as to warehousing at Birkenhead; *ib.* 11,928. Pointsmen are not over-worked on Great Western line; their hours and pay have not been reduced; they have been agitating for more wages; considers them good; would be a mistake to put a superior class of men to those duties; accidents generally occur at the points; *ib.* 13,551–13,554.

Complaints from Bristol and Bath as to unequal rates on timber, rice, carriages, &c., especially as compared with Newport; *Low* 13,889–13,893. The rate on rice was raised from 9*s.* 11*d.* to 17*s.* 8*d.* per ton; *ib.* 13,936. Company have been frequently applied to, but fruitlessly; *ib.* 13,890. No reason to suppose that company have any interest in Newport; *ib.* 13,912. Complaint that express fares are too high, and that trains are arranged so as to force people to travel by second class; *ib.* 13,950–13,955.

Deterioration of line, rolling stock, &c. during the last few years; *Harrison* 15,330.

Complaint that in a certain instance company are charging 1*s.* 2*d.* per ton for carrying coals one mile in

GREAT WESTERN RAILWAY—*cont.*

owners' waggons. Witness considers this illegal and unreasonable, and that 6*d.* would be a fair sum. Company are being opposed in Parliament, and an action on the subject is pending, but counsels' opinions are divided as to legality of charge; *Lancaster* 15,563–15,590. Witness presumes that company have an exceptional power in charging from not having been watched so closely as other companies; *ib.* 15,608.

Various particulars of working expenses, mileage, &c. of company; *Gooch* 17,313 *et seq.* Total mileage over which company's trains work is 1,389. Working expenses have been slightly on the increase for some years; *ib.* 17,384–17,388. Witness thinks that company's excursion trains do not pay, and they interfere with ordinary traffic; their 3rd-class traffic is very well developed; *ib.* 17,488–17,495. Company will have either to change or to double their gauge to a great extent, which is a very serious question for them; some of the rolling stock might be altered, but the engines could not; *ib.* 17,510–17,515.

Statement of broad and mixed gauge lines, of narrow gauge lines belonging to the Great Western Railway Company, and list of places where broad and mixed gauge lines meet narrow gauge; *App.* CZ. Remarks by the manager of the Great Western Railway Company on Mr. Low's evidence; *App.* DD. Diagram showing comparative weekly receipts; *App.* CD. Diagram showing the number of passengers booked out of Paddington station each day during 1865; *App.* CF. Diagram showing the weight of excess luggage at Paddington station each day during 1865; *App.* CG.

GREENORE. *See* CAWKWELL.

GREGORY, MR. CHARLES HUTTON. (*Analysis of his Evidence.*)

Is a civil engineer and one of the Vice-Presidents of the Institution of Civil Engineers. Has acted for upwards of 10 years as arbitrator for Post Office in fixing rates of payment to railway companies; has had occasion to consider cost of working trains and charges made by railway companies to the public; 17,631–17,633. Explains cause of the great difference in items constituting cost of working trains; how cost ascertained; 17,634–17,636. Hands in table of different items of expense, showing that average for all trains is about 2*s.* 6*d.* per mile; cannot separate cost of goods and mineral trains from those of passengers, but gives reasons why witness believes cost of former much greater; 17,637. 17,639–17,643. 17,648–17,652. 17,755–17,759. Average earnings per mile for passengers and goods; 17,638. Many of the items in table would not be increased by running an additional passenger or light mail train; in what manner permanent way would be affected; 17,644–17,646. 17,658. Thinks that about 4*d.* per mile would represent actual injury done to permanent way by running an average train; for a light train consisting of one engine with two vehicles about 3*d.* per mile; 17,647. Considers cost of locomotive power for goods trains about 25 per cent. more than for passenger trains. Cost of an ordinary passenger engine about 7½*d.* per mile; if interest on cost of engine be added, 9*d.* Might not necessarily be so great for a small mail train; 17,653–17,655. Clearing house rate of ½*d.* per ton per mile for maintenance of a carriage or van is in excess of actual cost; 17,656, 17,657. Earnings of a railway a proper basis on which parochial rates should be assessed; about ⅝*d.* the average for a passenger train consisting of seven carriages; 17,659. Insurance against accidents should be added to cost of a mail train, but risk rather less than by other trains; 17,660, 17,661. Traffic and miscellaneous charges would not necessarily be increased by running an additional night mail train, although there are cases where they would be affected. Payment for a guard would be about ½*d.* per mile. If any additional staff necessary, expense could be easily ascertained, and should be taken into account. Recapitulates items of cost on night mail train, which shows that total cost would be 1*s.* 9½*d.* for seven carriages. Uncertain what items Mr. R. Stephenson included when he stated cost of running a train was about 1*s.* 3*d.* per mile; 17,662–17,667. 17,679. Bases proposed to umpires in arbitrations between railway companies and Post Office; 17,668–17,671. 17,680–17,682. Has heard that the law officers of the Crown affirm that mail trains are legally exempt from toll or other charges for use of the road, but witness believes exemption has never been claimed; if it were pressed Post Office would either have to find the rolling stock, &c., themselves, or make arrangements with companies for the use of theirs; 17,672–17,678. Mode to be adopted in determining payment by Post Office for use of ordinary trains; 17,683–17,685. 17,749. Average sum paid by public for use of passenger trains; charges paid by Post Office for mail service rather less; reason why it should be lower; discussion thereupon; 17,686–17,695. No analogy between carriage of mail bags in charge of a railway guard and carriage of ordinary parcels; in what way latter a much more expensive service; how they might be made analogous. Quotes rates charged for parcels, newspapers, and commercial travellers' luggage, and compares them with those charged for mail bags; 17,696–17,701. Statement that North-eastern carry Post Office parcels for nothing quite incorrect; they have always been considered as part of the mail, and placed in the bags with the letters; has never been asked to separate them; high rates of payment awarded for mail service have been in consideration of companies carrying parcels; quotes sums per mile awarded for certain trains. Umpires, if so inclined, could not make an award which should exclude payment for parcels; are paid for at a higher rate than are now charged for the ordinary parcels. Has been two arbitrations with North-eastern Company; names referees. How arbitrations are usually conducted; from what class umpires generally taken; they invariably refuse to give any explanation of their principles upon which they make their award; 17,702–17,715. 17,718–17,727. Why there have been lately very few arbitrations for Post Office; 17,716, 17,717. Provided parcels were separate, companies would earn more by carrying letters only for Post Office and parcels for the public, than they do now by carrying both for Post Office; public would send them as packed parcels. Companies cannot prevent carriers from packing parcels; they have no monopoly of the carriage of parcels; 17,728–17,734. Does not know when North-eastern obtained their Act to construct main line; they have carried parcels at letter rates ever since introduction of penny post; 17,735. Calculations as to cost of running an additional train for Post Office would in many respects apply to any additional passenger train; 17,736, 17,737. Increase of passenger trains does not produce a proportionate increase in the cost of working; would be much more nearly proportionate with regard to goods. Practically the expense per train mile remains very nearly stationary whatever the traffic of the line. On large systems it will be found that comparing expenses of several past years, although mileage has increased, yet cost reduced by the mileage has not diminished; 17,738–17,740. Difficulty in making comparison of cost per mile by different routes without knowing mileage that can be got out of an engine or the gradients; generally get a better mileage out of engines on large systems than on short lines. Running on a short branch generally costs more per mile than running on a long line; are exceptional cases where it is the reverse. Cannot quote a fixed sum per mile irrespective of distance; 17,741–17,744. Thinks costs of working given are liberal, although average might not apply to every railway; 17,745–17,748. Charges made to public for conveyance of passengers, parcels, and goods do not vary according to the gradients, or a company with bad gradients does not charge more than one with good. Rule of railway companies is to fix charge at most remunerative rates, taking care to keep within maximum limits; 17,750–17,753. Could furnish cost per train mile upon two railways, one running a small and the other a large number of trains; but thinks it would not enable the Commission to form an idea what proportion of the charges are charges dependent or otherwise upon the traffic; 17,754. Amount per mile awarded to Great Western by umpire in a case where particular accommodation was required by Post Office; 17,760–17,763.

GRIERSON, MR. JAMES. (*Analysis of his Evidence.*)

Has been for last two years general manager of the Great Western Railway Company; was formerly goods manager; 5905, 5906. Nature of through-booking arrangements made by company with Waterford and Limerick Company. Most important traffic between the two places. Traffic between Waterford and Bristol, but no through-booking arrangements *viâ* Bristol to Waterford; 5907–5912. Waterford traffic comes to Milford Haven. Arrangement with Waterford and Limerick Company satisfactory. If through-booking carried on *viâ* Dublin it should also be carried on *viâ* Waterford, and to all parts of south of Ireland. Great Southern and Western refused to give through-booking arrangements; 5913–5917. Waterford and Limerick do not charge as part of through-

GRIERSON, MR. JAMES—*cont.*

booking rate a local rate; are negotiating with the Great Western Company in order to obtain some better arrangement. Deposited a Bill in Parliament this session with a view of bringing about a closer connexion between Great Western and their line. Great Western have decided to take no part in the matter; 5918–5921. 5924. Has traffic for passengers and goods on Waterford and Limerick Railway, but former not large, the boats being unsuitable; 5922, 5923. Would be advantageous to Great Western Company to have control over Irish railways so as to get all the through traffic over their system. Their interest to work lines so as best to develop traffic; 5925–5928. If Irish railways amalgamated, could be worked efficiently as one line. If Great Western Company leased lines, would give further facilities for through traffic. Rates from Waterford to Limerick very low; could not say whether company would lower rates; most desirable when there is a prospect of increase of traffic; 5929–5934. Amount of income guaranteed to Waterford Company in addition to proportion of mileage rate. Large traffic in bacon and butter, and in cattle, horses, and pigs, but not in passengers. If better boats were put on, Milford to a certain extent might compete with Holyhead; 5935–5944. A project entertained some years ago to establish in North Wales a rival port to Holyhead. Great Western Company have obtained an Act to make a line to Fishguard; intended by independent parties to make a harbour there and run boats to Wexford; will be able to compete with route to Holyhead, the distance being rather less. Act obtained last year to make a railway on Irish side of channel to Roslea; 5945–5949. If all the Irish railways were amalgamated under one company it would require strong clauses to be framed to prevent concentrating all the traffic to one Irish port to injury of others. Might not always be best to take traffic by shortest route; 5950–5954. Places to which company has through-booking arrangements, and natural routes of those places; 5955–5964. An equitable arrangement might perhaps be made by striking a line across England and allowing Dublin to have all the traffic north of it and Waterford all south. Such an arrangement was made by Great Western and Midland Companies. It might be considered equivalent to closing up one route in each direction for the benefit of a particular port, and for the benefit of the two companies. Would work well in the interests of the public. Would be so far disadvantageous as it would enable railway companies to charge high rates, and up to maximum fares. At present all traffic brought to any local station goes by route favoured by company. Great Western Company desire that traffic should take its natural route; there are four points with which they interchange traffic with Ireland. Same rate to same place *viâ* Holyhead or Milford. Only book through to Cork *viâ* Bristol; cheaper route when time is no object. Nothing to prevent booking through between Bristol and Waterford; 5965–5977. Witness explains arrangement entered into with certain companies, whereby it is agreed that certain portions of traffic shall be considered as going *viâ* Waterford, and other portions *viâ* Dublin; discussion thereupon. Amount of rebate paid to Messrs. Malcolmson. Arrangement prejudices trade of port of Waterford, but benefits Great Southern and Western Company; 5978–5992. Receives Irish traffic at Liverpool; expects that all the traffic from north of Ireland will be done through Birkenhead; Great Western do not contemplate putting on steamers to Birkenhead; 5993–5995. Reasons why it is desirable that all the Irish railways should be amalgamated into one. When amalgamation took place between Great Western and West Midland companies, a large additional traffic sprung up, and through rates were considerably reduced; increase of traffic more than compensated for the reduction, and greatly benefited the public. Adoption of similar arrangements in Ireland would lead to similar results. There would be a reduction in working expenses and general charges, and considerable economy in material, if all the railways in Ireland were amalgamated. Arrangement between Great Western and Vale of Neath Companies; reduced coal rate to London to about 1*s.* 5*d.* per ton; traffic 20 per cent. higher than it was; does not entirely arise from reduction; 5996–6007. The fewer separate railways in Ireland the better for the country. If nothing can be urged against Irish railways being put into one system, should not be put into two or three. Total mileage of Ireland about same as London and North-western and Great Western. Mileage of some of the French systems much more. Irish train mileage much less than on such a line as London and North-western; 6008–6015. One board could develop traffic in Ireland satisfactorily. Frequent complaints that local traffic has been neglected, but has never known a case authenticated. As far as possible members of railway boards in England are selected to represent different local interests. Local traffic of every railway most important; if directors of Irish railways consulted their interests they would cultivate it. How such traffic could be looked after; 6016–6023. Other things being equal, one extensive system can be better worked than a number of small systems. Mentions undesirable way in which Irish lines are worked, and traffic diverted. If railway in the hands of one company, should be prevented from falling into same error. Should not be tied up so as to avoid local connexions and influence, as a local director is often of great value to a company; but directors should look to general rather than to individual interests; 6024–6031. Thinks Irish railways are in good condition; rolling stock not so good as on best English lines; permanent way, with one exception, in good order; trains seem punctual; 6032–6036. English companies would have no objection to amalgamation of Irish lines if company entirely independent of existing English companies, or directors in it to represent them; 6037, 6038. Working of railways not much cheaper in Ireland than in England; circumstances which tell against them; 6039–6043. Amalgamation or absorption of small lines into large ones has, as far as Great Western is concerned, had the effect of raising rates of wages; higher wages are given with a view of getting a better class of men; this is the best economy; 6044–6053. Large railways have a town and country rate of wages; same under similar circumstances; how men are promoted; 6054–6056.

GRIERSON, MR. JAMES—*cont.*

Further examination.

Is general manager of Great Western Railway Company; 11,764. Has read the evidence given before this Commission respecting Great Western rates; 11,765. Disagrees with Mr. Nicks when he states that Gloucester suffers seriously for want of a competing line; it can only be required for passenger traffic, as the bulk of the trade (timber and grain) goes into South Staffordshire, and partially into certain agricultural districts. Mr. Nicks takes great interest in railway matters; has always been against Great Western Company, and is not a fair representative of Gloucester people. As to Mr. Nicks's complaint that Great Western charge express fares unless in competition with London and North-western Company, witness explains that some years ago express trains were taken off northern lines, and have never been charged since; 11,766–11,768. 11,791–11,793. Same fares are charged by all trains (except two) on London and North-western line. Answers complaints of Mr. Nicks, as to low charges from Birmingham to London (129 miles) as compared with those from Gloucester to London (114 miles); quotes the rates and compares them with Midland rates, said to be more favourable, and states that Great Western rates from Birmingham are governed by London and North-western route (112½ miles). In the case of two routes, maximum rates are always regulated by the shortest. Maximum tolls on Great Western and London and North-western companies are the lowest in the country. A reduction made in the rates last June from London to Gloucester; 11,769–11,772. 11,777, 11,778. Explains certain grievances complained of by Mr. Nicks in his evidence, Nos. 8951, 8952, 8947, and 8984, and states that great benefit, both to the companies and the public, has arisen from an agreement entered into between Great Western, London and North-western, and Midland. Reason why competing companies must eventually come to an understanding; 11,773–11,776. 11,781. Through an agreement has large booking arrangements with London and North-western Company. Transference of traffic very large; before agreement there was practically a barrier between the companies. Delivers in a table showing rates on Midland line as compared with those on Great Western, and also tables showing comparative statement of rates for carriage of timber and grain traffic. Witness contends that Gloucester rates are not unfavourable as compared with those on Midland line. Explains certain items in the tables Delivers in table showing comparison of rates for grain and timber, and distances from Gloucester and Newport. Reads certain evidence given by Mr. Nicks last session before a committee of House of Commons on London, Bucks, and East Gloucestershire Bill, where he states that as a general principle he does not find fault with Great Western goods rate. Same scheme before Parliament this year. Mr. Nicks suggests a uniform mileage rate, but has been very desirous to have special

GRIERSON, MR. JAMES—*cont.*
rates. Traders of Gloucester, upon Mr. Nicks's application, have had a special rate to Reading, which enables them to do a large trade; 11,779–11,787. Great Western Company, as a principle, would object to a competing line between London and Oxford; is not necessary. Asserts that there is no ground for Mr. Nicks's statement that for want of competition high rates are charged throughout Gloucestershire district. East Gloucestershire line not yet commenced; 11,788–11,790. Has looked carefully at the correspondence with Messrs. Howard; they seem to desire a special rate for their own particular advantage. With respect to that gentleman's complaint that passengers cannot book through from Bedford to Bristol or to any Great Western station west of Didcot, or that a third-class passenger cannot travel through without stopping a night at Oxford, witness states that the companies intend to establish through booking, and that having third class with all trains would remedy evil, but traffic is very small between Bedford and Bristol; 11,795–11,803. London and North-western have been putting on a good service of trains towards Cambridge, which will eventually open up route to Norwich and the east all through by Cambridge. Through booking will be carried out before long between all principal places; 11,804–11,806. Admits that passengers cannot be conveyed through to Worcester from Bletchley without changing. London and North-western Company could remedy this, if it were worth their while; 11,807, 11,808. In regard to Messrs. Howard's statement that rates to Great Western and North-eastern stations are higher in proportion than those of other companies, witness does not think them unfair; they may get a low special rate from Bedford; 11,809. Will put in table showing that Mr. Williams has not made a fair comparison of charges. Considers that very favourable rates are given to South Staffordshire district. Upon application from iron-masters of South Staffordshire, rates to London have been reduced to enable them to compete with Middlesbro'; reduced rates include collection and delivery. Hopes reduction will prove profitable to company; their reason for making reduction. Refused to discuss question of reduction with the iron-masters if they threatened to support a new line; 11,810–11,813. 11,817–11,824. 11,836. 11,846. Explains inequalities in the rates for bar and pig iron to Sheffield as compared with those to Liverpool and Manchester; 11,814–11,816. States that inequalities of the rates to Swansea as compared with those to Liverpool are caused by the one being a station to station rate, and the other includes collection and delivery; discussion as to charge for this service. Why low rates given to Swansea, and collection and delivery not included in rate quoted; 11,825–11,835. 11,837–11,841. Will endeavour to define the word "terminal." Reason why it would be very difficult to have a fixed terminal, as proposed by Mr. Williams. Corrects several statements made by Mr. Williams and Mr. Gibbs, as for instance, that a farthing a ton per mile would be a fair and profitable charge, notice to be given of alteration of rates, comparison of charges to Cardiff and other ports, and companies charging same whether they cart or not. The law compels them to allow public to cart for themselves, and that during last year 160,000 tons of traffic was brought to Paddington station by public or carriers, on which they either made the charge themselves or railway allowed it from the rates; gives cartage rates in London and the country. More convenient that companies should do the carting. Considers that competition in rates, as desired by Mr. Williams, could not exist for any length of time. Rule which Mr. Williams proposes respecting collection and delivery, and to give to all freighters the same advantages, is practically the principle upon which railway companies act. Railway companies might give a lower rate; under special circumstances, it would serve interests both of public and company. Although special rates are not published, there is no mystery about them. No rate given to any directors or officials on the line different from those given to traders. With respect to Mr. Williams's complaint of delay in the delivery of iron sent from South Staffordshire, witness states that, as a rule, it is delivered in Liverpool or London the next morning; 11,842–11,853. 11,860–11,862. Corrects certain errors in Mr. Matthews's tables as to Middlesbro' rates; he might have learnt them upon application at Paddington or Euston Square; 11,854–11,859. It rests with witness to give special rates; is done through the goods manager; any large reduction is discussed at the board. Has never heard that personal preference has been given by goods manager. Corrects statement of Mr. Matthews as to rates for pig iron to Shropshire from South Staffordshire, and states that Mr. Perry's proposition that castings should be charged same as bar iron would be unfair and entail loss to companies; great care required with this traffic. Thinks Mr. Walker has nothing to complain of in the rates for hardware from Wolverhampton. Is not unfair to charge a higher rate to places having a small trade; 11,867–11,874. Explains discrepancies pointed out by Mr. Walker as to bar and pig iron not being always charged the same rate; 11,875–11,878. Mr. Walker incorrect in stating that wire is sometimes carried from Warrington to London at lower rates than from Birmingham and Wolverhampton to London; 11,879. States how Mr. Gibbs's figures are all wrong; his prepared and hands in a correct table; reason why witness has not attempted to show mileage rate. Has never been asked for terminal separate from mileage. Occasions upon which it would be difficult to give them; would be no difficulty if an average terminal for whole of England were adopted; in some cases it would be on real information to traders; 11,880–11,893. As to Mr. Brown's statement that he does not know when the waggons go away, where they are detained, or whether broken down or not, witness states that Great Western Company have a regulation requiring station-masters to report immediately upon all these matters; is probable that occasionally this regulation is not attended to. Used to repair traders' waggons, but in consequence of accounts for repairs being disputed it was given up. Thinks that Mr. Brown must have forgotten that upon South Staffordshire line, as upon other lines, the Act of Parliament enables company to charge terminals in addition to maximum rates. Hands in table of salt rates. Quotes rates given to Mr. Corbett for salt to certain places in London; are very favourable; a uniform mileage rate would destroy his trade to a certain extent, or destroy companies' profit; 11,894–11,897. Has endeavoured to trace all Mr. Corbett's waggons for six months; finds there is very little detention. Is quite possible that they may be detained at Oxford; are detained at Reading; cause of detention; has recently adopted system on portion of line that will enable them to tell from what cause detention arises. Does not admit that it is not the fault of the consignee. Would be a good thing to charge consignees siding room when they delayed the trucks beyond a certain time; course adopted with traders in Chester station; discussion as to who would be the best party to enforce payment, and as to whether companies possess such a power. If companies found waggons, consignees would be bound to pay demurrage for detention; 11,898–11,900. 11,907–11,927. Gives Mr. Corbett a through rate; reason which induced company to give him a reduced scale a few months since; rate does not involve change of gauge. Company do not carry to Plymouth; salt from that district goes by Bristol and Exeter line; 11,901–11,905. Answers complaints respecting warehousing at Birkenhead, and Mr. Wilson's complaint against Great Western Company as owners of Kennet and Avon Canal; delivers in table showing canal rates in certain years and railway rates in 1860; 11,928–11,933. Does not think there are any instances in which railway charge exceeds the canal charge. List includes all the most important articles of trade; 11,934, 11,935. Does not think that if canal had continued in independent hands, the public would have had lower rates; believes it would have been stopped. Company give low rates on Stratford, and also carry on boats at low rates, but only for heavy produce, minerals, coals, &c. With regard to Mr. Wright's statement, witness says that company do charge glass at reduced rates at owners' risk, and decline to pay for damage when they are not in fault. Answers same gentleman's complaint as to charge for "smalls," and reads clearing house regulations, showing that Mr. Wright is in error; hands in table respecting mode of charging "smalls"; 11,936–11,948. Explains circumstances which led to an advance of rates between Birmingham and South Staffordshire and Liverpool, as complained of by Mr. Wright. Rates merely reverted to what was a fair paying rate; 11,949–11,952. States that although public may take advantage of low fares for a time, will not do permanently to any great extent. Mr. Wright must have forgotten former charge if he states that Birmingham has not benefited by railways. Gives rates per ton from London to Bristol before railways were opened and since. Mentions railways and canals carrying from Birmingham to London, Liverpool, &c. Gives number of miles from Birmingham by Midland, Great Western, and London and North-western railways. Midland railway only recently taken to London traffic. If mileage rates were in all cases charged from Gloucester, as suggested by Mr. Sturge, would be unfair towards Liverpool

GRIERSON, MR. JAMES—*cont.*

and Birmingham; considers Gloucester very favourably situated; 11,953–11,959.

Further examination.

Puts in printed paper, headed "General Observations;" 13,254. As to recommendations of some of the witnesses, that a uniform rate per mile should be first tried on a particular railway, witness explains that if the Great Western Company were compelled to adopt it, it would practically have same effect as making it compulsory upon all companies in the country, or competition would cease; if mileage rate uniform, passengers and goods would go by shortest route; if same company had two lines of different lengths between same points they would not be able, if rate per ton per mile, to use longer line as a relief line; 13,255–13,266. As to suggestion that there should be a uniform rate per mile over country, witness states that if this were brought about, either by Parliamentary enactment, or as just stated, it would be prejudicial to trade in various ways, unless it were made in many cases unnecessarily low, and then it would seriously injure railway companies; how it would affect iron trade, the conveyance of emigrants and passengers from London to Falmouth, and also affect lines passing through agricultural districts. If a Government board had power to interfere with tolls of a company which had voluntarily reduced any of their rates, such interference would discourage any further reduction being made, although so doing would benefit the company and the public. Why a higher rate should be charged for iron where consumption small; 13,267–13,272. 13,287–13,289. 13,291. Thinks if low rates were charged in agricultural districts it would not develop resources or increase trade of country. If salt were carried at half present price it would not increase quantity, and if same rates were charged to London for shipment as for local consumption, it might stop trade altogether. Is obliged to charge a rate which traffic will bear, so that the article can be sold at such a price as will enable it to compete with same article from any other place. Ground upon which witness thinks he is entitled to take into consideration use to which article is to be applied. Is of opinion that companies are entitled to charge maximum rates where they can get them, and reduce where they cannot; 13,273–13,286. 13,346. As a rule, fares are the same in agricultural and in thickly-peopled manufacturing districts, but in some districts third-class carriages are attached to most all the trains; 13,290. Reason why witness thinks that, except in thickly-populated districts, you could not induce people to travel for any long period or continuously. Excursion trains scarcely pay towards end of season; would limit them to holiday excursions if it were possible; is certain they induce parties to travel who would otherwise pay full fare. If third-class fares were much reduced, agricultural labourers would not travel three or four miles backwards and forwards to their daily work; in no case carries people from suburbs four or five miles into a town to their employment. About carrying from city to Hammersmith at a weekly fare of 1*s.* 6*d.*; 13,292–13,304. It would be impossible to publish rates in same way as canal and turnpike tolls were posted, unless they were uniform. Probable that when arrangements are completed for through booking, the rates and fares in Great Western books will amount to 5,000,000. A portion of rates has taken nearly two years to complete; large alterations made since book printed; 13,305, 13,306. 13,363, 13,364. 13,375–13,381. Parties desirous of learning rate could see the books. Gives it to any one who applies; applicant would also be told that a reduction might be made if large quantity sent, otherwise he might charter a vessel and send it by sea. Nothing unfair in giving special rates, provided that every one sending under same circumstances gets same rate. A person could obtain information as to rates at any station as to a particular station, but not generally. Small traders do not like special rates being given for large transactions; 13,307–13,320. 13,333, 13,334. Plan formerly pursued by Midland Company of giving a special rate to large brewers, is not same principle as pursued by Great Western Company, as in that case there was a secret agreement; do not think companies would enter into them now; they can be prevented by Act of Parliament. Probable conditions of this agreement; witness does not know that Midland Company now make same charge to all the brewers; 13,321–13,326. 13,329–13,332. 13,335–13,337. If a special rate given for a large quantity, say 500 tons, and the next week same person only sends 20 tons, the ordinary rate is charged; 13,327, 13,328. Would not tell people in London the Liverpool or South

GRIERSON, MR. JAMES—*cont.*

Wales rate. General publication of rates not necessary. Inconvenience to companies if legislature gave power to examine books of rates; discussion as to whether public should not be able to see whether equal rates are imposed under similar circumstances; 13,338–13,345. 13,347. 13,355–13,360. 13,382–13,385. Maximum rates could be published, but it would be of no practicable use to public. Compulsory upon company to put up toll boards; are now useless. Fares were published on Great Western line until they became so numerous; some of the old fares are published now to a small extent; 13,348–13,354. Goods manager decides upon special rate if trade small; if large, the question would come before the board. Revision of rates a continual business, and occupies a great part of general manager's time. Principal grounds of revision; 13,361, 13,362. 13,365–13,367. Has very little acquaintance with French system of railways, but is aware that all fares and rates (which as a rule are unalterable) are published every three months; no difficulty in publishing them in England if unalterable; would be merely the expense; 13,368–13,372. Number of rates in force in England must be 50 times greater than those in France. Believes that a uniform mileage rate is adopted in France; 13,373, 13,374. Return tickets are issued for two days where distance beyond 50 miles, within 50 one day, for 300 four days; same practice adopted by other companies; 13,386–13,389. If there were uniform rates and terminals a court of appeal would be unnecessary. If court of appeal had power to compel companies to charge rates, irrespective of powers which have been given to them by Parliament, their decision might be most prejudicial to railway companies. Quotes answers of some of the witnesses showing their different views as to proper mode of fixing rates, and states how the public interests are now protected; 13,390. Believes that traders are always allowed to be heard by counsel before committees; they appeared and opposed Amalgamation Act of Great Western some years ago; 13,391–13,394. Does not think county courts are more resorted to in small actions against companies than they were formerly. A great number of actions brought against Great Western Company; on what account brought. Has removed one or two into the superior courts to get an interpretation of the Act; 13,395–13,398. Cannot prevent packed parcels being carried upon the line; companies claim right to charge a certain rate per ton; present rates are a great hardship to companies; the carriers make an immense profit. The companies are spared the expense of delivering these parcels. Thinks that 4*d.* is about the charge for collection and delivery of each parcel; company would deliver a parcel at a distance of 1½ miles for 2*d.* or 3*d.* in a town; is not charged separately; 13,399–13,410. Companies carry the largest number. Mentions that an experiment was made at Bristol with one of these parties who packed in this way, and it was found that public paid more than they would have done to railway; accounts for the system being encouraged. Railway charges less in the gross than the packed parcels people; if public knew that, they would bring all the parcels to the railway; 13,411–13,423. Could not compete with Post Office for conveyance of parcels, as it would injure the present parcels traffic. Post Office get them conveyed without extra charge; is not complaining of the remuneration paid by Post Office, but only of their undertaking certain services which they did not originally perform, which has deprived companies of a great deal of traffic; description of parcels carried; discussion upon this question and upon right of Post Office to send parcels by railway; 13,424–13,449. 13,453–13,455. Company have no system by which parcels could be conveyed at an even rate from one part of the kingdom to another. Railway companies employ Post Office to convey book packages even to large towns which are in immediate connexion with railways; 13,450–13,452. Charges Post Office very much more per ton per mile than the publishers, but Post Office have a special service running each way once a day devoted to them alone, and also use of all regular trains; would be happy to give any private individuals same number of trains at same speed for the same payment. Does not know who objected to carrying passengers by Post Office trains; 13,456–13,462. Would strongly object to Board of Trade having power of deciding cases of complaint of trains not meeting at junctions, unless certain rules were laid down for their guidance, as it is a most difficult thing to manage; witness finds it impossible to manage it with their own trains. Thinks such a tribunal would be no advantage to the public; evil is correcting itself as rapidly as possible; 13,463–13,470. Principle of interchange of traffic

GRIERSON, MR. JAMES—*cont.*
is adopted by Great Western railway for all non-competitive traffic; how universal interchange of traffic would be unfair to companies, and useless to public. Has no objection to public getting such through booking and facilities as are required, providing it is on fair terms to the companies. Principle upon which division of traffic is made to those companies which have incurred the largest cost in stations, &c. Public want competition between railways, and at same time all the conveniences of companies working together in friendly relations. Reads preamble of agreement before referred to. Irregularities of trains caused in a great measure by irregular amount of traffic. Hands in diagram, showing gross receipts for each year, divided into weeks; 13,471–13,475. Method adopted to prevent trains being unduly delayed; sometimes attributable to want of vigour on part of station master and guard. Gives an illustration of inconvenience caused by a train not arriving punctually at Wells station. Trains not so punctual at excursion times; are generally heavier; 13,476–13,482. Explains how it has arisen that express fares are charged in some cases and not in others, the trains stopping at and missing some stations. Hands in diagram, showing the irregularities in traffic upon all the railways in England; 13,483–13,486. For what services a terminal charge should cover. Canal companies either charged a sum beyond the toll where they provided wharfage, craneage, &c., or carriers charged for these services. Gives an illustration showing the impracticability of including terminals in mileage rate, and disadvantage to those sending goods short distances; 13,487–13,489. 13,497–13,499. Would not object to a maximum terminal being fixed if an average of whole outlay on all the stations were taken into consideration. Reason company do not charge a higher rate at those stations where there are extra expenses. Gives cost of stations and sidings, and total sum expended on Great Western railway, including sidings; 13,490–13,496. Explains fully course taken by company in the case of private waggons, and of those of their own; and gives reasons why demurrage should not be paid by company for detention and delay, as would be the case if private waggons were admitted upon clearing house system, as suggested by one of the witnesses. Company, in fixing rates for the conveyance of traffic in owners' waggons, allow such a sum as will enable traders to find them; gives cost of a narrow-gauge waggon and number of tons it will hold. Traders look after the waggons much more carefully when they find them themselves; delays generally take place at the terminal stations; irregularities arise from variation in quantity delivered to customers. Company sends a notice in case of a breakdown of a waggon, but not when they are detained by the consignees. Colliery owner is to blame sometimes for detention by sending to certain customers a greater number than they can unload in a given time; gives an illustration; 13,500–13,509. 13,524–13,526. Mr. Corbett's complaint that salt sent in narrow-gauge waggons to Gloucester was detained for want of broad-gauge trucks, and that Midland Company demanded demurrage, no doubt is a great hardship, and arises partly from the irregular amount of traffic received; traders do not give an hour's notice of quantity they are going to send; would not be practicable to demand notice; 13,510–13,515. Break of gauge objectionable, but not many delays arise from it, or much damage caused in loading or unloading the goods. Gives cost of loading and unloading; service is done by agents of colliery owners. Coal is brought from Staffordshire to London both by broad and narrow gauge; 13,516–13,523. As far as Great Western is concerned, traffic on the double gauge is diminishing; are increasing narrow-gauge stock much more than the broad. Found it a great inconvenience when there was only one gauge. Cannot tell the cost of altering the gauge; alteration of the rail would probably cost 500*l.* to 750*l.* per mile; a certain part of rolling stock would still be available. Great Western broad-gauge rolling stock has cost about 4,000,000*l.* Dead weight not so much on broad gauge as narrow. Practicable to reduce dead weight in passenger trains, and give sufficient accommodation to public by running a smaller number of carriages, but public would be averse to it. Great length of train one of the causes of irregularities in the time. Cannot, as a rule, fill an ordinary train with passengers; all calculations founded upon such hypothesis are fallacious. No doubt public pay more in the long run for the additional convenience they get; 13,527–13,538. 13,543–13,547. Gives pretty much the same convenience to second-class passengers as to first-class, of passing them from branch to main line, and *vice versâ*. Takes third-class passengers on to long branch lines in same carriages; third-class have to change much more frequently than the other classes; 13,529–13,542. Does not think that an additional safety could be afforded to the travelling public by conferring further powers on Board of Trade; best to leave full responsibility upon managers of companies. Thinks Board of Trade see the difficulties of the case, and therefore decline to lay down any rule; 13,548–13,550. Pointsmen are not over-worked on Great Western line; their hours and pay; hours have not been reduced; have been agitating for more wages; considers them good; would be a mistake to put a superior class of men to those duties; accidents generally occur at the points; 13,551–13,554. Delivers in tables, headed "Rates, London and Birmingham, by canal in 1836, by railways and canal in 1842, and by railway in 1866;" also, "Rates, London and Manchester, by quick vans in 1833–4, by canal in 1834, by railways in 1840 and 1866;" also, "Rates, Birmingham and Manchester, by canal in 1836, by railways and canal in 1842, and by railways in 1866;" and also, "Rates, South Staffordshire and Liverpool, by canal in 1831, and railways in 1866," which shows that in no case are the present rates so high as formerly; gives an instance; 13,554–13,558.

Diagrams handed in by witness, showing comparative weekly receipts on Great Western Railway; *App.* CD. Comparative weekly receipts on all railways in the United Kingdom for the year ending December 1864; *App.* CE. Number of passengers booked out of Paddington station each day during 1865; *App.* CF. Weight of excess luggage at Paddington station each day during 1865; *App.* CG.

GRIMSBY:
Declared real value of total exports from port of, in 1863; *App.* B.

GROCERS:
Memorial of, and others interested in the commerce of London to the chairman and directors of railway companies connected with the metropolis; *App.* CQ.

GUARANTEE:
If Legislature compelled a reduction of rates, a guarantee against loss should be given; *Mulvaney* 1227; *Forbes* 1727; *Mallet* 2250 *et seq.* A great portion of the capital employed in making Irish railways being raised upon debentures, it would be of great advantage to have the Government responsible for the interest of the difference between a high and low rate; *ib.* 2299, 2300. Fares in Ireland should be reduced, and Government should guarantee companies against loss, and have a voice in the direction; *Longfield* 2870–2873. Conditions under which a guarantee fund might be raised to reimburse loss caused by reduction of fares; *Hemans* 3885–3887.

H.

HALHEAD, MR. HILTON. (*Analysis of his Evidence.*)
Is a Liverpool timber merchant; 412. Owing to increased imports more accommodation is much needed. The general trade of the place doubles itself every 14 years; 413–419. In consequence of the excessive rates the Baltic trade has diminished, and the timber merchants consider themselves aggrieved. Gives number of ships employed in the trade, and tonnage, in the year 1822, and in 1860 and 1863; 420–425. Rates from Liverpool much in excess of those from other places, in many instances the distances being greater and the charges much less; instances cited; 426–430. Birmingham timber merchants are kept out of the Liverpool market by the heavy rates; 431, 432. Liverpool is at a disadvantage with the eastern ports as to the Baltic trade; 433, 434. Suggests as a remedy a more equitable distribution of rates according to distance; 435.

Table showing railway carriage rates from Liverpool as compared with other places; *App.* D.

HANCOCK, DR. W. NEILSON. (*Analysis of his Evidence.*)
Was formerly professor of political economy in the University of Dublin, and professor of political economy and jurisprudence in Queen's College, Belfast; 7594. Has been engaged in collecting statistics on various questions relating to Ireland; 7595. Has directed his

HANCOCK, DR. W. NEILSON—*cont.*

attention to Irish railways; describes their financial condition, and mentions those companies that do not pay all their dividends on their preference shares, those that do not pay on their ordinary shares, those that pay a dividend less than the rate of interest in the funds, and those that pay more than the funds, but less than what the shareholders believe to be true commercial interest; gives also the mileage of each class. Dublin and Kingstown Railway shares at a premium; is leased to the Wicklow Company on a perpetual lease; 7596–7604. Coincides with proposition stated by a Committee of the House of Lords in 1864, that where companies were not able to pay their ordinary shareholders, they were not in a satisfactory condition for developing traffic, or to work the thing successfully; describes how the public interests are affected by such a state of things; quotes from the report showing that the commercial system breaks down where there is not commercial profit; 7605–7607. 7749–7753. Gives an instance where the shareholders suffered a serious loss; 7608, 7609. Thinks one cause of lines not paying is that solvent companies are afraid of carrying out extensions; these are then taken up by speculative companies, who pay their contractors in shares; reasons why it is objectionable to pay contractors or landowners in shares; discussion; 7610–7615. No line should be commenced unless it is a *bonâ fide* commercial company, and has its capital subscribed; if such is not the case shareholders will most likely suffer loss; 7616–7622. Attributes present state of things in Ireland to many lines having been made which never had a prospect of yielding a remunerative return; 7623–7625. County roads in Ireland are made out of local taxation; 7626. Railway defects in Ireland cannot be remedied by competition; mentions a case where it was injurious to the company, though beneficial to the public. Is in favour of competition; names several competing lines in Ireland; competition generally ends in a compromise. Effects of competition diminished where number of competitors restricted; not possible as a permanent arrangement; 7627–7631. 7704–7708. States why amalgamations go on very slowly in Ireland. Certain non-paying dividend lines may nevertheless represent a commercial value. If there were a general amalgamation of railways, and whole traffic worked on uniform plan like the Post Office, a much larger sum would be made, but scheme would create dissatisfaction in the different counties. Would be a great jealousy if any large portion of Irish lines were amalgamated with English companies; 7632–7636. 7700–7703. Present state of money market will put a stop even to legitimate extensions; 7637, 7638. Unprofitable condition of Irish railways not attributable to state of the country; since 1862 the country has steadily improved; 7639. Takes a hopeful view of the future prospects of railway traffic in Ireland; reasons for so doing. Railway returns much better this year than last. Dublin exhibition has of course made a difference; 7640–7642. 7756–7760. Emigration has not affected the traffic, as wages having increased, the people have been enabled to travel more; 7643. Gives two reasons why the coal traffic will increase; varies much in different years; 7644, 7645. Proposes that bankrupt lines and lines that have been stopped should be taken by the Government, provided that the traffic would pay cost of completing them, reckoning the money to be advanced at 3½ per cent. If the traffic would not pay at that rate, and localities would not guarantee portion of cost to make up that amount, the Government should not interfere, as no part of loss should be borne by national exchequer. If traffic produced more than enough to pay Government, residue should go to proprietors to make good money expended before Government took possession. Discussion as to when the Government should take possession; 7646–7661. 7709–7711. Lines which pay no dividends, either on preference or ordinary shares, should have the traffic valued, and purchased by the Government at 3½ per cent.; 7662–7664. Would not interfere with lines paying less than the funds or with those paying above unless the companies were desirous of selling; 7665–7667. How traffic should be carried on, and extensions and new lines made, when possession was taken by Government; in all cases they should control the rates; 7668–7670. 7729–7731. Does not think traffic would rapidly increase if fares were reduced; reason why it would be better to try experiment on those lines purchased by Government; 7671–7674. Experiment should be tried by reducing third-class passengers' rates, but not below the actual cost of conveyance; 7675, 7676. Calculation as to how to get maximum net receipts out of railway when purchased. Fixing such a rate as will induce people to travel will pay best in the long run.

HANCOCK, DR. W. NEILSON—*cont.*

If Government advanced the money to make the railway, fares should be regulated so as to pay the interest. If they purchased a railway for 100,000*l.* which cost 500,000*l.* fares should pay part of interest on the sum actually paid; discussion thereupon; 7677–7696. Unlimited nature of liability in case of accidents one impediment to reduction of rates. Should be a fixed sum for each class of passengers. In Ireland proportion that sums paid for compensation bear to passenger receipts small. In some instances it has materially affected the dividends; 7697–7699. If Government became the proprietors of all the railways they should work them like the Post Office, appoint certain of the officers, and fix fares; believes that under such an arrangement there would be the necessary vigilance to seek and promote traffic in the highest degree. Is not aware that the Irish Post Office does not pay; 7712–7721. Should not necessarily be one uniform rate of charge over line everywhere; does not know whether such a plan would create dissatisfaction; 7722, 7723. Discussion as to whether political influence would be brought to bear in particular localities in order to reduce the rates; might be neutralized by making parties in that district bear any loss from such a reduction; 7724–7728. 7737–7739. Gives a speculative opinion that where lines are not paying a commercial interest they are not well administered by the directors; 7732–7736. Shareholders of lines paying a very moderate rate of dividend averse to speculation; 7740, 7741. Solvent lines are well managed in Ireland; interest of directors to keep them in good repair; 7742–7744. Government would be better fitted to judge what would ultimately be profitable to lines than individual shareholders. Thinks they would not be too rash. Government establishments in England are managed as prudently as some public companies; 7745–7748. Government would not be under a disadvantage in having to make the experiment on bankrupt railways, as if they were bought at a price that the traffic would warrant they would be no longer bankrupt; 7754, 7755. Mentions several of the bankrupt railways which the Government should first take; discussion as to whether it would not be advantageous to amalgamate some of these lines, and work them in connexion with the Great Southern and Western Railway. Where lines are in the hands of preference shareholders they would be opposed to amalgamation; 7761–7766. Discussion as to whether one reason of railways not amalgamating in Ireland is because almost all are connected with special seaports, and also whether the making of unprofitable lines are of benefit to the public; 7767–7782.

Table alluded to by witness showing want of success on Irish railways as commercial speculations; *App.* AZ.

HARDWARE TRADE:

Complaint from Wolverhampton of unequal rates upon; *Walker* 10,637 *et seq.*

HARRISON, MR. THOMAS ELLIOT. (*Analysis of his Evidence.*)

Is civil engineer in extensive practice. Railways with which he has been and is connected; 15,126–15,129. Thinks all rates in the abstract should be equal under similar circumstances; but provided all traders are upon same footing, rule should not be read too stringently; benefit that resulted from the adoption of a graduated scale; companies now consider rule as to equal charges not to apply to different distances on same line. Gross charge on North-eastern up to a certain point higher for long distances than short. Have adopted, since 1853, 2*s.* as the maximum, so that colliery situated at 30 miles from a port would be charged same as one at 20 miles. Rates do not vary more than 20 per cent. for increased distances, taking rate to nearest point; why witness thinks public generally approve of system; difference of opinion in Hull upon the question; merchants there want to enforce system of equal mileage rates; if carried out would stop nine-tenths of traffic of country. Collieries situated near the port have often considered themselves unfairly treated; they do not in all cases derive compensating advantages; 15,130–15,136. 15,167. 15,182–15,188. Why there should be a varying rate for coals taken inland. Gives an instance where it was beneficial to carry iron ore at prime cost in order to develop another business; would be justifiable to have different rates for same article if used for different purposes; same principle adopted by companies generally. Would not suggest any alteration of the law as to equal charges; if altered, should not be made more stringent; 15,137–15,147. Unless there were some further object, would not recommend companies to carry

HARRISON, MR. THOMAS ELLIOT—*cont.*
traffic at prime cost; they occasionally refuse traffic which they could have had at a low rate; 15,148–15,150. Cases constantly arise where it would be expedient to relax regular rate in order to get a traffic, but if reduction made to one trader should be made to all; 15,151–15,153. Inconvenience from publishing rates; if exceptional rates given public would be able to learn if all were treated alike by consulting manager's rate-book. Would be no objection in having special rates entered in such book and made accessible to public; special rates are not of frequent occurrence; cases where they have been given; 15,154–15,166. Rule also to allow traders to send goods for shipment to certain ports at charge fixed to nearest port; port of Hull included, and being nearest, regulates charge; benefit that results from such a rule; 15,168, 15,169. Interest that North-eastern railway have in certain docks; no interest in docks at Hull; same gross rate to all the ports; 15,170–15,175. Goods going by way of Hull have to pay a higher rate than by way of West Hartlepool; no dock dues charged upon goods shipped; 15,176–15,181. Has no practical knowledge of system pursued in foreign railways; they adopt equal mileage rates; some gentlemen sent to England by French Government to obtain information upon the point; does not know result of their report; defends system of inequalities of charge between places at different distances. Why rate is only 2*s.* 6*d.* more from London to Aberdeen than from London to Edinburgh; 15,189–15,193. Principle upon which rate would be regulated for 10, 20, and 30 miles; could not carry at a rate that would absorb whole of profit; 15,194–15,196. Local rates are not equal on whole system with respect to passenger fares; mentions two cases where by raising rates traffic was almost destroyed. Can only ascertain effects of a change by having the most complete statistics of the result of it. A change of reducing would not be felt so rapidly as a change of increasing; 15,197–15,201. Next year the North-eastern will have gradually reduced their fares 25 per cent.; how reduction made; will sustain no loss therefrom; when and to what extent reductions should be made; believes low rates are beneficial to companies and the public; 15,202–15,207. If an experiment of reducing upon a large scale were to be tried at cost of Government, should be made between large towns at a moderate distance from each other, and not in an agricultural country like Ireland; 15,208–15,213. 15,219. Rates of wages and strikes materially affect amount of traffic; 15,214–15,218. 15,228. Does not think that a reduction in rates for cattle would increase traffic; unless there is anything which would increase produce of district, should not recommend a reduction of rates for agricultural produce; whole district of York and Newcastle line is purely agricultural; has not reduced fares in those districts; reduced fares first within neighbourhood of manufacturing districts; 15,220–15,225. First-class passengers bear a much larger proportion than second and third in agricultural districts; 15,226, 15,227. Gives rates for coal; reduction made within last five or six years; rates include use of waggons, but not terminals, which are about 1*s.* 6*d.* per ton; 15,229–15,233. Observations respecting rates from Wales and Cleveland; 15,234–15,236. With one exception have always adhered to reduction when once made; 15,237. What constitutes terminal charges. Mentions that in some cases coals were actually carried at a loss; 15,238–15,245. Is adding largely to sidings on North-eastern system. In mineral districts have nearly three-quarters of a mile of siding for every mile of railway; necessity for sidings increases; 15,246. No Act which distinctly gives railway company any power to charge a particular sum for terminals. What expenses should come under denomination of charges for loading or unloading, for which a reasonable sum is allowed to be charged by Act; 15,247–15,252. Why question of right of company to include interest for station accommodation in terminal charge does not often arise; in many cases whole charge, including terminal, is less than maximum authorized to be charged from station to station; are some cases where terminal appears to be heavy. Unless terminal charged, would not be worth while to put stations at small places; 15,253–15,255. Would be a great difficulty in having maximum toll fixed which would include all terminal charges; present plan the best. Has no objection to a fixed terminal, but there would be a difficulty in having a maximum to apply to all cases; thinks it would not make much difference in charges to public; reason why terminal must be higher for London; 15,256–15,258. 15,265–15,274. Doubts whether an arbitrator appointed by Board of Trade would be able to settle questions as to whether sum charged is reasonable, or that matters would be settled in a less costly way than

HARRISON, MR. THOMAS ELLIOT—*cont.*
now; 15,259–15,264. Greater facilities are given than formerly with respect to interchange of traffic; result has been a benefit to companies and the public; legislative enactment compelling interchange would not be advisable. Convenience to the public from companies granting running powers over each other's lines. Mentions a case where public was inconvenienced from there not being running powers; difficulty would cease if railways were amalgamated. Agreements for mutual running powers are upon the increase; but when granted are seldom exercised; a universal grant of running powers between companies would not be practicable; 15,275–15,286. No delay in the transmission of goods from one part of country to another owing to imperfect arrangements between companies; difficulty has been the want of siding accommodation for the rapid increase of traffic; 15,287. Cost of working railways has a tendency to increase; causes which lead to this; proportion of the expense of working a line to the gross receipts is not increasing. Greater economy cannot be effected in the working of railways. Would be going in the wrong direction to introduce system of running fewer carriages, so as to make number more in proportion to number of passengers. First-class travellers generally seem to consider that they have a right to two places instead of one; 15,288–15,297. Thinks that only about one third of seats in train are unoccupied, not two thirds, as stated; 15,298–15,300. In many cases cost of working line has been much increased by sanctioning of lines intended to compete with one another; thinks that a line granted for purpose of competition has never in its effects been successful, or existed for any length of time. In such cases ability to reduce fares lessened; 15,301–15,303. Competing line does not in every case serve a district different from original line; discussion upon this question. One line did not pass because every town that it touched was already accommodated. Will be a waste of money for Midland to make extension to Carlisle, as every town throughout whole length is accommodated. Does not know views that parliamentary committees take of these questions. Would not alter system of parliamentary legislation so as to prevent competition; or lay down rules for guidance of committees; 15,304–15,312. Does not think money is forthcoming to make a new line frequently because existing accommodation is inadequate. Describes nature of an agreement witness was consulted upon in the case of an extensive line of railway which was projected last year. Principle upon which several lines have been got up. Mentions a case which came before a committee of House of Commons a few days ago, showing the financial position of a company applying for an extension of time and extension of line; failure of speculative lines will sooner or later put a stop to such evils. A great many of such lines entirely promoted with a view of being sold to large companies, who if they purchase them do so at an immense additional cost to what they could have made them for; North-western have come to a resolution not to buy any of these small lines, and disposition to purchase them on the part of large companies decreasing; many are not paying; line passed going to Hull the original shareholders of which will not get a penny of their money back; 15,313–15,326. Views that directors take as to reduction of fares, &c. when railway prosperous and the reverse; 15,327, 15,328. Rates on Great Eastern considerably higher than on North-western; former not a specimen which any one would like to take of a railway. Great Western in consequence of the rigid economy adopted is getting worse and worse; 15,329, 15,330. Is not aware that fear of competing lines receiving sanction of Parliament often induce railway companies to reduce fares; was the case with the South-eastern. London and Brighton reduced theirs nearly 30 per cent., and for the first two or three years suffered considerably, but have now recouped themselves entirely; reduction, though it warded off competition for a time, has not prevented it reappearing; 15,331–15,335. Increase in the rate of interest for money borrowed adds to cost of working; 15,336. Recent amalgamations have not been opposed; have been of great advantage to companies and the public; effect of them has been to develop traffic to a great extent in witness's district; expects amalgamations will proceed much further than formerly. Does not think large companies neglect smaller branches of their system. Mentions some of the advantages resulting from amalgamations; 15,338–15,345. No reason why Irish railways should not amalgamate by voluntary arrangement; from what causes failure has arisen; would not recommend compulsory amalgamation; 15,346–15,350. Difficulties that would arise if Government were to purchase the railways. Proposition that

HARRISON, MR. THOMAS ELLIOT—*cont.*

Government should lend companies money on lower terms than it could be obtained in the market, on condition that they should make an equivalent reduction in fares, would meet with universal approval of railway companies. North-eastern would avail themselves of it. Whether companies would be willing to make a reduction to a greater extent than saving in interest would depend upon the term for which the money was lent; would be proper for companies to provide a sinking fund; having to do so would not deter companies from accepting such assistance; would have to issue debentures from time to time. Inconvenience that might arise to companies if, after such offer made for a limited time it was found that company by increased traffic had recouped itself from loss consequent upon reduction of fares irrespective of saving upon loan, Government were to terminate bargain, and let reduced fares continue. Loan might be continued upon condition of a further reduction being made, but might be some difficulty in ascertaining what proportion should be; 15,351–15,358. 15,369–15,377. If advance were made to Great Eastern or Great Western upon condition of lowering their fares, it would compel all other large companies going to competing places to reduce without having received any benefit; proposition should be open to any company. Prosperous companies as well as others would be desirous of borrowing. As a rule, thinks security would be perfectly safe; no difficulty in ascertaining their value; 15,359–15,365. Does not think Government would be able to pay off all the debts of the companies; would have effect of raising rate of interest. Money so advanced would go to pay off debentures and so forth; 15,366–15,368. Why Government should not lend to new projects; 15,378, 15,379. Cannot say to what extent value of property has increased by introduction of railways; in many cases near a station land has more than doubled in value; 15,380–15,383. Has travelled on narrow gauge lines which run up to slate quarries in Wales; carries passengers as well, but would not be applicable to country generally; cost of their construction not so much less than ordinary gauge; line paid when worked with horses; does not pay now; 15,384–15,389. Is aware what has been done in some parts of India with respect to narrow gauge lines; have been made at a very low cost; company prosperous; narrow gauge line also in Australia; 15,390–15,393. Lines could be made cheaply if they were allowed to cross highways on a level, as it avoids the necessity of building bridges. If lines could be made for about 4,000*l.* per mile in many cases they would pay well. Under what circumstances the Thirsk and Malton railway (22½ miles) was made for 100,000*l.*; sum did not include rolling stock; assuming company finds whole of waggons, cost of rolling stock required about equal to gross amount of one year's traffic; general rule for companies not to find waggons for mineral traffic; 15,394. 15,400-15,412. Advantages of Mr. Adams' radial axle box; 15,395–15,398. Steep gradients better overcome by broad than narrow gauge; locomotive engines can work over gradients of 1 in 50 with perfect ease; 15,399.

HARTLEPOOL:

Declared real value of total exports from port of, in 1863; *App.* B.

See also ATKINSON. NORTH-EASTERN RAILWAY. O'BRIEN. RATES AND CHARGES, &c., 5. WEST.

HARVEST LABOURERS:

Are carried on Irish Midland Great Western at about ½*d.* per mile; *Ennis* 4016. All who like to travel by the harvest trains are treated alike; women and children would not be refused; they are all through passengers; *ib.* 4089–4093. Large and increasing numbers in consequence of the low fare; *Parker* 6865.

HAUGHTON, MR. WILLIAM. (*Analysis of his Evidence.*)

Was deputy chairman for several years, and chairman since 1860, of the Great Southern and Western Railway of Ireland, and member of the board since opening of the railway; 4473–4475. Question frequently before board whether measures could be adopted to make railway more profitable. A reduction of rates would be too hazardous an experiment; 4476–4479. Railway running through an agricultural district, the increase of passengers following a reduction of fares would not make up deficiency in receipts. In England low fares in such districts do not produce any considerable increase in traffic; 4480–4482. Only change of fares since opening of railway was an advance of 10 per cent. about nine years ago on first and second class. Cannot say whether

HAUGHTON, MR. WILLIAM—*cont.*

change was satisfactory to company; 4483–4488. Third-class traffic large. No special facilities to passengers on market days. Frequently run excursion trains at low fares, to which third-class carriages are always attached; 4489–4492. Hands in tables showing places between which excursion trains are run, times at which portions of the railway were opened, and receipts to present time. When communication effected with Cork, traffic decreased; discussion thereon; 4493–4510. Local traffic very small. Hands in a return showing goods traffic between certain stations for years 1856–1858; quotes receipts between Hazlehatch and Carlow; discussion as to great increase in goods traffic between Tullamore and Cork in those years. Has no similar return as to passenger traffic; very little between second-rate towns and generally from one to the other. Considerable traffic between Limerick and Dublin; 4511–4520. 4580–4584. Competed for two years with Grand Canal Company. Hands in a table showing between what towns the competition existed, and that upon reduction of rates for grain and flour from 7*s.* 6*d.* to 2*s.* the tonnage considerably increased and receipts decreased. Revenue paid working expenses. Quotes dividend paid since opening. Raised rates and came to terms with Grand Canal Company. Traffic fallen off along line of canal. Has not tried any experiment since; 4521–4530. 4585. Gives passenger fares, and states that whilst traffic of first and second-class passengers from 1860 to 1864 remained almost stationary, the third-class traffic considerably increased; 4531–4538. Great increase of coal traffic in 1860 as compared with 1859; attributable to scarcity of turf; has always been an increasing traffic; 4539–4542. Railway charges 1*d.* per ton per mile without terminals, and provides the waggons. More coals are carried from Cork than from Dublin. Thinks it hopeless to expect a traffic for the consumption of the poor; 4543–4547; Railway communicates direct with shipping at Cork. Coals, but not ordinary goods, can be put at once in the trucks; 4548, 4549. Mentions with what English companies railway has through booking arrangements. How terminals are arranged between companies; are not charged to public; 4550–4562. The cartage is undertaken by Mr. Fishbourne, who acts in Dublin as Messrs. Pickford do in London; the railway company settles with the shippers of the goods; it is an additional expense of 2*s.* per ton. From Cork to Dublin it is 2*s.* 6*d.* a ton for goods; 4563–4569. Special rates have frequently been given to individuals, but in no case has quantity promised been sent; instance cited. The ordinary rates are published; vary according to distances; same inwards as outwards; 4573–4579. Repeated proposals to amalgamate Great Southern and Western with Waterford and Limerick; negotiations came to nothing. Amalgamation only a question of time. Great Southern and Western are absorbing small lines; these were made cheaply and well. Difficult to get lines of railway for their value unless Government interfered; 4586–4590. Public suffer inconvenience from small lines not being amalgamated with large ones, there being no through rate. Complaint against Great Southern and Western that third-class passengers cannot conveniently go and return same day. Reasons against issue of third-class return tickets. Has not tried them for market days; 4591–4595. Cattle traffic increasing until last year or two. Store cattle are not driven along the road for long distances. Number of trucks of cattle carried at Ballinasloe fair; has no branch there. Tried cheap rates for cattle for a year in opposition to Midland Company, but it was a failure; 4596–4600. There are several small railway companies within Great Southern and Western district, which are not amalgamated, and which do not work over by agreement; are no hindrance to traffic; run trains in concert, and work amicably with them. Great Southern and Western system complete throughout all the district; 4601–4605. If Waterford and Limerick were in their hands, communication between Limerick and Dublin would be more conveniently worked; through trains would then be run to Limerick. Inconvenience felt by public in consequence of not being able to return from Dublin same day; 4606, 4607. Received a proposal to send minerals, but it was found that traffic would not pay half working expenses. Gives rates offered, and distance it would have travelled over line. No fixed quantity promised. Traffic to be remunerative must be continuous; 4608–4616. Traffic in south of Ireland, so far as the Great Southern and Western are concerned, is fully developed. Thinks there would be a slight increase of traffic if rates were reduced. Corrects a statement made by Mr. Longfield; 4617–4620. Some of the minor lines are in a state of bankruptcy; this is owing

HAUGHTON, MR. WILLIAM—*cont.*
to having cost too much, or to insufficiency of traffic; instances the Wexford and Bagnalstown line; 4621–4623. 4625, 4626. Thinks Ireland is in a poor condition; cannot expect any great increase in passenger traffic; 4624. Has no new railway projects before Parliament; mentions some bills that have been passed; never opposed any lines; 4627–4629. Outstanding bonds. How debentures on Government loan were paid off; 4630–4634. Rented a line to Cork with the intention of purchasing it; has a large passenger traffic, but no goods traffic, because there are either no stations or very badly constructed ones. There would not be much traffic if stations were good. Cheaper to send by lighters to port of Cork. Explains how the trade is carried on; discussion thereon. Large grain traffic between Dublin and Cork, which goes principally by sea; reasons why railway cannot compete with the sea; gives rate by sea and distance by railway; 4636–4642. 4647–4654. Grand Canal has an advantage over railway. Railway company take all orders they can get; 4643–4646. Explains why railway cannot carry grain; 4655–4664. If there were a large and continuous quantity of grain, 6*s.* per ton would pay, but rates to Cork now very low, in order to compete with water communication; 4665–4671. Thinks that no measure in connexion with railways could stimulate industry of Ireland, unless Government is prepared to risk a large sum of money. Public expectation in Ireland; 4672, 4673. Would not recommend to proprietors any reduction of rate as it would reduce dividend. Cannot imagine any number of years in which deficiency would be made up; 4675–4678. Low fares on Great Southern and Western have never had a fair trial. Difficulty as to trying a reduction on part of a line. A reduction of fares would not be followed by a great increase of traffic, as there is nothing to induce travelling from town to town in Ireland; 4679–4682. New lines in progress in south of Ireland; others projected; declines to give an opinion as to motive for promoting new lines when old ones unremunerative; 4683–4685. Great passenger traffic to Killarney in summer time, though less than might be expected. The large hotel there, although terms reasonable, does not pay; 4686–4688. Gives quantity of butter sent between Cork and Dublin, and rates charged, also passenger fares between Cork and Limerick, Cork and Killarney, and Dublin to Kilkenny, and distances. Does not consider that many passengers are carried through to Killarney from London and North-western system; 4689–4694. Reasons why he thinks it doubtful whether there would be competition between Wexford and Dublin if a line were made to Waterford and Wexford; 4698–4701. Desirable that London and south of Ireland should be connected together; 4702, 4703. There would be no material saving in working expenses effected by amalgamation, the advantage would be greater convenience to the public; 4704–4711. All the engines and carriages are repaired in Dublin and Cork; does not repair those of other companies; 4712-4714. Within certain limits increase of passenger traffic might be worked without increasing rolling stock; 4715. Many lines are irretrievably ruined, as far as regards the public advantage, in the course of 10 or 15 years, and some of them in half that time, the rails and sleepers will have to be renewed. There is not a single line in south of Ireland whose capital is not irretrievably gone unless traffic of the country increases; 4716–4720. Corrects a mistake made by a previous witness as to saving effected in rate for coal by bringing railway in Dublin down to water side; 4721–4723. Majority of directors think that no reduction of rates could be made without ultimate loss; 4724–4726. Majority of shareholders Irish. The railway meetings are always in Dublin; 4727, 4728. Has a considerable fish traffic; it is carried in goods vans attached to passenger trains; is not an increasing traffic; goes principally to England. Gives through rates to England per cwt.; 4729–4733.

Statement alluded to by witness, of traffic on the Great Southern and Western Railway of Ireland from 1846 to 1864; *App.* AH. Explanation from Mr. Fishbourne in reference to certain statements made by witness; *App.* BC.

HAWKSHAW, MR. JOHN. (*Analysis of his Evidence.*)
Is a civil engineer in extensive practice; 14,398. Has seen the summary of Her Majesty's commands to the Commission; 14,399. Is not aware that companies charge unequal rates under similar circumstances; may be cases where it is proper and beneficial to public for a company to charge a lower rate in one direction than it does in another; reason which may induce companies

HAWKSHAW, MR. JOHN—*cont.*
to make such a difference; 14,400–14,406. Does not see why companies should not be left to deal with rates as they choose, so long as they keep within parliamentary maximum, or why there should be legislation for railway rates any more than for rates of cotton or anything else; object of companies is so to arrange rates as to secure the largest possible income; are in some cases prevented from doing so by extending their lines into unremunerative districts; if low rates will secure this, sooner or later low rates will be adopted; rates generally have been greatly reduced since railways first instituted; 14,407–14,411. 14,551, 14,552. Companies would be justified, if it appeared to them desirable, to take goods at half the rate from Fleetwood to Manchester that they take them from Liverpool to Manchester; 14,412. If a low rate is charged from Manchester to Fleetwood, does not see how company can be prohibited from charging more from Manchester to Preston. A person might take his ticket to Fleetwood and get out at Preston; would consider it an injustice if prevented doing so; company might run a train from Manchester to Fleetwood without stopping at Preston, say for 4*s.*, and then run another train from Manchester to Preston for 5*s.*; would be an anomaly, but there might be cases in which it would be worth while to do that without interests of public being damaged. In some cases companies carry a ton cheaper than they do in other instances; the law recognizes this principle in all Acts of Parliament; 14,413–14,422. Thinks interests of public and railway companies coincide with respect to charges made; are not always identical in particular localities; 14,423–14,425. Average cost of conveyance of a train per mile in round numbers about 2*s.* 6*d.* per mile; in special cases there would be a great departure from the average; would be too little for passenger traffic and too much for mineral; average only fit for generalization; 14,426–14,429. 14,450–14,463. Difference between cost of a passenger train and goods train depends entirely upon speed; cost of passenger trains varies in some degree with length of train; adding one more carriage to a train of ten would increase cost by about one-fifteenth, in addition to wear and tear of carriages and injury to road; subtraction of a carriage would of course diminish cost in same proportion. By adding a single carriage to an engine the increase in cost would be very slight; does not know what cost would be; how cost of running a train ascertained. Railway accounts are so kept that it could be ascertained what proportion ought to be attributable to cost of running a goods train and a passenger train; cannot tell proportion of permanent way; 14,430–14,437, 14,440–14,445. Companies have a rule by which they charge each other for use of carriages and waggons; 14,438, 14,439. Accounts in some measure for discrepancies in rates from certain places; 14,446–14,449. When one company works the line of another an arrangement is often made for so much per train mile; does not know sum usually agreed upon; very few cases where one company works the line of another upon an average rate; 14,464, 14,465. No better remedy is required than at present exists for settling disputes respecting terminal charges; mentions a case where county court judge decided matter at once; how difficulty that in county court a person cannot sue for more than 50*l.* could be met; 14,466. 14,478–14,480. Why a maximum terminal charge could not be fixed. What terminal services include. Why London terminal should be higher; 14,467–14,477. 14,491–14,494. No objection to terminal being published; amount of labour varies enormously; would be a long list; 14,481, 14,482. Sees no objection to insertion of a clause in every future railway Act to same effect as that inserted in North Staffordshire Act; 14,483. Law by which terminals are regulated; thinks the word "reasonable" in the clause is as expressive a word as you can have; interpretation of this word; as to what tribunal would best decide whether sum charged was reasonable; discussion as to whether appeal should be allowed; 14,484–14,488. 14,498–14,505. Terminal charge adopted by clearing house agrees with what companies charge; does not quite agree with what it costs companies, as they all get a profit out of it; 14,489, 14,490. No allegation of favour being shown to large traders at the expense of small; on matters of terminals affecting any important trade, traders would combine and try question; 14,506. In all cases where companies are carrying for great distances at very low rates, they must first of all take off terminals in order fairly to apportion the receipts between the different companies; 14,507–14,509. Cost of conveyance could be reduced if continental system of restricting number of trains and the construction of railways were adopted;

HAWKSHAW, MR. JOHN—*cont.*

would not be for convenience of public; does not think English travellers, in consideration of being carried at considerably lower fares, would consent to have only half the number of trains a day. Continental system applies almost as much to goods trains as to passenger trains; 14,510–14,515. 14,523. 14,548. 14,550. Gives number of trains run between certain places on continent and in England; cannot give the average number of passengers in each case; 14,516–14,520. Having a small number of trains per day at lower charges is much the same thing as an excursion train; profit on excursion trains sometimes greater than on ordinary trains; 14,521, 14,522. With regard to ordinary passenger trains companies have not only to provide for maximum, but that maximum diminished by having an extra number of trains; 14,524. If there were no competing lines country would be deprived of an enormous amount of railway accommodation; considers country has gained treble as much as the railway companies. Lancashire and Yorkshire railway has benefited district more than its proprietary; would be a great folly to adopt continental system; 14,525–14,529. Reducing number of carriages by each train would involve the changing of carriages, which passengers would object to. Describes the inconvenience on the Belgian railways; 14,530–14,535. Thinks that, so long as public have such frequent starting of trains and convenience of retaining the seats when transferred from one line to another, there is very little hope of a large reduction in the cost of conveyance; fares have been reducing more or less for last 20 years; reduction will continue so long as companies find it pays. Thinks companies are too apt to look at gross receipts and large returns without reference to profit; 14,536–14,540. Why wants of public are more attended to in this country than abroad; 14,541–14,544. Foreign railway fares rather lower than English. Expenses of French railways lower, Russian higher. Cost of fuel rather less in England than in France; 14,545–14,547. 14,549. Labouring classes have sufficient facilities afforded to them to travel. When a company can acquire a third-class traffic it is their interest to do so, and they always do it. Third-class carriages are not generally attached to express trains. Companies will attach them to all trains where they are likely to be productive of benefit. Is not aware that impression exists that people now travel second-class who would travel third if third-class carriages were provided; are cases where companies would not like to have them attached. Third-class passengers usually only travel short distances; they delay the trains; 14,553–14,559. Unless fares are low people will not travel by railway for short distances; 14,560–14,561. Why witness is strongly averse to railways being property of Government; 14,562–14,564. Is of opinion that if Government were to lease the railways to companies or individuals, it would lead to very lamentable consequences; mentions some of the evils which would arise therefrom. Thinks leaseholders would be much more troublesome than shareholders, and more indifferent and careless about management of railways. Points out that if lessees were to have the right of using line at a given rent, Government would require, in many respects, a staff as large as present staff of companies to look after lines; is not possible to make a provision for adequate maintenance of lines in terms of a lease; difficulty that occurred in the case of Lancashire and Yorkshire railway; 14,565–14,574. 14,579–14,586. Government now could borrow money upon better terms than railway companies, but if they had to borrow two or three hundred millions the rate of interest would be higher than it is now; might be some slight advantage, but not sufficient to make it worth the while of the Government to trouble itself with the management of all the railways; 14,575–14,578. Has not read the evidence of Mr. Bidder, in which he suggests securities to keep the property from being injured; mentions cases where plan has been tried and failed; 14,587–14,591. No general measures are required to facilitate traffic between different companies; running of through carriages carried quite as far as it prudently can be; is the case also with respect to the through-booking of goods; 14,592–14,594. Thinks amalgamations in the first instance took place from the opinion that it would stop the construction of competing lines. Would have railways like cotton factories, open to be made by parties willing to make them, provided that regard be had to the way in which they intersect or deal with property. Would require proof that they were wanted. Would not allow any opposition further than might be necessary to elicit the facts which bear upon it. Would treat all applications for railways as *bonâ fide*; believes that

HAWKSHAW, MR. JOHN—*cont.*

result of applications will not exceed, generally speaking, the necessities of the case; 14,595–14,602. 14,652–14,657. Parliament compels parties who have obtained powers to make a new line, to deposit a certain sum until considerable progress has been made with the work; no practical good would result from impounding it until railway completed. Is not aware of any railway for which a bill has been passed not being ultimately constructed; it may have been delayed; 14,603–14,611. Thinks amalgamations in England have nearly reached their limits; have been of advantage to the public; would be equally beneficial if many of the small Irish companies were amalgamated; has not considered what has prevented them; 14,612–14,617. Establishing a communication between passengers and guard a difficult question; company could only authorize guard, in case of being signalled, to find out the person who had called him, which he could not do unless he risked his life by walking along the side of the carriages; would be very dangerous if passengers had the power to stop the train; are some cases when a communication would be advantageous; would entail having another guard; 14,618–14,628. Would be a much more effective mode of meeting case if narrow gauge lines in England had the same sort of carriages as are in use on the continent; describes a carriage in use in Russia which is more comfortable and safer; Russian gauge practically same as English; could put it upon the North-western; would be no danger of their touching the sides of the tunnels; no reason why they should not be adopted on every line; will supply a drawing of it to the Commission; 14,629–14,635. Land has greatly improved in value by having railway communication. Cannot give any idea as to extent which improvement reaches on each side of railway; would depend upon certain circumstances. Has heard that value of land, quarries, and buildings has increased from 10 to 15 per cent.; have been cases where property has been injured; 14,636–14,646. Did not see Railway Companies Bill of last session, which was withdrawn by the Government; 14,647. Does not think time has arrived for altering maximum rates. Considers that fixing a minimum rate would be more absurd than fixing a maximum; would rather recommend the striking out of all rates and leave them to the companies; such a change would not alter value of railway property; as regards the public, would have a salutary effect; believes that in the course of three or four years all the existing railways will be so much choked with traffic that railways will have to be made to carry passengers only; 14,648–14,651. Will not be for the public interest to place any restrictions upon the construction of railways, as by so doing money would be invested in other countries which would otherwise be invested here; 14,658–14,661.

Plan given in by witness, of first-class carriage in use on Russian railways; *App.* CJ.

HEAVY GOODS:

Excessive rates upon carriage of, to Liverpool; *Clark* 30–34. If Irish Great Northern and Western Company could send heavy goods at ½*d.* per ton per mile, they could compete successfully with the boats; *Earl of Lucan* 3033.

HEMANS, MR. GEORGE WILLOUGHBY. (*Analysis of his Evidence.*)

Is a civil engineer, and has been for 25 years engaged in construction of railways in Ireland. Enumerates the lines; 3760–3762. Irish gauge an impediment to working lines economically. Advantages of traffic as great as in England. Carriages accommodate four abreast, same as on English narrow gauge, although much heavier. An advantage in constructing locomotives; 3764–3766. 3780, 3781. English narrow gauge preferable. Impossible now to alter Irish gauge; 3767–3769. Expense of working greater, increased by cost of coal and dead weights. Rolling stock also dearer. Cost of running a train per mile not quite so much in Ireland as in England. Irish gauge does not make much difference in the construction of a line; 3770–3775. Cost of carrying a given number of passengers or goods rather greater upon an Irish than upon an English railway. If carriages were filled the working expenses would still be heavier in proportion to number of persons carried; 3776–3781. Few night trains diminishes cost of keeping up lines, wages, &c. being less. Cost of keeping up permanent way less in Ireland than in England. Goods trains are run at night; 3782–3788. In comparing working expenses on English with those on Irish lines not fair to take the English great lines, but branch lines made through thinly-peopled rural districts; 3789. On

HEMANS, MR. GEORGE WILLOUGHBY—*cont.*
Sundays a train is run morning and evening. Sunday trains do not pay on long lines; 3790, 3791. Gross traffic receipts on Irish lines appear stationary; 3792, 3793. 3827. A few years since hopes were entertained, which have not been realized, that there would be more prosperity in Irish lines; many railways were started, the contractors being paid principally in shares, thus throwing an immense amount of debt upon the lines; found extremely difficult to get contractors to take up the work upon these terms; discussion as to amount of money wasted; 3794–3811. Goods traffic has diminished, cause; 3812–3816. If rates were lower there would be more cattle traffic: grass-fed cattle are frequently walked 20 or 30 miles; 3817, 3818. If rates were reduced one-half there would be a temporary loss, but thinks in five or six years the present net revenue would be realized. Comparative cost of working lines proportionately less as carriages are better filled; at present they would take 50 per cent. more third-class passengers; 3819–3825. Dividends have decreased, reduction in some cases attributable to expense of renewing permanent way; 3826. 3828, 3829. Is of opinion that steamboat traffic across Irish channel is not in a satisfactory state; 3830. Amalgamation of small boards with larger companies would reduce fixed charge in favour of proprietors; small boards often act in an obstructive manner; 3831, 3832. Discussion as to how Ireland should be divided into districts in the event of amalgamation of railways; 3833–3839. States cause of nonpayment of dividend in some railways and reduction in others; 3840–3848. Points out how saving would be effected by amalgamation, discussion thereupon; 3849–3856. Gives reasons why he thinks no favour would be shown by railway companies either to amalgamation or purchasing lines. Holders of stock would be glad of any measure that would ensure them a modest dividend. Thinks when shareholders opposed amalgamation they must have been influenced by the directors; 3857–3860. Amalgamation, with protection from monopoly, and a large reduction in the rates, would be popular with shippers of goods and cattle; how temporary loss could be met. Barony rate could not be put on; illustration; 3861–3869. 3871–3874. 3899–3902. Landholders and agriculturists derive considerable advantage from construction of railways. Would not agree to bear temporary loss; general feeling that it should be borne by United Kingdom; under such arrangement $\frac{9}{10}$ths would be raised by Great Britain. Irish railways pay no passenger duty; 3870. 3875–3884. Some method should be devised of trying the experiment of reducing fares without sustaining a loss. Conditions upon which a guarantee fund might be raised; 3885–3887. Reasons why directors in Ireland object to amalgamations. Amalgamations numerous in England; 3888–3892. If Irish railways were amalgamated, and the country divided into three systems, thinks it would not be possible that working could be satisfactorily carried on by a few boards unless Government appointed a referee who should have full power to do justice to every line; 3893, 3894. Whole system could be vested in hands of one or two companies. Dublin should be the chief centre of railways, and at Belfast there should be another centre; 3897, 3898. Has not estimated what the effect would be of reducing rates 50 per cent.; thinks traffic would come gradually; at the end of 10 years the loss would probably recoup itself. After a time third-class passengers would use railway, second-class passengers would be induced to travel first class, to those who now travel first class the reduction would not be material; 3903–3911. Does not think third class would use railway unless fares were reduced one half; 3912. Increase of passengers would not add to working expenses, but until traffic doubled there would be a diminution in gross receipts; 3913–3916. Low charges will tend to gradual establishment of manufactories in Ireland, but merely as an agricultural country it would pay to reduce rates; 3917, 3918. In England low fares have led to considerable increase in passengers in agricultural districts. Want of money prevents Irish people using railways; 3919, 3920. Introduction of coal into centre of the country becomes more important every year. Has observed a tendency to discontinue use of turf. If coal was cheaper, and the empty cattle trucks returned laden with same, the consumption would increase; 3921, 3922. If railway companies make a large reduction in cattle rates, and bring back coal from Dublin for $\frac{1}{2}d.$ a ton per mile in the same trucks, it would pay in the end; 3923. Cannot tell the net receipts on Irish railways, or amount of capital invested; 3924, 3925. Turf cannot be used so economically for steam engines as coal; all attempts to compress

HEMANS, MR. GEORGE WILLOUGHBY—*cont.*
turf into a small compass have commercially failed; three times the bulk of coke or coal. By the time good turf is dug, dried, kept, and sent to market it is not a cheap article; only burned on railways to light the fires; is possible, if you get an engine established near a peat bog, to drive it with turf at a low rate; 3926–3932. Flax mills and cloth and woollen manufactories would be established if rates were reduced. Manufactories in England have been established near to where fuel is produced. A good deal of water power would come in aid of Irish manufactories; where there is large water power and auxiliary steam it ought to be able to compete with steam power. Thinks manufacturers in Ireland using water power could compete with English manufacturers using steam power; 3933–3937. One engine would not take more than 210 tons of coal. Gradients are equal if not superior to many of the leading lines in England; gives them upon certain lines; 3938–3948. Putting on powerful steamers by railway companies in connexion with Irish ports would be beneficial. The London and North-western is the only company that has power to expend capital in that way, and they had considerable difficulty in getting sanction of Parliament; 3949–3954. Railway companies participate in property of steamboats between Fleetwood and Belfast and between Morecambe and Belfast. Not so well managed as they would be in the hands of railway companies; 3955, 3956. If Great Western Company had power to put on steamers between Waterford and Milford, the service would be better. Does not know if they applied to Parliament for power to put on steamers; general impression that it is difficult to obtain such power. Shareholders can stop companies from embarking in such undertakings; 3957, 3958. 3985, 3986. Would introduce competition between railways and independent steam ship companies; private companies must either improve their accommodation or succumb. The Waterford Company, with their numerous fleet of steamers, and also the Dublin Company, would be able to hold their own against any railway companies' boats. Places to which Waterford Steam Company ply; 3959–3967. 3983, 3984. Not sufficient sea service between Waterford and Bristol, 3967, 3968. An efficient service similar to that which exists between Holyhead and Dublin would stimulate the export trade all over the country, 3969–3982. Would make steamboats between English and Irish ports a combination between English and Irish railways, so as to work together; 3970. In some cases it might be advantageous to lease Irish railways to English. Irish goods should be booked through in every direction to England; 3971. English companies should be able to put on steamers in connexion with Irish railways, so as not to give an exclusive monopoly to any one line; 3972. Might be profitable for a railway company to put on steamers when it would not pay a private company. Is not aware of any difficulty in the way of through rates between Waterford and Wales; 3973, 3974. Places where it would be advantageous to establish steamers in connexion with railways where they do not exist, or are insufficient; discussion thereon; 3975–3981. 3989–3992. 3994. Difficulties in way of companies indirectly establishing boat communication; 3993. Thinks Midland Company are only interested in the boats from Morecambe to Belfast; 3995, 3996. Would establish a system of through booking from every port in Ireland to every port in England. There is booking through Dublin and may be some in the north, there is some also by Waterford, but service is not good; 3997–3999. Passage from south of Ireland to Fishguard; 4000, 4001. Compares difference in point of time and distance, supposing there was a good sea service between Waterford and Milford, of a journey from London to south of Ireland with route by Holyhead and Dublin; 4002–4006. Could hardly expect boats of equal power and speed to those running between Kingston and Holyhead; 4007–4010. Further statement by witness regarding Irish railways; *App.* DP.

HILL, MR. EDWIN:
On an official inspection of railways, and the management of the traffic thereon, as a means of preventing accident and loss; *App.* BK.

HILL, MR. FREDERIC. (*Analysis of his Evidence.*)
Has been for the last 14 years assistant secretary to the Post Office; 7933, 7934. His attention has been directed to questions of railway management and legislation; 7935–7937. Explains difficulties in obtaining postal facilities, and the tendency on the part of arbitrators, if matters are referred to arbitration; 7938–7943.

HILL, MR. FREDERIC—*cont.*
Not obtaining reasonable terms very much diminishes use of railways. In Belgium and France a more frequent communication between town and town than in England. In France, unless special trains are required, State pays nothing for transmission of letters by railways; 7944. 7949. 7950. In some cases cheaper to send mail by horse and cart 7945. 7946. Has to pay more where trains are required to be run at certain hours; 7947, 7948. 8091, 8092. Parliament might compel new lines to carry the mails gratuitously; thinks service would be better performed by paying companies a remunerative price; 7952–7955. Difficulties in the way of Post Office availing itself of ordinary trains; mentions an instance where it had to pay very highly for sending a very light mail; 7956–7961. Impossible to substitute a fixed invariable payment for system of separate arrangement. In the case of new railways, a mail tariff, varying according to certain circumstances, might be introduced into the Act. Post Office have frequently represented to the Treasury the want of such a measure, and some years ago a Bill was prepared, giving Post Office power of sending mails at certain fixed charges, but in consequence of an intimation of a very strong opposition, the Bill was not proceeded with; 7962–7986. Desirable that State should become the proprietor of the railways; should not be purchased; a fixed dividend should be guaranteed to the shareholders, the risk (if any) should fall upon the State. Reason why witness thinks there would be no loss; the Government will gain other advantages. Such a price must be offered as would induce shareholders voluntarily to surrender their interests. Power should be given to the majority to bind the whole; 7987–8001. 8026–8028. Would put up line to competition, and let each railway upon lease, imposing certain conditions as to rates, &c.; permanent way should be left to leasing company; 8002–8005. Should be frequent inspection of line; 8006. Believes the rent would cover payments for debentures, and for ordinary shares. As the debentures fell in, Government would be able to reissue them on much more favourable terms; 8007–8010. Would be desirable to create a special small department for managing the railways. Government should buy them up gradually; 8011, 8012. If purchase by voluntary means only, does not follow that Government would become possessed of all the worthless lines, as they need not purchase unless they thought proper. Proprietors of improving railways would be willing to part with them at a given price. For what cases compulsory powers should be obtained; 8013–8017. 8097–8099. If Parliament thought any new line would benefit the country, they should sanction its construction; if it should be an injury to companies having a 21 or 30 years' lease, lessees would have claim to have rent re-considered; 8018–8022. 8036–8038. By witness's system the State and the proprietors would both gain; 8023–8025. In what way saving would be effected if State purchased the railways; 8029–8035. Thinks force of competition between those offering themselves as lessees would bring about a large reduction of the fares. Under present system effective railway competition impossible; 8039–8041. Puts in paper headed "Summary of opinions held on the subject of railways;" 8042. No essential difference between an annuity payable to a body of railway proprietors, and one payable to ordinary holders of consols; effect that Government borrowing money or paying annuities at higher rates of interest would have upon consols. Discussion upon the creation of these annuities; 8043–8067. No term of lease should be fixed. How packet tenders are framed. Thinks there is an analogy between entering into a contract for the conveyance of mails, and one for the entire use of a railway; discussion thereupon; 8068–8079. 8190, 8191. Lessees should have power to select their own officers, even though the railway were only let for one year; 8080–8082. Government should prescribe the trains to be run, but should reserve to themselves the power of preventing lessees of one railway throwing unnecessary obstacles in the way of the working of an adjoining one; 8083–8090. 8093. Would lease out each separate line as it was surrendered. Thinks that all the railways will gradually become the property of the State; 8094–8096. Believes lessees would be men of more administrative ability than present boards of directors. Has observed a tendency recently of private enterprise changing to joint stock companies; in many cases boards of directors of such companies will manage better than boards of railway companies; mentions the cases of Mudie's Library and Dillon and Co., where the existing management has been retained, and become the nucleus of the company; 8100–8110. If a particular railway were ably managed, lessees would be glad to retain manager. Very probable that managers themselves would become lessees, provided they could give security that terms of lease would be acted upon; discussion as to the security that should be required; 8111–8123. 8131. Would not allow lessee any per-centage upon his rent for profit and risk; 8124–8130. Upon termination of lease, or at any intermediate time, if either party desire it, the whole property should be assessed, and any falling off made good by a money payment. How to guard against insolvent companies undertaking a lease. Lowest tender not the only thing to be considered. Thinks political bias would not influence the contracts; not the case in Belgium and France; 8132–8143. Advantages that would arise if Government were to take possession of the railways. Is not for the advantage of the public to make as many railways as can be made; cases in which competing lines are an advantage, and the reverse; mentions two instances in which lines have been unnecessarily multiplied; discussion as to whether such lines should be sanctioned by Parliament; 8144–8177. Great difference in the railway communication if State had purchased the railways 20 years ago; 8178. Discusses question as to whether it would be expedient to have one line for passengers and another for goods; 8179–8189. Power of lessee to make engagements with third parties would cease with his own term; all engagements extending beyond must have the sanction of Government; 8192–8196. Reasons why securities against accidents, assaults, robberies, want of punctuality, and irregularities should be provided for in the terms of the lease and not by Act of Parliament; 8197–8209. Amount paid to vessels carrying mails depends upon the penalties imposed; 8210–8214. Adjusting the working of different railways so as to make trains of every line coincide at terminal points with those of neighbouring lines would be done better in a lease than by Act of Parliament. Believes that in many cases the want of correspondence is intentional; 8211–8220. Government might find it beneficial to have only one gauge; would have to pay for the alteration, but if traffic largely increased it would tell upon the rent. Could not be altered without Government interference. Broad gauge only exists in a very limited district. If profitable to Government to change gauge, not necessarily so to Great Western Company. Mixed gauge upon that line must be very inconvenient; 8221–8231. Question whether it is sound commercial policy for State to purchase railway property at more than its market value; 8232–8240. Would propose a moderate tariff for the conveyance of the mails, reserving the power as now of requiring trains at certain times and at a certain speed; 8241–8245. Post Office worked at considerable profit. Can have every facility by paying for it. Under a lease very much greater facilities could be obtained for a moderate additional payment. Post Office makes a profit in spite of railway system; would not greatly exceed its means if there were no railways. Pays more per ton per mile than was paid formerly to old coach proprietors; work is done now cheaper by stage coach and mail carts than by railways; 8246–8253. If scheme carried out there would be greater competition between railways and canals; might seriously injure the proprietors. Discussion as to whether this would not be a great hardship. Government would take over every collateral obligation which railways would be under with respect to the canals; 8254–8262. Is not aware that in Austria and Italy the Governments have sold all the railways; not bound to follow their example. The French Government have not sold theirs; 8263–8267.

HOLLAND:
Memoranda as to the assistance given by the Government of, to the railways in that country; *App.* DK.

HOLLINS, MR. MICHAEL DAINTRY. (*Analysis of his Evidence.*)
Is senior partner in the firms of Minton & Co., china and earthenware manufacturers, and Minton, Hollins, & Co., encaustic tile manufacturers, at Stoke-upon-Trent, and has been chairman of Staffordshire Potteries Chamber of Commerce (entirely consisting of china and earthenware manufacturers) since its formation in 1851; 11,270–11,272. Is present to speak on behalf of chamber, and as representing potteries district. Puts in preliminary statement as to evidence witness is prepared to give; 11,273, 11,274. Complains of the high rates in comparison to those in other districts for similar goods; 11,275. Hands in table showing rates per ton and mileage rates charged by North Staffordshire railway

HOLLINS, MR. MICHAEL DAINTRY—*cont.*
when they complete the contract, and those charged when goods go a certain distance on other lines, which shows that rates charged by that railway are considerably above maximum allowed by their Act; for instance, maximum Parliamentary rates from Stoke to Congleton would be 3*s.*, instead of 7*s.* 6*d.* as charged: supposes difference would be for terminals. Table also shows that the further goods go on foreign lines the less the mileage rate becomes. North Staffordshire Company say that great proportion of sum charged is for terminals; explanation not satisfactory, because it shows that by increasing terminals companies can charge what they please; 11,276–11,282. Gets a through-rate to all stations mentioned in table; rates given include collection and delivery within a mile from station; no difference made when company does not collect or deliver. States nature of goods sent and value per yard. Companies responsible for serious damage, but witness has never made any claim; 11,283–11,291. Puts in table prepared by North Staffordshire Company explanatory of table previously presented, which shows that they charge 4*s.* for terminals and other companies 4*s.*, making a total of 8*s.* from majority of places; in some cases North Staffordshire Company take 8*s.* for terminals; to London the terminal charge is 12*s.* 6*d.* Points out that according to this table, rate, after deducting terminals, from Stoke to Macclesfield (20 miles) is 4*d.*, whereas to Burton (29 miles) it is given as 4*s.* 4*d.*, to Norton Bridge (11 miles) 6*d.*, and to Crewe (14 miles) 3½*d.* Argues from this that public have no guarantee by rates put down in any Act of Parliament, what charges will be per ton per mile; 11,292–11,295. Obliged to make special application to companies before making a contract; such a course detrimental to trade of country. Terminals might be abolished and a fixed rate per ton per mile instituted; would not do away with competition in such cases as where there are two routes of unequal length to same place, as companies should have power to go below maximum. Would prefer compulsory through-booking and a fixed terminal; 11,296–11,302. 11,358–11,360. 11,366, 11,367. Reason why preferential rates should not be permitted; if fares were regulated by shortest route they would be less objectionable. Companies should not be allowed to charge a less sum between two places than they charge between one of those places and a place intermediate to the other, and if they carried goods on one portion of line for one trader, they should be compelled to carry like goods at same rate for other traders. Mentions that London and North-western book passengers from Crewe to Shrewsbury at less rate than from Crewe to Stafford; will not allow passengers to take tickets for Shrewsbury and give them up at Stafford; 11,303–11,308. Would compel companies running long distances, where there is sea competition at low rates (London to Edinburgh or Newcastle to London) to carry short distances on same line at same mileage rate. Possible that companies might then give up the low rate traffic, and still continue the high rates for short distances; in such a case, vessels then having no competition would probably raise their rates. Would rather companies should charge maximum rates, than charge differential rates arbitrarily. Quotes rates from certain places to London, in order to show that rates are not in accordance with distance. Discussion as to whether public are injured by differential rates; 11,309–11,318. 11,329–11,331. 11,335. 11,361–11,363. In some cases if maximum rates were charged, traffic would go by sea. In Staffordshire, for want of competition, the rates are high. Before London and North-western railway was finished, charge for earthenware from Staffordshire to London was three guineas per ton; is now 30*s.* Rates from Liverpool remain the same, although they have canal communication. North Staffordshire railway have bought the Trent and Mersey canal; they impose high tolls by railway up to junction at Crewe, in order to drive traffic on the canal. High rates are brought up by heavy terminals; no terminals on the canal. Quotes rates charged for clay by London and North-western from Birkenhead to Crewe, and those charged by North Staffordshire railway from Crewe to Stoke. Gives value per ton of clay and flint; 11,319-11,328. 11,334. Thinks it would benefit the public as well as the manufacturer, if every manufacturer had two companies to treat with, to ensure competition, and keep rates fair and reasonable. How the four attempts made to introduce competing lines into Staffordshire have been defeated. Bills have passed the Committee of the House of Commons three times. Does not at present intend to renew the attempt. If either line had passed, grievances complained of would have been remedied. Public get the benefit of the Newcastle low rate; Staffordshire potteries cannot compete with manufacturers there; 11,336–11,338. 11,341–11,346. 11,362. 11,353. 11,355. 11,356. 11,387. Reason why North Staffordshire terms offering to reduce rates if a certain competing line were withdrawn were accepted; 11,339, 11,340. Thinks that, inasmuch as certain large railways enjoy a sort of Parliamentary protection, they should be under Government control; 11,347-11,354. Would put all railways under a Government Board; mentions certain regulations the Board should make for safety and convenience of the public; would subject railways to this control without giving them compensation. Discussion as to whether companies should not have power to reduce maximum over one portion without being compelled to reduce over whole system, and also as to whether a reduced mileage rate might not be given to the large trader; 11,364–11,376. Reason why it would not be unfair to Newcastle potteries if rates were reduced; 11,377–11,379. Would have uniform mileage rates for passengers as well as for goods; witness contends that companies should charge same rates over whole system, although a certain rate that would pay in a densely populated district would not in a thinly peopled agricultural one; 11,380–11,386. Does not doubt but that Parliamentary Committees on railways are actuated by a variety of principles in the decisions they come to; their duties would be equally well performed by a Government Board, and at far less cost. Enormous sums spent by companies in "protecting their interests." Parliament might not be willing to delegate its authority to another tribunal; 11,388–11,390. 11,396, 11,397. Contests might be shortened and difficulties lessened if there were some previous inquiry to determine what opposition ought to be heard. Would not exclude opposition if they could show some real and clear grounds beyond that of loss of traffic. Large companies would object to any tribunal short of the highest tribunal of appeal; if Court constituted would not be inclined to allow any appeal from its decision; 11,391–11,395. Delivers in table of tolls charged by various canal companies between London and Staffordshire Potteries, which shows that while canal companies to the south have largely reduced their tolls, owing to competition of the London and North-western railway, the Trent and Mersey Canal Company have made no reduction; 11,398.

HOWARD, MESSRS. J. AND F.:
Statement of Messrs. J. and F. Howard, of Britannia Iron Works, Bedford, as to irregularities of rates and other railway grievances; *App.* X.

HUISH, CAPTAIN MARK. (*Analysis of his Evidence.*)
Was for 18 years general manager of London and North-western railway; 15,850. Course pursued by Parliament when railways first established. Competition now the rule; is encouraged by Legislature; salutary to the public; necessarily brings down prices, but in long run will not be prejudicial to companies. Competition has largely increased by extension and operation of running powers; companies have found it better to grant them than run the risk of competing lines being made; cannot be too largely encouraged. Believes that under proper regulations companies may safely run over each others lines, whether single or double; 15,851–15,853. 15,877. Does not consider punctuality in arrival and departure of trains an essential element of safety, or would deprecate running powers; is only a secondary consideration; will be necessarily more delay in the case of single lines. Explains how safety produced, and why public would be as safe with three or four companies as with one; 15,854–15,856. Mentions that Dublin and Meath and Dublin and Drogheda Railway Companies, the one owning the line, and the other running over a single line, both compete for same traffic; operation injurious to themselves, but no difficulty or danger to public; 15,857. More difficult to effect repairs on a single line, but does not lead to danger; expense much greater in proportion than a double line; 15,858, 15,859. Owners of a line granting running powers are remunerated by arbitration tolls; why this is a fair way; parliamentary tolls would be too high; would do very well for short lengths. Running powers would be futile if owners of line did not grant use of stations and watering places; 15,860–15,864. 15,866, 15,867. Companies which have exchanged running powers on each others lines; 15,865. Rules laid down by arbitrators to prevent interruption to traffic on owners' lines. Case where Parliament would have to grant a second line; thinks that before very long passenger lines and goods lines will be totally

HUISH, CAPTAIN MARK—*cont.*

distinct; 15,868, 15,869. Course pursued by Midland Company before Hitchin line opened; 15,870. Why making new line into London by Midland is to their interest as well as to interest of public; 15,871, 15,872. Between London and Redhill lines used by two companies, but although part of line quadrupled, traffic is getting crowded; 15,873–15,875. Running powers are more frequently exercised now by mutual agreements than by authority under Act of Parliament; 15,876. Nothing to prevent a combination between Great Western and North-western between South Staffordshire and London. Means of communication between London, Manchester, and Liverpool. Companies endeavour to maintain a standard of rates; is broken every day. Railways opened to these places have produced lower rates to public; why rates never go back to old standard; competition has not tended to reduce rates to intermediate towns on lines where no competition exists; its effect necessarily limited; reason why competition arising upon same line would not apply to every town on that line; 15,878–15,883. 15,889–15,896. Rates throughout kingdom are considerably under parliamentary tolls. A competing line is frequently bought off by original company; 15,884–15,888. Discussion as to whether it would be advisable for Parliament to establish any general restriction as to running powers; 15,897–15,903. Does not know of a single case where amalgamation has not benefited company and the public; mentions some of the benefits. Why it is questionable whether large companies should be amalgamated with each other; small lines should amalgamate with large companies. Parliament has been rather jealous of amalgamating parallel lines, or any of the great systems. London and North-western tried to amalgamate with Sheffield Company; Lancashire and Yorkshire were allowed to amalgamate with the East Lancashire. Public are opposed to amalgamations; are not good judges; cannot find any reason against amalgamation; 15,904–15,916. Canals and railways should be kept distinct; amalgamation has not saved canals for use of public. Andover Canal has fallen into disuse. Grand Canal still pays a small dividend, and their traffic has increased. Lancaster Canal is the only one with which the London and North-western have any connexion; 15,917–15,923. Uniform rates would be destructive to competition. Policy of railway companies to equalize rates to the ports and thus fight them against each other. Why Liverpool traders consider themselves unfairly treated; 15,924–15,928. Is surprised that there are not more accidents by railway. Power should be given to Board of Trade to make regulations for safety of public; should be a perpetual system of inspection; would not then release companies from their liability to make compensation for accidents, or reduce the amount; companies not keeping up lines is one source of danger. How inspection should be carried out; would not prevent accidents occurring; discussion thereupon. Where running powers are encouraged there should be a recognized code of railway regulations; 15,929–15,933. 15,954–15,963. Inconvenience and danger from companies adopting different signals; would be no difficulty in establishing a uniform system. Cannot call to mind any accident arising from this cause; 15,934–15,953. Terminal charges are not quite recognized by Parliament. Sum charged for loading or unloading must be regulated by the circumstances of the case. What terminal charge includes; must vary where it includes delivery of goods; are so many conflicting elements of charge that it is impossible to lay down a standard of rule. Is only a small wharfage charge for coal. Thinks Burton brewers do not pay terminals. Upon long lines total rate including terminals are under parliamentary maximum; upon short distances the terminals are overwhelming. Towns where there is no competition are obliged to pay maximum railway charge, and whatever company thinks reasonable in addition; if rates are very high traffic will not go. Is aware that great dissatisfaction is caused by allowing companies to make what they think proper to call a reasonable charge; could only meet this dissatisfaction by letting loose more competition; 15,964–15,977. 15,984–15,987. Thinks a maximum terminal of general application would be an injustice either to public or companies. If scale of terminal charges were established it must vary according to circumstances. Board of Trade should not be called in to settle amount of terminal. Remedy traders should try if dissatisfied with charge; 15,978–15,982. If companies were called upon to publish terminals, it would be very troublesome, and easily evaded. Not necessary that trader should know how charge made up; 15,983. 15,988, 15,989. Discussion as to whether there would be any difficulty in arriving at a

HUISH, CAPTAIN MARK—*cont.*

practical interpretation of the word "reasonable;" might ascertain cost to companies, and then add a per-centage for profit; 15,990–15,998. Would be almost afraid to recommend appeal to the Board of Trade to appoint an arbitrator to decide, whose decision should be final; thinks companies would rather go to a court of law; county court not expensive, but company could appeal from its decision; 15,599–16,002. A recognized scale of terminals is now in use at the clearing house; were not fixed with reference to public, but merely as a convenient mode of dividing traffic. Has given satisfaction to companies; has been no change made. For different descriptions of goods there are different terminals; 16,003–16,010. In what way witness's attention has been called to Irish railways; 16,011, 16,012. In Ireland rates very high, speed very low, trains very few, and remuneration to proprietors very small. Not many of the small railways worked by the large ones. Are a great number of independent companies. The total weekly receipts of the 56 railways, with a staff of 461 directors, and upwards of 50 managers, 50 secretaries, 50 locomotive superintendents, and 50 of every other description of officer, are only equivalent to two days and a half receipts on London and North-western. Capital expended by these railways about half of that railway. Would recommend that whole of Irish railways should be amalgamated into three or four groups, viz., northern, central, southern, and eastern; benefits that would result therefrom. Would be collision between the ports if fusion took place, but general benefit would counterbalance this objection. Irish directors and proprietors would oppose any such scheme, but popular opinion would sooner or later carry it; 16,013–16,019. 16,036–16,038. 16,068–16,073. 16,082–16,085. Nothing to prevent voluntary amalgamation in Ireland; cannot account for its not taking place; the advantages would be much greater than in England, and facilities for so doing greater. Public opinion in Ireland is not strong enough to overbear private interests. Proprietors of Irish railways would be in favour of very extended amalgamation in their country; 16,020–16,027. If Commission or Legislature recommended something of the kind suggested they might couple it with some boon. Would be perfectly safe for Government to lend them money upon their debentures at low rates, upon condition that rates to public were reduced; if reduction not remunerative. Government security would be reduced; 16,028, 16,029. 16,055–16,058. Irish rates for passengers and goods are very high. Charges are high and trains few on Great Southern and Western; what lines this railway would take in if witness's scheme carried out; is a well managed railway; they should run more trains; 16,030–16,035. 16,039–16,042. If witness were an Irish director, would not be disposed to recommend a reduction of rates if railway were paying 5 per cent. dividend, as on Great Southern and Western; but if there were large amalgamations and security against rivals would recommend experiment to be tried. Scheme suggested would enable existing corporations to complete their systems; would reduce expense 25 or 30 per cent., and by enabling companies to make a reduction to the public, draw out traffic. Failure of Irish railways is owing to their having been made through districts where there is no traffic to feed them; 16,043–16,049. Only way of obtaining a reduction of fares in England is by competition; same method would not do in Ireland; thinks that if railways were amalgamated, company would reduce rates; 16,050–16,053. Many of the Irish railways pay nothing whatever; one or two sold up; 16,054. Thinks that a recommendation either from this Commission or from Board of Trade to the shareholders in Irish railways, pointing out that it was their interest to amalgamate would be concurred in, even without any pecuniary inducement being offered; 16,059–16,063. Is averse to Government purchasing these railways; if they did, and then leased them to a joint stock company, they would take the risk and lessees the profit; 16,064–16,067. Believes that the formation of a company in this country to purchase whole of Irish railways, to supersede the present management, and conduct them upon principles found to succeed in this country, would be strongly objected to by the present proprietors. Would be sorry to see the railways taken out of Irishmen's hands, as there are some very good railway managers in Ireland. Thinks directors are not acting in interests of proprietors; 16,074–16,076. Would answer to run a greater number of trains in Ireland. Mentions expense incurred in going from Dublin to Belfast; are three railways; all pay 4½ per cent.; might pay more; 16,077–16,080. Difficulty imported into witness's scheme by recent legislation; 16,081.

HULL:

Injury to, by diversion of traffic to suit docks owned by railway companies elsewhere; *Atkinson* 881, 882, 946–961. Statement in reply to this, intended to show that public benefit resulted from this diversion; *Cawkwell* 11,526–11,530. No competition since 1854; *Atkinson* 883. Agreements between railway companies prejudicially affecting town; *ib.* 918–927. Dock dues at, rather high; *ib.* 962–964.

Answer to various complaints from Hull regarding North-eastern and Lancashire and Yorkshire Companies; *O'Brien* 11,961 *et seq.*; *Smithells* 12,983–12,985.

Justification of course pursued by North-eastern Company with respect to rates, as compared to other ports; *Harrison* 15,169 *et seq.*; *Sherriff* 16,298. Even in Hull great difference of opinion prevails on the subject; *Harrison* 15,185.

Declared real value of total exports from port of, in 1863; *App.* B.

See also NORTH-EASTERN RAILWAY. O'BRIEN. RATES AND CHARGES, &c., 5. SMITHELLS.

HUTCHINSON, MR. JOHN BATEMAN. (*Analysis of his Evidence.*)

Is a wholesale tea dealer and hop merchant; attends on behalf of the Nottinghamshire and Midland Merchants and Trades Association for the Protection of Trade, organized to take up questions of a nature which would come before a Chamber of Commerce, only more confined to tradesmen than to merchants; association has about 800 members; operations are confined to midland counties; 9716–9721. Complains that rates are not in accordance with distance; gives illustrations showing difference made in the case of grain, and advantages that were given to the millers of Newark; thinks it was to encourage them to send goods by railway instead of by water, as well as to coax traffic from a distance; 9722–9729. Rates are lower for imported grain, probably because companies may have an interest in docks at Hartlepool or Newcastle; 9730–9734. No change made in the rates since Hartlepool line handed over to North-eastern; does not know whether the docks belong to railway company; 9735–9740. Complains that goods in same classification are charged different rates to different towns; instances canary seed, flour, and sugar; there being water competition by Grand Junction Canal from Hull, may probably make some difference. States arrangement entered into between this canal and Midland and Great Northern Railway Company; 9741–9756. Great want of traffic accommodation; gives illustrations showing delay in the delivery of goods; in one instance they could have been carted quicker; 9757–9767. Mentions case of a dealer whose trucks remained empty three or four days in the yard before they were despatched to the pits, or remained three or four days at the yard upon the arrival from the pits before he can get at them to unload them. Company charge demurrage if their own trucks are detained an unreasonable time, but make no allowance for detaining those of dealers. In consequence of want of room Midland Company allow only nine of the large coal dealers to bring coal into the yard; a year ago there were about sixty; is good accommodation for the nine; has known no such instance in other trades; reduction in number accommodated has tended to increase price of coal. No accommodation given to small dealers; must make a contract with one of the nine large dealers; 9768–9777. 9786–9790. One coal dealer refused to pay demurrage because, although trucks had been forwarded from pits, they were not placed on his siding so that they could be unloaded; in consequence of refusal, notice was sent to all the coal owners with whom he did business directing them to send no more coals to wharf; had eventually to pay the company their demands; 9778–9785. Reason why no difference made with regard to water communication between large and small dealers. Trent Navigation charge a tonnage on the boat, whether full or empty; 9791–9796. Why the larger dealers are enabled to carry at rather lower rates; 9797–9802. Practice on the canal is more convenient, as they charge so much per ton by the boat, making no difference whether there is one ton or ten. The boats on Grand Junction Canal are the property of the canal company; 9803–9806. With exception of millers at Newark and coal owners at Nottingham, does not think that particular firms are favoured; 9807, 9808. Thinks companies should be compelled to confine themselves to their legitimate places of traffic; would suggest that there should be a uniform mileage rate, with certain exceptions, as for instance, where lines do not go direct or there is very little traffic; 9809–9817.

I.

IMPROVED AXLE BOX:

By means of Mr. Adams's newly invented axle box trains can pass round sharp curves at high speed with perfect safety; *Harrison* 15,395–15,397.

IMPROVEMENT OF PROPERTY NEAR RAILWAYS. *See* LAND, INCREASED VALUE OF.

INCOME TAX:

If Government purchased Irish railways and lost unexpectedly in consequence, an Irish income tax might fairly be laid on to indemnify them; *Fox* 6720.

INCREASE OF TRAFFIC:

Witness believes that in the course of three or four years railways will be so choked with traffic that the leading ones will require a distinct line for passengers only; *Hawkshaw* 14,651.

INSPECTION OF RAILWAYS:

Systematic Government inspection undesirable, as it would take responsibility off companies, and probably tend to make them less careful. By means of strict daily inspection the permanent way of railways in England is kept in the most perfect repair; companies could not afford to let it get out of order; *Cawkwell* 11,695–11,704.

On an official inspection of railways, and the management of the traffic thereon, as a means of preventing accidents and loss; by Mr. Edwin Hill; *App.* BK.

INSURANCE. *See* COMPENSATION FOR ACCIDENTS.

INSURANCE OF GOODS:

Complaint of excessive rates of; *Nicholson* 8781; and that certain goods, if insured, are charged in too high a class; *ib.* 8848–8856. Insurance being excessive, a separate rate should be given to freighters who desire to send goods at their own risk; *Perry, T.* 10,611, 10612. Silk takes a high terminal charge as a set-off against risk; *O'Brien* 12,218–12,221.

When usual time of delivery exceeded, or in case of culpable damage, company (Great Northern) consider themselves liable: *Clarke* 12,629–12,630.

INTERCHANGE OF TRAFFIC:

1. *Correspondence in Trains.*
2. *Through-Booking, Rates, and Fares.*
3. *Through-Booking, Ireland.*

1. *Correspondence in Trains:*

Better arrangements for, should be enforced; *Hill* 2815–2820.

Explanations as to want of correspondence between North-western and Midland trains at Market Harborough, Northampton, Leicester, &c.; new arrangements in progress; *Cawkwell* 11,727–11,733; *Allport* 14,421. Answer to similar complaints as to Bedford; *Cawkwell* 11,746–11,754.

Correspondence in trains at junctions is very difficult to accomplish; *Grierson* 11,796. As regards the larger companies, at any rate there is no foundation for the prevalent opinion that mutual jealousies prevent proper correspondence; *Allport* 12,422–12,426. 12,434. Companies endeavour to accommodate the greater number, and make the best provision for the larger traffic; *ib.* 14,427, 14,428. As regards the Midland Company, witness can state emphatically that the trains are timed solely with reference to the public convenience; *ib.* 12,433. Obstruction may be practised by some of the smaller companies, but not by the larger ones now; *ib.* 12,434.

Statement by the Rev. J. Field as to want of correspondence of trains on different lines in the midland counties; *App.* Q.

2. *Through Booking, Rates, and Fares:*

Through rates on Grand Trunk line of Canada are in some cases 30 or 40 per cent. lower than usual rate; *Brydges* 5416–5419.

Through rates should, where necessary, be compellable; principles upon which they should be established and conducted; *Lees* 9378 *et seq.*

Through-booking between all the principal places is only a question of time; *Grierson* 11,806.

Inconvenience to salt trade from want of through rates; *Corbett* 10,900, 10,901. In answer to this, com-

INTERCHANGE OF TRAFFIC—*cont.*

2. *Through Booking, Rates, and Fares*—cont.

pany say that they give through rates for salt whenever desired; *Grierson* 11,901.

Great delay in coal trade from same cause; companies should be compelled to grant, in all cases; *Brown* 11,183–11,189. 11,228; from refusal of through rate witness is compelled to pay two local rates; *ib.* 11,220–11,227. Answer to this complaint; *Allport* 13,723.

Interchange of traffic is now so general between companies, that no legislative interference is necessary to enforce through rates, but it is impossible to book throughout to every place on any one large system; *Allport* 12,537–12,542. The public are now fairly treated as to booking through, both for passengers and goods; *ib.* 12,543–12,546. Witness states that the Midland Company have been amongst the first to carry out through-booking; figures given in proof; discussion of this point; *ib.* 12,547–12,552. Reasons why through tickets for certain routes cannot be issued; through rates are already calculated by the million; *ib.* 12,829–12,837.

North-eastern Company have never found any difficulty in making through rates or arrangements; all that Mr. Cardwell's Act directs is done voluntarily and without interference; *O'Brien* 12,244–12,249. 12,252–12,255. No amendment of the law for through arrangements is necessary; *ib.* 12,264. Each company generally takes its mileage share of through rates; *ib.* 12,250, 12,251. There are nine different routes by railway between Newcastle and Liverpool, with through rates over several of them; *ib.* 12,257–12,263. Through arrangements cannot be so complete with branch lines, but companies use every effort to make trains fit; *ib.* 12,256–12,265. Agreements between companies should be for short periods, and should not be enforced by Parliament; *ib.* 12,280–12,287.

Classification of through rates is necessitated by want of uniformity in the rates given by Acts of the various companies; they do not differ much; *Clarke* 12,609–12,611. 12,616. No objection to Parliament revising classification, and making it more like what is in force; *ib.* 12,612–12,615. Practically the same classification is adopted by all the companies; *ib.* 12,617. No legislation is necessary to facilitate interchange of traffic of country, as it is already principally carried at through rates; *ib.* 12,808. Witness believes that the days of companies intentionally arranging trains not to fit those of others have gone by; *ib.* 12,810–12,812. Explanation of apparent want of facilities at Newark between Great Northern and Midland trains; *ib.*, 12,813. If railways were all under one management such inconveniences could not be avoided; *ib.* 12,814. Terminal charges on through traffic should be defined. No legislative enactment necessary for through arrangements, as they are now carried out wherever possible; *ib.* 12,924–12,926. Through carriages are put on trains for the convenience of the passengers, though it involves extra expense; *ib.* 12,939, 12,940.

Witness would strongly object to Board of Trade having power of deciding cases of complaint of trains not meeting at junctions, unless certain rules were laid down for their guidance, as it is a most difficult thing to manage; witness finds it impossible to manage it with their own trains. Thinks such a tribunal would be no advantage to the public; evil is correcting itself as rapidly as possible; *Grierson* 13,463–13,470. Principle of interchange of traffic is adopted by Great Western railway for all non-competitive traffic; how universal interchange of traffic would be unfair to companies, and useless to public. Has no objection to public getting such through booking and facilities as are required, providing it is on fair terms to the companies. Principle upon which division of traffic is made to those companies which have incurred the largest cost in stations, &c. Public want competition between railways, and at same time all the conveniences of companies working together in friendly relations; *ib.* 13,471–13,475.

Companies have adopted through-booking, both for passengers and goods, as far as reasonable and practicable; statistics in proof; it is in operation from all principal places; *Allport* 13,761–13,764. Through booking between Midland railway and Ireland; *ib.* 13,765. System is more perfect for goods than for passengers; *ib.* 13,765. Method of forwarding goods to places to which there are no through rates; liability is with first company; *ib.* 13,766–13,768. Through rates for passengers more frequently than not consist of the local rates added together; *ib.* 13,769–13,777. Through fares from London to Ireland or Scotland are less than united local fares; *ib.* 13,774. The French system of altering rates but once

INTERCHANGE OF TRAFFIC—*cont.*

2. *Through Booking, Rates, and Fares*—cont.

in three months seriously interferes with English companies making through arrangements with them; *ib.* 13,822–13,833.

Present arrangements for interchange of traffic satisfactory, so far as witness is aware; *Hawkshaw* 14,592–14,594.

Free intercommunication with all points very desirable; this can only be done by friendly arrangements between companies; *Stewart* 14,746. Imperfect through arrangements arise chiefly from companies' distrust of each other; there is not much unwillingness now, but they would not like being compelled to make them. Instance quoted in proof; but companies are much more friendly than formerly; *ib.* 14,809–14,814. Difficulty in extending liability beyond company first receiving the goods; *ib.* 14,815. Figures given showing the extra expense of trains at present caused by through arrangements, which would be much increased if further pressure were put on; discussion of this point; *ib.* 14,821–14,828. Fear of being looked upon with suspicion by Parliament prevents companies making friendly arrangements; no dependence on decisions of Committees; *ib.* 14,845, 14,846.

Companies generally are far more disposed now for interchange of traffic than formerly. Doubtful whether any improvement could be effected by legislation, nor would compulsory arbitration answer. Principles upon which running powers between companies should be based; they find it is for their advantage to offer the public all reasonable facilities; *Harrison* 15,275–15,278. 15,282. Instance of inconvenience to public at St. Leonard's from South-eastern Company not allowing use of station to Brighton Company; *ib.* 15,279. Although mutual running powers are on the increase, they are not very generally exercised. Witness advocates their extension wherever it can be done safely, believing them to be beneficial to the companies as well as to the public; *ib.* 15,283–15,286. The difficulty during the last year or two in the transmission of goods between companies has arisen from the rapid increase of traffic; *ib.* 15,287.

South-eastern company have through arrangements with all the lines, but have been compelled to abandon them at some small stations in consequence of the traffic being so very small; *Eborall* 16,104. 16,119.

Some particulars of through arrangements between French and English railways; *Eborall* 16,203–16,217.

Through rates are extending; not much difficulty in arranging them. For short distances it is sometimes fair to give a proportionately higher mileage; *Sherriff* 16,383–16,385. Large companies are now mostly willing to enter into arrangements with one another. Cases given showing beneficial operation of certain compulsory powers of arrangement between two large companies; *ib.* 16,386–16,390. In these cases companies have what really amounts to mutual running powers over portions of each others lines; *ib.* 16,387, 16,388. Reasons why such arrangements are not being adopted on other railways; *ib.* 16,389. Parliament could not advantageously interfere with these arrangements; *ib.* 16,391. Through arrangements practicable, but not so easy, between local railways as between large systems; *ib.* 16,391–16,393. Through rates will not enable companies to reduce rates and fares; *ib.* 16,394. Many competitive lines being merely got up to serve a purpose, have no compensating advantages to offer for through arrangements; *ib.* 16,396. Interchange of traffic might be greatly facilitated if there were some tribunal (clearing house, for instance,) to take up practical difficulties; further powers should be conferred on clearing house by Act of Parliament; *ib.* 16,402–16,408.

Through arrangements are more readily and frequently made now than formerly, and are likely to go on; *Bidder* 16,824–16,826. Arrangements desirable in fixing through rates; *ib.* 16,964, 16,965.

Of late years there has been a much greater disposition on the part of companies to work harmoniously together for interchange of traffic than formerly; this might be carried much further than at present, and the more it is done the better both for companies and the public. Statement as to arrangements of this kind between Great Western and other companies; *Gooch* 17,497–17,507. The greatest difficulties in the way of these arrangements are the absurd contractors' lines which have been forced upon companies; *ib.* 17,509. Facilities for interchange of traffic on Great Western line would be much advanced by narrow gauge; *ib.* 17,510. Company carry out through-booking to a great extent, and generally find

INTERCHANGE OF TRAFFIC—*cont.*

2. *Through Booking, Rates, and Fares*—cont.

other companies ready to meet them fairly; *ib.* 17,533–17,537.

If Parliament would give companies further powers to make arrangements, interchange of traffic might yet be extended. A better understanding exists now between companies and readier facilities are given than formerly. Witness hardly knows a case where neighbouring companies have not through-booking; *Wainwright* 17,626–17,630.

Statement of Mr. John Bullar as to through-booking; *App.* AD. Comparative charges for through goods traffic between England and Ireland; *App.* AN. Letter from Mr. Oldham of Dublin in respect to the through rates for passengers between England and Ireland; *App.* BD. Remarks by the London and South-western Railway Company upon statements of Mr. John Bullar, as to want of railway accommodation at Putney, and as to through-booking; *App.* DE.

3. *Through Booking, Ireland:*

Through traffic arrangements necessary; *Mulvaney* 1187. 1847. Through rates with English railways would develop traffic, and would be equivalent to a reduction of local rates; *Forbes* 1809–1811. No difficulty in Ireland in booking goods through; *Tinsly* 2591. Inconvenience resulting from want of concert between companies; *Longfield* 2837–2844. Through rates on Great Southern and Western; *ib.* 2899–2903. Difficulty in getting from place to place from opposing interests not allowing trains to run in connexion with one another; *Brady* 3357, 3358. There is a through-booking system over Limerick and Waterford Railway with reference to England; *Malcolmson* 3438. The bulk of the Limerick goods traffic goes under what is called the through-rate system, either by Waterford or Dublin; *ib.* 3457. Through-booking rates with London and North-western and South Wales Railways; through tickets are issued to Milford, or to London *viâ* Milford; *ib.* 3464–3469. Through rates from Limerick and Tipperary do not give a preference to Waterford; *ib.* 3510–3513. Irish goods should be booked through in every direction to England; *Hemans* 3971. Witness knows of no difficulty in the way of through rates between Waterford and Wales; *ib.* 3974. Would establish a system of through-booking from every port in Ireland to every port in England. There is booking through Dublin, and may be some in the north; there is some also by Waterford, but the service is not good; *ib.* 3997–3999. Harvest through tickets by Midland Great Western to Dublin; *Ennis* 4016, 4092. Cannot have so long a through rate in a country which is narrow between any two points; *Bidder* 4339.

Through-booking arrangements between Great Southern and Western and English companies; *Haughton* 4550–4567; *Murland* 4571; and with small neighbouring companies; *Haughton* 4601–4603. Particulars of through-passenger arrangements between Belfast and Dublin; *Murland* 4773. Readiness of Dublin and Drogheda line to arrange through rates to distant places; *ib.* 4863–4873. 4937–4939. If Newry and Armagh Company could obtain certain through rates there would be a great traffic in grain and minerals; *Fearnley* 4984. Attempt to enforce through arrangements, and inconvenience from want of them; *ib.* 4994–5009.

Efforts of London and North-western company to establish through-booking with Irish lines; these but very partially successful the Irish lines insisting on their local rates, and some of them having an interest in the shipping companies, causing a diversion of the traffic, &c.; *Cawkwell* 5054–5068. 5073–5087. 5112–5117. Irish traffic consequently "not half developed;" *ib.* 5069–5072. Irish lines specified with which they have through arrangements, and description of traffic; minerals not included; *ib.* 5073–5109. 5136–5141. Present bad through arrangements to benefit steamboat companies; English steamboat companies would act differently; nothing actually illegal in these arrangements; would not recommend legislative interference; *ib.* 5153–5162. Discussion as to whether goods can be shipped cheaper from Dundalk through to Manchester, or consigned to an agent at Liverpool to send on to Manchester; *ib.* 5222–5236. No through arrangements between London and North-western and Irish companies for coal; *ib.* 5237. Question of sea risk to be borne by railway companies where they have through rates with steamers; *ib.* 5250–5260.

Midland Railway Company have temporary limited through arrangements with Ulster Company; agreements among Irish companies prevent any considerable extent of through arrangements with England; *Allport* 5262–5269.

INTERCHANGE OF TRAFFIC—*cont.*

3. *Through Booking, Ireland*—cont.

5274, 5275. Better arrangements should be made, in which all the English companies should be allowed to participate; this would doubtless develop Irish traffic considerably; *ib.* 5270–5273. If Government assist Irish railways, it should be on condition of their traffic being thrown open to English railways; *ib.* 5276–5280. Through booking desirable; *Roe* 5829, 5830. Great Western Company have through arrangements with Waterford and Limerick and with Waterford and Kilkenny companies; Waterford and Limerick a very important traffic, and arrangements satisfactory; *Grierson* 5907–5914. 5918. 5955–5964; but Great Southern and Western ought also to book through to Waterford, which they decline to do; *ib.* 5915–5917. Guarantee to Waterford and Limerick Company; *ib.* 5935–5938. Shorter sea passage by Holyhead route than by Milford; *ib.* 5941. Route between south of Ireland and Wolverhampton and Birmingham; *ib.* 5958–5960. Through routes should be unrestricted; parties sending goods should be allowed to prescribe route, if more than one available; *ib.* 5965–5977. Particulars of an agreement between several companies which practically operates as an impediment to free interchange of traffic, and is injurious to port of Waterford; *ib.* 5978–5992. Expectations as to opening Birkenhead for Irish traffic; *ib.* 5993–5995. Want of through arrangements, Cork and Bandon line; *Shaw, W.* 6454–6460. Bad through arrangements in parts of Ireland; cheaper from north of Ireland to London, and thence to Dublin, thence direct to latter place; other instances; *Macfarlane* 6527–6535. Great inconvenience from want of through arrangements between Galway and Belfast; *Meldon* 6736, 6737. Instance of inconvenient disagreement between companies; *ib.* 6754. Injurious effects on commerce of Ireland of through-rate system organized by London and North-western Company; *Boileau* 6804. Absence of proper correspondence of trains an enormous hindrance to traffic; *Perry, H. R.* 6829. Great inequalities in present Irish through-rate system; it especially acts injuriously upon Dublin; *Parker* 6878–6889. 6894–6899; *Pim* 7093–7098. Further information on and discussion of this question, and some of the causes pointed out; *Bewlay* 6902–6923. Urgent need of through arrangements for goods and passengers; *Bagot* 6994, 6995; *Pim* 7071. 7079–7086.

Through passenger fares to Ireland have been reduced to encourage traffic; *Allport* 13,774.

See also CAWKWELL.

IRISH COUNTY ROADS:

Are made by local taxation; *Hancock* 7626.

IRISH FISHERIES AND FISH TRAFFIC:

A considerable fish traffic might be secured by Irish Great Northern and Western Company if they could put on a night train; *Earl of Lucan* 3053–3057. Fishing population decreasing; railways have caused other conveyances to cease, and have not sufficiently supplied their place; *Brady* 3187–3190. Before extension of railways chief market for fish taken on west coast was in the interior, but now it is sent to Dublin, and from thence to all the principal towns in England. In seaport towns there is a falling off in the demand for fish. Supply in Dublin unequal to demand; *ib.* 3191–3194. 3275. High rates tend to depress the trade. Better facilities for getting fish away since introduction of railways. Cause of decrease in the trade; *ib.* 3195–3200. Jolters or hawkers buy the fish at the boats and send it to Dublin. Price of fish risen in consequence of great demand for English market; route by which sent, and price at market, also price paid by hawkers to fishermen. If greater facilities were afforded fishermen could send their fish direct to factor in Dublin; *ib.* 3201–3223. 3231, 3232. 3245, 3246. 3248–3257. Rates for fish by certain railways. Midland Railway charge unequal rates in proportion to mileage. Complaints made of inequality, but there has been no alteration. Discussion as to how far a reduction of rates would affect price of fish. Reasons why fishermen do not send their own fish to market, and thus do away with the middlemen's profit; *ib.* 3224–3230. 3233–3244. 3247. 3263. 3266–3269. Great many middlemen make large profits. There are no markets where fish is caught, it is sold on the strand in bulk. In some cases there is competition; *ib.* 3258–3262 Custom of this class of people to sell goods to agents; *ib.* 3264, 3265. If the fish is spoilt on the journey, profit of middlemen considerably reduced; *ib.* 3269–3271. 3310–3314. Railways have not benefited the fisheries to the extent contemplated; *ib.* 3263. 3274. Except at Galway,

IRISH FISHERIES AND FISH TRAFFIC—*cont.*

fisheries on west coast have not suffered from a trades-union system. A fishing company established there was well supported by the fishermen, but it failed from mismanagement, and not from obstructions by the people or the railway company; *ib.* 3276–3282. 3284. Want of private enterprise is the root of much of the evil existing in Ireland; *ib.* 3283. Railway company at Galway afford every facility; quantity of fish carried by that line in 1852, and where collected; *ib.* 3285–3291. Reduction of rates would increase quantity sent from Sligo and Ballina, as it has to be carted 16 or 18 miles. Salmon sent from Ballina round north coast by smacks at much less expense than by railway; *ib.* 3292–3296. 3298–3301. Interviews between Irish Fishery Commissioners and directors of Irish railways; *ib.* 3297. 3330–3332. No uncertainty in the fishing trade. Galway train starts at 12 o'clock at night, and the boats are all in before that time. A similar train from Sligo or Castlebar would be of great advantage. In some places coarse fish are packed in ice. In such case a few hours' delay is not of much consequence; *ib.* 3301–3305. Large take of fish at Kinsale last year. There is a good supply in Dublin Bay, but these are not affected by railway carriage. City of Dublin badly supplied with fish, as it is sent off to English market. Witness reads extracts from Reports of Commissioners, stating that moderate rates, especially for small parcels of fish, and quick transit, would benefit the trade in certain districts, and that in 1855 the rates were increased from Cork and Dublin. Discussion upon this increase; *ib.* 3305–3310. 3315–3329. Encouragement to fishermen on western coast, if a reduction were made in freight, and facilities of transit increased. The Great Southern and Western line make up a train when they have large packages of fish. Witness would have trucks attached to ordinary trains to carry the fish. There are no special trains for fish. It is a long time reaching the market, being generally sent by goods train at inconvenient hours. Fish caught at Castlebar on Monday does not get into Dublin market till Wednesday morning, there being no mail train; *ib.* 3333–3343. General complaints made of want of accommodation on the Great Southern and Western line; 3344–3346. Insufficiency can hardly be attributed to the fact, that being a poor country with limited traffic, companies cannot afford to run cheap trains. How requirements of Castlereagh district could be met. Reason why there is no night train from Castlebar to Castlereagh; *ib.* 3350–3356. Valuable fish travel by night trains; inferior is taken at very low rates. Why Galway fisheries are totally neglected. Unproductive state not owing to want of facilities by railway companies. English fishermen would not be allowed to fish on west coast of Ireland; *Ennis* 4204–4209. Considerable fish traffic on Great Southern and Western line; *Haughton* 4729–4733. Better arrangements and lower rates needed for fish traffic; *Bagot* 7026–7031.

IRISH NORTH-WESTERN RAILWAY:

Company originally consisted of the Dundalk and Enniskillen only, but they now hold on lease the Derry and Enniskillen, for which they pay 26,000*l.* a year; this is the first charge on their revenue, and is paid weekly; *Shaw, T.* 8276–8281. Traffic has improved lately, but company are labouring under heavy debts; neither ordinary nor preference shareholders receive anything at present; *ib.* 8268–8271. Increase of traffic has been in both passengers and goods, and may be expected to continue; causes; comparative statement given in; *ib.* 8349–8352. Length and cost of line, particulars of capital, stock, debts, &c.; *ib.* 8272–8275. 8282–8293. 8332–8335. 8412. Income, rate of interest on debt, fixed annual charges, &c.; *ib.* 8401–8407. Company and three others have joined in subscribing to a branch line (Cavan and Clones); they all work harmoniously together, though recent alterations in trains of those companies obstruct through-booking arrangements; *ib.* 8294–8300. Company have through-booking arrangements with London and North-western; *ib.* 8329–8331. Passengers are chiefly 3rd-class, the traffic agricultural produce; it would not answer to reduce fares; cattle rates are moderate; *ib.* 8301–8307. There is not sufficient traffic to warrant low fares or experiments; *ib.* 8360. Witness's opinion as to why line does not pay; particulars of trains, traffic, and plant; the line is a single one; *ib.* 8308–8316. Market tickets are issued; *ib.* 8305. 8317–8321. Coal traffic; *ib.* 8326–8328. Income, working expenses, &c. for last half-year; *ib.* 8336–8344. Severe competition with Ulster company; *ib.* 8345–8348. 8386–8393. Agreement with Northern Counties to avoid competition; *ib.* 8397–8400. Directors are hopeful, and as attentive as if line were prosperous; *ib.* 8353–8356. Witness believes that an amalgamation of all the lines north of Dublin would be advantageous to the companies and to the public; *ib.* 8357–8383. Believes rates would be lower in consequence; *ib.* 8384, 8385. No very large mills on the line; *ib.* 8395. There are 12 directors, who are elected by the shareholders; *ib.* 8408–8411. List of shareholders given in; *ib.* 8409.

Letter from, offering to reduce fares if Government advance, at a low rate of interest, a sum sufficient to discharge bonds and debentures of company; *App.* AP. Reply received from company to extracts from evidence sent to them for explanation or remark; *App.* AX. Returns showing company's charges for various kinds of goods; *App.* BH. Memorials from Irvinestown, and remarks thereon by the company; *App.* BR.

IRISH RAILWAY DIRECTORS' CONFERENCE:

Statement prepared by on Irish railways. Their present position, and how (without any loss to the Treasury), at reduced interest, they could be materially improved financially and the public better served; *App.* ET.

IRISH RAILWAYS:

There are 26 railways in Ireland, 14 of which pay an average dividend on the original shares of 3¼ per cent., while 12 pay none; spread over the whole, the dividend would average 1¾ per cent.; *Fox* 6562–6564. Net income in 1863, 770,000*l.* on a capital of 24,000,000*l.*, being 3 per cent., reckoning ordinary and preference stock and debentures, but not interest on Government loan; *ib.* 6565–6570. Witness thinks there is a strong desire on the part of the shareholders and the public that they should be purchased by Government; *ib.* 6572, 6573. General dissatisfaction at present management; *ib.* 6590, 6591. Great disinclination to invest in Irish railways; many lines are constructed by contractors, who are paid in shares, the company having no capital; this enormously increases the cost; *ib.* 6627–6637.

Passenger fares on, higher than on German railways; *Mulvaney* 1116–1130. Placing all under one management would probably create a monopoly, but a great need exists of through traffic arrangements, and of their being connected together and brought to the water's edge at ports; reduction of rates to about one half also needed. A very large development of traffic might be expected were something of this kind accomplished. The reduction would result in a loss for three or four years, but after that, a great gain would doubtless accrue. The question of a guarantee by Government or other parties discussed; *ib.* 1175–1182. 1187, 1188. 1226–1235. 1240–1250. Nothing to fear from competition by sea; *ib.* 1183. The free introduction of coal, coupled with low rates, by developing its mines, manufactures, agriculture, &c., witness believes, would be the greatest benefit that could be conferred upon Ireland; *ib.* 1189–1195. Some particulars of the undeveloped wealth of Ireland; *ib.* 1198–1204. Traffic decreasing; fares much too high; contrast in this respect between German and Irish railways; *ib.* 1222–1225. Urgent need of low fares for third and fourth-class passengers; *ib.* 1276. Witness desires to show the impossibility of developing any system without a connexion with the various systems of railways that exist in Dublin; without that no system like that of the German unions can be effected. Sidings and branches to places that would afford trade should be made by companies without incurring the enormous expense of separate Acts of Parliament. In the German union, the waggon work is provided by the various companies, who furnish their quota for the purpose of through traffic, and arrange a tariff for the transport of goods, and fix rate for waggons passing over the lines of another party. The system of adopting a per-centage deduction from the rates for full trains running through from fixed station to fixed station might be adopted to great advantage in Ireland. The organization of goods trains at fixed times has been found beneficial in Germany. The Irish fares are too high, and the dividends are consequently diminishing. New markets might be developed by low variable tariffs. Fixed rates, however low, may nevertheless bear a certain new traffic. German passenger rates should be adopted as a maximum in Ireland. Introduction of English coal into interior of Ireland would lead to development of the coal districts which exist there. States how present changes might be effected; *ib.* 1847, 1848. Plan which exists in Germany for decreasing expense of making sidings and branches; *ib.* 1849–1860.

IRISH RAILWAYS—*cont.*

Present rates and fares prohibitory; in some cases higher than in England; *Forbes* 1459. Witness would reduce fares 50 per cent.; *ib.* 1553. Entire traffic of country might be increased by a reduction of rates; *ib.* 1561. Opinion as to effect of lowering rates on agricultural produce, cattle, minerals, and all descriptions of traffic; some particulars of present traffic and mode of conducting it; *ib.* 1562–1666. Necessity for reducing passenger fares to increase traffic; excursion trains; speed; season tickets; *ib.* 1667–1694. Want of sufficient accommodation; *ib.* 1695–1698. 1704–1706. Railways would work better under one management; *ib.* 1710. If compelled by law to reduce fares, they should be guaranteed against loss; *ib.* 1727. Bearing of railways upon manufacturing industry; *ib.* 1749–1759. 1771–1784. Fish traffic might be increased by lower rates; *ib.* 1785–1793. Through rates with English railways would develop traffic, and would be equivalent to a reduction of local rates; *ib.* 1809–1811. Mismanagement of Irish railways; *ib.* 1812–1814. Terminal charges in Ireland lower than in England; *ib.* 1820. Is in favour of amalgamation of Irish railways; why directors are opposed to this; 1829. 1833. Working expenses in England 50 per cent., in Ireland 49 per cent.; might be reduced by better management; *ib.* 1838–1844. Want of competition injurious to the public and to the railway interests; *ib.* 1845. Discussion as to whether plan of raising money on terminable annuities would increase charges; *ib.* 1867–1875. A reduction of rates and fares would greatly stimulate mineral trade and agriculture; present charges in some cases 50 to 72 per cent. of value of produce; *Sullivan* 1929–1939. 1944–1950. Production of mines might be trebled; *ib.* 1951. Account of the mines and mineral productions of Ireland; their state and prospects in connexion generally with the railways of the country; the great increase which would take place if railway matters were in a satisfactory condition; *ib.* 1930–2087. Trade in cattle, turf, flax, agricultural produce, &c. would all be immensely benefited by better railway arrangements, including reduction in rates and fares; *ib.* 2088–2133.

Railways of more importance to Ireland than to any other part of the kingdom; *Mallet* 2140. A narrower gauge desirable in poor districts and for quarry purposes; *ib.* 2216–2236. Cattle trade. Rates and fares should be reduced; *ib.* 2238–2243. Dairy farms; *ib.* 2244–2249. Legislature should compel reduction of rates, and a guarantee against temporary loss should be given; *ib.* 2250–2281. 2283–2290. 2295, 2296. First and second-class fares should be reduced at least one-third; *ib.* 2282. If railways were amalgamated into one system, or into two or three groups, capitalists might perhaps be found who would lease them for a term, trusting to make them pay by better management and increased traffic from reduction of fares; *ib.* 2297. 2301–2304. Witness believes that if Government took them, they could get a company to work and manage them; *ib.* 2298. A reduction of fares to one half, and uniformity in rates and fares, most desirable; *ib.* 2305–2307.

Fares too high; traffic and intercourse would be increased by a reduction; *Tinsly* 2312–2315. 2365–2382. Number of trains between Dublin and Limerick insufficient; fares; trains more convenient between Limerick and Cork, consequently more intercourse; *ib.* 2316–2349. Accommodation more easily arranged if in the hands of one company; *ib.* 2350. Sufficient accommodation between Limerick and Waterford; *ib.* 2351. Population and trade of Limerick; *ib.* 2355–2364. No market trains or third-class return tickets; *ib.* 2383–2385. Traffic between Limerick and other places; increase of charges on some goods 80 to 100 per cent. and loss of trade in consequence; *ib.* 2386–2415. Various particulars of traffic in cattle, coals and other goods, and how restricted by high rates; absence of competition by water in consequence of agreements between railways and canals; very little flax brought to Limerick by railway; *ib.* 2416–2582. No difficulty in booking goods through; hardly any trade with the north; witness is favourable to competition; *ib.* 2591–2593. The Foynes and Limerick is a very bad line; *ib.* 2618.

Bad arrangements of railways from Limerick and high fares prevent numbers from travelling, especially third class; trains sometimes nearly empty; many carriers on the road; cattle rates too high; Limerick and Foynes Company have increased rates; remonstrances in vain; *Ryan* 2653–2710. Hucksters go through the country doing work that would be done by railway except for high rates; *ib.* 2711–2733.

A reduction of rates would increase traffic, but might diminish profits; *Longfield* 2796–2799. A cheap parcels

IRISH RAILWAYS—*cont.*

rate tried on Great Southern and Western, but failed; *ib.* 2800–2809. Cattle traffic on same line; *ib.* 2810–2815. Directors always entertain any reasonable proposals; would be ready to make a branch to certain mines named if there were fair hopes of a return; *ib.* 2821–2831. Third-class trains between Limerick and Dublin, and inconvenience resulting from want of concert between companies; *ib.* 2837–2844. Traffic in corn, coal, and third-class passengers would be greatly developed by a reduction of rates; *ib.* 2854–2860. A reduction of third-class fares to ½*d.* a mile would cause numbers to ride who now walk; *ib.* 2861–2864. Great Southern and Western Company have never issued return third-class market tickets; *ib.* 2865–2869. Witness believes there would be no loss ultimately from reduction of charges; Government should give a guarantee, and have a voice in the direction; *ib.* 2870–2873. Market trains; *ib.* 2874–2883. Suggested scheme of Government management, and system over which it might be tried; *ib.* 2884–2898. 2932. Some particulars as to through rates and excursion trains on Great Southern and Western; *ib.* 2899–2913. Traffic would not be materially increased by line being in communication with the water at Dublin; *ib.* 2916–2934.

The north and west have not benefited by railways so much as they ought; fares should be reduced 50 per cent., the dividends would then be better after four or five years; fares on Great Northern and Western as high as in England; *Earl of Lucan* 2940–2943. 2977–2979. Accommodation insufficient between Castlereagh and Castlebar; *ib.* 2952. Could not afford to reduce fares and rates at present, though they are much too high; *ib.* 2955–2960. Decrease of traffic; capital; loans; difficulty of negotiating preference shares in London market; financial position of company; *ib.* 2961–2976. Counties should provide the land for all new railways as they now do for roads; *ib.* 3023. Quantity of goods carried would be doubled if rates reduced to 3*d.* per truck; Great Northern and Western Company cannot reduce their rates, as the Midland Company will not do so; *ib.* 3039–3042.

A gradual reduction of rates having produced an increase of profits in Belgium, witness would try the same experiment in Ireland; *Fassiaux* 3105.

The railways have rather injured than benefited the fisheries, as other conveyances have ceased, and railways have not sufficiently supplied their place; *Brady* 3188–3190. Railways have not benefited fisheries to the extent contemplated; *ib.* 3263. 3274. Insufficient railway accommodation in west of Ireland; *ib.* 3344–3356. Difficulty in getting from place to place from opposing interests not allowing trains to run in connexion with one another; *ib.* 3357, 3358. Third-class accommodation very bad; in consequence of delay, it may cost more to travel to the Dublin markets by third-class than by first-class; *ib.* 3359–3362. Present state of railways not satisfactory to shareholders, but witness considers that public are fully convenienced; *Malcolmson* 3367, 3368. 3399. Witness is connected with some lines which pay no dividend; Waterford and Limerick last paid 1 per cent.; rates on that line; *ib.* 3396–3398. Public difficult to satisfy; witness thinks third-class day return tickets not required by passengers; have been abandoned as not remunerative; market tickets are issued, and succeed well; *ib.* 3401–3418. 3485–3490. Farmers do not use trains going less than from eight to ten miles from town; *ib.* 3419, 3420. 3556–3559. New railways in progress; reasons for constructing new lines while old ones seem unremunerative, that the facilities they afford increase value of produce, &c.; *ib.* 3441–3444. If Government purchased railways, landholders, &c. would be willing to share loss consequent upon reduction of rates; *ib.* 3449–3452. Water competition between Tipperary and Waterford and Dublin; *ib.* 3459, 3460. Extensions applied for this session; more than in any previous session; *ib.* 3491–3493. New lines generally promoted by landed gentry, who to a certain extent find the capital; course pursued to raise money; *ib.* 3495–3506. Railways carry all the minerals produced about Limerick; *ib.* 3565. Could carry more passengers without additional expense; thinks working expenses of goods traffic do not increase beyond a certain proportion; *ib.* 3625, 3626.

English gauge would be better and more economical for Irish lines, but impossible now to alter it; *Hemans* 3764–3769. Cost per mile of running a train not quite so much as in England; *ib.* 3773. But few night trains; this saves expense. Cost of keeping up permanent way less than in England; some goods trains are now run at night; *ib.* 3780–3788. To make a fair comparison with English railways, branch lines through

IRISH RAILWAYS—*cont.*

thinly-peopled rural districts should be taken; *ib.* 3789. Gross traffic receipts on Irish lines appear stationary; *ib.* 3792, 3793. 3827. A few years since hopes were entertained, which have not been realized, that there would be more prosperity in Irish lines; many railways were started, the contractors being paid principally in shares, thus throwing an immense amount of debt upon the lines; found extremely difficult to get contractors to take up the work upon these terms; discussion as to amount of money wasted; *ib.* 3794–3811. Goods traffic has diminished, cause; *ib.* 3812–3816. Dividends have decreased, reduction in some cases attributable to expense of renewing permanent way; *ib.* 3826. 3828, 3829. If rates reduced 50 per cent., witness thinks that probably at the end of 10 years loss would be made up; *ib.* 3907. Increase of passengers would not add to working expenses, but until traffic doubled there would be a diminution in gross receipts; *ib.* 3913–3916. Low charges will tend to gradual establishment of manufactures, but merely as an agricultural country it would pay to reduce rates; *ib.* 3917, 3918. Want of money prevents people using railways; *ib.* 3919, 3920. Gradients are equal if not superior to many of the leading lines in England; instances quoted; *ib.* 3938–3948.

In 1860 passenger fares on Midland Great Western were increased 10 per cent.; receipts considerably increased; last half-year revenue fell off; this may be ascribed to impoverished state of the country; *Ennis* 4082–4084. 4097. Length in miles of Midland railway proper; small lines rented by that railway, &c. Equal mileage rates over the whole line; *ib.* 4102–4105. Leading articles of traffic on the Midland Great Western are groceries, wines, and spirits; a good deal of corn, also, at times, but no turf; *ib.* 4160–4163. Railways should all be purchased by Government and placed under one management; *Bidder* 4217–4219. Under improved management there would be a large passenger traffic; *ib.* 4233. Increase on English railways and also on continental lines mainly due to their long leads; would be modified when lead only 60 miles, though partly met by terminal charge being the same for 50 as for 60 miles; *ib.* 4335, 4336. Cannot have so long a through rate between any two points of a country which is narrow. When lead short reduction in charge for conveyance of certain articles depends upon reduction of rate; in coal, if rates were reduced from 1*d.* to ¾*d.* in a lead of 50 miles, the saving would be 2*s.* 6*d.* per ton; *ib.* 4339–4341. Working expenses of Irish railways as compared with Great Eastern are nearly the same percentage; the former gets an advantage in wages, and from not having to pay Government duty. Chief difference in miscellaneous charges. Charge for permanent way in Ireland not yet up to its full amount; *ib.* 4344, 4345. 4374–4377.

Traffic to be remunerative must be continuous; *Haughton* 4615. Witness believes traffic in south of Ireland as far as Great Southern and Western system is concerned to be already developed; *ib.* 4617. Some of the minor lines bankrupt; causes; but little increase to be expected in passenger traffic; *ib.* 4621–4624. Ineffectual attempts to complete a line to New Ross; *ib.* 4625, 4626. Necessity for quays at Queenstown, to connect railway with water; *ib.* 4656, 4657. Small inducements to travel in Ireland; *ib.* 4682. New lines forming in south of Ireland, others projected; declines to express an opinion on motive for promoting new lines while old ones unremunerative; *ib.* 4683–4685; *Murland* 4846–4850. Great passenger traffic to Killarney during summer, though less than might be expected; *Haughton* 4686. Witness takes a desponding view of prospects of Irish railways; reasons; *ib.* 4695, 4696. Desirable to connect London with the south of Ireland, but not by means of Government interference; *ib.* 4702, 4703. Many of the lines are badly constructed and irretrievably ruined; *ib.* 4717–4720. Though taking rather a better view than last witness, does not think traffic capable of very great development; cannot advise reduction of charges; *Murland* 4735–4738. 4829, 4830. Bad effect on railways of short harvests of 1861 and 1862; *ib.* 4789–4792. Ireland is favourable for the construction of railways; *ib.* 4823. Instances of lines paying no dividend; *ib.* 4821. 4826. Relatively to population, traffic in the north generally is increasing; does not think railways have suffered from the emigration; *ib.* 4837–4845. Lines not paying dividend badly worked; *ib.* 4891. Shareholders would not submit to temporary loss, unless ultimate gain tolerably certain; *ib.* 4893–4895. A gradual reduction might probably pay in a few years; *ib.* 4896–4900. High nominal cost and defective condition of some new lines; *ib.* 4929–4936. Condition of Irish lines inferior to English; *ib.* 4940–4942. Witness would like to see experiment of reducing

IRISH RAILWAYS—*cont.*

charges, but not at expense of shareholders; *ib.* 4952. Bagnalstown and Wexford line lying idle, as it will not pay working expenses; *ib.* 4960. Rate of interest on Irish debentures; *ib.* 4961, 4962.

Injury to Newry and Armagh Company caused by proceedings of Ulster Company; *Fearnley* 4965–4979. Difficulty of reaching interior of Ireland *viâ* Waterford from refusal of Great Southern and Western Company to run trains at proper hours; *Delahunty* 5011, 5012. Traffic of Irish railways "never yet half developed" from want of proper arrangements with English companies; *Cawkwell*, 5069–5072. Interests of some of the lines subordinated to steamboat interests; *ib.* 5111. Reduction of goods rates would increase traffic, but profits would be less than now; *ib.* 5146, 5147. No communication in Dublin between railways and wharves; if connecting link made it will come down to the quays; Bill before Parliament to make tramways along the quays; *ib.* 5239.

Witness considers Irish railways tolerably well managed; is not aware that they are conducted to suit views of steamboat companies; *Allport* 5307, 5308. Connexion *viâ* Bristol with Midland Railway; *ib.* 5309, 5310. No reason why experiments in reduction of rates would be attended with more difficulty or greater risk in Ireland than in England; it should be done with care; would be attended with loss, but increase of traffic would ultimately make it up; in agricultural districts it takes longer to make up loss than in manufacturing districts, especially where population is poor. A reduction is frequently made in one district, and not in another. Three instances on the Midland; *ib.* 5340–5342. Rates will not admit of reduction unless companies are aided. Most Irish railways are in debt. Fears reduction of rates would be attended with permanent loss to the companies. Founds his opinion upon absence of population. If all the railways were finished for which powers have been obtained, Ireland would be well supplied; *Dargan* 5456–5459. 5483–5488. A partial reduction might be made without loss; *ib.* 5637. Thinks Irish railways at their present rates might be worked for a little over 40 per cent. of the gross receipts. Average cost of working English railways 50 per cent.; explains how saving would arise; *ib.* 5489–5492. 5609–5615. No need for some lines now being applied for; one in Wexford necessary; very few districts that will now justify new railways; *ib.* 5539, 5540. Shares of insolvent companies have a nominal price in the market; some of them are as low as 15 per cent. Is sorry that rule laid down has been abandoned, that parties applying for a Bill should prove their capability of making the line; discussion as to how solvency should be proved; *ib.* 5541–5545. 5548–5550. Where new and old lines have come into competition they have damaged each other; *ib.* 5546, 5547. Dublin and Wicklow is a line of 120 miles; has equal mileage rates both for passengers and goods, with exception of working people's train; *ib.* 5573–5575. 5648, 5649. Certain landholders have made advances to promote construction of railways in parts of Ireland; *ib.* 5577. Landholders and agriculturists would be greatly benefited by an extensive reduction, but would not be willing to give any security to carry out scheme; *ib.* 5578–5582. Average cost per mile of keeping up permanent way in Ireland about 80*l.*; more in England; upon Dublin and Wicklow line about 85*l.*; *ib.* 5616–5621. Is supplied with a large quantity of traffic from mines at Vale of Avoca; increase since accommodation afforded; rate charged fairly remunerative; mining companies pay high dividend; not a fair test of charge to reckon rate as a per-centage in value upon goods carried; *ib.* 5623–5630.

General reduction of rates and fares would lead to increased profits; *Roe* 5811, 5812. Best accommodation at lowest possible price needed in Ireland; *ib.* 5903. Reason why it is not to the interest of the public that Irish railways should be leased to any English railway company, but they might be efficiently worked as one company if amalgamated; *Grierson* 5925–5930. Condition, working, &c. of Irish lines at present, witness thinks, satisfactory; *ib.* 6032–6036. Expenses of working, &c. as compared with English lines; *ib.* 6039–6043. Amalgamated companies, though worked more economically, generally pay higher wages than small ones; *ib.* 6044–6056. Not too many lines in Ireland at present to be profitable to shareholders, but competing lines should not be permitted; *Lanyon*, 6169–6174. Some Irish railways being insolvent, witness cannot say why powers to construct more are being applied for; *ib.* 6175–6180. Character of population of Ireland, as to their ability to travel much by railway, &c.; *ib.* 6188–6191. Capital of Larne and Carrickfergus line, recently opened, found entirely by shareholders; that for

IRISH RAILWAYS—*cont.*
Belfast and Bangor, also recently opened, by capitalists in England, chiefly by the contractor; *ib.* 6253–6255. Private enterprise in railways in Ireland nearly extinct; *Earl of Clancarty* 6327. Present system of audit almost useless; management of many lines very bad, from directors trying to force a dividend; *ib.* 6331–6338. Insolvent state, cost of construction, bad management, &c. of Cork and Bandon Railway; *Shaw, W.* 6385 *et seq.*; *Jones* 6463 *et seq.* Facilities now afforded by railways to agricultural shows in conveying stock and implements free, &c.; *Macfarlane* 6518–6522. Want of proper through arrangements; *Shaw, W.* 6454–6460; *Macfarlane* 6527–6535. Facilities between Dublin and the north-west very bad; no night train; traffic might be six times as large with better arrangements; Irish North-western, being in difficulties, are giving more attention to finance than to developing traffic; *ib.* 6535–6542. Instance of less accommodation since opening of railway than previously; *ib.* 6543. Complaints of bad arrangements of trains on Irish North-western; *ib.* 6556–6558. From want of concert between railways from Galway to Belfast, and reduction of rates, an enormous amount of traffic is lost; *Meldon* 6736–6741. If shareholders desire change in management, they have little chance of obtaining it, all the power being practically with the directors; hardly any English capital invested in the small Irish lines; *ib.* 6791–6800. Reduction of rates and fares and Government aid necessary for full development of commerce of the country; *Boileau* 6804. Ruined state of many of the smaller lines from cost of construction; a line out of use from want of arrangement between two companies; *Perry, H. R.* 6863.

Railways are in a very unsatisfactory condition at present; a bold reduction of fares and rates, especially the former, would be an immense benefit to the country immediately, and to the companies after a year or two, but the latter are afraid of the experiment; Government help desirable,—need not be any loss to the Exchequer; *Parker* 6865. Remote districts where railways are still needed to enable produce to be brought to market; increase of railway travellers must be from the millions to be remunerative; *Bewlay* 6974. 6987–6989. Evils of want of concert between companies; *Pim* 7079–7086. Railways named which were constructed more with a view to developing country than for profit; *ib.* 7087. Labouring classes would ride much more than they do if fares were reduced; *ib.* 7098. Committee at Dublin to obtain information of railway grievances; communications from, and from various parts of Ireland handed in; complaints are chiefly of overcharges, which injure the country traders; *Barrington* 7106–7108. 7123–7130. Recent experiment of cheap third-class excursions on Midland Great Western highly successful with artizans, &c.; *ib.* 7108–7115. Witness believes that if Commissioners would carry on their investigation in Ireland they would obtain better information, and produce a good effect there; *ib.* 7149–7161. This opinion further and more fully enunciated; *ib.* 7257–7277. If Government took railways and reduced charges, temporary loss might be met by a penny income tax in Ireland; *ib.* 7166–7205.

Two are bankrupt, several at a standstill, six do not pay dividend to all the preference shareholders, 10 pay no dividend to ordinary shareholders, others pay less than 3 per cent.; detail of the latter class of dividends, and of lines which pay more than 3 per cent., but less than what is considered fair interest; mileage of these various classes given; one line only (the Dublin and Kingstown) whose shares are much above par; *Hancock* 7597–7604. Witness endeavours to show how the public interests must suffer where a commercial speculation is unsuccessful, as in the case of the Irish railways; *ib.* 7605–7607. Causes of the above state of things witness believes to be that many were made without proper previous calculations, from seeing high interest paid by some of the earlier English and Irish lines; *ib.* 7623–7625. Competition will not remedy defects of Irish railway system, although it is the proper principle of commercial management; *ib.* 7627–7631. Amalgamations have gone on but slowly, and will so continue; discontent would be created if amalgamation were allowed to stop competition; *ib.* 7632–7636. Any extensions would be most difficult at present; *ib.* 7637, 7638. Unprofitable present condition not attributable to the state of the country, that having greatly improved; statement in detail of improved condition, which witness considers gives a hopeful future for railway interests; *ib.* 7639–7641. Returns for 1865 show an improvement on 1864; the Dublin exhibition one, but not the only cause of this; *ib.* 7642. 7756–7760. Railway traffic not affected by emigration; *ib.* 7643. Increased traffic in coal may

IRISH RAILWAYS—*cont.*
be expected; *ib.* 7644, 7645. [*For this witness's remedy for present state of Irish Railways, see* GOVERNMENT ASSISTANCE, &c., IRELAND.] General amalgamation undesirable, unless undertaken by the State, in which case it would be a great advantage; *ib.* 7700–7708. Solvent lines are well managed; *ib.* 7742. One reason why Irish lines do not amalgamate is that the individual interests of certain seaports with which they are connected stand in the way; *ib.* 7767–7771. This also leads to the making of unprofitable lines; *ib.* 7772–7782.

Witness believes Irish traffic is fully developed, that reduction of fares to one-half on business lines would injure receipts; fares can scarcely be too low on pleasure lines; *Cotton* 7824–7825. Labouring classes can hardly afford to travel in Ireland at all; *ib.* 7827, 7828. No room for competition; in the only instance of which witness is aware, it has been useless to the public, and injurious to the companies; if commenced, probably the opposing parties would half ruin one another, and end by combining and raising the fares; *ib.* 7916–7930.

Witness believes that an amalgamation of all the lines north of Dublin would be advantageous to the companies and the public; no room for competition, nor sufficient traffic to warrant low fares or experiments; *Shaw, T.* 8357–8383.

Past progress of railway construction in Ireland; *Galt* 8475. Present financial condition very bad; unpopularity of management and badness of arrangements prevent traffic from being fully developed; *ib.* 8476–8479. Fares much higher, and number of passengers considerably less (in proportion to population), than in England and Scotland, as shown by Board of Trade returns; *ib.* 8480–8483. Witness can speak from personal observation of want of proper railway accommodation; *ib.* 8484, 8485. Quotes a letter from a late principal magistrate of Coleraine showing the grievances under which that town labours from unfair railway arrangements, and stating that a proper reduction of fares and the adoption of better arrangements would be the salvation of the country; if it were required, nobody would object to a penny income tax in Ireland to effect this; *ib.* 8485. Injurious effects of lines being so much in the hands of preference shareholders; *ib.* 8487, 8488. Desire in Dublin for carrying out the Act of 1844; *ib.* 8489, 8490.

Not so much traffic to develop as here, nor so much energy to develop what there is; *Sherriff* 16425–16,427.

Rates are high, speed low, trains few, and dividends small. Too many officials; lines are over governed; *Huish* 16,011–16,015. 16,030, 16,031. Great Southern and Western is very well managed, and is the most successful line; *ib.* 16,032–16,031. Irish railways have cost less per mile than English; *ib.* 16,068–16,073.

Information received by Commission, witness believes, is incomplete; better would be got by local inquiry (as suggested by Mayor of Dublin); *Chadwick* 17,297. 17,308.

Letter from the Chancellor of the Exchequer (Mr. W. E. Gladstone) to the President of the Commission, requesting that the facts connected with question of Irish railways may be at once collected and presented to the public; *App.* P. Statement of Mr. G. W. Shannon as to obstructive policy followed by directors of; *App.* R. Returns (extracted from Board of Trade returns) by the several railway companies in Ireland, showing the traffic in passengers and goods during the year 1863; *App.* AA. Statistics deduced from preceding return, and comparative summary; *ib.* Return by the several railway companies in Ireland of their authorized share and loan capital, and of the sums received in respect of their ordinary capital and preferential capital, and debenture stock or funded debt on 31st December 1863, specifying the rate per cent. of the dividends for 1863 on each of the said capitals; showing also the loans outstanding on 31st December 1863, classified according to the several rates per cent. of interest, and the capital authorized and paid up for subscriptions to other undertakings, whether such are on lease to or worked by the subscribing company, or are independent; *App.* AA. List of companies who have either abandoned their undertakings or have allowed the powers granted by Parliament for the compulsory purchase of land required for their construction to expire previous to the 31st December 1863 without such powers having been exercised; *ib.* Table showing for the railways in Ireland,—1. The capital authorized; 2. The capital raised on ordinary shares, preference shares, debenture stock, and loans, upon 31st December 1861 to 1864 respectively: and as regards the lines opened,—3. The receipts from traffic and the working expenses during those years; 4. The interest on preference and guaran-

IRISH RAILWAYS—*cont.*
teed shares and debenture stock, and on loans calculated on the amounts paid up on 31st December in each year; and 5. The proportion per cent. which the surplus income bears to the ordinary share capital, and proportion per cent. which the net receipts bear to total capital; *App.* AB. Communication from Lord Mayor of Dublin respecting railway rates and charges; *App.* AF. List of Irish railway companies incorporated previously to 1855 who obtained powers to make new railways and to raise capital for the construction of the same in 1855 and subsequent years; the length of such lines and capital authorized, together with the length of such lines opened for traffic at 31st December 1864; *App.* AJ. List of railway companies incorporated in 1855 and in each succeeding year, showing the length of railway and capital authorized in each year, the length open at 31st December 1864, and capital raised to same date; *App.* AK. Statement as submitted by the Lord Mayor of Dublin to the Royal Commissioners on Railways, showing cause of complaints on Irish lines; *App.* AM. Statement from the Public Works Loan Board of loans advanced by Government to Irish railways, made up to 26th May 1865; *App.* AO. Statistics affecting the value of certain railways in Ireland; *App.* AQ. Statement of loans and interest thereon to certain Irish railways; *App.* AR. Abstract of returns, showing—1. General particulars and cost of management. 2. List of agreements made with other companies, giving their dates, periods, and a short sketch of the nature of each. 3. IRON:
Cause of failure of attempt to smelt iron with turf; *Mallet* 2197, 2198.

IRON TRADE OF STAFFORDSHIRE:
Representation by South Staffordshire Ironmasters' Association to railway companies as to inequalities and anomalies in tariff of that district, especially with respect to the London market; *Williams* 10,115–10,120. Report of Association on the subject given in; *ib.* 10,121. Appendix to report given in; *ib.* 10,407. No special rates recently given, so far as witness is aware; *ib.* 10,223, 10,224. Inequalities of rates not owing to competition; causes of inequalities; the position of South Staffordshire demands that lowest possible rates should be charged; *ib.* 10,245–10,248. Low rates from the Middlesborough district to London in consequence of water competition; this presses hardly upon the South Staffordshire district, which has to pay a much higher rate, partly (as witness considers) to make up for loss on the former; discussion of this point; *ib.* 10,248–10,264. The canals and railways to London (from the South Staffordshire district) are really a monopoly; *ib.* 10,274–10,276. Rates on Birmingham Canal same as railway rate to Liverpool; *ib.* 10,277–10,279. Discrepancies in rates, which the Ironmasters' Association desire to see remedied; *ib.* 10,280–10,283. Explanation of principles upon which Association desire a uniform mileage rate to be founded; *ib.* 10,284–10,303. This would cause an increase in a few cases, but there would be a considerable reduction on the whole; *ib.* 10,305–10,310. Further illustrations of inconvenience caused to iron trade by present rates; favouritism in fixing rates; *ib.* 10,358–10,366. A new line would not improve matters; *ib.* 10,367–10,371. Great increase in conveyance of goods between London and Staffordshire within the last 20 years; rates were considerably reduced by competition during part of that time, but are now as high as ever. The trade was better served by canal than it now is by railway; delays frequently occur, but iron reaches London on an average much more quickly than it did by canal. Various advantages of railway transit admitted. Companies are dilatory in attending to complaints; *ib.* 10,373–10,402. Complaint of improper classification of goods. Should be at option of freighter to declare goods damageable; *ib.* 10,403–10,407.

Objections to a uniform mileage rate; *Cawkwell* 11,637 *et seq.* Observations and explanations relative to some of the preceding statements; *ib.* 11,657 *et seq.*

Differential rates given by railway companies in favour of new iron districts in the north very prejudicial to interests of Staffordshire iron districts. Table of these rates given in; *Mathews* 10,450. Favourable sea rates to London increase the disadvantage. The iron being admitted to Staffordshire districts on such low terms, should be let out as reasonably. The remedy proposed is to make the mileage rate uniform throughout each district. Instances of unequal rates quoted; *ib.* 10,451–10,454. Witness's proposition is that the rate between the Middlesborough district and Staffordshire should be the same each way; *ib.* 10,454. This is already so witness believes; *Grierson* 11,866. If rate from Middlesborough were raised, it might force the traffic over some other line; *Mathews* 10,460. Complaints of heavy rates for short distances, and excessive terminal charges; Table given in in proof; *ib.* 10,462–10,469. Rates quoted by Mr. Mathews are incorrect; Table given in; *Morris* 14,119. 14,126. Further argument for equality of rates. If lowered in one part to compete with water carriage, they should be made equally low over the whole system; *Mathews* 10,498–10,506. Witness believes this would not discourage reductions. Discussion of these points; 10,507–10,521.

Answer to above on behalf of railway companies; *Cawkwell* 11,657 *et seq.*; *Grierson* 11,854 *et seq.*

Complaint that foundry trade of South Staffordshire is restricted by unequal rates and excessive insurance

Iron Trade of Staffordshire—*cont.*
charges. Companies should be bound to give freighters option of sending at their own risk or at that of companies; they have admitted the principle, but have not gone far enough. Suggestions for new arrangements for classification; *Perry, T.* 10,605 *et seq.*

With regard to Mr. Williams's complaints: he has given the rates per ton per mile, but has omitted to deduct terminal expenses, &c. Witness considers that Great Western Company have acted very favourably towards Staffordshire iron trade; they have quite recently reduced the rates to London. Discussion of discrepancies between the Sheffield and the Liverpool and Manchester rates on iron. Company of course hope to benefit themselves as well as their customers by above-named reduction; *Grierson* 11,810–11,824. Railway companies greatly helped South Staffordshire during a recent strike by bringing coals at almost nominal rates; *ib.* 11,836. Witness admits the Liverpool rate to be high as compared with the Swansea rate; *ib.* 11,825–11,835. Low rate to Swansea is brought about in part by canal competition; reasons for including expenses of collection and delivery in the Liverpool and not in the Swansea rate; *ib.* 11,837–11,841. Such competition in rates as Mr. Williams desires is impossible. Witness shows how he considers that Staffordshire receives great consideration from railway companies; *ib.* 11,846. Companies really do act in respect to collection and delivery on the principle Mr. Williams desires; *ib.* 11,846–11,852; also they deliver the iron promptly; *ib.* 11,852, 11,853. Mr. Gibbs has based his evidence on mileage rates, omitting to deduct terminals, so that his figures are all wrong; corrected Table given in; *ib.* 11,880, 11,881. Discussion as to the difficulty of giving mileage rate and terminal charge as separate items; *ib.* 11,882–11,892. Witness considers that Mr. Gibbs' evidence answers itself; *ib.* 11,893.

Rates spoken of by Mr. Mathews are exceptionally low specially to accommodate himself and other ironmasters; company could not afford to charge all their traffic at like rates; *Morris* 14,120–14,125. The same rate is always charged in both directions between any two places; *ib.* 14,128, 14,129. Denial that charges are excessive; North Staffordshire Company pay but 4 per cent. dividend; *ib.* 14,130–14,133. Parties have a power of appeal to Board of Trade, but have never exercised it; *ib.* 14,134–14,142. Rates quoted to show that Mr. Mathews is mistaken when he states that company exceed their parliamentary maximum; *ib.* 14,143–14,145. Under sects. 81 and 82 of 10 & 11 Vict. c. cviii. company have power to exceed their maximum when they perform the duties of common carriers; *ib.* 14,153. Account of dispute as to a certain rate between company and Mr. Mathews and its settlement; *ib.* 14,154, 14,155. Company's charges for short distances are always within parliamentary maximum; *ib.* 14,157. Mr. Mathews uses canal considerably, which is cheaper than railway, but he sends a good deal by rail also; *ib.* 14,167–14,173. Correction of a mistake made by Mr. Mathews as to larger and smaller charges; *ib.* 14,175. Company have found it advisable to provide all the waggons; this has given general satisfaction, and witness believes it to be the best plan for mineral traffic; *ib.* 14,176–14,186. A uniform mileage rate would be practically prohibitory of much of company's traffic; this would probably be an advantage to Mr. Mathews, but would be very prejudicial to district; *ib.* 14,197–14,200. 14,207–14,210. Company's rates are the result of many years' experience; some are almost unremunerative, but district (which is in a highly prosperous condition) would cease to be a producing one if raw material were not carried at very low rates; *ib.* 14,228–14,331. Company give special rates for large quantities, but treat all comers alike; *ib.* 14,232–14,235. A month's notice of alterations given; general publication impossible; *ib.* 14,236–14,238.

J.

Jones, Mr. William Bence. (*Analysis of his Evidence.*)
Is a landed proprietor in the county of Cork; has resided there more than 20 years; 6461, 6462. Whole of traffic of West Riding of county of Cork, with a small exception in the northern part, depends upon one line of communication; main line of communication from Cork to Bandon; 6463, 6464. 6505. When line opened. Cost per mile. Difficulties before railway was opened. At first taken up by preference shareholders; is now managed by first preference shareholders. Mentions directors' names, and where resident. Not necessarily required to hold original shares; 6465–6470. First preference shareholders have always received their dividend, but second not so regularly. Amount of loan capital, and interest paid. How much represented by first and second preference shares, and by original shares. Original shareholders have received nothing since line opened. Market value of these shares; 6471–6476. 6489. Bandon district capable of producing a considerable quantity of traffic. Amount earned by railway. If fares were lowered, it would be beneficial to the public, but cannot say whether it would be profitable to company; 6476–6479. Real difficulty is that present managers of railway being interested only in preference capital, upon which they receive a dividend, have no interest in developing traffic. Were company solvent, would promote extensions; all traffic from extensions must pass over the line. Company do not stand in the way of extensions, but cannot promote them for want of money. An extension partly finished, called West Cork Railway. Describes the favourable nature of the country for making this railway. Originally intended to go to Skibbereen (32 miles). Completed 17½ miles out of 18, and was obliged to stop for want of money. Has applied to Parliament for power to raise more. Line will cost considerably over 20,000*l.* per mile; engineer estimated that it could be done for 4,000*l.* Enormous increase of cost caused by there being only 10,000*l.* embarked in it. Whole done by taking shares into the market and getting rid of them at any price. Everybody, except labourers, paid in shares. Tried to get a *bonâ fide* contractor, but failed; got into the hand of people who carried on lines on credit; 6480–6488. Does not think the Cork and Bandon Company can be in arrear to Exchequer Loan Commissioners, as there has never been any statement that first preference shareholders did not receive theirs, and Commissioners would take precedence of preference shareholders. Interest upon mortgage loans also must have been paid, as that would be a first charge before preference shares; 6489–6493. Preference shareholders elect directors; 6494. 6514. If West Cork railway had been made for estimated cost, it would have paid a fair dividend; cannot say what dividend would have been paid on the other 14 miles. From arrangements made in Bill before Parliament it is pretty clear that preference shareholders will get something, and others none; such a system very discouraging; 6495–6497. How far witness's residence from station at Bandon; has property near Cork that would be benefited by railway being opened. Branch lines from trunk lines to Cork and Bandon would be an immense benefit to the country. Bandon line, bad as it is, has been of incalculable benefit to district. A little agricultural produce carried into Cork by carmen. If rates were moderate, this traffic would go by railway. Course adopted by the farmers to get their butter to the market; 6500–6504. 6506, 6507. Would suggest as a remedy for present state of things that Exchequer Loan Commissioners should have power to advance money wherever there was a *bonâ fide* traffic available; 6508. Would buy up preference shareholders. Does not know market price of preference shares; they are seldom sold; 6509–6513.

Junctions:

Complaints of very great delay of coal traffic at; *Brown* 11,192.

Juvenile Offenders:

Defective and anomalous state of the law as to punishing children for throwing stones, &c.; *Teulon* 16,579–16,581. Witness hands in two forms of clauses which he thinks might be adopted to remedy this; *ib.* 16,585.

K.

KENYON AND LEIGH RAILWAY. *See* CLARK, MR. C.

KILLARNEY:

Great traffic to, in summer time, but not so much as might reasonably be expected; the large hotel there, though exceedingly well conducted, does not pay; *Haughton* 4686–4688.

L.

LABOURERS:

Demoralization and mischief occasioned by want of proper regulations for the labourers engaged in the construction and working of railways; *Chadwick* 17,179.

LANCASTER, MR. JOHN. (*Analysis of his Evidence.*)

Is a coal and iron master, and connected with Wigan Coal and Iron Company; 15,536, 15,537. Considers there should be no terminal charge for coal, iron, and raw materials; reasons; 15,538, 15,539. 15,598–15,605. Would have a fixed maximum terminal charge; should be uniform for same services, and not higher for London; should not include cartage. Witness now pays 2*d.* per ton under an arrangement made with the London and North-western and Lancashire and Yorkshire Companies. If terminals were fixed by Act of Parliament rates should not be increased; before arrangement charge was irregular; 15,540–15,545. 15,552–15,558. What services terminal charge should cover; should be defined and kept separate; 15,546–15,551. 15,559–15,562. When goods go upon two lines only one terminal should be charged. Great Western charged 1*s.* 2*d.* for conveying coal from North-western railway to certain gasworks at Wolverhampton (about a mile); have now taken off 2*d.* charged for terminal; considers this charge illegal and unreasonable; 6*d.* should cover the whole for these services. Rates fixed by Act of Parliament for coals for certain distances; 15,563–15,581. 15,583–15,597. In some parts of country coal owners find the trucks; 15,582. Is quite satisfied with the ordinary short rate in the general Acts. Great Western have a short mileage upon the fixed tolls; reason other companies have not this exceptional power. If a general Act fixed a maximum toll, giving companies power to go below it, would do away with necessity of reciting tolls and charges in each particular Act; 15,606–15,615. Inconvenience suffered by traders in consequence of detention of waggons; are sometimes detained 14 days in going 24 miles; minimum time seven days; has sometimes to pay demurrage for keeping the vessels waiting; if detained beyond a certain time companies should pay demurrage at the rate of 1*s.* 6*d.* per day; does not consider this charge too high; is the rate charged to traders by North Staffordshire Company. To what extent companies should be liable; 15,616–15,624. 15,644–15,659. 15,662–15,665. Detention generally arises from companies giving the preference to other and more remunerative traffic; 15,625. 15,660, 15,661. If companies were liable to demurrage they could not refuse to take goods on consignment until they had already forwarded them outwards; are not bound to deliver within a certain time. Would not go so far as to ask that private owners should be admitted to the clearing house; 15,626–15,632. 15,666–15,668. Is averse to railways finding rolling stock; doing so would not require a much less quantity, but would render less sorting of waggons; reason why each trader would require his own waggons to be returned; 15,633–15,643. Where waggons detained accidentally companies have never given a drawback; in such a case would not ask for it; only ask that no preference should be given to other traders. Does not want companies to carry at one uniform rate, but would have maximum toll fixed, so that traders would know extent to which they might be charged in sending goods from one part of England to another; might carry as much lower as they pleased; 15,669–15,673.

LANCASHIRE AND YORKSHIRE RAILWAY:

Former unremunerative state of, led company to apply for increased rates; this did not arise from competition; *Cawkwell* 11,679, 11,680.

Answers to various complaints made by witnesses from Rochdale; *Smithells* 12,952 *et seq.* Company run numerous third-class trains at express speed; *ib.* 12,998.

LANCASHIRE AND YORKSHIRE RAILWAY—*cont.*

More passengers carried on this, witness thinks, than on any line in the kingdom; in 1865 the number was over 20 millions; *ib.* 13,000. Some of company's goods traffic does not pay; company continue it notwithstanding. Among other reasons for this are, the back traffic obtained, and the fear of Parliament granting competing lines; *ib.* 13,015–13,027. There is a considerable road traffic between Bury and Manchester, though company carry at low rates; *ib.* 13,023. Company obtained increased rates from Parliament for goods and passengers on account of cost of line; extent to which this power is used; *ib.* 13,070–13,082. But few packed parcels forwarded over company's line; *ib.* 13,096. Parcels can only ordinarily be conveyed where company have through rates, but they will undertake to forward them to places beyond; *ib.* 13,103–13,108. Company keep ledger accounts open with their customers; bills have to be paid within a month; *ib.* 13,099–13,101. Payment for parcels; *ib.* 13,110–13,114. No complaints from customers as to terminals; company do not include collection and delivery in their charge, nor do they adopt clearing house terminals in fixing their local rates; *ib.* 13,150–13,178. Very considerable excursion traffic, which pays, and does not much interfere with ordinary traffic; *ib.* 13,186–13,189. Company issue return tickets largely, but not many third-class; the fare being so low; *ib.* 13,190, 13,191. 13,212. Company have a large and increasing third-class traffic; second-class is also increasing; *ib.* 13,208–13211. A little competition by omnibuses; *ib.* 13,215. Witness does not think that a general reduction of fares would much stimulate traffic; an experimental reduction over a portion of line is being tried at present, but witness is not sanguine as to result; *ib.* 13,216–13,226. Fares are already very low, but many of them are good paying ones; the tendency has been to reduce, and the result so far is satisfactory; *ib.* 13,227–13,235. Company endeavour to meet public wishes in the matter; *ib.* 13,240. Should dividend average 8 per cent. for three years (which witness hopes it will), tolls and fares will be subject to revision by Board of Trade. Question as to whether this could be evaded; *ib.* 13,241–13,250. Dividend for the year 1865 was 5⅞ per cent.; *ib.* 13,251.

See also SMITHELLS.

LAND, INCREASED VALUE OF:

Land, houses, quarries, &c. have considerably improved in value from contiguity of railways in numerous instances, but circumstances are so various that witness could not suggest an average improvement in value; *Hawkshaw* 14,636–14,645.

Property is frequently incidentally improved by lightening of rates consequent upon the unduly heavy proportion railway companies are compelled to pay; *Teulon* 16,448. If roads are tolerably level, value of agricultural land is improved for five or six miles from railway to the extent of 15 to 35 per cent. according to proximity to station; if near London, several hundreds per cent.; *ib.* 16,582–16,585.

Increased value of land from introduction of a railway averages 2*s.* 6*d.* an acre per annum; *Chadwick* 17,200. Local inquiries needed as to increased value imparted to land by improved means of transit; *ib. Addendum, page* 854.

LANDOWNERS:

Should not be paid in shares; *Hancock* 7611–7615.

LANYON, MR. CHARLES. (*Analysis of his Evidence.*)

Is a civil engineer. With what railways has been connected; is now consulting engineer to Belfast and Northern Counties Railway. Attends the board and is acquainted with system pursued by directors, but duties of traffic attended to by manager; 6057–6063. Time railway has been open. Line from Belfast to Ballymena satisfactory, but dividends reduced since branch made from Antrim to Cookstown; 6064, 6065. Quotes fares, and states that third-class return tickets are issued by all the trains, except express; at all stations; market trains are also run at an average rate of ½*d.* per mile. Four trains a day from Belfast to Londonderry. Trains same as when Londonderry and Coleraine line separate. Fair passenger trade. No variation in fares since railway opened, except giving third-class tickets, which had the effect of increasing the third-class, and depreciating the second; result profitable to shareholders; 6066–6076. Rate at which Londonderry and Coleraine line worked; formerly paid a rent of 10,000*l.* a year, which was an annual loss to company. Line previously worked by Mr. Rowe; is

LANYON, MR. CHARLES—*cont.*
not aware whether it was profitable; traffic has changed. Thinks there has been no alteration made in the fares; 6077–6083. Names manager of railway. Is not aware that Mr. Rowe reduced the rates; cannot speak as to the receipts. Worked line for remainder of lease before altering agreement; 6084–6090. When competing line by Omagh and Dungannon opened, and effect it had upon the receipts. Second competing line opened from Londonderry to Belfast. Coleraine line a little shorter. Both companies charge same rate, competition between the two extremities only; 6091–6102. 6170. Same rate charged on whole of line between Londonderry and Belfast as on part between Belfast and Coleraine. Traffic in passengers and goods equal; is not considerable; 6102, 6103. Coal is much used for manufactories at Ballymena, and also for household purposes. Rate at which carried; 6104–6110. Up to last year was a considerable traffic in cattle. Reasons why a demand for coal inland would not materially increase if rates were reduced. Would be a large consumption. In towns near to railway stations consumption much increased. Demand increasing. Is not aware that in England 1*d.* per mile is a heavy rate, but having a long haulage would make a considerable difference. Gives gradients in Northern Counties line and loads drawn by one engine. Maximum train loads much better in England, because gradients are better. Description of coal consumed in North of Ireland, and price at Belfast; 6111–6128. Condition of Northern Counties line as to permanent way and rolling stock satisfactory, but line from Coleraine to Londonderry is in a very bad state. Not so intimately acquainted with railways in other parts of Ireland; believes some of leading lines well worked; 6129–6141. Question of lowering fares frequently came before the board. Third-class fares lower than average in Ireland. A reduction would largely increase traffic, but does not know whether receipts would be increased. Issue of third-class return tickets profitable to company. Will not say that market tickets were not so; traffic much increased; are issued for all classes; 6142–6159. If rates were lower shareholders would permanently suffer. Does not think many more would travel who now walk. Third class principally ordinary labourers and farmers; 6160–6167. Owing to there being a thin and scattered population, traffic could not be carried so cheaply in Ireland as in England. District round Belfast very populous and prosperous. Not too many railways in Ireland; competing lines should not be allowed. Some of the Irish railways in a state of bankruptcy. Does not know why new lines are being constructed; 6168–6180. With exception of neighbourhood of Belfast, Irish people are less able to pay high rates than English; 6181. Rates should be high because population is not so dense, and people are so poor that they cannot pay high rates, are two things quite compatible as facts. Low rates should be charged if a railway company is to be of use to population. Does not know fares charged by Bianconi's cars. Rates (particularly third class) being lower in England than in Ireland where people are not so well able to pay high rates, is attributable to difference in numbers carried; 6182–6187. Difference between farmers and labouring class in Ireland and in England. On holidays a large excursion and pleasure traffic from Belfast among labouring class connected with manufactures; 6188–6191. Amalgamation of lines in north of Ireland most important in the interests of shareholders and the public. Great want of amalgamation between three lines from Belfast to Dublin. Difference in value has been the great obstacle in the way of lines being amalgamated in Ireland. Negotiations for amalgamating Belfast Junction and Drogheda lines failed; 6192–6197. Advantages that would arise from amalgamation of Irish railways; 6198. Great delays caused by necessity for consulting various interests. Dividends paid by Ulster, Belfast Junction, and Drogheda lines; 6199, 6200. Ireland might be divided into districts, whether two, or three, or more, would require great consideration. All lines under one management would not be desirable. Reasons why more difficult to manage than London and North-western Company or other large English lines; discussion thereupon; 6201–6212. Would have all the small railways merged into the larger ones; is quite in favour of amalgamation as a principle; shareholders would not offer much opposition; 6213–6215. 6280, 6281. In several districts traffic is still carried on by carts; necessary for railways to secure this traffic. As to what distance cheaper to carry by road than by railway. Northern Counties, by lowering fares, have absorbed all the road traffic with profitable result to company. Is not aware of any great traffic with cars in districts accommodated

LANYON, MR. CHARLES—*cont.*
by railways; 6216–6229. Loans might be given to railways in Ireland at a less rate of interest than could be obtained in the market, as they have not same advantages as English railways. Points out in what way it would be an assistance. If loans obtained fares should be reduced to extent of saving effected. Reduction should apply to passengers, cattle, and minerals; 6230–6235. Carries large quantities of coal on Ballymena railway, owing to great facilities in connexion with Belfast harbour. Ulster railway has no communication with the harbour. Carries a very small quantity of coal, as canal runs parallel with railway, by means of which a great coal traffic is carried on into interior of the country at very low rates; 6236–6241. Amalgamation of smaller railways into larger ones must be by Parliamentary compulsion. Upon what basis compulsory power should be formed. Has not known an instance in which Parliament has been asked to pass a measure for compulsory amalgamation; 6242–6247. 6280–6282. If Government lent money to Irish railways, would have to do so to those English lines paying low dividends; 6248, 6249. Interest of shareholders should not be sacrificed to interests of public, and *vice versâ*. Witness has just finished the Bangor line and the Larne and Carrickfergus line. Capital of latter found by shareholders, of the former principally by the contractor. Capital about 20 per cent. more in consequence. Gives amount subscribed, cost of making railway, price paid for land, description of the line and traffic upon it, and arrangement made with contractor; 6250–6279.

LAW AND LEGAL DECISIONS:
Contradictory, in consequence of wording of Railway and Canal Traffic Act, causing great injury and hardship; *Oxlade* 1876.
Uncertainty and indefinite state of the law as between railway companies and the public, and necessity for its amendment. Companies should not have power to refuse to carry goods if they think fit, as they at present have; *Corbett* 11,057–11,066. Should be subject to same rules as common carriers; *ib.* 10,059.
Court of Appeal unnecessary; *Grierson* 13,390. Does not think county courts are more resorted to in small actions against companies than they were formerly. A great number of actions brought against Great Western Company; on what account brought. Have removed one or two into the superior courts to get an interpretation of the Act; 13,395–13 398.
Conflicting legal decisions as to right of Post Office to exchange bags at intermediate stations when in charge of guard who travels as a passenger; *Page* 14,960.

LAWTON, MR. ROBERT. (*Analysis of his Evidence.*)
Is a machine broker and general dealer at Rochdale; 1412, 1413. Railway charges are much higher at Rochdale than to other towns of greater distances in the neighbourhood; 1414–1428. 1447–1451. There is no competing line to Rochdale; the charges are 25 or 30 per cent. more than to Oldham; 1429, 1430. 1442, 1443. There are machine brokers at Oldham; they have better markets, and can pass their goods for 25 per cent. less to any part of England than witness can. With heavy machinery the cost of transport affects the price. Has often complained to the officials at Rochdale station. They give witness a fixed rate. The high rates at Rochdale prevent the opening of manufactories; it applies to all classes of goods; 1431–1441. Suggests as a remedy a competing line to Rochdale, though even then they might amalgamate; 1443–1445. Thinks all railways should carry a certain class of goods at a certain price, and should not be allowed to favour places by giving lower rates; 1446, 1447. Hands in a tabular statement, headed "Machinery and Trains"; 1452.
See also SMITHELLS.

LEASING RAILWAYS:
1. *Generally.*
2. *By Limited Liability Companies.*

1. *Generally:*
Midland Railway Company at one time leased their line, and their rolling stock and permanent way were allowed to get into bad condition. The public were served properly. There were clauses in the lease to prevent deterioration, but they were found to be defective; companies leasing a line would look more to present than ultimate profit. There would be no difficulty in securing owners of railways against injury; *Dargan* 5676–5687. Leasing company should have a maximum fixed, but

1. *Generally*—cont.

should be allowed to reduce as much as they liked. Maximum should be lower than present rates; *ib.* 5688–5691.

System of leasing which prevailed extensively is now almost wholly given up, from difficulty of compelling leaseholders to maintain line in good and proper condition; *Hawkshaw* 14,588–14,591.

2. *By Limited Liability Companies:*

Practicable and desirable to work railways by limited liability companies. From experience, witness knows that they can be advantageously sub-let to and worked by a small company without deteriation of rolling stock or permanent way. Contracts must be so framed as to make it the interest of lessees to keep everything in good condition. Discussion of this question, and statement of its advantages. Companies might be allowed to do it without special parliamentary sanction, but subject to general conditions. Feeling is hardly ripe for it yet; *Bidder* 16,793–16,806. Limited companies would be in a better position for reducing charges than present ones. As to constitution of such companies; *ib.* 16,811–16,815. Witness thinks that cost of working could be more easily reduced by a limited than by an ordinary company, by means of giving employées an interest in economy; *ib.* 17 144–17,147. By a "limited" company, witness means a company without an Act of their own under the Limited Liability Act. Witness does not think that at present companies can sub-let to a small number of persons. If a Permissive Act were passed, he believes that some companies would avail themselves of it; *ib.* 17,149–17,159.

Lees, Mr. Henry. (*Analysis of his Evidence.*)

Is a director of the Edinburgh Chamber of Commerce; has been 18 years manager of Edinburgh, Perth, and Dundee railway, and filled other official capacities in connexion with railway companies; 9278–9282. Will give own experience of railway management; 9283. Railway and Canal Traffic Act of 1854, passed to prevent obstructions to free interchange of traffic, and to give facilities of interchange between various lines, has entirely failed. Mentions case where there was an obstruction to traffic at Perth (where four railways met) in consequence of Scottish Central Railway becoming interpolated between the station and line of Scottish North-eastern; obstruction arose from a defect in the Act; anticipated evil was represented to Committees of both Houses of Parliament, but they passed the bill; 9284–9289. 9292–9297. 9307–9313. 9416, 9417. Proposes as a remedy in such cases that Commissioners should be appointed who should have power to settle like disputes provisionally, so that the convenience of the public should not be interfered with, leaving matters to be finally settled by law or arbitration; party in the wrong would eventually have to pay all costs, &c. In case cited, company would not have gone to law, but to Parliament next year, hoping that another Committee would have taken a different view; 9290, 9291. 9307–9313. 9328–9339. 9351–9361. 9378–9380. If Scottish North-eastern Company had been willing to subject themselves to the six-mile rating clause, inconvenience would not have existed; would have had to charge addition to the public. States how the companies finally settled this matter, and pressure that was brought to bear upon them by London and North-western Company. Discussion as to whether the dispute was not settled more quickly than it would have been by a reference to any other body; 9298–9306. 9314–9327. 9340–9347. Reason why the House of Lords remitted the six-mile rate in the case of the Edinburgh, Perth, and Dundee Company; 9347–9350. Offer that was made by Scottish North-eastern as to interchange of traffic; explains how Act of 1859 affected interchange; 9362–9372. Scottish North-eastern and Scottish Central companies have not amalgamated; expects a great contest this session with Scottish Central and Caledonian companies; 9373, 9374. During interruption of Scottish North-eastern traffic Edinburgh, Perth, and Dundee company attempted to mitigate evil, but were frustrated by Edinburgh and Glasgow company, which was in alliance with Scottish Central. Principle of Act of 1854 was designed to meet such a case, but, in consequence of being too general in terms, it can be evaded; 9375–9377. 9381, 9382. Nothing illegal in the company charging the six-mile rate, but if all companies were to stand upon their legal rights, traffic of the country could not be carried on; should not be deprived of their legal rights. Would not reverse principle of Act, which is expressly confined to enforcing legal rights, but if facilities are

given in one direction by one route, like facilities should be afforded in the other, both as regards through-booking and rates; companies should not place upon one section of the line special rates with a view of obstructing traffic; 9384–9395. Some years ago Great North of Scotland would not grant through-rates for traffic from the south; they should have been compelled, even though there were no through-rates on any part of their line. Parliament gave company power to refuse granting them; 9396–9400. No notice was given to the public, the companies, or the Post Office of the stoppage of the traffic by the Scottish North-eastern; would have some effect if companies were bound to give notice to the public of intended traffic alterations. Notice in this case would only have informed public of the fact, and not in any way mitigated the evil. Both the routes were nearly the same in length. Would compel shorter line to take a portion of through-rate; may be exceptional cases where this would be a hardship; in such cases an additional allowance might be allowed. Commissioners appointed to settle disputes should not overset decision of Parliament; should have power to compel a company to give a through-rate; 9401–9410. 9418–9420. Object of Act of 1854 is that when a company has itself fixed a rate, that rate shall be common to everybody. Would prevent a company having two lines, a long one and a short one, to same point, fixing rates by long line. Is in the discretion of a company having a line running into another line, just before the first comes to a station to charge a considerable sum for the benefit of this particular portion; 9411–9415. Would have Parliament reconsider their legislation with a view of alleviating certain mischiefs. Division of whole mileage rate between companies is not in an equal proportion per mile; very expensive lines with large termini are allowed something more, besides having a terminal charge. In case of two lines competing, one a direct and the other a circuitous line, would have them both carry at the same rates. If a competing company run over a line, say for 30 miles, should have their own mileage rates; through-rates should be charged for a single truck as well as for a whole train, or whether company had a train or not to forward trucks by; 9421–9445. Between Dundee and Carlisle, and all places south of and *viâ* Carlisle, there were two routes, one *viâ* Perth and Greenhill by the Scottish Central and Caledonian railways, and the other *viâ* Fifeshire to Granton and Edinburgh by the Edinburgh, Perth, and Dundee, and thence by the Caledonian, the latter being 31 miles, the shorter route. States injury inflicted in consequence of the Caledonian and Scottish, which were in alliance, refusing through-booking and through-rates to the Edinburgh, Perth, and Dundee; 9446, 9447. What power should be given to the commissioners to remedy evils of this description. Why witness doubts whether Act of 1854 embraces such a case. Explains that there would be no practical difficulty in trains coming south with goods waiting for trains coming from Granton; 9448–9451. Whilst Glasgow route was practically closed, only passengers could book through from Carlisle by a train which met Glasgow train at Carstairs junction. Does not wish to set up opinion as to what commissioners should determine, but merely make suggestions whereby 2nd clause of Act of 1854 would be made more specific; would carry out arrangement of the railway clearing house by Act of Parliament; 9455–9464. States how route between Dundee and Glasgow, by the Edinburgh, Perth, and Dundee and Edinburgh and Glasgow, was closed in consequence of an alliance between Scottish Central and Edinburgh and Glasgow; mentions also that between Edinburgh and Aberdeen there were two routes through Fifeshire by the Edinburgh, Perth, and Dundee; the one *viâ* Perth (134 miles); the other across the Tay *viâ* Broughty (115 miles). The company holding railways north of Perth and Broughty refused to book through by the shorter route, but compelled passengers to rebook at local rates or fares, which together exceeded the through fare by the other and longer route. They also refused to await arrival of trains from the south, and frequently started their trains while the other was at hand. In consequence shorter route was practically abolished. Thinks Act of 1854 quite inoperative to meet this case, therefore commissioners appointed should have a more dictatorial power than would be possessed by a court of law; 9465–9467. Mentions how line traffic was stopped by way of Perth, in consequence of Scottish North-eastern cancelling through-rates and through-booking; also how traffic in coal and pig-iron wholly ceased by through-rates being refused to the Edinburgh, Perth, and Dundee. Delivers in memorandum suggest-

LEES, MR. HENRY—*cont.*
ing a remedy for these several evils; 9468, 9469. As to power that should be given to the commissioners; the number that should be appointed; their duties should be very fully specified; 9471–9478. Parties should appear before commissioners to settle all matters that might arise; should not have same rights as they would have in a court of justice; questions should be dealt with as arbitrations are frequently dealt with; should be no appeal, written pleadings, or appearing by counsel; 9479–9485. Would have commissioners deal with railways very much in the same way as administration deals with emigrant ships; should act according to law, but with a discretion given to them by Act of Parliament; 9486–9488. 9528–9531. Railway interest deserving of greatest consideration; thinks arrangements suggested would in many cases be beneficial to those interests, and obviate many of the evils complained of; 9489–9492. Most of the amalgamations which have taken place within last few years, and all the new lines authorized since 1859, have been subjected to a future general revision of the rates and tolls; discussion upon this question; 9493–9500. 9540–9548. Commissioners should have power to put on trains when necessary, but not to compel companies to enlarge their stations; a necessity for which would not often occur. If any orders of commissioners diminished profits of company they should not be recompensed. Commissioners would have power of reversing and reconsidering their orders upon application made to them. Would allow comfort of public to be considered at the expense of loss to company; 9501–9515. Inasmuch as the power railway companies possess of having whole of carrying traffic of country in their hands, there should be obligations laid upon them to meet wants of country; only obligation now is to run a train at a penny a mile. Companies go a very great length in giving public what they really require, but many cases of hardship exist. Are many cases where trains are withheld, which could be run with considerable profit to company and public. If a manager can possibly get traffic by one train, he will not at different hours put on two trains, although public wants may require two; 9516–9523. Discussion as to Parliament compulsorily reducing rates and tolls as previously sanctioned by them; 9532–9539. Board of Trade have sanctioned within last two or three years two or three additional byelaws. Witness' railway has a double code, one under sanction of their Act, and the other under the sanction of Board of Trade; 9549–9551.

LEGAL DECISIONS. *See* LAW.

LEGISLATION:
Expense of obtaining Act much less in Germany than in England; *Mulvaney* 1155. Companies should have the power of making sidings, branches, &c. without the enormous expense of a separate Act; *ib.* 1847. Railway and Canal Traffic Act enables companies to act unfairly to individuals; the words "undue and unreasonable" should be struck out, and "may" altered to "shall," to compel companies to carry every person's goods; *Oxlade* 1901. Irish Tramway Act, requiring all tramways to be of one gauge, should be repealed; *Mallet* 2216.

Witness sees no objection to including a number of schemes in one Railway Bill (called an "Omnibus" Bill); states why he considers it rather an advantage than otherwise; *Cawkwell* 11,573–11,575.

Witness believes that traders are always allowed to be heard by counsel before committees; they appeared and opposed Amalgamation Act of Great Western some years ago; *Grierson* 13,391–13,394.

Railways are suffering from bad legislation; *Stewart* 14,847. Witness thinks it would be a great misfortune if the two parliamentary inquiries were reduced to one; *ib.* 14,781. Suggests the establishment of a tribunal of the highest order, with powers of sanctioning new lines, &c., Parliament reserving right of appeal and veto. Discussion of this proposition; *ib.* 10,848–10,852. 14,885. Present system of canvassing members would be abolished by this means; *ib.* 14,853, 14,854. Reasons for appeal and veto above mentioned. One advantage of a second hearing is that evidence before first is given with more caution; *ib.* 14,855–14,860. 14,862. Present system of referees is generally approved; *ib.* 14,861. Serious abuse in present system of obtaining Acts, preventing *bonâ fide* investors from embarking their capital in railway schemes, and discouraging lines which are really required; *ib.* 14,873, 14,874.

Witness would not wish to see present parliamentary tribunal altered; *Harrison* 15,310, 15,311.

Expense of present parliamentary procedure so enormous as to amount to a prohibition of a number of

LEGISLATION—*cont.*
useful lines; *Chadwick* 17,181–17,183. Witness thinks that, whether for large or for small things, the whole system of our parliamentary procedure, the tribunal, and everything connected with it, ought to be swept away; in its place should be instituted proceedings somewhat similar to those adopted in carrying out Public Health Act, viz., an application to Board of Trade, who should send down an engineer to make his own survey, and examine witnesses on the spot, &c.; *ib.* 17,184. 17,187, 17,188. An appeal should lie to a central authority sitting in London for the purpose; Board of Trade has already too much business to undertake this. Some suggestions might be taken from French system; discussion of merits of the latter; *ib.* 17,189–17,197. There are general extensive needs which the present legislation fails to accommodate; in regard to railway matters, it stands in the way of the speedy transit and distribution of goods; *ib.* 17,185, 17,186. 17,250, 17,251. 17,260. Further complaint of present unsatisfactory and expensive procedure for obtaining railway concessions in England, and advocacy of local preliminary examinations, &c. Detailed account of French procedure, and comparison between that and English, much to the advantage of the former; *ib. Addendum, page* 849–852.

Witness would like to see system of proving subscription contracts revived and carried out without evasion, in order to check speculative lines; discussion of this question; *Gooch* 17,658–17,574. There have not been latterly, nor are there likely to be again, such severe contests as formerly; *ib.* 15,575–15,576. Letter from Mr. Bullar on; *App.* DR. General List of Railway Acts passed from 1801 to the end of the Session 1866, including those for tramways, and also those for canals and docks owned, leased, or worked by railway companies; *App.* EK.

See also GOVERNMENT CONTROL.

LEGISLATION, DEFECTIVE. *See* LEES.

LEVEL CROSSINGS:
Injurious where traffic is increasing; very prevalent in Germany; *Mulvaney* 1847.

LIMERICK. *See* MALCOMSON. RYAN. TINSLY.

LIMITED LIABILITY. *See* LEASING RAILWAYS, 2.

LINCOLN:
Complaints from, as to improper classification of goods; *Smith* 9045–9110; and of excessive rates as compared with other places; *ib.* 9111–9116. Although served by two railways, there is a want of real competition; *ib.* 9117 *et seq.* Lincoln is at a disadvantage with Gainsborough on account of the water competition to the latter place; *ib.* 9123–9125. Disadvantage also in passenger arrangements, especially in regard to want of proper facilities for getting to and from London; *ib.* 9134–9138. 9167, 9168. Traffic arrangements between Great Northern and Midland Companies prevent all the advantages of competition; *ib.* 9137–9145. If complaint is made to one company they say their arrangements with the other preclude their making any alteration, and *vice versâ*; *ib.* 9164–9166. 9172.

Rates on grain, &c. between Lincolnshire and the manufacturing districts are excessive in amount and are arbitrarily levied. Companies have been appealed to in vain. French grain is delivered as cheaply at Manchester as grain from Lincoln; warehousing and other facilities were denied which were granted to the French trade; but this was for a time only; *Gentel* 9174–9205. 9227–9238. 9274. Instance of application to Manchester, Sheffield, and Lincolnshire Company for alteration in rates, which would have been of great service, refused; *ib.* 9206, 9207. Want of competition to Lincoln may account to some extent for high rates; *ib.* 9208–9213. Lincoln probably suffers from railway companies having larger interests at Grimsby; witness does not object to their having docks there; nor to their charging as low rates as they please to other places, if they would treat them the same; *ib.* 9214–9226. 9239. Tables showing inequalities given in; *ib.* 9239. Exorbitant rates to Burton-on-Trent; *ib.* 9241–9245. Necessity for equalizing rates; further instances of inequalities; *ib.* 9246–9248. Witness does not suppose there is any desire to favour a particular class of traders; a discount is sometimes allowed to those who send very large quantities; witness does not object to this; *ib.* 9249–9259. Low rate to Nottingham in consequence of competition; *ib.* 9260–9262. Passenger fares between Lincoln and Nottingham are one-third higher than beyond Nottingham; *ib.* 9275.

LINCOLN—*cont.*

Answer on the part of the Great Northern Company to Mr. Smith's and Mr. Gentel's complaints, which witness considers are very trifling; *Clarke* 12,555 *et seq.*

Comparative statement of Great Northern grain rates, to; *App.* BI. Comparative statement of grain rates from, with Northampton, Norfolk, and other barley districts, to Burton-on-Trent; *ib.*

LINEN TRADE. *See* BELFAST. FLAX TRADE.

LINTZ COLLIERY. *See* COAL TRADE.

LIVERPOOL:

Great complaints of the inequality of rates for goods traffic as compared with other places mentioned, and of the want of sufficient accommodation; *Clark* 3–8. 30, 31. 38. 54, 55; *Halhead* 415. 420–430. Several companies come to Liverpool, but they all combine to charge at the same rate; *Clark* 9–24. 29. Only two places where the charges exceed those to Liverpool; *ib.* 25–28. The rates press especially upon heavy goods; *ib.* 30–34. Tonnage inwards and outwards. The exports exceed those of all the rest of England; *ib.* 35, 36. Injury to the trade from causes named above; *ib.* 44–49. Diversion of the French trade; *ib.* 50–53. A new line to Manchester needed; *ib.* 58. Rates to Liverpool should be less than to other places. Reasons; *ib.* 59, 60. No competition by water; *ib.* 61, 62; nor between the railway companies, but very desirable; *ib.* 63–67. 138. Striking instance of diversion of traffic; *ib.* 67–69. The grievances complained of are of very old standing; *ib.* 70, 71. Greater traffic between Liverpool and Manchester than between any other two places in England; *ib.* 81. Terminal expenses not proportionately greater than elsewhere; *ib.* 109. The rates generally do not include collection and delivery; *ib.* 113–115. Carting may be done at 10*d.* a ton; *ib.* 117–124. Rates are excessive and unequal; *ib.* 160–162. Lines are at times excessively overloaded for want of better accommodation; *ib.* 195–197.

Recent reduction in rates on grain; *Cawkwell* 11,422, 11,423. In answer to complaints of Mr. Clark, witness (who is general manager of London and North-western Railway Company) states that the low rates (on chemicals, &c.) between Newcastle and Hull, as compared with Liverpool and Hull, are caused by water competition; the same with respect to difference (on timber) between Liverpool and Preston and Fleetwood and Preston, though in the latter case the North-western Company endeavour to create a traffic to Fleetwood, having spent money in forming a port, &c. there; *ib.* 11,402–11,406. 11,410–11,415. The above also is the cause of the low rates (on sugar, &c.) between Hull and Sheffield as compared with Liverpool and Sheffield; *ib.* 11,424–11,428. Explanation as to railway not carrying salt or coals into Liverpool; are prevented from carrying heavy goods for shipment by exorbitant rate charged by Liverpool Dock Company for going upon or across their rails; *ib.* 11,429–11,436. 11,520–11,525. No similar charge at Birkenhead or Hull; *ib.* 11,437. Causes of want of accommodation for coal trade (complained of above); measures now in progress to remedy it, of which coal owners are quite aware; *ib.* 11,442, 11,443. Explanation of a recent alteration in terminal charge, which though apparently is not really an increase; coal owners are also aware of this; *ib.* 11,444–11,447. Denial of statement that high rates and want of accommodation have caused the falling off in the French trade; other reasons assigned; *ib.* 11,448. Witness asserts that the 10 per cent. clause spoken of by Mr. Clark was repealed in 1846; it could not be carried out if unrepealed; *ib.* 11,448. 11,456. Discussion of this point, and whether Act has not been evaded; *ib.* 11,450–11,454. Company have spent 1¾ millions upon stations in Liverpool; *ib.* 11,449. They will soon have three stations open, which will cause a great saving in cartage to merchants; *ib.* 11,519, 11,520. Witness contradicts assertion that cartage can be done for 10*d.* a ton, and quotes letters from agents and carriers in proof; discussion of this question; *ib.* 11,458–11,465. Correction of statements made by Mr. Clark, and in tables given in by him, as to timber rates, chiefly in regard to deduction for terminals. Witness considers that Liverpool will contrast favourably with other places as to these rates; instances Hull. Gives in tables; *ib.* 11,477–11,486.

Unfavourable rates at Liverpool compared with Gloucester caused by the bad position of the latter as a port. Answer to case of diversion of traffic complained of by Mr. Clark; *Allport* 12,347. Low charges complained of on iron from Staveley to London are caused by competition; *ib.* 12,348–12,353. The rate to Liverpool from Staveley is less than to London, though the contrary is stated by Mr. Clark; *ib.* 12,354–12,357. Although there are several routes between Leeds and Liverpool, witness admits that companies agree to uniform charges; *ib.* 12,358–12,361. Midland Company ave nothing to do with rates from Morecambe, although it is their line; North-western Company fix the rates; *ib.* 12,373–12,376. If views of Liverpool gentlemen were to prevail, viz., to concentrate the traffic of the country in one port, witness considers it would be a national calamity, though, as manager of a railway, he would develop the traffic of his district to the utmost possible extent; *ib.* 12,377–12,379.

The corn trade is unduly weighted by the railway charges; many towns suffer severely from being unable to buy their corn here, owing to the excessive cost of conveyance. The merchants have frequently to warehouse their goods at great cost for want of cheap communication; *Patterson* 224–232. Facility of combination much increased by disproportion between the railway accommodation and the enormous traffic; *ib.* 307, 308. Rates, though less than formerly, are higher in proportion to present cost; *ib.* 318. The dock charges are high, but do not unduly press upon trade; the corn trade suffers somewhat from them; *ib.* 353–356. Great loss of trade with other towns from the high railway rates; *ib.* 355. Increase of railways to Liverpool might be advantageous, if unable to combine; *ib.* 362. Rates might be reduced without lessening profits; *ib.* 402–404. Dock accommodation insufficient, but extensions in progress; *ib.* 405. No real difficulty in obtaining sites for stations; representation of grievances to companies almost entirely without effect; *ib.* 409–411.

Explanations as to corn rates to Manchester; they have been somewhat reduced, and would have been more so, but that Manchester people objected. If merchants at Liverpool could have agreed with those at Manchester, railway company would have met their views. Further reductions are intended; *Cawkwell* 11,466–11,476. Statement to prove that corn rates are quite reasonable, and will compare favourably with those in other parts; *ib.* 11,487, 11,488. Table delivered in and statement made to show that very favourable rates are also given on numerous other commodities. Various instances quoted of arrangements made by railway company to bring traffic through Liverpool that would otherwise have gone elsewhere. Witness considers that company has given great advantages to the place; *ib.* 11,489–11,494.

The trade of Liverpool doubles itself in 14 years; *Halhead* 417. Birmingham timber merchants kept out of the Liverpool market by the heavy tolls; *ib.* 431, 432. Liverpool is at a disadvantage with the eastern ports as to the Baltic trade; *ib.* 433, 434. Witness suggests as a remedy a more equitable distribution of rates according to distance; *ib.* 435.

Statement to show that by company's method of weighing timber at Liverpool, the rates are really very favourable; discussion of this point; *Cawkwell* 11,500–11,506. 11,526. Low rates have been made by company specially to accommodate Liverpool; *ib.* 11,507, 11,508.

Explanations (in answer to a previous witness) as to company's trade between England and Ireland viâ Holyhead, intended to show that railway company do not in reality carry any part of the distance for nothing, to the injury of the Liverpool route; *Cawkwell* 11,508–11,519.

There would have been two routes to Liverpool from Saltaire, but for an amalgamation; *Stead* 488.

There are nine different routes by railway between Newcastle and Liverpool; *O'Brien* 12,257.

In answer to Mr. Halhead and others, witness considers that no complaint can reasonably be made of rates being higher on a shorter distance, so long as Parliamentary maximum is not exceeded; *Allport* 12,379–12,389.

In answer to complaints of Messrs. Clark, Patterson, and Halhead, the traffic manager of the Lancashire and Yorkshire railway states that company are deeply interested in the prosperity of the port, and have therefore spared no expense in developing it, but they have also duties to other places which they cannot neglect and if they did all they are asked, they should be injuring some of these to create a monopoly at Liverpool; a uniform mileage rate would have this effect; *Smithells* 12,954. Although statement made, no evidence has been given to show that Liverpool rates are excessive. Answer to complaint of "want of accommodation," showing how much has been given by company. Traffic fluctuates so much, and goods are brought by carters so unequally, as to cause company great inconvenience and (otherwise) unnecessary expenditure. Causes of high terminal expenses. Company would be glad to contract with Mr.

LIVERPOOL—*cont.*

Clark or any one else to do their carting at 10*d.* a ton. Company have nothing to do with fixing "rates between Dunkirk and Liverpool and Manchester." Witness will hand in tables showing in what particulars statements of three gentlemen above-named are incorrect; *ib.* 12,954. It is not that Liverpool rates are high, but others are very low; *ib.* 12,955, 12,956. Map handed in, showing accommodation afforded by companies, and improvements consequent thereon; *ib.* 12,957–12,960. Company have adopted through rates for benefit of Liverpool which are really rather detrimental to themselves; traffic is encouraged from other ports with a view to the public advantage, though they will not eventually be to disadvantage of company; *ib.* 12,961–12,969. Witness admits that loss on Hull traffic is made up by gain on Liverpool, but great good is done by admitting the former, and their Act justifies their procedure; *ib.* 12,970–12,974. Company act on these principles to be in a good position before Parliament. Traffic of Liverpool increased in six years from 760,000 tons to 1,049,000 tons; *ib.* 12,975. Company have a large traffic from the eastern ports; *ib.* 12,976–12,979.

Lancashire and Yorkshire Company contract for carting in Liverpool at 1*s.* 3*d.* to 2*s.* and make that charge to the public; *Smithells* 13,181.

Although terminal charges are high, witness believes they hardly pay, expenses being so great; *Morris* 14,283.

Railway charges for timber and deals, chemicals, sugar, and sundries, to and from, as compared with other places; *App.* A. Declared real value of total exports from port of, in 1863; *App.* B. Statement from the Association of the Liverpool Corn Trade as to imports and exports of breadstuffs, and stocks held in Liverpool in years 1858 to 1864; *Apps.* C. and K. Tariff of rates of railway carriage of grain, proposed by the Association of the Liverpool Corn Trade, from station to station; *App.* C. Rates of railway carriage for corn existing and proposed; *ib.* Table showing railway carriage rates from Liverpool as compared with other places; *App.* D. Memorial from the Chamber of Commerce of, addressed to the Right Hon. the President of the Board of Trade, and referred to this Commission; *App.* K.

LIVERPOOL AND MANCHESTER RAILWAY. *See* CLARK, MR. C.

LLOYD'S BONDS:

Given as security to contractors; *Malcolmson* 3498. Many Irish companies have had recourse to; manner in which money borrowed on, appears in accounts; *Fox* 6643–6648. Lloyd's bonds for work done take precedence over all debentures of subsequent date; *Bidder* 16,598.

LOANS:

Statement from the Public Works Loan Board of loans advanced by Government to Irish railways, made up to 26th May 1865; *App.* A. Statement of, and interest thereon to certain Irish railways; *App.* AR. Statement of mortgage debentures, bonds, and other loans of Irish railways from the commencement, showing amounts, rates of interest, dates at which to be repaid, &c; *App.* AW. Debenture loans outstanding on Irish railways, December 1864 (including Government loans); *App.* CS.

See also GOVERNMENT ASSISTANCE.

LOCAL INQUIRIES:

Witness believes that a large mass of evidence might be obtained by local inquiries which cannot be got at by a commission sitting in London; *Chadwick* 17,297, 17,298. 17,307. *Addendum, page* 854.

LOCAL TAXATION, CONSTRUCTION OF RAILWAYS BY. *See* CHADWICK. EXTENSION OF RAILWAY SYSTEM. GOVERNMENT ASSISTANCE, &c.

LONDON:

Most desirable for Irish cattle to reach the English markets; at present, rates to London are higher than from Germany or Holland; *Earl of Lucan* 3030, 3031.

Declared real value of total exports from port of, in 1863; *App.* B.

LONDON AND NORTH-WESTERN RAILWAY:

Alleged evasion of the Liverpool and Manchester Act by company, in not reducing rates; *Clark* 77. Meet complaints courteously, but give no redress; *ib.* 102–104.

LONDON AND NORTH-WESTERN RAILWAY—*cont.*

Attempts at traffic arrangements with Irish companies only partially successful; reasons; *Cawkwell* 5054–5072. Have expended a considerable sum at Greenore and other places in Ireland to facilitate railway traffic; particulars, especially regarding Greenore; *ib.* 5061–5063. 5088–5098. Company run steamboats between England and Ireland; *ib.* 5118–5120. Cattle traffic carried on very satisfactorily by company between England and Ireland; routes; *ib.* 5121–5135. Through traffic with Irish Midland Great Western; *ib.* 5136–5138. Not much increase in traffic from Ireland; nature of traffic; *ib.* 5142, 5143.

Unequal rates charged by, in South Staffordshire district; *Williams* 10,115 *et seq.*

Complaint against company by Cannock Chase and Lintz collieries of great delay in transmitting their coals; *Brown* 11,070 *et seq.*

Explanation and answers to statements and complaints of various witnesses as to company's charges, accommodation, supposed diversion of traffic, &c.; *Cawkwell* 11,399–11,558. Certain statistics of line as bearing upon terminal expenses; *ib.* 11,559–11,569. Various particulars quoted to show that 8*d.* per ton on goods and 1*d.* on minerals are not sufficient terminal charges; *ib.* 11,570–11,572. Passenger fares are pretty uniform over the whole system; *ib.* 11,627.

Complaint against company by brewers of Burton-upon-Trent for granting favouring rates, for abuses in terminal charges, and for charging unequal rates; *Cosgrove* 15,674 *et seq.* [*For detail see* COSGROVE. RATES AND CHARGES, 2.]

Report of the Auditors of the; *App.* EF.

LONGFIELD, DR. MOUNTIFORT. (*Analysis of his Evidence.*)

Is senior judge of the Landed Estates Court in Ireland and director of the Great Southern and Western Railway; 2794. 2797. Has given much attention to Irish railways. Thinks passenger traffic would increase upon reduction of rates, but the profits would diminish. Reasons; 2795–2799. Company tried a 4*d.* parcel rate, but it did not pay. There was no perceptible increase in number sent. Probably reduction was not well known; 2800–2808. If fares were reduced the increase of passenger traffic would not be so great as in England. Agricultural does not admit of same increase as commercial traffic; 2809–2811. Considerable fat cattle traffic on Great Southern and Western. Reasons why store cattle are not sent by railway; 2812–2814. 2818. Doubts whether a rate that would tempt a grazier to send store cattle by railway would be remunerative; 2815. Attributes decrease of dividend to bad harvests diminishing the wealth and population; 2816, 2817. Is sure all traffic would increase upon reduction of rates; 2819. Proposals holding out the prospect of an increase of traffic are frequently made to the board; 2820, 2821. No material increase upon any description of cattle within last few years. If rates were reduced the ultimate result would be favourable to the companies; 2822–2824. 2852, 2853. If proprietors of mines would supply sufficient traffic, and send full train loads, companies would be glad to carry at reduced fares, and if required would make stations and sidings; 2825–2830. Subject of reduced rates discussed frequently at the board, special inquiries made, and company guided by the result; 2831–2836. There must be a third-class train between Limerick and Nenagh, as the Act compels company to provide it. Is not witness's line, but has running powers over it; 2838–2841. Probable that

LONGFIELD, DR. MOUNTIFORT—*cont.*
first-class passengers could not get from Limerick to Dublin in a day, as they would have to pass over two different lines of railway; 2842–2844. Proposition made by board of directors to amalgamate with Waterford and Limerick Company, but shareholders refused. Would have facilitated traffic arrangements if they had done so. Thinks the terms offered were too high, as the earnings of that company have not been equal to the terms; 2845–2851. Gives reasons why the traffic in corn, coal, and third-class passengers would increase upon reduction; 2854–2861. If third-class was ½*d.* per mile, traffic would considerably increase. Class of persons who would travel; 2861–2864. Has never attempted to develop third-class traffic in vicinity of market by issuing return tickets at low fares. Discussion upon this question, and as to how loss upon general reduction should be made up; 2866–2871. 2875–2883. Thinks an experiment might be made by empowering Government to nominate an official director on any line, who should have power to consult the books and vote as other directors, and be allowed to make experiments, guaranteeing the company against loss, and Government receiving half the gain, if any. Scheme discussed; 2872–2874. 2884–2898. 2932. Mentions certain railways and places with which there are through rates; 2899–2903. 2909–2913. There are not many excursion trains. They interfere with the traffic. Would rather have all trains cheap. No reduction to reapers; 2904–2908. Traffic sometimes regulated by other considerations than those of distance; 2914, 2915. The passenger traffic would not materially increase by railway communication with the water at Dublin; the coal traffic would. Coal traffic chiefly from Dublin. At Cork coal can be brought up very close to the railway. In Dublin they are carted at an expense of about 2*s.* a ton; 2916–2931. 2933, 2934. Hands in paper for Appendix; 2935, 2936.
Proposal of, on the subject of railway reform; *App.* F.

LORD MAYOR OF DUBLIN. *See* DUBLIN.

LOW, MR. CHARLES HOSKINS. (*Analysis of his Evidence.*)
Is chairman of the general committee of the Bristol Chamber of Commerce; 13,881. Delivers in statement setting forth certain complaints from merchants, &c., of Bristol, of inequalities and high charges for various goods, and suggestions from Bristol Chamber of Commerce; also delivers in a table showing rates for carriage of timber by Great Western; 13,882. Points out inequalities of rates from Bristol, as compared with those from Newport, and states that timber is taken from Newport to Didcot (104 miles), through Gloucester, for 1*s.* 2*d.* less than it is taken from Gloucester to Didcot (60 miles); charges in both cases from station to station, and include collection and delivery. Rates for timber from Newport much below maximum. Does not know why Great Western favour Newport. No sea competition to places specified in table; 13,883–13,889. 13,903. 13,912, 13,913. No representations have been made to Great Western Company respecting these charges; 13,890. 13,911. Large trade between Bristol and the places mentioned in table. Baltic and Canadian timber is largely exported from Bristol to Derby, north, Henley-on-Thames, east, and Exeter, west; 13,891–13,893. Suggests as a remedy that Board of Trade should be empowered to revise both passengers and goods rates about every three years, and that public should be allowed to appeal against unequal or unfair rates and charges; is not aware that such a power would be a distinct contravention of an Act of Parliament, and in violation of terms imposed upon railway. If the maximum rate of 2*d.* per ton for coals had been enforced from Wales to Bristol, as authorized by the South Wales and Great Western Railway Act of last session, no coal could have come to Bristol; company charge ⅝*d.*; 12,894–12,896. 13,906, 13,907. Believes that if railway carries for one person to one place at a certain rate, they can be compelled to carry for another person at same rate. Is nothing to compel a railway to charge same price for 70 miles over every part of their line, or to make same charge to all persons under similar circumstances; can charge below maximum if they think proper, but witness thinks such a course prejudicial to general interests of the country; 13,897–13,902. 13,904, 13,905. Company have charged these differential rates between Newport and Bristol for a considerable time. Did not represent this to the Parliamentary Committee at time of Amalgamation Bill with West Midland. Bristol people did not find it out until Newport houses

LOW, MR. CHARLES HOSKINS—*cont.*
came into what they considered their ground; 13,908–13,910. Bristol rates in many cases lower than Liverpool ones, but advantage to a great extent counterbalanced by both Liverpool and Newport being export places. In certain cases Bristol derives advantages from principle which railway companies have adopted; 13,914–13,918. States that carriage manufacturers of Bristol and Bath complain of the high rates for carriages to London, and that charge for conveyance of a four-wheeled carriage from Bath to London, which had been reduced, has recently been raised to former rate, and that same charge made for pony carriage as for travelling carriage. Would take a truck to convey a pony carriage just the same as for a travelling carriage. Manufacture of carriages a large trade in Bath and Bristol; 13,919–13,927. 13,932–13,935. Great Western Railway Company pays 2 per cent. dividend. Thinks a reduction of rates would far more likely increase than reduce dividend; finds that where rates are reduced there is a large increase of traffic; instances the competition between Reading and London some years ago; 13,928–13,931. Tea dealers of Bristol complain that rates for rice to London have been nearly doubled, and that they are quite shut out of London market in consequence. Does not know when, or circumstances under which advance was made, has been informed that they have repeatedly applied for a reduction, but without success. Bristol does not compete with ports of import in supplying London with rice; Bristol is supplied chiefly from Liverpool. Rate from Liverpool to Bristol about 9*s.* per ton; 13,936–13,946. As to Mr. Aiken's suggestion that passengers having heavy luggage should be at station 10 minutes before advertised departure of the trains, witness thinks such a regulation would lead to more punctuality in trains; does not think Bristol would be averse to such a rule; 13,947–13,949. Complains of high fares by the express trains on Great Western; have none on the Midland. Reason Bristol people are almost compelled to use them to London; third-class passengers cannot get into London before 5.45 p.m., or return same day; thinks it is done to drive persons to go second class. Witness went to Oxford by express train from Bristol, and then from Oxford to London, which is a détour of about 30 miles, and it cost 2*s.* less than taking a return ticket from Bristol to London. Express fares are not charged from Bristol to London; 13,950–13,953. Extreme maximum rate 1st class from Bristol to Paddington is 26*s.* 1*d.*; 13,954–13,955. Would tend to greater punctuality in the starting of trains if tickets were sold at the principal stations and offices at any time; 13,956–13,959.
Addendum to witness's evidence; *App.* CY. Remarks by the manager of the Great Western Railway Company on witness's evidence; *App.* DD.

LUCAN, THE RIGHT HON. THE EARL OF. (*Analysis of his Evidence.*)
Is chairman of the Great Northern and Western Railway Company; 2937. Railway from Athlone to Castlebar (72 miles), will be continued to Ballina (106 miles); 2938, 2939. Material interests of the North and West of Ireland have not benefited by railways as much as they should. Companies too poor to work traffic at prices attractive to the people. If companies would reduce fares 50 per cent., believes at the end of five years there would be a large dividend; 2940–2942. Fares nearly at maximum, and much the same as in England. Gives dividend paid, number of passenger trains running, and fares. Line worked by the Midland Company; 2944–2950. Travelling facilities greater since railway opened; more accommodation required between Castlereagh and Castlebar; 2951–2954. Reasons why experiment of running trains at low fares has not been tried; 2955. Quotes rates at which the trucks travel. Midland Company find trucks and fix rates, subject to approval of the Great Northern and Western; 2956–2960. Line to Castlebar opened three years; slight decrease in traffic since January; never earned more than 7*l.* per mile per week; requires 8*l.* 10*s.* to pay a dividend of 5 per cent. States amount of paid-up capital, capital advanced by Loan Commissioners, and interest paid; 2961–2965. 2970. Commissioners are about converting loan into a 22 years' annuity; inconvenience that will arise to company in consequence; 2966–2969. 2973–2976. 3010–3017. Preference stock 5 per cent. Preference shares not worth more than 90 per cent. Irish credit low in London market; mentions as an illustration an interview had with Governor and Deputy Governor of Bank of England; 2970–2972. Unless fares are reduced 50 per cent., traffic would not materially

LUCAN, THE RIGHT HON. THE EARL OF—*cont.*

increase; quotes rates, and states that cattle, corn, and potatoes would then be carried by railway. In four or five years traffic would more than double; 2977–2979. 3039 Government should negotiate with different companies and buy up all the Irish railways; thinks whole of the ordinary stock could be bought at 50 per cent.; discussion as to the preference shareholders; 2980–2998. Strongly opposed to management of railways being placed under Irish government; 2999. Government should lease railways to large English companies upon condition that there should be maximum fares and minimum accommodation. Would have only three railway companies in Ireland (instead of 54 as at present), one for the North, one for the South, and one for the Midland district, with a board sitting in London. Temporary deficit consequent upon reduction of rates should be added to capital account; discussion upon the question; 3000–3021. No difficulty in getting English companies to lease Irish lines. Very few additional lines required; none should be constructed in future unless county find the land, as is done for roads; quotes cost at which lines could be constructed; 3022–3027. Course to be adopted in the case of lines in process of construction or for which Acts have been obtained. Not many new lines proposed this session. Great object for Ireland to reach the English markets. Dutch and Germans can send beasts to English markets cheaper than they can be sent from Ireland; quotes rates; 3028–3031. If heavy goods were sent for ½*d.* per mile, could successfully compete with the sea; 3032, 3033. Does not think a coal trade could be established in the West of Ireland, as it is cheaper to burn turf; gives illustrations; 3034–3037. Difficulty in obtaining back freight; 3038. Experiment has not been tried of reducing rates, as there would be a difficulty in getting the Midland Company to reduce; 3040–3042. Enumerates certain goods which would be carried upon reduction of rates; 3043–3050. Does not believe that store cattle would continue to be driven along the roads if the rates were lower; is certain that nearly the whole would go by rail; 3051, 3052. Witness's line would have the whole of the fish traffic if there were a night train; greater part of this traffic, which is considerable, is carried on by small smacks; 3053–3057.

M.

MACAULEY, MR. JAMES HYNDMAN. (*Analysis of his Evidence.*)

Is manager of a bank in Coleraine; 7283. Mentions different railways between Coleraine and other parts of Ireland, and length of the lines; 7284–7287. Dissatisfaction often expressed at the differential rates charged. Are no fixed charges. Instances differences in rates charged for goods and coals from Portrush and from Londonderry to Coleraine. All heavy goods are carted from Portrush in consequence of the high rates by railway; quotes rates; 7289–7291. Coleraine people are now making application to Board of Trade for a loan to improve navigation of river; hopes in time to have it made navigable, so as to make Coleraine a sea port; will then be independent of the railway companies. Long journey from Londonderry deteriorates value of certain goods. There is a port both at Londonderry and at Portrush. Both the railways worked by same company; 7292–7299. 7311–7315. Similar differences in passenger rates; facilities are given to Londonderry people which are not given to Coleraine people. Has often been told that different rates are charged to different individuals on same line for same quantity of goods; 7300–7302. 7308–7310. Thinks rates for passengers and parcels have been increased on Northern Counties line between Coleraine and Belfast within last two years, but fares on Londonderry and Coleraine part of line have not been altered; 7303–7307. If Government purchased railways there would be regularity in charges and perhaps at lower rates. Rates now high; if lower, traffic would considerably increase. Rates from Londonderry to Coleraine very low; no goods go along the roads in that part of the country; 7316–7320. Different opinions expressed as to how loss should be met if Government purchased the railways. Unless railways could be made to pay, it would be unadvisable to make a change. If fares were all raised and re-arranged might be more suitable than some lines charging high and some low rates; 7321–7327. Coleraine has communication by river Ban, it is navigable

MACAULEY, MR. JAMES HYNDMAN—*cont.*

up to Lough Neagh. Receives very few goods from Belfast by means of that river. Chief port is Portrush. Population has not much increased in Coleraine; it is an improving town. Has only one linen manufactory; 7028–7032. Has known two instances where merchants have experienced much difficulty in recovering damages from railway companies for goods lost or injured; 7333.

MACFARLANE, MR. HENRY JAMES. (*Analysis of his Evidence.*)

Is a magistrate of the county of Dublin, and a member of the Council of Royal Agricultural Society; 6515, 6516. Has been brought very much in contact with the authorities on various railway boards in Ireland, principally in connexion with the annual shows which are held in each province alternately, and the conveyance of stock and agricultural implements of all kinds. Has not latterly experienced so much difficulty in making arrangements with managers of railways for these shows; describes nature of facilities afforded, and what has been done in consequence. A great desire on the part of many people to see them; a liberal reduction would largely increase passenger traffic. Would encourage holding them in towns where they have not been already held. Afraid to hold them in some towns, not knowing what the railway arrangements will be. Reasons why they should be held. General complaint of the arrangements made in Dublin. Greater facilities for sending goods from Liverpool to certain country towns in Ireland than from Dublin, and at lower rates. Gives an illustration, showing the facilities given by the North-western Company to go direct to England, and the impediments, on the other hand, which are thrown in the way of travelling from Dublin to the northern districts, and the heavy cost of the journey; discussion thereupon; 6517–6529. Facilities afforded to travellers from north-west parts of Ireland to Dublin are very bad. Explains how it is that a person cannot go from Omagh to Dublin, and spend a day there, without being absent three days. Was told by a director of Irish North-western line that if there were greater facilities between these two places there would be six times the passenger traffic. General impression that Irish North-western directors are attending more to financial questions than to development of traffic. Gives a curious illustration of the want of facilities for travelling on the railway, and states that since it was opened the accommodation afforded is much less than it was before; 6530–6544. Mentions the high rate charged for bringing potatoes from Omagh to Dublin; 6545, 6546. Coal and turf both used in Omagh. Rates for coal satisfactory. Reasons why he does not think that if coal could be brought into the interior of Ireland at very low rates it would supersede use of turf. There is not sufficient supervision over railways; instances the accident to the late Mr. Senior, and suggests a remedy to prevent similar ones occurring upon that line. Lord Campbell's Act is to a certain extent a sufficient safeguard or inducement to directors to take great care for the protection of life. Board of Trade or some Government authority should have a general power to compel railway companies to make alterations in their works for the safety of the public; at present time financial difficulties stand very much in way of what companies see ought to be done. A friend, in order to be in time to catch Cavan train, induced engine driver to put on extra steam. Reads a letter extracted from a newspaper, showing the inconvenience to which a passenger was put in consequence of Irish North-western Company having altered their times without giving sufficient notice; 6547–6558.

MACNAY, MR. THOMAS. (*Analysis of his Evidence.*)

Is secretary of Stockton and Darlington railway, now amalgamated with North-eastern; 13,960, 13,961. Stockton and Darlington quite independent as regards management. A reduction in rates or any allowance cannot be made without consent of North-eastern line. Questions arising as to altering aggregate of tons to be sent per annum by a particular colliery owner would be settled by Stockton and Darlington Company. Reason they retain the management; in what it consists; 13,962, 13,963. 13,972–13,980. 14,057–14,059. Has observed certain charges made by Mr. Wooler, and prepared to answer them; 13,964–13,966. Denies statements that preference has been shown to directors owning collieries over other colliery owners; agents are directed to carry out rules and regulations impartially. Same gentleman has complained before; complaints are always investigated; 13,967–13,969. 13,971. 14,014. 14,050–14,056. Mr. Wooler's coal traffic has increased from 5,600 tons in

MacNay, Mr. Thomas—*cont.*
1859 to 72,000 tons in 1865; no directors' collieries have increased one-tenth of this proportion; 13,970. 14,032–14,036. Has cancelled resolution passed in 1856 allowing a rebate when quantity sent reached 20,000 tons or upwards; now charge a low rate to any colliery for coal and coke for iron-making purposes; Mr. Wooler has not paid the higher rate since September last; when his traffic increased he had the rebate; 13,981–13,985. No rebate allowed now for large quantities sent; an allowance might be made if large trade brought; 13,986–13,989. Reason Mr. Wooler could not sell his coke in Glasgow; only sent 40 tons. Mr. Pease sent his from North-eastern railway; 13,990–13,993. 14,010, 14,011. Mileage rate on coke ¾*d.* per ton per mile including the waggons. Practice for both companies to find the waggons; inconvenience that was felt when colliery owners found them; would be impracticable now to work coal traffic if they found them; 13,994–14,000. 14,037–14,039. Rate for coal for iron-making purpose ¾*d.* per ton per mile including terminals and waggons; is pretty uniform over whole system; makes a little difference for shipping; is rather higher for household purposes; no reduction in coal rates would materially increase traffic. Carries about 1,000,000 passengers per annum; gives rates for each class, and mentions changes that have been made, and advantages given to the public. Company's district is a large iron-making one; 14,001–14,006. 14,077–14,083. Reduces about one-sixth for return tickets. Labouring population do not travel much, or use railway to go backwards or forwards to their work; 14,007–14,009. Carries coal and coke at same rate, although a waggon that will carry three tons of the one will only carry 1¾ of the other; 14,012. 14,015. Last dividend was 9½*d.* per cent. for Stockton and Darlington section; 14,013. Respecting Mr. Wooler's statement that whilst he has been waiting for waggons he has seen some standing at another colliery unoccupied, witness mentions the arrangements that are made for the supply of waggons to the coal owners; 14,016, 14,018. Run 14 passenger trains each way daily; none, except mail trains, on Sunday; 14,019, 14,020. With respect to complaint that in consequence of company not sending waggons a shipper had to pay 1*s.* per ton more for his coke, witness says that he cannot find there has ever been such a case; 14,021–14,023. As to complaint that the mineral manager, who was part owner of a small colliery which loaded at same siding as Mr. Wooler, got waggons when Mr. Wooler could not get them, witness states that he did not become part owner until after he had given notice to quit company's service; does not think he would make any disposal to favour his own purpose; he left in June. Company would not object to any of their officers being connected with collieries; 14,024–14,031. When prices are good each colliery owner sends all he is able, when the reverse, railway companies may do as they can. Inconvenience that was occasioned to railway companies some years ago when prices were not good; 14,040. Company have 15,000 chaldron and 2,000 or 3,000 other waggons; large ones carry eight tons; use chaldron waggons for shipping purposes; can run them in same train as large waggons; use the large waggons at the iron works in North Yorkshire. Increases complement of waggons every year; have now orders out for waggons and locomotives that will cost about 120,000*l.* Unusual increase in consequence of a large number of new iron works; 14,041–14,049. As to complaint that in winter of 1860 the directors kept the furnaces short of coal and sent it to York for household purposes, because they could get 3*s.* a ton more; reads a letter from Captain O'Brien and witness's reply as to a complaint of Mr. Nicholas Wood, which fully explains course pursued by Stockton and Darlington railway; 14,060–14,065. Traffic on line gradually increasing, now send about 6,000,000 of tons of minerals along line; has increased from about 5,300,000 tons in 1859. Coal traffic has increased about one-half since 1859; 14,066–14,069. Reason why there are so many different rates upon the line arises from the peculiarity of the traffic; rates vary; not much difference in mileage rates charged for same description of coal; 14,070–14,076. Distance to which Stockton and Darlington send coal, and rate charged; 14,084–14,088. Would be no difficulty in publishing rates, or objection to let public inspect rate books. Rates are published now to a certain extent; notice of any alteration affecting traders is generally given; special rates given are not published; any trader under same circumstances would be put upon same footing; 14,089–14,097. Exclusive of the mineral traffic there is a great deal of traffic in pig-iron, iron bars, and

MacNay, Mr. Thomas—*cont.*
iron plates; not much inequality in the rates; iron-plates are generally higher; 14,098–14,101.

Mails. *See* Post Office.

Malcomson, Mr. William. (*Analysis of his Evidence.*)
Is chairman of several Irish railways, and director of four others; 3363–3366. Attention called particularly within last five years to Irish railways; present state not satisfactory to shareholders, but conceives public are fully convenienced; 3367, 3368. 3399. Suggests that Government should advance money at a low interest to those companies who can show an income beyond working expenses of the line; full discussion of this scheme, as to saving effected, interest to be paid, and whether the public would receive any benefit from such arrangement; 3369–3393. 3598–3606. 3610–3622. Railway companies would reduce charge if Government would make the advance; reduction would not be considerable; 3393–3395. 3421, 3422. Witness is connected with some railways which pay no dividend; Waterford and Limerick last paid 1 per cent.; fares on the line; 3396–3398. Public difficult to satisfy in matter of railway accommodation; 3400. Complaints made of want of facilities of going to and returning from one point in a day; thinks with third-class passengers it neither suits their convenience or wants; on short lines they can do so. Market tickets are issued at one-third fare; succeed well, but have not materially increased the receipts. Experiments made by issuing third-class return tickets, but abandoned as not being remunerative; 3401–3418. 3485–3490. Irish farmers do not use trains going less than from eight to ten miles from town; 3419, 3420. 3556–3559. All railways with which witness is connected have had loans from Exchequer Loan Commissioners; terms for which money lent, interest paid, and course pursued when instalments have to be paid; 3423–3437. There is a through booking system over Limerick and Waterford Railway with reference to England; 3438. Witness is connected with steamboats; to his interest to have a reduction of fares; 3439, 3440. Several new lines of railway in progress; reasons for constructing new lines when old ones seem unremunerative, that cattle and agricultural produce increase in value at least 5 per cent. by facilities which railways afford, &c. Landholders and others further benefited by a reduction of the rates; 3442–3448. 3494, 3495. If Government purchased railways, landholders, &c. would be willing to share loss consequent upon reduction of rates; 3449–3452. States that Mr. Ryan is partly incorrect in stating that by allowing a person with butter to travel free the traffic is driven into Waterford to the injury of Limerick; the arrangement was made in order to induce the farmer to sell his butter himself, thus doing away with intermediate party; was disappointed in the result as to number who availed themselves of it; 3453–3456. Very little local traffic between Limerick and Waterford; the great bulk of the Limerick goods traffic goes under what is called the through-rate system, either by Waterford or Dublin. Advantage lately in favour of Tipperary, as between Tipperary and Waterford difference is principally caused by terminal expenses; gives an example; 3457, 3458. Tipperary is competed with by several water routes to Waterford and to Dublin; there is also competition; 3459, 3460. Changes in the rates are left pretty much in hands of traffic managers; 3461, 3462. Cannot explain how impression has got abroad that rates are influenced to disadvantage of Limerick; 3463. 3525–3527. Has through booking rates with the London and North-western and South Wales railways; 3464–3467. Through-tickets are issued to Milford, or to London viâ Milford; 3468, 3469. Cattle traffic has been the best source of income; trade decreasing from scarcity of cattle. Present rates do not affect transmission, as railways carry nearly all the traffic; 3470–3474. There are slaughter-houses for pigs, but not for oxen, at Waterford; for last two years, dead meat, &c. has been carried to Milford for London; this traffic not so great as from Aberdeen, as butchers will not try it; 3475–3480. Has heard that animals are much bruised on the journey to London; not many fat cattle; principally store cattle which come through Waterford to be fattened in England; cattle less injured by steamer than by railway; 3475–3814. Names extensions applied for this session, and states number of miles; more than in any previous session; 3491–3493. New lines promoted generally by landed gentry, who, to a certain extent, find the capital; states course pursued by the contractors to raise money;

MALCOMSON, MR. WILLIAM—*cont.*
discussion as to the issue of "Lloyd's bonds;" 3495–3506. The reason coal is carried from Waterford to Tipperary more cheaply than from Limerick to Tipperary, is, that the mileage is longer to Waterford, and though there may be a difference in favour of port of Waterford, it is done more to secure the traffic; 3507–3509. Through rates from Limerick and Tipperary do not give a preference to Waterford. How rate divided between shipowner and railway company; 3510–3523. Difficult to say what the fixed terminals are at Waterford; 3524. Thinks no hardship arises from the fact that it takes a third-class passenger four days to get from Ennis to Dublin and back; 3528–3530. Delay at Limerick junction caused by Post-office interference; no perceptible difference in the traffic in consequence; 3531–3536. Considerable decrease in the receipts of Waterford and Limerick Railway Company in year 1863; rates were lower at Foynes end of line, but raised to equalize over whole system; result satisfactory to company; Limerick and Foynes does not pay a dividend; decrease attributable to trade falling off; 3537–3546. Increase in Waterford and Kilkenny line from having conveniences the public by arranging trains; hands in statement showing per-centage of third-class passengers on six lines; discussion thereupon; 3548–3554. Majority of shareholders in Waterford and Limerick line are Irish; in Waterford and Kilkeuny, English; 3555. Proposals made to send timber, if the rates were low, to a shipping port. Has universal traffic from Birdshill on Castlecomnel line; 3560, 3561. Bianconi's cars do not run in competition with witness's lines in same district; there are some in neighbourhood of Bruff. Believes that the railway carries all minerals produced in that district; more proposals made to company to bring back coal for smelting purposes than to carry increased quantities of minerals; the trucks now bring back Indian corn and breadstuffs; 3562–3568, 3609. Quantity of coal, though considerable, not increasing, as there are very few manufactories in district; some small ones are being set up. Water-power conveniences for manufactures witness is engaged in, are quite as important as railways, and cannot be competed with. Uses both water and steam power; 3569–3573. Clonmel is the most inland town, in which witness has established flax manufactories; 3574, 3575. Decrease in coal traffic on Waterford and Limerick line in 1863 as compared with 1861; receipts show that railway benefited by the traffic; 3576–3578. Opinion of board that reduction of rates would not be followed by such an increase of traffic as would make up loss; 3579–3585. Application only made from Glasgow for special rates for sugar; 3586, 3587. Two years ago the cattle traffic was increasing; a general falling off since. The rates were advanced three years ago 10 per cent. on the Waterford and Limerick and Great Southern and Western lines; 3588–3592. Local rates sufficiently low to ensure bulk of traffic; 3593, 3594. By amalgamating the small lines some expense of management would be saved; shareholders averse to amalgamation. Have been negotiations for amalgamating Waterford and Limerick with Great Southern and Western; 3595–3597. Government advanced a large sum of money to complete Dublin and Galway railway. Does not know what dividend is paid by Dublin and Kingston railway; 3607, 3608. Would be glad to sell railways at 50 per cent. of original cost; thinks Great Southern and Western would not; 3623, 3624. Could carry more passengers without additional expense; thinks working expenses of goods traffic do not increase beyond a certain proportion. Goods trains are not heavy in consequence of indifferent gradients and curves; they are more gather-up trains, conveniencing stations along the line; 3625–3631. Does not think with present gradients that coal could be carried for ½*d.* per ton; is connected with a German company which carries at ½*d.* per ton, the gradients being good. Gradients on Limerick and Waterford line; 3632–3636. On English lines coal rate not more than ½*d.*, companies finding the waggons; they are not found on the continent; on Cologne and Minden line, coals are carried into Holland at ½*d.* per ton at a profit; in Ireland the rate is more than 1*d.*; from Waterford to Clonmel exactly 1*d.*, there being river competition; 3636–3645. No special rate to individuals; 3646, 3647.

Letter from witness on Irish railways; *Apps.* DQ and DZ.

MALLET, MR. ROBERT. (*Analysis of his Evidence.*)

Is a member of the Institute of Civil Engineers, London, and Fellow of several scientific societies; also Vice-President of the Institute of Civil Engineers of Ireland; 2134–2136. Has been long resident in Ireland, and

MALLET, MR. ROBERT—*cont.*
from 1836 to 1856 concerned in all the large railway and other works, and is well acquainted with the industrial elements of Ireland generally; 2137–2139. Thinks railways are of more importance to Ireland than to any other part of British dominions; reasons; 2140. If coal could be obtained for 17*s.* per ton, it would be more economical than peat; 2141–2143. Peat is scarcely available for locomotive engines; states the best way of obtaining it; 2144, 2145. Limit of water power of Ireland; relative cost of water and steam power. Is very important to get coal into Ireland at a much cheaper rate; by establishing steam colliers, and low fares on railways, coal could be supplied at depôts along the stations for 10*s.* or 12*s.* per ton. The price at the quay at Dublin varies from 14*s.* or 15*s.* up to 22*s.* It can be delivered at one railway communicating with another at the port, but then cost of taking it along the railway must be added. Dissents from opinions of three eminent engineers that coal could not be carried profitably upon Irish railways at ¼*d.* per mile with back freights, and ½*d.* if they came back empty, provided the run was 100 miles or more. Coals are carried in England at 1*d.* per ton, and pay a profit of 200 or 300 per cent.; the present price into the interior exceeds what it ought to be; 2146–2160. 2172–2177. 2181–2183. A large proportion of the cost of coal in Dublin is occasioned by want of steam colliers and mechanical coal-whipping; 2162–2164. Thinks that by proper arrangement, back carriage could be obtained for the coal trucks; discussion thereupon; 2165–2171. Will supply figures showing working cost of railways per ton per mile; 2278–2280. Goods waggons carry from 5 to 10 tons, they should be quite as large or larger than those on the Great Northern; 2284, 2285. Describes particularly the class of manufacturing industry to which coal is chiefly applied; 2286–2291. Enumerates certain materials existing in Ireland, which might be obtained as back freight, if coal could be carried at ¼*d.* per mile. Cause of failure of attempt to smelt iron with turf; 2191–2215. Trusts that the Irish Railway Act requiring all tramways to be of same gauge will be repealed. A permissive power to construct railways on a gauge not exceeding 3 feet would be of importance in many of the poor districts. For quarry purposes a gauge of not more than two feet would be desirable; 2216–2218. 2225. Would make railways in connexion with existing railways through a poor district as feeders; 2219. Having a narrower gauge for branch lines would involve a break of gauge, but that should not prevent its adoption in certain remote districts; 2221–2224. Discussion of the narrow gauge, and cost of transhipping minerals and coals from these to the ordinary gauge; 2225–2236. Additional lines are required in Ireland upon the broad gauge; reasons; 2237. Cattle trade of Ireland with reference to the improved means of transport; sufferings of the animals upon railway and in the boats, and proposed remedy; 2238–2241. Witness cannot say whether cattle fares are too high, but is clear that all the passenger and mineral rates should be considerably reduced; 2242, 2243. As to connexion between dairy farms in Ireland and the railway system; description of a patent for concentrating milk in order that it may be sent long distances by railway. Discussion whether a traffic trade in milk could be profitably established in Ireland; 2244–2249. Thinks Legislature should compel railway companies to try the experiment of reducing the tolls, as they are not likely to do so themselves; states how control should be exercised, and that guarantee should be given to make up temporary loss. Discussion of this scheme; 2250–2281. 2283–2290. 2295, 2296. First and second class fares should be reduced at least one third; they would then be on a level with fares in Prussia, Germany, and France; 2282. Diminution of the feeling (prevalent some years ago) that the absence of effective industry in Ireland results from the habit of the people relying upon the State; 2291–2294. Possibly if all the railways were amalgamated into one system, or into two or three large groups, capitalists might be found willing to lease the lines for a term of years, trusting to make them profitable by better management and an increased traffic from reduction of fares; 2297. 2301–2304. Witness thinks it very likely that if Government became proprietors of all the Irish railways, they could get a great company to work and manage the lines upon certain conditions; 2298. A great portion of the capital employed in making Irish railways is raised upon debentures, and it would be of great advantage to have the Government responsible for the interest of the difference between a high and low rate; 2299, 2300. A reduction of fares and uniform rates for goods and passengers would prove advantageous; 2305–2307.

MANAGEMENT OF RAILWAYS:

Railway and Canal Traffic Act, 1854, (17 & 18 Vict. c. 31.), was intended to prevent obstructions and conflicts and to promote interchange of traffic between companies, but has failed in its object, at least in Scotland; *Lees* 9284–9287. Instance given, which occurred at Perth, where, from a dispute between the Scottish Central and Scottish North-eastern Railway Companies, the public were for a time put to enormous inconvenience, though the companies' Acts respectively fully justified their proceedings. Necessity for some tribunal with powers to settle provisionally but summarily, by arbitration or otherwise, such cases immediately they arise, leaving the companies to obtain a final decision in due course; *ib.* 9288–9313. 9326–9346. 9351–9359. The above difficulty was clearly foreseen and pointed out whilst the Bills were before Parliament; *ib.* 9292–9296. 9347–9350. After some days the matter was arranged by the friendly intervention of another railway company; witness believes it would have been more quickly decided by such a tribunal as he suggests; *ib.* 9314–9325. Court of Session has summary jurisdiction, but could not have acted in this instance; *ib.* 9360, 9361. Further particulars and discussion relative to above dispute; *ib.* 9362–9371. A third company endeavoured to intervene and act for the benefit of the public, but failed; *ib.* 9375–9377. Act of 1854 intended to meet such a case as this, but was evaded; *ib.* 9381–9384. Development of witness's views as to proposed tribunal; *ib.* 9378–9380; should have powers to decide as to local and through-rates; if companies refused to grant the latter where necessary, should have power to enforce them; *ib.* 9385, *et seq.* Legislation having failed in its objects, Parliament should reconsider and amend it; *ib.* 9434–9437. Another instance cited of inconvenience to the public and injury to one company for some years through other companies refusing to make proper traffic arrangements, in opposition to the spirit of the Act of 1854; this again would have been a case for interference of suggested tribunal; *ib.* 9446–9455. If such a tribunal established its powers should be clearly defined by Act of Parliament; *ib.* 9456. Scotch companies have not resorted to Act of 1854, as they think that hopeless litigation would ensue; *ib.* 9461–9463. Witness, in fact, thinks the clearing-house arrangements so convenient, that he would carry them out by Act of Parliament; *ib.* 9464. A further case quoted, in which one company owning two routes was able to direct traffic over the longer one to the injury of other companies and the inconvenience of the public; *ib.* 9465. Another, where a company closed a district against the introduction of the mineral resources of a neighbouring line; another, where advantageous arrangements were made with one company and refused to another; Act of 1854 does not meet any of these; *ib.* 9468. Memorandum given in, stating in detail what ought to be done in respect to these matters; *ib.* 9469.

Tribunal above suggested should consist of three commissioners, each one to hear cases singly, with right of appeal to the whole number if decision unsatisfactory; *ib.* 9470–9474. Act of 1854 should be amended; amending Act to detail very specifically the powers to be entrusted to the commissioners; *ib.* 9475–9479. Decisions should be speedy and inexpensive; *ib.* 9483. Commissioners should be empowered to order additional trains if the public needs required it (even though they might not pay), but not enlargement of stations; *ib.* 9501–9516. Companies now not unfrequently withhold trains necessary for the public convenience; *ib.* 9517–9531. Powers would be somewhat analogous to those exercised with regard to emigrant ships; *ib.* 9486–9488. Tribunal would benefit the railways as well as the public; *ib.* 9489–9492.

Witness would not altogether prohibit colliery owners or others interested in the communication sitting as directors; *Wooler* 9674–9676.

Description of the parties who have the chief management of a railway; *Clarke* 12,558. Frequent conferences of managers take place to arrange rates and all other necessary matters, at which applications for reductions of rates, complaints, &c. are entertained; general manager revises decisions of these bodies, subject to directors' approval, and there is no further appeal whilst Parliamentary powers are not exceeded; *ib.* 12,559–12,563. Principles upon which classification of goods are based; *ib.* 12,564–12,568. Interests of the public and of companies being identical, no Board of Trade regulations would enforce more convenience for the public than is already given; *ib.* 12,843.

Railway reformers say that managers are apt to be too quiet, and stand still; witness's opinion is rather the

MANAGEMENT OF RAILWAYS—*cont.*

opposite; *Hawkshaw* 14,539, 14,540. Public have more power in influencing management here than abroad; *ib.* 14,541–14,544.

Unwise parsimony when companies are not prospering; *Harrison* 15,327–15,330. Amalgamation is generally productive of improved management; *ib.* 15,343, 15,344.

Railways should always be managed by parties having a direct interest in the profits; *Bidder* 16,784.

One defect in English management is "that he who "does much is allowed no more than he who does "little." Servants should have a pecuniary interest in increase of profits; *Chadwick* 17,246. By unity of management, witness believes that a saving of 24 per cent. might be effected; *ib.* 17,270. Witness believes that more defaults take place than people in general are aware of under present management; *ib.* 17,288. Examples of advantages of unity of management; *ib.* 17,296. One great disadvantage of present disunity is the time wasted in "labour of verification;" instances cited, and argument in proof. Local inquiries needed on this subject; *ib. Addendum, page* 853, 854. Witness, while coinciding with Mr. Galt on many points, cannot agree with him that any existing directorates would be the most eligible parties for carrying out railway reform; *ib. page* 855. Objections to reform on the score of Government patronage answered. Competitive examinations for appointments; *ib. page* 856.

Statement of Mr. Spence (Lord Ashtown's colliery agent), showing some of the disadvantages that senders and consumers of minerals have to contend with in consequence of the regulations of railway companies; with some suggestions for the removal of excessive charges, &c.; *App.* O.

See also COST OF CONVEYANCE. SIGNALS.

MANCHESTER:

A new line required from Liverpool to; *Clark* 48.

See also ROCHDALE.

MANCHESTER, SHEFFIELD, AND LINCOLNSHIRE RAILWAY:

Complaints from Lincoln of unequal and unfair charges on; *Gentel* 9185 *et seq.*

MANUFACTURES:

Present state of railway communication is a great hindrance to the distribution of the various manufactures over the country; *Chadwick* 17,260–17,265.

MARKET TICKETS:

Issued on Limerick lines at reduced fares; *Malcomson* 3403. Return tickets are issued between market towns on Irish Great Midland; *Ennis* 4086. None issued on Irish Great Southern and Western; *Haughton* 4490. 4594. Answer well on Dublin and Drogheda line; *Murland* 4767. Are issued for all classes on Belfast and Coleraine line at single fares; large numbers use them; *Lanyon* 6068, 6069. 6151. 6159.

Are issued on Belfast and Northern Counties lines at single fares; *Cotton* 7825; and on Irish North-western line; *Shaw, T.* 8305. 8317–8321.

Are issued by Great Northern Company in Lincolnshire; they induce people to travel; *Clarke* 12,883–12,885.

MATHEWS, MR. WILLIAM. (*Analysis of his Evidence.*)

Is proprietor of Corbyn's Hall Iron Works at Kingswinford, in South Staffordshire, and also connected with large ironworks at Clough Hall in North Staffordshire; 10,444–10,446. Names railways and canals with which witness has been connected. Is familiar with process by which all heavy traffic of a district like South Staffordshire is carried on, both by canals and railways; 10,447–10,449. Favourable rates given to new districts, prejudicial to interests of North and South Staffordshire. States that rates per ton per mile for pig and bar iron, out of South Staffordshire to Liverpool or Manchester, more than double those charged between Middlesborough and South or North Staffordshire on London and North-western. Hands in table showing comparative rates at which iron is carried from several districts by which North and South Staffordshire are affected; 10,450. North and South Staffordshire ironmasters seriously affected by favourable rates given to northern ironmasters. Advantages given to Middlesborough traders by railway; they have already a cheap and favourable sea rate; if rates were not low, they would not get so much traffic. Rates per mile should be uniform throughout district. Quotes rates for pig iron from Middlesborough district, into South Staffordshire, and from North and South Staffordshire to Liverpool and Manchester, which show that discrepancies in rates

MATHEWS, MR. WILLIAM—*cont.*
charged are greater for short distances. Should have same advantages. Does not know whether rates quoted include a terminal charge; if charge the same, rate is higher upon the short distance; 10,451–10,457. 10,498, 10,499. 10,526–10,528. 10,537, 10,538. Route that Middlesborough traffic comes by into South Staffordshire. If rates were raised to higher standard, it might force traffic upon some other line; 10,458–10,460. Complains that companies refuse to carry out the short rates except upon their own terms, because they say it is not profitable. Should not be allowed to exclude the less profitable part of traffic, and carry on only the more profitable. Gives instances where they greatly exceed the maximum allowed by the Act. Companies say the difference is caused by the terminals; discussion as to amount charged for terminals; how the words in Act "a reasonable charge for terminals not exceeding "9*d.* per ton" are interpreted. Question as to interpretation has never been tried at law. Was a conference three or four years ago between the chairman of committees, the chairman of railway companies, and freighters, with a view to endeavouring to frame a clause which should control this charge of 9*d.* per ton, but they differed so much in opinion that they could not do so. Delivers in table showing rates for short distances; 10,462–10,477. 10,484–10,488. Does not cost companies half 9*d.* per ton at each end. Terminal varies very much in table delivered in. Can only arrive at terminals charge by deducting parliamentary rate from general charge, and considering residue as the terminal; gives several instances showing Parliamentary rates and terminals calculated in this way. Inference is that where parliamentary rates are unprofitable, they are supplemented by an extravagant terminal charge at each end. Cannot suggest a remedy; 10,478–10,483. 10,493–10,497. Difficult to say what ought to compose the terminal charge. Some indifferent party should decide what this expense should be. Board of Trade should be the tribunal to whom the freighter might appeal. Had a dispute with North Staffordshire Company, who charged more than 9*d.* per ton. Witness refused to pay, and company threatened to stop the trucks until rate paid beforehand; offered to have dispute settled by law, but company declined, and matter ended in a sort of drawn battle; has been since charged a lower rate; 10,489–10,492. 10,525. Public should not complain however low companies reduced their rates, provided same reduction made over whole system; this might possibly prevent companies making any reduction. They should not be allowed to make profit out of a district where there is no competition in order to gain traffic from a district where competition exists. Would not give an advantage to any district already possessing the advantage of sea or water communication; 10,500–10,515. 10,529, 10,530. 10,536. 10,539, 10,540. Would not go to extent of compelling one company to reduce its rate, if another company made a reduction. Could not propound a scheme for remedying the existing evils. Contends that as railways have monopolized the whole carrying trade of the country, equal facilities should be afforded, and that because a certain district suffers from natural inequalities there is no reason it should suffer from artificial inequalities; 10,516–10,524. The law now fixes a uniform maximum rate for each railway, but few act up to them, except upon short distances; would leave companies in the enjoyment of their present rights as prescribed by Act of Parliament; 10,529–10,535. Thinks rule is in the case of two companies amalgamating, and one having a lower rate, for them to adopt the lower; 10,541–10,544. Would be very desirable that notice should be given of any alteration of the rates; a month's notice is generally given; 10,545–10,548. Upon application companies send a list of rates; no security that those given are the same as charged to other individuals; 10,549–10,552. Would be a great advantage to the public if companies were compelled to publish rates. Is objectionable to give an advantage to those sending large quantities; if given the rates should also be published; discussion thereupon; 10,553–10,576. Is in favour of competition. Mentions a case where there was a clause inserted in a bill to effect that Midland, London and North-western, and Great Western should charge same rates, and not promote any other object without consent of all; this combination was in a great measure broken down by contractors, to the benefit of the public. Although competition has generally ended in combination, the agreed rate has always been lower. Cannot give an opinion as to whether charges should be kept down by active competition caused by creating new lines of railways. Has no doubt that railways are managed with ability as regards the interest of the shareholders; 10,581–10,586. Good deal in ironmasters' report that witness should not, perhaps, concur in. Agrees that terminal charge should be separated from the mileage rate; but does not concur in the classification. Thinks that terminal charge should be simply for taking trucks into siding of freighter and bringing them out again; if railway performs other duties, such as loading and unloading, &c., they have a right to charge for that over and above the 9*d.* per ton. Thinks it would be possible to class these extra charges and fix public rates for them; might be left to what may be called competition between railway company and general public. Why rates for transmission of trucks into siding and out of it should be defined. If parties could not agree, freighter would have to take the goods at his own cost; 10,587–10,598. A difference should be made in the terminal charge for such places as London, Liverpool, &c. Has not considered question as to having a uniform mileage rate where goods are forwarded on by a special railway; 10,599–10,602.

See also CAWKWELL. GRIERSON.

MELDON, MR. JAMES DILLON. (*Analysis of his Evidence.*)
Is a solicitor in Dublin and a large landowner in Galway; 6732–6734. Is in favour of Government taking all the railways and working them by a board of commissioners. Has prepared a statement showing number of lines, their average length, and number of separate boards of directors, solicitors, engineers, and secretaries. Remuneration paid to directors. A board sitting in Dublin, consisting of three intelligent business-like men, would be able to manage the railways; vast saving of expense would be effected by amalgamation and by traffic being fairly developed. Inconvenience that arises from want of unity of action between companies; 6735, 6736. 6747–6751. If fares were reduced one half, witness would be able to send about 3,000 tons each year of agricultural produce to Dublin, and example would soon be followed by the farmers. Trucks could take back manure. Uses a good deal of hay in Dublin, cannot have it from Galway owing to high rates. Could also send large quantities of turnips and mangold if rates were about 5*s.* or 6*s.* a ton. Same charge made by railway whether manure worth 3*s.* 6*d.* per ton, or guano worth 12*l.* per ton. Not one-twentieth part of the cattle at Ballinasloe fair are brought by railway, in consequence of high rates and insufficiency of rolling stock. If railways were amalgamated, rolling stock could be borrowed from another line in times of pressure. Companies do not now borrow from each other. If rates were reduced one half, would carry all the cattle of the country. Lean cattle sent to Ballinasloe fair are afterwards taken to Leinster and England to be fattened. Preferable to send them by railway even for a distance of 25 miles; 6737–6746. Reasons why it is hopeless to expect companies will amalgamate of themselves. Serious inconvenience for want of amalgamation of line between Dublin and Belfast. Relates an incident that occurred upon that railway three years ago. Same interest would not be opposed to proposition for selling railways to Government; matters would be in the hands of the proprietors; 6747–6755. Large companies whose preference and ordinary stock yield no return would be willing to sell at prices which fairly represent its depreciative value. How this could be done without cost to the Government. Would pay them a shade more than the market value; 6756, 6757. Discussion as to whether companies would hold back with hope of getting more if purchasing the railways were a matter of bargain between Government and individuals, and not compulsory. Might be necessary to pass an Act providing that majority of shareholders at a public meeting should bind the minority. How Government should arrive at value of shares; should be liberal. Having regard to enormous saving effected in management, thinks Chancellor of Exchequer would have a very large surplus at end of year, even out of present receipts, but under new management expects receipts would double; 6758–6766. 6784. Would require special legislation to meet case of those companies who refuse to come into Government proposal, and throw impediments in the way of traffic; 6767–6770. Power of accepting Government proposal rests with ordinary shareholders, but in some cases the consent of preference shareholders must be obtained; 6771–6781. If Irish railways in hands of one company, there would be some little difficulty as to extensions; how difficulty might be got over; 6782, 6783. How value should be determined in the case of lines paying no dividends; many would pay as soon as Government took them. Thinks Government would act fairly and liberally with the shareholders. Terms upon which they would be willing to sell. Present earning

MELDON, MR. JAMES DILLON—*cont.*
eaten away by salaries; 6789–6791. Shareholders have not the power to force directors to amalgamate; might turn them out and elect others; have never stopped their money; doing so would soon cause them to retire. Shareholders hold their half-yearly meetings, but directors always manage to secure sufficient proxies to control meeting; 6792–6798. A great deal of Great Southern and Western and of the Midland capital is held by English capitalists who will not invest in small lines; 6799, 6800. Does not know salaries of the 100 engineers employed on various lines in Ireland. A return of all paid officers could be easily obtained; 6801.

MERCHANTS:
Memorial of, and others interested in the commerce of London, to the chairman and directors of railway companies connected with the metropolis; *App.* CQ.

MIDDLESBOROUGH IRON DISTRICT:
Complaint by Staffordshire ironmasters that rates from, are unequal and unfair; *Williams* 10,115 *et seq.; Mathews* 10,444 *et seq.*
Explanations in answer to the above; *Cawkwell* 11,657 *et seq.; Grierson* 11,810 *et seq.; Morris* 14,117 *et seq.*

MIDLAND RAILWAY:
Unfair and unequal rates charged by company, and occasional extraordinary delay, severely felt by tradesmen at Derby; *Cox* 8575 *et seq.; Renals* 8684 *et seq.; Nicholson* 8796–8798; *Wheeldon* 8863 *et seq.;* witness's business seriously interfered with by them; *Renals* 8711. Remonstrances have been made, but ineffectually; *Cox* 8585. 8654. Effectually in one instance; *Renals* 8697, 8698. Injurious effects of delays on branch lines of company; *Cox* 8665–8669. Rates raised without notice; *Wheeldon* 8922. Instances of unequal rates charged by company; delays (especially where parties use their own trucks), &c., at Nottingham; *Hutchinson* 9723 *et seq.;* and of restricting number of dealers whom they allow to send coals into their yard; *ib.* 9772–9777; *Brentnall* 9824–9826.
Denial of charges of favouritism brought against company; *Allport* 12,362. All parties in same district get same rates; *ib.* 12,363–12,365. Correction of errors made in tables of rates given in by Mr. Clark; *ib.* 12,365, 12,366. Company are not carriers between Liverpool and Derby, and cannot, therefore, charge the exorbitant rates stated; *ib.* 12,367. As to complaints against company for unequal rates, they consider that so long as they are kept within the Parliamentary maximum, no place has a right to complain because another gets a lower rate, the object of the company being in each case to make a profit. Answers to charges of various witnesses as to classification of goods, parcels rates, rates on travellers' patterns, &c.; *ib.* 12,379–12,412. Company's rates on glass, though complained of, are very reasonable; *ib.* 12,413. In answer to Mr. Sturge, as to railway facilities to King's Norton, witness states that there is great difficulty in obtaining land, or the company would gladly encourage the building of suburban residences there; the price of land is excessive; *ib.* 12,415–12,421. Although company charge a very light terminal at Glou- they are at considerable expense there; *ib.* 12,421. as to price of coke at Birmingham (said to be by railway), that there is no coal near suitable facture; company carry it from Derbyshire at er mile; *ib.* 12,421. Answer to complaint correspondence in trains; *ib.* 12,421. As er companies, it is not true that jealousy arrangements for correspondence of 426. 12,434. Particulars of some nts for meeting trains of other 14,429–14,432. Company go commodating the greater num- rovision for the larger traffic; f trains are fixed solely with

MIDLAND RAILWAY—*cont.*
reference to the convenience of the public; *ib.* 12,433. It cannot be helped that sometimes a train is gone when another arrives which is supposed to meet it (this is generally the case with a certain train from Leeds to Derby); it is caused by the fluctuations of numbers, the quantity of passengers' luggage, &c., and could only be remedied by considerably delaying the main trains, which is not desirable; *ib.* 12,436–12,439. Discussion whether the case of the Lichfield train above named could not be remedied; *ib.* 12,441–12,444.
Explanation as to Mr. Cox's statements regarding unequal rates, &c. In some instances the amount of traffic is utterly insignificant, and in others Mr. Cox is mistaken; *Allport* 12,449–12,453. Further, some of the rates in question include collection and delivery, whilst others do not; this makes an important difference; *ib.* 12,454. Correction of mistaken figures quoted by Mr. Cox regarding lead rates between Ambergate and Derby, Ambergate and London, and Matlock and London; rates quoted are completely wrong; *ib.* 12,453–12,460. Reasons why rates on coke cannot be fairly compared with lead; *ib.* 12,461, 12,462. In comparing rates from Stamford to London with those from Stamford to Derby, Mr. Cox (as in a previous case) falls into the error of taking the longer instead of the shorter route; *ib.* 12,463. Denial to statement that company have purchased canal; it is perfectly independent of any railway; *ib.* 12,462–12,464. Tables given in to disprove, by comparison with other companies, the charge that rates are high at Derby in consequence of its being (as alleged) the monopoly of Midland Company; *ib.* 12,465, 12,466. 12,483. Neither is traffic of Chesterfield (as stated) monopolized by company; they get very little of the trade thence from London; *ib.* 12,483. London and North-western Comp an have quite one-half of the Derby traffic, which the Midland Company carry for them, and witness cannot hear of any complaints that this traffic is treated differently from their own; *ib.* 12,484–12,486. Answer to Mr. Cox's complaint of delay, that he, in fact, delayed company's waggons, and although they had to pay demurrage to another company in consequence, Mr. Cox refuses to repay them; *ib.* 12,477–12,480. Witness is not aware of any complaints from Derby of demurrage charges; *ib.* 12,481. Answer to complaint that in consequence of the "Midland railway monopoly," Derby is not progressing; statement to show that this is not the case; that Derby, like Coventry, has suffered from loss of the silk trade, but that population and trade generally have largely increased; several of the principal manufacturers, &c., would be prepared to come forward and state this; *ib.* 12,487, 12,488. The gentlemen who gave evidence before the Commission were not fair representatives of the town; *ib.* 12,492. Tables given in showing increase of population as compared with other towns, and increase in gross rentals; *ib.* 12,494. Reasons for raising rates on silk at Derby and lowering them at Nottingham; *ib.* 12,488–12,491. Justification of company's charges on silk; *ib.* 12,492–12,494. Answer to Mr. Wheeldon's complaints; to many of the places named by him company are not carriers, and therefore have no control over the rates; where they are carriers the rates are very favourable, and will bear comparison with any in the kingdom. The object of raising the rates on grain from Burton to Derby was to rectify inequalities; *ib.* 12,495–12,501. Answer to complaints from Nottingham regarding their management of the coal traffic; *ib.* 12,502–12,520. From 1850 to 1865, with but a slightly increased mileage, company's traffic in goods and minerals rose from 2,479,000 tons to 9,169,000 tons; *ib.* 12,522. The inconvenience and loss to company by break of gauge at Gloucester and Bristol is so great, that they have offered to contribute largely towards laying down narrow gauge; *ib.* 12,530–12,535. Company has been amongst the first to carry out through booking extensively; *ib.* 12,547.
As to supply of coal waggons. Answers to complaints from Wingerworth colliery, regarding alleged favouritism and delay on part of company; *Allport* 13,634 *et seq.* Company's waggons earn more money than those of most railways; *ib.* 13,655, 13,656. Answer to complaint as to want of through arrangements; *ib.* 13,723. Answer to Mr. Wheeldon's complaints as to corn rates between Liverpool and Derby; *ib.* 13,742–13,744. Through arrangements; *ib.* 13,762–13,777. Reduction of fares, and satisfactory results; *ib.* 13,777–13,781. Enormous increase of mineral traffic, and development of district; *ib.* 13,790. With regard to interchange of traffic, trains are fixed with a view to the interests both of the companies and the public; discussion as to arrangement which causes present difficulty of getting from Grantham to Lincoln; *ib.* 13,803–13,810.

MIDLAND RAILWAY—*cont.*

Complaint against company by brewers of Burton-upon-Trent for granting favouring rates, for abuses in terminal charges, and for charging unequal rates; *Cosgrove* 15,674 *et seq.* [*For detail, see* RATES AND CHARGES, &c., 2. COSGROVE.] Witness finds it difficult to get explicit answers to the complaints made to company with regard to the London rates; lengthened correspondence read to prove this; *Cosgrove* 15,848. Witness cannot propose remedies, as company will not answer him; *ib.* 15,849.

See also ALLPORT. NOTTINGHAM. RATES AND CHARGES, &c., 5. SALT TRADE.

MILEAGE OF RAILWAYS:

In 1844, under 2,000 miles; in 1865, over 13,000 miles; *Galt* 7342. 7344.

Average cost per mile travelled is about 2*s.* 6*d.*; *Clarke* 12,927, 12,928.

Gross average earnings per mile 3*s.* 11*d.* for passenger trains, and 4*s.* 6*d.* to 5*s.* for goods trains; *Allport* 16,955. Receipts in 1864 were 60,000*l.* to 70,000*l.* for passengers, and 1,600,000*l.* for goods and minerals; railway approaching position of being no longer a passenger line under Act, and therefore not bound by parliamentary fare, but would never discontinue carrying 3rd-class passengers at 1*d.* per mile; *ib.* 16,961–16,963.

Average earnings of passenger trains in the United Kingdom 56·56*d.* per mile, of goods trains 70·31*d.*; *Gregory* 17,638.

Length of Irish lines and capital authorized, together with the length of such lines opened for traffic at 31st December 1864; *App.* AJ. Similar return to the preceding; *App.* AK.

MILEAGE RATE. *See* RATES AND CHARGES, 5.

MILEY, MR. JOHN:

Statement from, in regard to the emission of smoke from locomotives; *App.* Y.

MILITARY STORES:

Highly important that War Department should have the means of promptly forwarding stores wherever needed, but South-eastern Company will not undertake delivery beyond their own line. To forward stores to Portsmouth for Devonport, for instance, therefore (although there is direct railway communication from Woolwich), carriers have to be employed, who cart the goods to Nine Elms, and forward them by South-western railway. Sent by this means, a gun would be delivered in 12 or 14 hours. If sent direct by South-eastern, there would be no guarantee as to time; letter sent from General Manager given in stating this; *Gordon* 13,560–13,574. 13,593–13,596. Having to employ carriers, Government lose the benefit of the provision compelling railways to carry stores at a certain rate; *ib.* 13,575. At present railways will only carry gunpowder and combustibles at certain times; great inconvenience of this, also of such matters passing unnecessarily through the metropolis; Government should have power to compel their carrying it at any moment; *ib.* 13,579–13,586. 13,597. Inconvenience that South-eastern and South-western Companies have no trucks capable of carrying over 8 tons; heavy guns have consequently to go by sea. North-western and Great Northern have each 30-ton trucks; *ib.* 13,587–13,591. Companies probably would not object to War Department providing their own; *ib.* 13,592. Railway taking charge of stores should be compelled to guarantee expeditious delivery, even though place of delivery be beyond their own limits; *ib.* 13,599–13,609. 13,620. Government stores should have preference over ordinary traffic; *ib.* 13,615. Conveyance of gunpowder; *ib.* 13,616, 13,617. Stores for life-boats are frequently required in great haste; exorbitant charge for their conveyance by rail, though less dangerous than oil or turpentine; *ib.* 13,621–13,627. Gunpowder is charged 4*d.* per ton per mile, and never less than two tons charged for, however small the quantity sent; copy of a contract between War Department and railway companies given in; *ib.* 13,628. New classification of rates for combustibles required; such a classification suggested; *ib.* 13,629. Witness is not aware that companies would object to this; *ib.* 13,630. Inconvenient length of time occupied in conveying a gun by railway; *ib.* 13,631–13,633.

South-eastern Company never refused to carry stores through, but having no railway at Portsmouth they cannot deliver them the same day or the day following that upon which they receive them at Woolwich. There would be no difficulty in making through arrangements for Government stores if required, but they have never yet been officially requested to do so; *Eborall* 16,087–16,101.

MILTON, MR.:

Statement of Mr. Milton, of the War Office, as to the payment to railway companies for the conveyance of troops; *App.* BX.

MINERAL PRODUCTS, IRELAND:

Mineral trade would be greatly stimulated by a reduction of rates; *Sullivan* 1931, 1932. Produce of mines might be trebled if rates reduced; *ib.* 1950. If coal could be had at a moderate price the ore would be made into oxide; most of the ochre found is now allowed to run into the river; *ib.* 1972–1974. By having a railway wharf at Limerick, ore could be sent at a reduction of one third; *ib.* 1986. If southern railways were amalgamated, it would pay to make a branch to the mines; *ib.* 1988. Sulphur export trade; *ib.* 1933. 1995. Supply of sulphur from Sicily has greatly diminished; *ib.* 2007. Mines not worked in consequence of high rates; *ib.* 2011–2015. Coal trade may be expected to increase greatly in the next four or five years; *ib.* 2084. In order to develop some mines, the Great Midland Company some time ago agreed to take minerals at an exceptionally low rate, but from difficulty in getting to railway they were not sent; *Ennis* 4198–4202. Mineral traffic in Ireland ought to be quadrupled; if rates reduced one-half, traffic should be doubled; wherever low rates are introduced a fresh source of traffic springs up; *Bidder* 4330–4332. Principal mines in Ireland are copper and sulphur; *Murland* 4920. Large decrease in last half-year's working of iron ore from unsatisfactory state of railway arrangements; *Barrington* 7280.

MINERAL TRAINS. *See* GOODS TRAINS.

MORRIS, MR. PERCY. (*Analysis of his Evidence.*)

Is general manager of North Staffordshire Railway and Canal Company; 14,102. Produces and explains map of system; 146½ miles opened, 40 more in course of construction; 100 miles of the canal belong to company; 14,103–14,106. States peculiarity of the line; 14,107, 14,108. Average gross rate received on local mineral traffic is only 1*s.* 6*d.* per ton, including finding waggons, locomotive power, road toll, and terminal services; where traffic goes beyond North Staffordshire system, 1*s.* 9*d.*; 14,109. One-fourth of engines run only about 24 miles a day, and remainder do not make as good mileage as those of the large companies, which average about 100 miles a day; 14,110–14,115. Average cost of locomotive power under 10*d.* per mile; 14,116. Has read Mr. Mathews, and Mr. Hollins' complaints; points out where Mr. Mathews is in error, and hands in table of rates from Stoke to various important districts; 14,117–14,119. Respecting Mr. Mathews' complaint that different rates are given from North Staffordshire than from Middlesborough to North Staffordshire (about 22 miles) witness states that rate quoted (¼*d.* a mile) is for pig iron, which, at the request of iron melters of North Staffordshire, was made exceptionally low in order that they might compete with other markets in the production of bar iron; would not be remunerative to charge all traffic at same rate. Witness's argument is, that as long as charges are within parliamentary rates no one has a right to complain if rates are lower upon one part of line than upon another. Mr. Mathews wrong in stating that rate from South Staffordshire to Stoke is 2*d.*; is only 1¼*d.* including terminals, and 1*d.* without; mistake in a great measure arises from a misconstruction of the tolls company are really entitled to charge; 14,120–14,127. Same rates for all descriptions of goods are always charged in both directions between any two places; 14,128, 14,129. As to complaint that North Staffordshire charges are excessive, witness states they are invariably within parliamentary maximum, and that company does not realize a reasonable profit. Gives dividend paid upon opening of line and now; has been gradually progressing; has spent about five millions in development of district in railways alone; 14,130–14,133. In case of differences between parties sending goods and railway company, appeal can be made to Board of Trade; has not had a single appeal; why clause giving power was inserted in Act of 1864; is peculiar to that Act; no object in a similar clause being inserted in all railway bills. Would not object to a fixed maximum terminal charge provided it would insure a reasonable profit to company; 14,134–14,142. 14,162–14,166. Explains why rates are higher for bar iron than pig iron, as shown in table delivered in by Mr. Mathews; 14,143. As to complaint that company charge more than they are entitled to for pig iron to Manchester, witness explains that Mr. Mathews has taken maximum toll, which does not apply to cases when companies do not act as

MORRIS, MR. PERCY—*cont.*

common carriers. Discussion as to right of company to charge the sum of three rates in one case, and only the maximum rate in another; 14,144–14,153. 14,175. Explains statement as to dispute between company and Mr. Mathews, which dispute was eventually compromised. Why charges to North Staffordshire district are frequently less than maximum tolls. Company charge maximum where they can. As a rule rate based upon shorter route. Could not carry at a uniform mileage rate; 14,154–14,156. 14,205–14,207. As to charge that railway company supplement their rates by unreasonable terminal charges for short distances, witness says that they are always within parliamentary maximum; reason why a higher terminal should be charged for short distances. Would be impossible to make terminal charge invariable; 14,157–14,161. 16 miles is about average distance Mr. Mathews' traffic goes over line; it mainly goes by canal, which is cheaper; in some cases his customers order the goods to be sent by railway; 14,167–14,173. Thinks companies have a right to make a reasonable profit out of terminal services; 14,174. Company now find waggons for every description of traffic; until a year ago every iron master or colliery owner found his own; have purchased them at a valuation. Reason why company has found it advisable to adopt a different practice to that adopted by other companies. Thinks South-eastern is the only other company that has adopted system of sending waggons for whole of mineral traffic. Change has given great satisfaction to colliery owners; much less delay; if waggons detained beyond 24 hours company charge demurrage. Would be desirable for all companies to find waggons for mineral traffic; 14,175–14,180. 14,196. By company's owning the waggons they load them both ways; freighters will not allow companies to load return trucks; are enabled to have a better class of waggons; effects economy in use of sidings. Knows of no proviso in any railway Act regulating right either of railway or freighter respecting the sending back empty trucks; is generally understood that charge for forwarding full trucks embraces charge for shunting back empty ones; 14,181–14,190. 14,192–14,195. Has mineral traffic both ways; great bulk of traffic outwards; 14,191. Mr. Mathews' idea of a uniform mileage rate could not be carried out; if it were, it would deprive public of competition. How it would affect North Staffordshire line, and be prejudicial generally to district; 14,197–14,201. 14,208–14,210. Has not heard of suggestion that rates should be uniform, not for distance travelled by rail, but from point to point as crow flies; difficulties that might occur from such a system; discussion as to whether companies, after having incurred heavy expenses in making direct lines are not entitled to charge more than those companies owning lines which have been made circuitous for sake of economy; are numerous instances in which special tolls are authorized under peculiar circumstances; 14,202–14,204. 14,211–14,225. Is sure that companies charge such a rate as they think will be fairly remunerative and at same time develop traffic. Rates charged by North Staffordshire are the result of some years' experience. Rates for short distances not remunerative; cannot be increased. North Staffordshire district in a very prosperous condition; 14,226–14,231. 14,349–14,351. Invariably charge all parties equally between same points and under like circumstances; give special rates for large quantities; 14,232–14,235. 14,246. As a rule give one month's notice of any alteration in rates; alterations have invariably been in favour of public. Manufacturers are holding meetings to raise price of their commodities in consequence of advance in price of labour, but railway companies must carry at same rate, although everything used in conduct of business is enhanced in price; 14,236. Should not object to publication of rate if it were practicable. Traders can always learn those that concern them upon application; their publication would not prevent favourable rates being given to private individuals; could be done by way of rebate; 14,237–14,245. Mr. Mathews' definition of terminal charge not correct. What witness considers terminal service to include; discussion thereupon. Companies would decline to be common carriers if they were not allowed to charge for sidings and other accommodation where loading and unloading undertaken by carriers. Thinks traffic of country could not be carried on if carriers performed their own services; 14,247–14,263. 14,275–14,279. Certain articles which cannot be carried at maximum tolls prescribed by Act; 14,264–14,266. Terminal services are only debited with their proportion of charge for rates and taxes on line. States average cost of terminal charge for conveyance of merchandise; 14,267–14,272. Terminal

MORRIS, MR. PERCY—*cont.*

charge for coal is either 6*d.* or 3*d.*; has never charged more than 6*d.*; under what circumstances 6*d.* is charged, and advantage that arises from carrying coal at low rates for long distances; 14,273, 14,274. 14,289. Reason terminals are higher in London and Liverpool; believes if question were gone into they would rather be advanced than reduced. If public have not gained in competition as regards the rates, they have gained enormously in facilities; 14,280–14,285. On North Staffordshire system the towns of Longton, Stoke-upon-Trent, Hanley, Burslem, and Hunslet all run into one; are really one town; 14,286, 14,287. Has no local coal trade for household purposes; is always carted from collieries; 14,288. Does not take much coal by canal, except to the salt works; 14,290. Mr. Hollins in error in stating that in 1847 company purchased Trent and Mersey Canal at nine times its original cost; was only three times the cost of the paid-up capital; only market price paid. Hands in schedule of Trent and Mersey Canal Company's Acts of Parliament, under which they raised their capital. For last two years have earned rather more than five per cent. guaranteed dividend upon the share capital; mentions heavy liabilities the company have had to meet. Canal accounts are kept distinct; 14,291–14,300. Denies that company have ever attempted to force traffic on the canal; would rather it went by railway. States what witness believes to have been the object in purchasing the canal. Has never been any competition between railway and canal; the latter became the property of the railway company before completion of railway. How it is to interest of company to keep down canal charges; 14,301–14,309. 14,340. As to Mr. Hollins' statement that North Staffordshire rates are excessive, witness delivers in a table showing rates charged from various potteries to London, and per-centages borne by such rates to the value of common earthenware, showing also the conditions of carriage. Table agrees with that put in by Mr. Hollins, but he has only selected those which suit his argument. Explains charge made for earthenware; 14,310, 14,311. Witness states that out of whole of Mr. Minton's traffic, amounting to a great many tons a year, Mr. Hollins has only been able to bring forward six cases of complaint. North Staffordshire Company have done their best to develop trade of district; made certain reduction in rate in January 1865, further reductions will be made in January 1868. Mr. Hollins has never applied for a reduction, but complains of the rate before committees of both Houses, and to Chamber of Commerce. Since witness has been connected with North Staffordshire has never had a single complaint as to rates or mode of conducting business. Mr. Hollins has mentioned that he has never had a claim against company for damages, although goods sent require very careful handling; 14,312–14,317. Mr. Hollins is also wrong in stating that company charge same rate when cartage service not performed by them; states reduction made at country stations and at the potteries; does not know a single case where manufacturers in collieries cart their own goods; they could not do it at the same charge. Witness is astonished at many errors committed by Mr. Hollins in 1866. He gave in a table of tolls in 1862; might as well have quoted a table of tolls charged in 1797; hands in an entire list of original tolls, and reductions since made; 14,318–14,323. Makes no allowance where goods are delivered into trucks at sidings. Rate from siding to siding much lower than from siding to station. Rule which guides company in making this difference. Invariably charge maximum tolls for short distances, where it does not preclude traffic altogether; when put into a siding a terminal charged in addition; how additional charge regulated. Considers company has a right to charge for marshalling the traffic, in addition to siding charge; amount spent for this accommodation. Where siding extends an additional length in order to join a branch colliery an additional charge is made; is by agreement with the coal owners. Charge must be reasonable. Company are not under any legal obligation to carry off the line; 14,324–14,336. In what way a uniform terminal would operate prejudicially. Classification would be very difficult; 14,337, 14,338. Answers Mr. Hollins' complaint that although rate for earthenware from Staffordshire to London has been considerably reduced, Liverpool rates remain the same; hands in table showing reductions made in last 33 years; 14,339. Has prepared and delivered in a statement of traffic previous to opening of railways, and for some years after opening of railway, which is a perfect answer to Mr. Hollins' complaints; 14,341. Entirely disagrees with Mr. Hollins' explanation as to causes which have prevented introduction of competing lines into North Staffordshire district, and as to statement

Morris, Mr. Percy—*cont.*
that company had created a monopoly, and states that committee were satisfied as to what company had done in district by way of developing traffic, and with the moderate charges made, and that company had introduced very active competition by granting running powers to North-western over whole of system. North-western have granted running powers over a certain portion of their system in return; both companies use their powers. Running powers first established in 1851. Believes North-western lease the South Staffordshire. Reason amalgamation between North-western and North Staffordshire has been refused; 14,342–14,347. Committee who rejected the Bill in House of Lords read the agreement between Mr. Sneyd and North Staffordshire Company; 14,348. A considerable part, though small in extent, of company's district is very populous. Has an omnibus service between pottery towns at very low fares. Gives fares to Hanley and Longton, and mileage rates on agricultural portion of line. Reason why such immense number of workpeople avail themselves of the omnibus traffic; they only go home to their meals when distance short; description of the carriages; do not give return tickets to third class. Carry an immense number of people every year by excursion trains; cheap trains used principally for pleasure traffic; 14,352–14,360, 14,363–14,368. Bulk of increase of pottery trade is in earthenware; 14,361, 14,362. Thinks third-class fares should be reduced on North Staffordshire line; would adopt a sliding scale according to distance; would reduce long distances 50 per cent.; believes reduction would pay; would be a great benefit to working classes if they could travel long distances cheaply. Has frequently advocated reduction; thinks company will try scheme; 14,369–14,375. 14,379. 14,382. 14,389, 14,390. 14,393. 14,394. Would confine low rates to one train a day in each direction, and run it at such an hour as would only be convenient to class for whom it was intended; principle same as parliamentary train, but at lower fares; 14,376–14,378. 14,380. 14,387, 14,388. Discussion as to class of people who would take advantage of cheap trains; 14,381. 14,383–14,386. A reduction below 2*d.* for first-class passengers would not be beneficial to companies; no reduction of this class would pay on North Staffordshire line; 14,391, 14,392. Company has never considered question of better means of communication between passengers and guard; has never known a case where it would have been of the slightest use; 14,395–14,397.

Mortgage Debentures:
Statement of mortgage debentures, bonds, and other loans of Irish railways, from the commencement, showing amounts, rates of interest, dates at which to be repaid, &c.; *App.* A W.

Mulvaney, Mr. William Thomas. (*Analysis of his Evidence.*)
Was for a considerable time a Commissioner of Public Works in Ireland. Since 1855 has resided at Dusseldorf, in Prussia, being part owner and sole manager of two collieries in Westphalia; 1047–1052. His attention has been called to the railway systems in Ireland and Germany; 1053–1056. In consequence of high rates coal could only be sent by railway about 50 miles, but a reduction took place, and it now goes about 500. States the difficulties that had to be overcome before reduction took place, which was finally effected by 32 collieries guaranteeing to deliver 25,000 tons in a year at Magdeburg at a proposed rate, subject to a penalty equal to the original freight in case of failure; 1056–1060. 1062–1065. 1082, 1083. 1237–1239. Witness sent as an experiment 10 tons of coal to Magdeburg (54 German miles), and had to pay for freight 2*l.* more than the coals realized, although they were equal to and purchased at the same price as English coal; 1061. 1073–1079. In consequence of State jealousies, the rates are not the same on all the railways. Reduced rate rather less than English rate, but in some cases there is a terminal charge of 3*s.* a waggon of 5 tons at each end of the system; 1066–1069. The result of the arrangement has been very satisfactory to the railway companies. The Dutch-Rhenish line, from having no trade in coal, had, last year, 147,000 tons from Germany alone; 1070, 1071. English coal goes chiefly by canal to Berlin; 1080, 1081. In Prussia a number of the railways belong to the State; 1084, 1085. The German unions of railways, consisting of various boards, fix all rates for the through traffic; 1086–1090. The system of carrying coal at the low rate is spreading. Statement as to the collieries in Westphalia; 1091–1097. Income much increased in consequence of the reduction. Reads

Mulvaney, Mr. William Thomas—*cont.*
from a report of the Cologne and Minden Railway, showing that every reduction in the rates, whether in passenger or goods' traffic, has increased the dividend. Gives some particulars as to their earnings, mileage, and capital; 1098–1115, 1161–1164. Passenger fares lower in Germany than in Ireland. Gives average charges. A slight reduction has been made, but not to the same extent as for coal. A considerable reduction has been made in the rates for iron ores, &c., and matters essential for reduction of iron; 1116–1120. In Germany there are very few return and no season tickets issued. On the Rhenish Railway there have been reduced charges for excursion trains; 1121–1130. The German union do not permit special rates to individuals; the tariff is published. Thinks there should be variable rates; gives reasons. The Government approve the rates only upon those lines in which they have an interest; 1131–1138. 1165–1169. Coal could not have been sent to Bremen and Hamburg unless terminal charge had been reduced. There is an agitation for a like reduction in the intermediate towns; 1139, 1140. Companies find it to their interest to make sidings for the unloading of coals, otherwise they would not get the trade; 1141, 1142. The same rate should be charged by two different companies carrying the same distance, although one may have been put to a great expense in providing sidings; this question discussed; 1143–1147. There is very little difference in speed between the German and Irish trains; 1148–1150. In Prussia competition was prohibited, but the Government are now changing the law, and promoting railways and canals in order to produce competition; 1151–1154. Cost of obtaining a railway bill much less in Germany than in England; 1155. The construction of a railway in Prussia rests with the Minister of Commerce and Public Works; 1156, 1157. The monopoly guaranteed to certain railway companies, limited generally to 50 years, with the power of increasing it upon application of the whole company and with the sanction of the State. In the case of the Cologne and Minden Railway, concessions were made upon the understanding that after a certain period the Government should have power to take possession; 1158–1160. In Hanover, Brunswick, and Bavaria the rates are fixed more with reference to the interests of the public than the railway companies. It was represented that a reduction of the rates was essential in order to raise the interest of the trade of the country, and that such reduction would be profitable to the companies. The Government would not have sanctioned the reduction if it had not been for their benefit; 1171–1174. The management of railways an exceedingly difficult question. Competition is essential to success in almost all great commercial matters, but thinks it is not the province of Government to manage railways. Putting Irish railways under one management would lead to a monopoly. Complains that the railways are not joined together; none of those which come into Dublin go down to the harbour, owing to the want of meeting trains coming from Cork to Belfast; goods passing through the centre of Ireland take nearly a week, whereas if a suitable connexion were made they might go through in 10 hours; 1175. There is a great deal of traffic which might be developed in Ireland if rates were lower. Traffic small in comparison with what it might be; 1175–1182. Railway companies have nothing to fear from competition by sea. The rate for coal upon Irish railways is about ¾*d.* per ton per mile; 1183–1186. If fares were reduced one-third, there would be a temporary loss, but the ultimate success would be certain; discusses this question; 1226–1235. 1240–1250. The district with which witness is connected is a vast coal field, and has enormous capabilities of production undeveloped. If rates were reduced, increase of traffic would not be so great in Ireland as in Westphalia, but the introduction of coal into Ireland, coupled with low rates, would greatly improve the country; gives reasons. A reduction of rates for travelling and carriage of agricultural produce would be beneficial; 1190–1194. Potatoes, corn, and agricultural produce are sent by railway from the agricultural provinces of Prussia into manufacturing districts of Westphalia and the Rhine at very low rates; 1195–1197. In Ireland there are ores rich enough to pay for working if coal were near. In Galway there is coal, but not so free as in Prussia, as there is always some difficulty as to title; 1198–1200. Railway companies have not run a branch into the Kilkenny and Tipperary districts. It may not pay to make branch railways to develop the Irish coal trade, but witness believes a reduction of the rate would very much increase the English coal trade; 1201–1205. Coal can be raised in Prussia better than in Belgium; 1206. At Cork the consumption of coal is increasing; it is cheaper in the eastern parts of Ireland than in Dublin; 1208–1212.

MULVANEY, MR. WILLIAM THOMAS—*cont.*

Cannot explain why there are no facilities for unloading coal in many of the Irish ports; only partially afforded in London; 1213, 1214. There is a great want of enterprise in Ireland; 1215. Does not know the price of coal at the stations, but at Kildare, by canal, it is 14*s.* or 15*s.* per ton; 1216–1218. Freights on railways ought not to vary according to the time of year, but fixed rates are inconsistent. Would fix a much lower maximum (which should not be reduced in all cases) than at present, and allow the greatest possible liberty to go below that maximum. Thinks that railways are intended not only to carry existing traffic, but to seek out and create new; 1219–1223. The profits of Irish railways have very much decreased. Considers that directors are in error in assuming that railways are constructed for passenger instead of for goods traffic; 1223–1225. The reduction in Germany is chiefly in the case of new traffic; 1236. There are special rates for Government purposes, and for their own service, but for the public everything is fixed and published. Is aware that in England and Ireland special bargains are made with individuals for the carriage of goods. Mentions an instance where the practice of having various rates has been attended with great advantage; 1251–1260. When the coal traffic was established between the collieries and Magdeburg, an arrangement was made between the producer, the carrier, and the seller. There is a special rate for coal, but not for other produce; 1261–1265. In parts of Ireland there is a large demand for coal, but not in the interior; 1266–1270. Scarcely any back carriage in the trucks which convey coal on the German lines; 1272. The railways do not amalgamate, they only unite for the purposes of through traffic; the principle being uniform rates and tolls only for the through traffic; 1272–1275. Passenger trains are frequent in the district with which witness is best acquainted; 1276. There is a feeling springing up in favour of a system of competition; 1277. The State has several lines, of which a report is published yearly, showing their cost, &c.; 1278, 1279. Coal could be carried to Paris, the distance being about the same as to Berlin, but English coal could not be laid down there as cheaply as witness could lay it down; 1283.

Further examination.

Wishes to show the impossibility of developing any system without a connexion with the various systems of railways that exist in Dublin; without that no system like that of the German unions can be effected. Sidings and branches to places that would afford trade should be made by companies without incurring the enormous expense of separate Acts of Parliament. In the German union the waggon work is provided by the various companies, who furnish their quota for the purpose of through traffic, and arrange a tariff for the transport of goods, and fix rate for waggons passing over the lines of another party. Had difficulty in inducing the union to adopt a per-centage deduction from the rates for full trains running through from fixed station to fixed station. This system might be adopted to great advantage in Ireland. The organization of goods trains at fixed times has been found beneficial in Germany. The Irish fares are too high, and as a natural result the dividends are diminishing. New markets might be developed by low variable tariffs. Fixed rates, however low, may nevertheless bear a certain new traffic. German passenger rates should be adopted as a maximum in Ireland. Introduction of English coal into interior of Ireland would lead to development of the coal districts which exist there. States how proposed changes might be effected; 1847, 1848. Plan which exists in Germany for decreasing expense of making sidings and branches) 1849–1860. Level crossings (very prevalent in Germany; where the traffic is increasing, injurious; 1861, 1862. Circumstances connected with development of coal traffic not exceptional in Germany in consequence of the coldness of the country and the expense of fuel; the private consumption is a small matter. Before construction of railways wood was used for manufacturing and domestic purposes, although within a few miles of the coal pits. Increase of consumption of coal did not take place until the rates were reduced; 1863–1866. Discussion as to whether plan of raising money on terminable annuities would increase charges upon railways; 1867–1875.

Further information from witness in regard to German railways; *App.* DT.

MURLAND, MR. J. W. (*Analysis of his Evidence.*)

Irish Great Southern and Western Railway permit persons to take their goods to and from the railway, thus saving the charge for collection and delivery. In calculating rates terminals are taken into account; 4568–4572. Concurs with Mr. Haughton in matters of fact, but not in opinion; does not take so gloomy a view of the prospects of traffic increasing in Ireland, though thinks it not so capable of development as the traffic of this country. If rates were reduced, traffic in cattle and in third-class passengers would increase; but there would be temporary loss to the railway companies. Would not advise a reduction; 4736–4738. Coal traffic will steadily increase. If rates were reduced 50 per cent., consumption would not materially increase. Conditions under which cattle traffic is conducted render it expensive to work; question discussed; 4740–4759. Reduction of rates would give rise to some traffic not now anticipated; that in grain would probably increase. Cultivation of flax would not be materially affected by a reduction; reasons; 4760, 4761. Has been nearly 17 years chairman of Dublin and Drogheda Railway Company, and for some years a director of the Irish North-western, which extends from Dundalk to Londonderry. Not so well acquainted with lines in that part of the country as with the Dublin and Drogheda and Great Southern and Western. In some respects there is much denser population on a portion of the Dublin and Drogheda line than there is on the Great Southern and Western. Has more third-class traffic (chiefly for short distances to the markets) in proportion. Interest to give third-class return tickets on that line. Proportion of return tickets to single tickets for short distances is as three to one; 4761–4767. No important towns between Dublin and Drogheda. Line extends to Oldcastle. Books through, with the northern lines, at same scale of fares. Belfast Junction Company issues third-class return tickets, but Ulster Company does not. Complaints in Belfast of communications being in the hands of three different companies. No discord between them; 4768–4775. Accommodation between Dublin and Belfast; speed of trains; class of passengers and fares. Great traffic between the two towns. Same carriages and waggons run through, but not same engines; 4776–4782. District between Drogheda and Oldcastle richer than average of district traversed by Great Southern and Western; is not the most productive in way of traffic; 4783. 4785. Does not carry near so much cattle as Great Southern and Western in proportion to receipts; 4784. Paid five per cent. dividend until competing railway opened between Dublin and Navan; that line has never paid a dividend. Effect competing line had upon traffic; decrease in 1861 attributable to bad harvests; is slightly recovering; 4786–4792. 4837–4840. Cattle traffic stimulated for a short time by bad harvest; 4793, 4794. Manufactories such as those at Drogheda and Balbriggan add to traffic; 4795–4797. Has some coal traffic between Dublin and Clones and Oldcastle; 4798. Consumption has increased, and will continue to do so. Classes who consume coal; 4799–4805. Coals can be brought to Drogheda; there is a good fleet of steamers and small sailing vessels trading to it. Railway comes near the water. Mileage rates for coal and price at Drogheda and Dublin; 4806–4813. Traffic in district round Belfast much larger than in agricultural districts, but railway not more prosperous than those in south of Ireland. Quotes dividends paid by certain lines. Were not very expensive lines; 4814–4825. Traffic within a certain radius of Belfast is large. The Irish North-western paid no dividend; it now pays the interest on its bonds. Traffic fell off in 1862 and 1863; is slightly mending; railway made with economy; 4826–4834. Trade to Belfast has much increased, but traffic has not increased in proportion. Mentions change that has taken place in the linen trade. Carries a great quantity of flax. Reason why it is principally grown in Ulster; 4835, 4836. 4851–4873. Would make a through rate through any town between Dublin and Belfast for this traffic if it were demanded; discussion thereupon. Compared with present population traffic in Ireland has increased. Does not think railways have suffered from emigration; 4841–4845. New lines are being constructed in the North, although present lines are to a great extent unprofitable. Thinks the extension of unremunerative lines a matter of speculation; 4846–4850. It would be an advantage if three or four of the northern lines were amalgamated. Difficulty in the way of the Irish North-western amalgamating. Tried to bring about an amalgamation between witness's company, the Belfast Junction, and the Ulster, but failed. Reason of failure. Would not be a necessary part of amalgamated company to embrace the Coleraine line, it being to a certain extent independent, but the other four should be if the convenience of the public is to be consulted. There are eight lines between Armagh, Londonderry, and Belfast. A solicitor tried forcibly to

MURLAND, MR. J. W.—*cont.*

amalgamate the Dublin and Drogheda and Belfast Junction, but shareholders almost unanimously rejected the proposition; 4874–4890. Lines paying no dividend will not be worked so well as paying lines. Wants of the public not so well supplied now; 4891, 4892. Shareholders would not submit to a loss unless they were sure of an ultimate gain; 4893–4895. No objection to transfer of return tickets; 4896, 4897. Thinks a gradual reduction in all classes of passenger traffic (particularly third class) and in goods would probably recover themselves in a few years; 4896–4900. Third-class fares should be reduced to ½*d.* per mile, but would begin at ¾*d.*, and wait and see effect on each class of traffic. There would be no disadvantage in decreasing rates gradually; 4901–4904. Has not known third-class fares raised, but sometimes lowered. Third-class receipts of Dublin and Drogheda Company bear an excessively small proportion to total receipts; this is rather in favour of reduction; 4905–4908. If amalgamated, an increase of traffic in populous parts would be a set-off against loss in sparsely populated parts. Experiments of amalgamating might be successful, but difficult on individual lines. A proportionate reduction should be made in first and second-class fares when third-class lowered; 4909–4913. All the Irish railways might be managed by a single company, and considerable improvements leading to increased development of traffic introduced. Saving in management would not be so great as expected; 4914–4919. Thinks there are no mines worked in the north of Ireland in district with which witness is connected as a director. There are some collieries near Dungannon accommodated by canal; 4920, 4921. A great many manufactories have been built in Belfast, and some large mills near there. Does not know of any manufactories having been established in consequence of the construction of railways in Ireland. The population of Portadown has increased from 1,000 to 10,000 since Ulster railway made; 4923–4928. Many of the railways have been made at an unnecessary cost, but too little of the money has been spent upon the road, consequently they are badly made, and the sleepers defective; instances the Cork and Youghal line; 4929–4936. Dublin and Drogheda line has no through-booking with Armagh and Newry line, except through the medium of other companies. Could not give tickets through from Dublin to Armagh by Newry and Armagh line; 4937–4939. No line in Ireland in as good condition as London and North-western line. A few of them are very good; 4940–4942. Return tickets on Sundays at single fares for all classes of passengers are issued on Dublin and Drogheda line; adds much to the traffic in summer time; same trains run in winter. States for how long return tickets are available for certain distances. Third-class will only avail themselves of excursion trains at holiday times; trains are then crowded, and financially satisfactory; 4943–4951. Would like to see experiment of reducing rates and fares tried, but not at expense of shareholders. If Government would purchase railways, shareholders would be willing to take a smaller dividend, and in this way they might have some margin which could be applied to reduction of fares; 4952. Lines, although not in first-rate repair, would bear a much larger traffic. State of repair an important question if Government were to purchase them up; 4953–4956. Shareholders of non-paying dividend lines would not be disposed to make the Government a present of their capital, many would sell at very moderate terms. There are some speculative people who would buy the shares of some lines at low prices, but with regard to others, purchasers could not be found. Line from Bagnalstown to Wexford does not pay working expenses. Interest paid by Dublin and Drogheda and Great Southern and Western Companies. Any line in good credit can get its debentures out at 4½ per cent.; 4957–4962. Preference capital of the Dublin and Drogheda; 4963.

NEW RAILWAYS:

Not desirable or possible to stop new competing lines as long as railway property goes on improving. No restriction should be put upon them, except as far as necessary for protecting property proposed to be passed through. Opposition should not be allowed merely on the ground of its being a competing line; *Hawkshaw* 14,595–14,602. 14,649. Witness does not think that further obligations are necessary to compel construction of lines for which Acts have been obtained, as he is not aware of any cases since 1846 of powers obtained which have not been exercised; *ib.* 14,603–14,611. Parties who were willing to do so should be allowed to make new railways wherever they might be considered necessary as freely as they would erect a new mill or start any other business concern; *ib.* 14,650–14,661. There are few persons who would make a railway unless there is a probability of its paying; *ib.* 14,657. There are gentlemen who will expend their money in things of this sort, if they cannot do it in this country they will elsewhere; *ib.* 14,659.

Where districts need accommodation, new lines should be granted, even though it produce competition; *Harrison* 15,312.

NICHOLSON, MR. THOMAS HENRY. (*Analysis of his Evidence.*)

Has been for last eight or ten years a silk manufacturer in Derby; attends on behalf of the Chamber of Commerce there; 8763–8765. Complains that railway companies' liability for loss of silk goods does not extend beyond 10*l.* Rates for silk very high; quotes them, and gives number of miles from Derby to London. Mentions a case when companies denied their responsibility, although the goods were abstracted by one of their late servants; entered into a compromise; could not legally have recovered the amount of goods lost beyond the 10*l.* Can have an insurance, but as it is about 50 per cent. increase, it is better to risk loss; 8766–8780. No reason that silk should be placed at such disadvantageous terms as compared with other articles; a hamper of lace can be sent to London for less than half the cost of silk goods, and company are responsible for it if lost in transit. Reason why distinction made in Passenger Act for certain classes of goods; 8781–8784. 8847–8851. In sending ribbons by railways has to pay for the whole weight, although three parts are made up of wooden rollers and paper; thinks in such a case there should be a special rate; has tried paper rollers, but retail traders object; tin ones would do, if they were less expensive. Gives value of one cwt. of silk goods, and freight charged. Thrown silks are not rolled upon wood. Considers it a hardship that goods should be obliged to be packed in a particular way, and then an excessive rate charged; 8785–8795. Complains of the inequalities of the rates for silk between place and place; gives instances; 8796–8798. 8857. Should be a uniform maximum rate, irrespective of questions whether there is competition, or cost of construction of line. Discussion whether a uniform rate would be possible, as in cases where lines have been expensively constructed, or made through unproductive districts, companies would be carrying at unremunerative terms. Might be feasible to have a mileage rate to certain distinctly specified towns. If there were uniform rates, Parliament should not refuse to sanction a line being made through a district unprovided with a railway, because rates required to be charged to make it remunerative would be above those fixed, as such rates might be only half those now charged by coach, &c.; 8799–8821. As far as witness's experience goes does not think there has been a general reduction of rates; under a disadvantage in only having one line at Derby; 8822. Would allow companies to reduce rates if they thought proper. Is a maximum rate now for certain kinds of goods, but companies can increase it by adding a terminal charge; 8823–8832.

NICHOLSON, MR. THOMAS HENRY—*cont.*
Would abolish clause in the Passenger Act, as there should not be a reservation of silk goods from other goods in the classification; railways should carry by weight, without reference to value. If companies' liability is not greater for carrying gold then for carrying pig iron the rate should be the same; would amount to taking some standard of weight as the standard of value; discussion as to how standard should be taken; 8833–8853. If Carriers' Act were abolished, railway company's liability would be in same relation to goods as they are now to passengers; 8854–8856. By having competition at Derby, some of the inconveniences would be done away with, but unless clause in Passenger Act were abolished, the principal grievance would exist; 8858–8860.

NICKS, MR. ALDERMAN WILLIAM. (*Analysis of his Evidence.*)

Is a large timber and slate merchant at Gloucester; has been alderman, and twice mayor of that city; attends at the request of the Gloucester Chamber of Commerce; 8936–8939. Gloucester merchants suffer both from want of competition, and a more direct route to London *viâ* Oxford; describes present route, and how during last 20 years all attempts to obtain a more direct route have been frustrated by the Great Western Company; 8940–8946. Number of trains per day from Gloucester to London, and fares; in consequence of competition fares higher than to Birmingham (13 miles farther), and not same advantages given with return tickets. Where no competition, Great Western charges express fares. Return tickets available for two days; 8947. 8977–8989. Worcester and Gloucester about same distance from London; no competition at present to Worcester. Fares have not been altered since amalgamation with Great Western Company; if they had been increased, traffic would have gone by another route; 8948–8952. All the grievances were represented when Bill for the amalgamation was before Parliament; how a certain clause inserted in this Bill has injuriously affected Gloucester people; has not a copy of the clause; 8953–8955. 8975, 8976. Line between Swindon and London more expensive to work than between London and Worcester or Birmingham, and has bad gradients; but charges should not be more on that account. Gloucester people think that route to London should have been *viâ* Cheltenham and Oxford; would not have been a bad country as laid out by East Gloucestershire line; gradients much easier, and distance not greater; how far sanctioned; its course; would rather tend to favour London and North-western Company; discussion as to the distances by the different routes to London; 8956–8974. Great Western Company charge considerably more for goods than Midland Company; broad gauge not adapted to goods traffic; contrasts the rates by each line. No competition on Great Western line; company can charge what they think proper; if railway were narrow gauge could carry cheaper; has power to lay narrow gauge down, but has not done so. Goods going beyond Hereford have to be transhipped. Great convenience if narrow gauge all the way; break of gauge inconvenient, and damaging to goods; 8990, 8991. 8997, 8998. 9000–9004. Great Western Company would not get custom, if Gloucester merchants did not try to keep their trade together; trade to Hereford and towns between diverted to Newport, which has advantages over Gloucester; hopes to remedy evil next session; 8992–8996. Gloucester Chamber of Commerce memorialized Great Western board respecting the rates, but nothing has been done; 8999. Gloucester and Hereford line is open at night for traffic; line single, and bad; cost a large sum; 9005, 9006. Is not aware that London and Hereford mail goes by way of Shrewsbury; 9007. Should be an uniform mileage rate upon all railways for different classes of goods; cannot say that rates should be fixed irrespective of amount of traffic or cost of line; railways are constructed cheaper now; but not necessarily at expense of gradients, or by works being more slightly made; mileage rate should be paid on actual ground gone over; 9008–9011. No importance given to Gloucester by having a very circuitous line to South Wales; 9012, 9013. Reasons why commercial class of Gloucester opposed the direct line. Discussion as to whether the construction of certain bridges across the Severn will be advantageous to trade of Gloucester. Direct line to South Wales will not affect Gloucester; trade chiefly with Midland district; 9014–9021. 9031–9043. Although people at Gloucester desire another line, they are not able to subscribe all the money for its construction. East Gloucestershire line was obliged to apply to Midland to advance funds, in consequence of local parties not having sufficient interest in its completion, but it was

NICKS, MR. ALDERMAN WILLIAM—*cont.*
decided that Midland could not advance them; 9022–9026. Thinks Great Western Company should treat people in the west as they treat them in the north. Does not know whether the Birmingham traffic pays; 9027–9030.

See also GRIERSON.

NIGHT TRAVELLING:
Travelling by night is diminishing, and in opinion of witness will in a few years cease altogether; *Allport* 16,954.

NON-LIABILITY FOR LOSS OF GOODS IN TRANSIT:
Railway companies take advantage of the provision in the Carriers' Act limiting liability for loss, &c. on certain goods to 10*l.*, unless a heavy insurance be paid; in a recent instance witness lost 90*l.* worth of silk on Midland Railway, but company acted liberally by repaying him 45*l.*, though only legally liable for the 10*l.*; they also took active measures, and discovered the thief; *Nicholson* 8763–8780. The 10*l.* clause should be abolished; *ib.* 8834. Silk takes a high terminal charge as a set-off against risk; *O'Brien* 12,218–12,221.

NORTH BRITISH RAILWAY COMPANY:
Reply of the, to the charges of delay in the delivery of goods; *Appendix* DX.

NORTH-EASTERN RAILWAY:
History of the bad treatment witness states he has been subjected to by company, nearly causing his ruin; *Oxlade* 1876–1923. *For detail of same, see* OXLADE, MR. WILLIAM, *and for answer to this, see* O'BRIEN, CAPT. WILLIAM. SHERRIFF, MR. A. C.
Complaint of irregularity of passenger fares between Darlington and Newcastle; *Wooler* 9556–9566. 9698–9703; Answer to this; *O'Brien* 12,152. Also of preferential rates granted and apparent favouritism shown by company; witness considers that special rates should be published; *Wooler* 9567–9619. Instances of favouritism in witness's own experience, where his coals have been kept standing an undue time, his customers greatly needing them all the while, through an unfair number of waggons being allowed to more favoured parties; *ib.* 9620–9650. Further similar instances; *ib.* 9679–9698. Waggons have been standing empty in directors' collieries whilst witness has been distressed for them; *ib.* 9651. Necessity for competition with North-eastern line; *ib.* 9677–9679. 9702, 9703. Unfair treatment to private owners of waggons, in order to compel use of company's waggons only; *ib.* 9704–9712.
In reply to complaint that company favour Hartlepool and other ports at the expense of Hull, witness states that they have really given substantial pecuniary support to the latter at the request of the merchants and shipowners, who complained of the want of accommodation, &c. there; *O'Brien* 11,961–11,967. Statement to show that the railway rates on timber at Hull are far from exorbitant, and that they have not driven the traffic elsewhere, also that the dock accommodation is very insufficient; *ib.* 11967–11,969. Impracticability and inexpediency of a uniform mileage rate; *ib.* 11,969, 11,970. Rates are much the same from Liverpool to either Hartlepool, Hull, or Newcastle; *ib.* 11,981. Although company have a considerable pecuniary interest in Hartlepool Docks, and own docks in the Tyne, they give them no additional facilities, but act upon the principle of treating all ports alike; *ib.* 11,981–11,990. If, as Mr. Wright states, rates from Birmingham to Hartlepool are lower than to any other part of the country, company are not responsible for it; *ib.* 11,992–11,994. Cases in which company grant special rates; *ib.* 11,995, 11,996. Company have made arrangements with other companies for equal rates as respects Hartlepool and Hull and all the principal towns in Yorkshire and Lancashire; *ib.* 11,997–12,004. Uniform mileage rates would give a monopoly to certain ports to the injury of others and of the consumer; *ib.* 12,028–12,032. Dock dues at Hull higher than at Hartlepool and several other ports; witness considers them too high; as do also the Hull merchants, who tried to compel them to raise their Hartlepool dues, but Parliament would not consent; *ib.* 12,033–12,037. Some of the short general traffic to the coal districts does not pay, but it is done to oblige the coal owners, who are very good customers; *ib.* 12,043–12,046. These rates vary according to circumstances; *ib.* 12,047–12,055. Full explanation of the principles upon which the company conduct their land-sale coal trade; *ib.* 12,064–12,086. Though disliked by the middle-men, the system is approved generally by the colliery owners and the consumers; *ib.* 12,087–12,091. 12,145. Occasional charges of favouritism have been brought against company in

NORTH-EASTERN RAILWAY—*cont.*
working the system, but with little foundation; *ib.* 12,092–12,101. Discussion of merits of system. Care needed in carrying it out, and reasons for its adoption. Plan of unloading; *ib.* 12,102–12,109. Company have introduced it throughout their system; they believe it is economical and encourages consumption; *ib.* 12,110–12,116. Rates are adapted so as to bring coals from different collieries into fair competition; *ib.* 12,117–12,122. Company contend that they are not common carriers, and can therefore refuse to carry for any particular individual if they think fit; *ib.* 12,127–12,134. Legal decisions have confirmed this view; *ib.* 12,135. Some, who cannot get their coal carried, complain of favouritism; *ib.* 12,136–12,139. Some do not care about the land-sale trade at all; *ib.* 12,149. System originally established by Stockton and Darlington Company; *ib.* 12,140. Some of the directors are coal proprietors, but they are treated same as others; *ib.* 12,141–12,144. Particulars of company's connexion with Stockton and Darlington section; a parliamentary train is now run upon it; *ib.* 12,159–12,173; reasons for not running this before; *ib.* 12,181. Considerable reduction now going on in passenger fares; *ib.* 12,174–12,176. Passenger traffic decreasing and goods traffic increasing; *ib.* 12,182–12,184.

Denial of Mr. Wooler's charges of favouritism, and explanations given to show that company were really acting more for the public interest than their own; *O'Brien* 12,185–12,188. Explanation of circumstances under which company refused to carry coals for Mr. Wooler, and justification of that course; *ib.* 12,189–12,192. Distinct denial of Mr. Wooler's allegations as to favouritism to a director, &c.; *ib.* 12,193, 12,194.

[*Mr. Wooler's complaints will be found more fully answered under* "MACNAY, MR. THOMAS," *and* "STOCKTON AND DARLINGTON RAILWAY."]

No local competition by railway; some by canal, which tends to keep rates down, but railway and canal tacitly understand that they will not injure one another; *O'Brien* 12,195–12,204. A Bill is before Parliament for a line in opposition to company; *ib.* 12,206. Company has never found any difficulty in making through arrangements; *ib.* 12,444–12,449. North-eastern Company quoted to show that with good security for their money, and fair prospects as to dividend, the amount of railway accommodation throughout the country will be greatly increased and charges reduced; *ib.* 12,266. A large portion of company's district is purely agricultural; *ib.* 12,273; goods traffic in this increases considerably more than the passenger traffic; *ib.* 12,270–12,279.

Answer to complaint that Hull is injured by company being interested in docks there and elsewhere; and justification of their course as to rates to various ports, and as to charging such dock dues as will attract traffic; *Harrison* 15,169–15,183. Public generally approve of the system; *ib.* 15,184. In Hull itself great difference of opinion prevails on the subject; *ib.* 15,185. North-eastern is the largest amalgamated company in the kingdom; amalgamations have been earnestly desired by the traders, &c. of the district; *ib.* 15,184. Company have no desire to extend any further, but spend all they can afford on their own district; *ib.* 15,341. General gradual reduction of fares on company's lines; *ib.* 15,202; but not in agricultural districts; *ib.* 15,223. The great bulk of the travellers in the manufacturing districts are third class; *ib.* 15,227. Particulars of company's coal rates; *ib.* 15,228–15,233. Discussion as to those between Cleveland and London and Staffordshire and London; *ib.* 15,234–15,236. Company find waggons for everything; *ib.* 15,412.

Letters from Mr. William Oxlade to the Commissioners, stating that charges are much higher on this railway than are authorized by their Act of Parliament; *App.* G.

See also HARRISON. O'BRIEN.

NORTH STAFFORDSHIRE RAILWAY AND CANAL:

Injury to trade of pottery districts from high rates charged by and want of competition with company; *Hollins* 11,274 *et seq.*

146½ miles of railway and 100 miles of canal open, and 40 miles of railway making; *Morris* 14,104–14,106. Railway consists of numerous short branches running into the main line, and from formation of country is most difficult to work; *ib.* 14,107, 14,108. Particulars given, showing that from necessarily short runs of trains and other causes the working expenses are very considerable; *ib.* 14,109–14,116. Denial that company's charges are excessive; they pay but 4 per cent. dividend; *ib.* 14,130–14,133. Parties, if dissatisfied, have (under company's Act) a power of appeal to Board of Trade, but have never exercised it; *ib.* 14,134–14,142. The bulk of company's traffic is outwards; *ib.* 14,191. A uniform mileage rate would be practically prohibitory of much of company's traffic; *ib.* 14,197–14,200. Company have no local coal trade for house purposes, houses being so near the collieries; *ib.* 14,288. Company carry little coal by canal, except to the salt works; *ib.* 14,290. Company paid but three times (not, as stated, nine times) original cost for purchase of Trent and Mersey Canal; *ib.* 14,292. Witness gives in schedule of Acts under which canal company raised their capital; *ib.* 14,293. Up to the last two years company earned over 5 per cent. on purchase money of canal, and would still do so, but that they have now to pay heavy obligations (which they never contemplated) for coal lying idle under tunnels, which they are neither allowed to work themselves or to sell to others; *ib.* 14,296–14,299. Canal accounts are kept distinct from railway accounts; *ib.* 14,300. Denial of statement that company endeavour to force traffic over canal rather than over railway; *ib.* 14,301–14,303. Canal having been bought before railway was opened, there has never been any competition between them. It is the interest of company to keep canal charges down; *ib.* 14,304–14,309. Tables of company's rates on pottery ware given in; *ib.* 14,310. Also an entire list of the original tolls, and the reductions which have since been made; *ib.* 14,320. Company have no through system anywhere; traffic is confined to North Staffordshire district; *ib.* 14,350.

Complaint against company by brewers of Burton-upon-Trent for granting favouring rates, for abuses in terminal charges, and for charging unequal rates; *Cosgrove* 15,674 *et seq.* [*For detail, see* COSGROVE. RATES AND CHARGES, &c., 2.]

Copy of contract for working the North Staffordshire Railway; *App.* CL.

See also IRON TRADE OF STAFFORDSHIRE. HOLLINS. MATHEWS MORRIS.

NOTTINGHAM:

Complaint from, of unequal rates on grain, the charges bearing no proportion to the distance travelled; this probably caused by railway company having an interest in certain docks; *Hutchinson* 9722–9740. Also that rates differ upon similar articles; one case among several cited is that of canary seed, which is carried for 13*s.* 4*d.* per ton from Hull, a distance of 120 miles, whilst from London, only 126 miles, it is charged 30*s.*; *ib.* 9741–9751. Also on flour, loaf sugar, &c.; *ib.* 9752–9756. Further complaint of want of proper accommodation for traffic, causing great delay and inconvenience; this is felt specially by parties having their own trucks, which are constantly detained, and no compensation is given; whilst, if company's trucks are delayed, demurrage is promptly charged; hard case in point quoted; *ib.* 9757–9787. Disproportion between rates for one and two tons; reasons. More equal treatment and greater convenience in some respects by canal than by railway, especially as regards the smaller dealers; *ib.* 9788–9806. Complaint that Midland Company now only allow nine parties to deliver coals in their yard, whilst, until six months ago they allowed 60; *ib.* 9772–9777; *Brentnall* 9824–9826; reasons; *ib.* 9826. 9833, 9834. 9849, 9850. Injury to those not selected; witness considers the company had no right to create such a monopoly; *ib.* 9827–9832. The smaller dealers have now to obtain their coals through the favoured nine, for which privilege they have to pay 3*d.* per ton, and this being the whole profit on one branch of the business, that is now entirely in the hands of the nine; *ib.* 9835, 9836. 9839, 9840. 9881–9889. Unfair treatment of witness by company; *ib.* 9837, 9838. The few who have wharfs suffer less inconvenience through using the canal; *ib.* 9841, 9842. The nine were not selected unfairly,—probably they were the largest dealers; *ib.* 9847, 9848. Prices may have risen slightly in consequence; *ib.* 9843. 9851, 9852. There is no competition by the canal, as it belongs to the Great Northern Company; *ib.* 9853, 9854. Strong feeling in the town on the subject; *ib.* 9855–9858. Arbitrary and unfair proceedings of company in respect to demurrage; *ib.* 9859–9861. Some coals sent for a person not among the nine were never delivered; *ib.* 9862. Explanation of what witness means by "company refusing to carry for the public;" merchants of Nottingham think of trying legality of company's proceedings; company are too powerful for any single individual to contend with; *ib.* 9863–9873. Colliery proprietors appeared to dislike arrangement at first, but seem now to fall in with it; some of them, witness believes, are connected with the railway, but not

NOTTINGHAM—*cont.*
with the firms that represent the mine; *ib.* 9875–9880. Remedy for present state of things, witness believes, would be a competing line; *ib.* 9890–9896.

In answer to above complaint as to Midland Company's management of coal traffic, witness states that as soon as company opened their wharf the large numbers coming to it led to so much confusion that business was almost stopped, and they were obliged to limit the number with whom they would deal, and divide the accommodation amongst them. This arrangement answers admirably, and the public generally, as well as the coal owners, are perfectly satisfied; it has also tended somewhat to reduce the rates; *Allport* 12,502, 12,503. 12,513. "There is not a particle of foundation" for the charges of favouritism; *ib.* 12,502. North-eastern Company, having found same difficulty as the Midland, have appointed a clerk of their own to sell the coal; *ib.* 12,504. Midland Company adopt the same plan at all large towns; *ib.* 12,509. Witness considers it the only plan that can be adopted with fairness to all; *ib.* 12,507. System does not prevent new dealers starting, as company would accommodate more if they considered their dealings likely to be extensive enough to warrant it; *ib.* 12,511, 12,512. 12,518, 12,519. Company receive no rent, but are paid by a terminal charge; *ib.* 12,516.

Communications from coal merchants at Nottingham, stating that company's arrangements there work very satisfactorily, and have not caused any advance in price; *Allport* 13,682, 13,683. Quantity has increased since alteration, and there has not been a single complaint from the public. In answer to Mr. Brentnall's complaint, witness states that that gentleman refused to comply with an agreement he had signed, but as soon as he did so the restriction was removed; *ib.* 13,684.

See also ALLPORT. COAL TRADE, ENGLAND. MIDLAND RAILWAY.

O.

O'BRIEN, CAPTAIN WILLIAM. (*Analysis of his Evidence.*)
Is general manager of North-eastern railway; 11,960. Has seen the evidence of Messrs. Atkinson and West, of Hull, in reference to management of North-eastern traffic; 11,961. As to complaints made, that great advantages are given to Hartlepool and other northern ports, as compared with port of Hull, witness states that company have subscribed 50,000*l.* to provide increased dock accommodation at Hull. Does not know total sum laid out, or amount railway contributed bore to whole sum expended. With respect to Mr. West's statement that timber trade of Hull has been driven away by exorbitant railway charges, witness mentions that Mr. Clark of Liverpool stated that rates from Hull were unfairly low; reason why this trade has not increased in proportion to trade of Hartlepool and Grimsby. Quotes from speeches made by chairman and a director of Hull Dock Company at last general meeting, pointing out the improved condition of Hull trade, particularly in articles of oranges, timber, and fish. In reference to complaint made by Mr. Atkinson of rates from certain places to Hull as compared with those to Hartlepool, and who suggested a uniform mileage rate, witness states that measure proposed is unpracticable, and would destroy traffic of the kingdom; a uniform mileage clause has been rejected several times by House of Commons. Reasons why principle objectionable; mentions requests made by a deputation from Hull upon this subject; 11,962–11,970. Rates determined upon commercial principles; cost of railway does not enter much into calculation; 11,971–11,974. Timber rates from Newcastle to Hull do not much more than pay working expenses; if rates were higher, traffic would go by sea; meaning of the word "remunerative." Principle upon which the high rates are adjusted; 11,975–11,980. Same gross rates between Hartlepool and Liverpool as between Hull or Newcastle and Liverpool; 11,981–11,983. 12,000. Docks at Hartlepool belong to North-eastern Company, who receive the dues, as well as those of their dock in the Tyne; have no interest in dock at Hull; same rates would be charged if company had no interest in any dock or port. No other company has any interest at Hartlepool; 11,984–11,986. 11,989–11,991. 11,994. Rates from Hartlepool same as those at Grimsby, Hull, and Newcastle; no facilities given to that port over others; 11,987, 11,988. As to complaint of Mr. Wright, that rates from Birmingham to Hartlepool were lower than those between Birmingham and any other part of country, witness states that North-eastern Company only give a rate over portion of route; thinks it

O'BRIEN, CAPTAIN WILLIAM—*cont.*
could not be lower than to Hull; 11,992, 11,993. 11,999. 12,001. Under what circumstances special rates are charged to individuals; 11,995, 11,996. Arrangements have been made with other companies for equal rates as respects Hartlepool and Hull, and all the principal towns in Yorkshire and Lancashire; extends to towns in midland counties, such as Birmingham. Could not carry coals from Durham coal pit to Hull at same gross rate as to Hartlepool, mileage rate would be much lower. Under what circumstances ½*d.* a ton per mile would yield a profit, and in other cases not pay working expenses; 11,997, 11,998. 12,002–12,007. Number of waggons that North-eastern Company could run on a level line, and on one where there are gradients. Cost of working traffic depends materially upon the gradients, and length of the line. Cannot make any comparison as to what would be a paying load, with 60 miles of work done by engine, and 160. Very difficult to say whether the rate charged pays; 12,008–12,014. Does not carry traffic 30 miles for ½*d.* per ton. Considers that an engine could make 30 miles of paying mileage in a day; 12,015–12,017. Cost of engines 4 or 5 guineas a day, or about 1,200*l.* per annum, including repairs, but exclusive of interest on cost of engine, or money expended in repairing shops. New engines and cost of repairing are paid for out of revenue. An ordinary engine and tender costs from 2,500*l.* to 3,000*l.* Reason why witness cannot say whether there is any difference between cost of maintaining and working a passenger engine and a goods engine, or whether there is more wear and tear with a passenger engine running at high speed with express trains. Engines running over a very heavy road consume much more fuel than a passenger engine; 12,018–12,027. 12,056–12,060. If there were a uniform mileage rate from different parts, traffic would not necessarily be sent by the shortest route, as distance is not of so much consequence as question of dock dues, facilities at the ports, and frequency of communication; reason why it would be objectionable. Dues at Hartlepool lower than at Hull, but higher than at Grimsby; are about the same at Newcastle. Dock dues high at Hull. Dues of North-eastern Company's dock on Tyne are as high as at Newcastle dock; 12,028–12,037. Cannot say whether an engine which travels 31 miles a day over bad gradients is worn out sooner than one which travels 80 miles a day over good; 12,038. Cannot give cost of waggons; 12,039. Experience teaches when rates will pay, or the reverse. Believes that short distance traffic trade does not pay; is done for those doing a large remunerative trade with railway, otherwise it might appear ungracious; alludes particularly to carrying up to collieries certain goods, such as grain for horses, grease and rope for the engines, &c. Would be an outcry if rates were raised. Different rates are given to different colliery owners; each one makes his own bargain; rates are not published; could not be fixed, as circumstances vary. Tramways belong to owners or proprietors of collieries; company not obliged to carry traffic over them; 12,040–12,055. Denies Mr. Oxlade's statement that company agreed to carry his coal for 2*s.* 7*d.* per ton, and afterwards charged 5*s.* 2*d.*, and kept back the account for three months in order to keep him in ignorance of the charge. Mr. Oxlade's account of interview with Mr. Sherriff untrue. Reads a letter from Mr. Tennant denying Mr. Oxlade's statement that he greatly favoured Mr. Sparks to prejudice of himself; also his statements that there is illegality in companies charges, regulations, and practice; that the price of coal to the public is higher than it would be under a different system, and that such arrangements preclude competition and create a monopoly, are all of them untrue. Explains most fully the course adopted by North-eastern Company in their arrangements for traffic, warehousing, and sale of coal, and hands in a table showing effect of system in providing against monopoly, and fluctuations in the price of coals in 1853 and 1854. Gives the career of Mr. Oxlade, and mentions that he has brought six actions against the company, and only partially succeeded in one. Railway dues vary between every colliery and every station. Colliery owners or proprietors cannot send coals on to line until there is a depôt vacant. Course adopted by company in the appropriation of these depôts. If a person required a particular kind of coal, railway would send for it, and charge 1*s.* a waggon extra; if a considerable quantity required, dealer would have a depôt; 12,061–12,081. At most of the stations the depôts are fully occupied; at some stations there are only two colliery proprietors. At all important stations there are many applications for these depôts. Colliery owners and large consumers are satisfied with arrangement,

O'Brien, Captain William—*cont.*
but agents and middlemen are not. Coal merchants still exist, and sell coals at a price which yields them a large profit; how their coals are obtained; 12,082–12,094. Constantly had charges of favouritism brought against agents at the station; charges investigated, and if found true, party dismissed. System less open to charges of favouritism than any other. Could not arrange traffic if matters were left entirely in the hands of local agents to order from colliery proprietors what coal they required; 12,095–12,104. In what way system differs from that pursued at Nottingham. Has been partially adopted by other companies; 12,105–12,109. Reason why coal depôts have been introduced at every station; 12,110–12,116. Does not carry from all collieries at equal rates, whatever their distance from the station, but adjusts rates so as to bring coal from different collieries into competition. Company carries coal 100 miles at same rate at which they carry it 60 miles. Would charge pretty nearly same rate for coal coming from Durham as from Yorkshire; margin of profit to coal owners so large it is not necessary to go to exactly same rate as for merchandise; coal trade very flourishing; 12,117–12,122. Mr. Wooler's evidence affects the Stockton and Darlington section of North-eastern railway, and will be replied to by secretary of that section; now amalgamated with witness's line. Mr. Wooler was not authorized to represent Darlington Chamber of Commerce; 12,123–12,126. 12,152. Reason why company are not bound to take the coal of any particular owner; same views admitted by the courts of law; 12,127–12,135. Does not think there are many coal owners who are unable to get the coals on to railway; 12,136, 12,137. Colliery proprietors complain of undue preference; would like somebody else turned out, and themselves put in. Depôt system has existed ever since formation of line; originally established on Stockton and Darlington railway. Some of North-eastern directors are coal proprietors and have depôts; if they failed in delivering the quantity they would be turned out same as others. Sends large quantities of coal and coke out of the district. Any coal owner that applies would be allowed to send coal in that way. Are two classes of coal owners, those that have a local land sale trade in coals, and those that have a great shipping trade which is conducted by railway; 12,138–12,151. Mr. Wooler's allegation that passenger fares in Newcastle district are high, witness thinks is refuted by table submitted to Commission by Darlington Chamber of Commerce. Strongly opposed to a uniform mileage irrespective of distance, as desired by Mr. Wooler; as to his complaint of the fares at Pelaw; where low fares introduced, the population is large. Advantage to company where there are low fares. Are considerably reducing fares on line. Reduction always followed by a loss; does not know whether company do not gain ultimately; 12,152–12,157. 12,174–12,180. 12,182–12,184. Gives 3rd-class accommodation. Parliamentary trains now run from Penrith to Darlington; ground upon which they formerly refused to run the train. Stockton and Darlington section manage their own line and fix rates as if they were a separate board; receipts go into a common fund; stocks not amalgamated; not a guaranteed dividend; have their own working power; boards agree, and arrangement works well; 12,158–12,173. 12,181. Believes that a reduction of 3rd-class fares would be attended with loss to company, as increase of traffic would be at expense of 1st and 2nd class; believes that there would be no increase of receipts. Does not know that when passenger receipts become less than one-third of goods receipts it ceases to be a passenger railway within meaning of Act 7 & 8 Vict. States that Mr. Wooler's allegation that at Christmas 1860 a director of Stockton and Darlington railway got a promise that North-eastern would allow him the use of the Stockton and Darlington chaldron waggons for coal trade in Yorkshire, and the evils that resulted therefrom, is a mere fabrication; witness states what really occurred; 12,185–12,188. Gives a full explanation of complaint of Mr. Wooler, that company would not give him a depôt at Croft, that they made an improper extra charge, and that they stopped the practice of the waggons being emptied by means of baskets into carts, and further that he could have sold coals 3*s.* per ton cheaper than the price at which other coals were sold there; 12,189–12,191. Answers a complaint of same gentleman, that company will not give the same facilities with respect to coke as to limestone; 12,192. 12,194. Has very little local railway competition; all carry at much the same rate; 12,195, 12,196. Has canal competition on southern part of Yorkshire end of line, which influences the rates. Have had an understanding with Aire and Calder Canal; do not reduce rates one against the other; 12,197–12,204. Company have

O'Brien, Captain William—*cont.*
some bills before Parliament this year. A railway projected from Skipton to Wharfdale by Leyburn and Yarm to Middlesbro' in opposition to North-eastern Company; portion from Middlesbro' to Settle was got last session; 12,205–12,209. North-eastern rate includes terminal charges; are in some cases in excess of Parliamentary limits to an extent which would cover the terminal charges. Sees no objection to a fair maximum being fixed by Act of Parliament; difficulty is that maximum that would be fair on an average, would be unfair under particular circumstances. Clearing house no power to settle rates and terminals; companies agree to a particular terminal, and it is charged through agency of clearing house; does not follow that it is the charge actually paid on any particular class of traffic. Terminals vary; thinks 2*s.* 6*d.* is probably the highest charge. Would not be so high for coals; timber is a loss for a short distance. Reason why silk requires a high terminal; 12,210–12,225. 12,230. Gives clearing house terminal charge per ton for London and the country, when carted and otherwise; 12,226–12,229. Terminal nothing to do with mileage rate, but is to cover certain expenses beyond the toll for use of road plus cost of engines and waggons; discussion thereupon; 12,226–12,236. Defines carriers' duty independent of carrying goods on railway; empowered by Act to charge a reasonable sum for the service. No terminal charged for passengers; what expenses included in making up terminal rates; 12,237–12,243. Has never had any difficulty in making arrangements with other companies or getting traffic conveyed to any other place; a great deal of interchange arises from agreements between companies; thinks agreements should be for short periods rather than settled by Act of Parliament. Works under several agreements satisfactorily. Has experienced a difficulty in making through rates with companies in Scotland, but they have ultimately yielded. Chief difficulty is desire of company to adhere to local rates. When through rate made, practice for each company only to take its mileage share; sometimes allows a larger share; 12,244–12,251. 12,280–12,287. Finds no difficulty in arranging for conveyance of goods or passengers. Mr. Cardwell's Act has never been brought into operation. Thinks it would be monstrous for a company to insist upon another company running branch trains unnecessarily merely to fall in with the great lines; 12,252–12,256. Can book through from Newcastle to Liverpool by nine routes; the two mostly used are by Normanton and Leeds. Is not sure whether through rates are granted by all the nine. Routes by which you can book through to Liverpool. No amendment of Mr. Cardwell's Act or any additional enactment bearing upon interchange of traffic is required; 12,257–12,264. With reference to complaints that trains on branch lines do not meet other trains at their junctions, witness believes that this evil would be remedied if companies were in a more prosperous state. Mentions what has been done on North-eastern railway within last 11 years; 12,265, 12,266. Runs a certain number of trains per day without reference to number of passengers; more carriages are put on than are likely to be filled; 12,267–12,269. If rates were reduced traffic would increase. Has been an extraordinary development of trade, especially in goods and minerals in North-eastern district since 1850. A large portion of district agricultural; passenger traffic is not increasing in this district; increase has been in manures and other articles used by farmers. Thinks 1st-class passenger traffic, generally, is not increasing over railway. Is a large transfer always going on from 2nd to 3rd class. Better to carry a passenger one journey for 2*d.* than two for 1*d.* each; 12,270–12,279. Believes cost of conveyance will increase; reasons. Strongest interest of directors to economise; 12,288–12,292. Application for reduction comes sometimes from parties who are getting up limited companies and guaranteeing 10 per cent. dividend for five years; railway is only paying five per cent. Considers parliamentary classification of goods very defective; is adhered to closely; is that of the clearing house, with a variety of local classifications; would be desirable to revise it. No person, by looking at any classification, can tell what he has to pay; could tell the maximum. Believes parliamentary classification is the same in all Acts; 12,293–12,299. Would be impossible for North-eastern Company to publish rates; as to advisability of publishing separate terminal and mileage rates; 12,300–12,305. Would be unfair if directors favoured individuals, and an injury to the shareholders; 12,306, 12,307. With respect to companies' liability for goods damaged, witness thinks protection given to carriers might be revised. How companies now protect themselves; 12,308–12,310. Liability of companies for injury

O'Brien, Captain William—*cont.*
to passengers is defective, but cannot suggest any improvement; a jury an unfavourable tribunal towards a wealthy company; 12,311–12,315. As a shareholder, would be pleased if Government took the railways, but is against their managing them themselves, or leasing them out to others; 12,316–12,319. Has a few private waggons on North-eastern line; prefers to have their own; private waggons are worked and sent back same way as those of company; would not allow demurrage if they were detained. The waggons are sometimes detained at private sidings; cannot charge demurrage. Companies do not bind themselves to deliver within a specified time. Disadvantages that would arise if punctuality of trains were enforced by legislature. Does not wish to be exempted from Parliamentary control, but more Government let companies alone the better. Complains that Post Office have deprived companies of much of their parcels traffic. Companies cannot compete with Post Office. There is a properly organized railway parcels traffic. Railway can deliver parcels as soon as Post Office. Would not get any more from Post Office if taking these parcels involved carrying a large extra weight. Post Office pay a certain sum per mile; quantity limited; 12,320–12,344.

Oldham, Mr. Henry:
Letter from, in respect to the through charges for passengers between England and Ireland; *App.* BD.

"Omnibus" Bills. *See* Legislation.

Oxlade, Mr. William. (*Analysis of his Evidence.*)
Complains that the North-eastern Railway Company select their customers, and that the Court of Queen's Bench and Court of Exchequer decide differently from the Court of Common Pleas; 1876. The words "undue and unreasonable" and "may" should be struck out of the Railway Act. States how the application of these words affect witness, and describes the treatment he has been subjected to by the railway company; 1877–1893. 1901. Facilities given to coal owners; 1894–1900. States the only way in which he sees it is the interest of the railway to interfere with his trade; 1902. They exclude some of the colliery owners as well as the dealers; 1903. It is not true if the company say that there is not sufficient accommodation at their stations to allow anyone to come in who chooses; 1904. Coals would be sold for less to a Mr. Sparkes (who represents himself as the owner of the West Belmont colliery) than to witness. Assigns as a reason for the preference, the gentleman being a friend of the present accountant. When witness first began trade, this gentleman had a private agreement with the company that if he sent 10,000 tons they were to be carried at ½*d.*, but until witness's trade was stopped, he never did send the stipulated quantity; from that time he got a large drawback. Mentions the treatment he received from the Great Northern Company; 1905–1915. Complains that in certain instances the North-eastern Company charge much higher than their authorized toll; for instance, they charge for agricultural produce 10*d.*, and for furniture 1*s.* 2*d.* per mile. The highest toll under their Act is 3*d.* There should be no further charge, except a reasonable one for loading and unloading; 1916–1922. If people complain of the high charges, the railway people threaten that they will serve them "as they served Oxlade"; 1923, 1924.
Letters from witness to the Commissioners, stating that North-eastern Railway charge much higher than they are authorized by their Act; *App.* G.
[*For answer to above statements, and full description of North-eastern Company's coal trade system, see* O'Brien. Sherriff.]

Paddington:
Diagrams showing the number of passengers booked out of Paddington station each day during 1865, and weight of excess luggage at Paddington station each day during 1865; *Apps.* CF. and CG.

Page, Mr. Edward. (*Analysis of his Evidence.*)
Is inspector-general of mails; 14,911. Prepared the returns for England and Wales sent by Post Office to this Commission; did not prepare the Irish one, but believes speed there given includes stops; 14,912–14,914. Total cost of mail service; 14,915. London to Dover by South-eastern line is the fastest mail train; nearly

Page, Mr. Edward—*cont.*
46 miles an hour; 14,916. Has only one exclusive mail, and one mail train restricted. Object of Post Office in having these limitations; has been attained to a very great extent; 14,917–14,920. Gives number of miles traversed by mails by ordinary trains with number traversed by mail trains under notice. Daily mileage of trains carrying mails for United Kingdom about 60,000 miles. Explains meaning of trains under notice; 14,921–14,924. General principle as to payment on which contracts have been made. Rates of payment vary; gives some instances; 14,925–14,932. Does not know the cost of running an engine and a single carriage per mile; gives Mr. R. Stephenson's estimate, and reads a list from second report of the Postmaster-General (Duke of Argyll) of payments awarded, which range between 2*s.* and 4*s.* 6*d.* for conveyance of mails by trains which also carried a considerable amount of passenger and parcel traffic; in only one case was there more than a whole carriage required, and in many cases less. Pays more than 4*s.* 6*d.* for services in Chester to Holyhead; high rates given to company as a sort of subsidy for making very expensive road to Ireland; 14,933–14,943. 15,024–15,028. Gives two illustrations of wide difference of opinion between Post Office and arbitrators as to payment for conveyance of mails; any attempt to define and regulate arbitration would lead to somewhat cheaper payment for mail services placed under legal notice. Is scarcely a railway company in the kingdom that would say they were sufficiently paid, but new companies are always anxious to secure conveyance of mails. Line of argument taken by companies before arbitrators, and Post Office view of the question; 14,944–14,947. 15,015–15,017, Post Office considers it necessary in consequence of want of uniformity in decisions of umpires that some specification should be introduced into an Act of Parliament in order to define what is a reasonable remuneration; gives an illustration of want of uniformity in umpires' decisions; to what cause attributable; 14,948–14,950. 14,973. 15,011–15,014. In majority of cases Post Office worse off with regard to sending mail bags by ordinary trains than public at large with parcels, as they are charged a higher rate, although they relieve the companies of collection and delivery; must either put train under notice or send a guard with bag and pay his fare; latter course would be inoperative in consequence of company denying right of Post Office to exchange bags at intermediate stations; great disputes have arisen and question twice tried. Post Office could exercise power by sending porters to every station at which bags were to be delivered up; would have to send as many porters as series of bags. Post Office has asked companies to grant a yearly ticket for guard, but right has been disputed; one company has granted a season ticket. Effect of the defect of legislation has been a high rate of charges for ordinary train services upon agreement with companies, and consequently very great delay in establishing mail service; mentions a case which occurred some years ago with regard to services of this description; 14,951–14,956. 14,960–14,962. Have very seldom obtained reasonable terms for ordinary train service; the lowest charge now made is full parcel rate, or twice what it ought to be; mentions rates charged by companies; in one case 7*d.* per mile was awarded for a bag unaccompanied by a guard, the weight of which was less than allowed to passengers for luggage; by same train passengers were only charged a trifle more than 1*d.* per mile; 14,957–14,959. Considers it would be very important in order to secure more punctuality, that Post Office should have right of requiring, if it was prepared to pay for it, an exclusive train carrying mails and officers of Post Office only, and also, if it desire it, a train, the traffic of which should be limited either as to number of carriages or description of traffic; 14,963, 14,964. All cases of irregularities are reported; explanation generally given by companies; mentions great irregularity that took place in the train from Edinburgh and Glasgow to London, and delay in the delivery of London letters in consequence; 14,965–14,967. Difficulties Post Office encounter in reference to speed of trains in consequence of right being so vaguely defined; 14,968. Post Office has endeavoured to deal with all the difficulties that have arisen from time to time by the introduction of bills in 1853 and 1857. Reads remarks made by the Duke of Argyll in his fourth report on the object of the latter Bill; Bill was introduced into House of Commons, but did not pass the second reading; was a sort of combination among the railway companies to defeat it. Reads also a memorandum which was prepared to explain various provisions of the Bill; 14,969–14,972. 15,123–15,125. Explains why the passing of the Act which abolished the com-

PAGE, MR. EDWARD—*cont.*
pulsory newspaper stamp was accompanied by a lowering of the rates charged on book packets; 14,974, 14,975. Why witness thinks that Captain O'Brien could not imagine that Post Office were sending their parcels for nothing; is a sweeping accusation unsupported by any proof; 14,976–14,978. Railways have afforded very great advantages to Post Office for development of correspondence; benefits that have followed their introduction. Cost to Post Office of performing postal service has materially increased as compared with coach conveyance; increase has not been proportionate to number of letters carried; 14,979–14,984. Question of parcel post very carefully considered 10 years ago, and has been repeatedly ventilated by public press, and also by Society of Arts, who, in 1859, made a report recommending its establishment; their reason for recommending it. Anything that does not come under description of a book packet is charged same as for a letter; intended that parcels should be charged at a lower rate than for letters, but should be subject as book packets to possible delays in despatch and delivery; believes such a system would be profitable to companies and Post Office; would expect to have an enormous number of parcels sent. Peculiar facilities possessed by Post Office for a parcel post; 14,985–14,994. 15,002–15,004. 15,010. Post Office scheme and Society of Arts' recommendation was a parcel post at uniform charge according to weight, irrespective of distance. Public would have known exact cost of sending a parcel; does not now in all cases; would be impossible to ascertain total charge for a parcel sent from a town upon a railway addressed to a village remote from a railway; that portion of cost would in many cases be an arbitrary one; 14,995–15,001. Would not be difficult to devise means by which whole charge levied and collected by Post Office for parcels should be equitably divided between Post Office and railways, according to services performed by each. Gives the daily mileage of mails by railway, and by coaches, omnibuses, and mail carts; has no record of daily mileage of rural messengers; 15,005–15,009. Reason which has led different umpires to award different sums. Post Office only wish to be treated same as any large trader. Duke of Argyll's view was that actual cost of carrying mails should be ascertained, and 100 per cent. added for profit; 15,018–15,023. 15,036. Sum awarded under arbitration for mail from London to Bristol is 3*s.* 9*d.* per mile; thinks any individual could obtain a train at same rate; according to Mr. Stephenson's estimate of cost of running a train, this sum would yield a profit of 200 per cent. Believes 2*s.* 6*d.* represents average cost of running a train; would far exceed cost of running an engine and a single carriage for the Post Office. Post Office would not pay any proportion of ordinary expenses; 15,024–15,035. Board of Trade stated that additional cost of running a train and a carriage would be represented by a rate varying from 1*s.* to 1*s.* 2*d.*; 15,037. Nearly all recent contracts give the Postmaster-General a right to require any additional train that may be required; rates of payment under these contracts vary considerably. London and South-western offered to run an additional mail train for 3*s.* per mile; when manager cannot utilize a return engine it is only equal to 1*s.* 6*d.* per mile; names companies who, under contracts, run trains for less than 1*s.* 6*d.* per mile; 15,038–15,042. Companies charge other parties from 3*s.* to 8*s.* per mile for special trains; are purposely fixed at a prohibitory amount; 15,043. Have only called upon two companies to run additional trains; for what service required; are occasional trains and in one direction only; 15,044–15,046. Would make a great difference as to payment whether trains were occasional or daily, or in one direction or two; is very seldom that a mail train is not required to run in both directions; 15,047, 15,048. Provision made in contracts as to fines for services not performed within specified fixed limits. Companies have obtained a large subsidy in consideration of fines, but owing to peculiar circumstances have never paid any; 15,049–15,051. 15,058–15,062. Post Office have no power to make stipulations as to companies taking in passengers at stations; 15,052. Companies can enforce penalty of bond when train unpunctual, but practically they never do so; 15,053–15,057. Thinks there would be greater punctuality if companies obtained a premium when time was not exceeded, and pay a penalty to Post Office when exceeded; similar arrangement offered to companies some years ago, and refused by all except one, who obtained a considerable amount from premiums; 15,063–15,067. Duke of Argyll's bill would have afforded a material improvement, but would not have remedied all the evils; 15,068. Would not be fair to Post Office or railway companies to provide for

PAGE, MR. EDWARD—*cont.*
payment of every description of service by a tariff. As regards ordinary train service, no reason why a tariff of charge should not be fixed according to weight of mail. Post Office would be very glad to pay even at the highest rate required for goods; 15,069–15,071. Companies, in laying case before umpires, base their claims as to rate of payment on fact of Post Office carrying book post; considers this a most unjustifiable argument; companies have no more exclusive monopoly in the conveyance of parcels than in conveyance of passengers and goods; 15,072–15,079. Post Office pays a sum for carrying parcels very much in excess of maximum charge allowed by Act for packed parcels. Many companies refuse to carry packed parcels; decision has been against them. Weight of mail forms an element in fixing charge; space allowed is very seldom filled. Post Office practically pay for a much larger space than they use; 15,080–15,085. 15,107. Would save many thousands a year if Post Office made arrangements for conveyance of letters only, and then paid for the packages and books same as other individuals; has never made such a proposal to companies; 15,086–15,088. How companies are able to exact more from Post Office than private traders; thinks in most cases umpires take a mistaken view; they generally lean towards railways; their expectations are not merely for a liberal but an extravagant payment; 15,089. 15,091–15,096. Why, in cases where there are two routes to same point, Post Office cannot make special agreements with one company as against another; 15,090. Why system of arbitration disliked by companies; are sometimes kept out of their money for many years; delay as much their fault as fault of Post Office; wherever a fair representation made Post Office has paid a sum of money on account. Reason Great Western Company were kept out of 150,000*l.* for some years. Only where the service changes that a fresh arbitration can be claimed by either party; railway company can, at expiration of three years, claim a fresh arbitration, although service unchanged; why the power given; 15,097–15,106. Does not know whether book packets are carried to a great extent upon railways. If parcel post established satisfactory arrangement could be made as to proportion of income that should be paid to railway; knows object of clearing house arrangement; thinks facilities could be materially advanced by similar arrangements; 15,108–15,111. 15,117–15,119. Post Office has a monopoly by law of conveyance of letters, but not for parcels. Newspaper and book-post service performed at a loss; mainly owing to high railway charges; 15,112–15,116. With one company, who carries the bags at parcels rates, a composition arrangement has been entered into by which average weight of bag is ascertained at a certain period, and a sum paid on assumption that weight will always be about the same. Has heard that arrangements have been made with foreign countries whereby necessity of weighing each specific letter has been got rid of, and an equitable basis formed for division of postage; believes arrangement has worked well. Wishes it to be distinctly understood that in all witness has stated he has only given his own opinion; 15,120–15,122.

Remarks by, on certain portions of Mr. Allport's evidence affecting the postal service; *App.* CW.

PARCELS:

Great facilities for, on Belgian railways; *Fassiaux* 3148–3152. Unequal rates upon, in certain parts of Ireland; *Cooper* 3747. Increase of rates for, on Irish Northern Counties line; *Macauley* 7304.

Complaint that, under the guise of carrying letters quickly and cheaply, Post Office deprive railways of their parcels traffic; *O'Brien* 12,328–12,343. Denial of this statement; *Gregory* 17,702 *et seq.*

Railway companies have reason to complain that Post Office is gradually trying to absorb the parcels traffic; *Allport* 16,951.

Cannot prevent packed parcels being carried upon the line; companies claim right to charge a certain rate per ton; present rates are a great hardship to companies; the carriers make an immense profit. The companies are spared the expense of delivering these parcels. Thinks that 4*d.* is about the charge for collection and delivery of each parcel; company would deliver a parcel at a distance of 1½ miles for 2*d.* or 3*d.* in a town; is not charged separately. Companies carry the largest number. Mentions that an experiment was made at Bristol with one of these parties who packed in this way, and it was found that public paid more than they would have done to railway; accounts for the system being encouraged. Railway charges less in the gross than the packed parcels people; if public knew that they would bring all the parcels to

PARCELS—*cont.*
the railway; *Grierson* 13,411–13,423. Could not compete with Post Office for conveyance of parcels, as it would injure the present parcels traffic. Post Office get them conveyed without extra charge; is not complaining of the remuneration paid by Post Office, but only of their undertaking certain services which they did not originally perform, which has deprived companies of a great deal of traffic; description of parcels carried; discussion upon this question and upon right of Post Office to send parcels by railway; *ib.* 13,424–13,449. 13,453–13,455. Company have no system by which parcels could be conveyed at an even rate from one part of the kingdom to another. Railway companies employ Post Office to convey book packages even to large towns which are in immediate connexion with railways; *ib.* 13,450–13,452. Charges Post Office very much more per ton per mile than the publishers, but Post Office have a special service running each way once a day devoted to them alone, and also use of all regular trains; would be happy to give any private individuals same number of trains at same speed for the same payment. Does not know who objected to carrying passengers by Post Office trains; *ib.* 13,456–13,462.

System of Midland Railway as to small parcels; *Allport* 12,399–12,404. 13,858–13,875. Company have a special rate for packed parcels; *ib.* 13,860. Higher rates charged if parcels go by passenger trains; *ib.* 13,871. Experiment made by witness some years ago of reducing parcels rates to a uniform scale, irrespective of distance, after two years' trial was given up; *ib.* 13,877. Conveyance of, and charges for, on Lancashire and Yorkshire Railway; *Smithells* 13,096–13,114.

There is practically a maximum charge for parcels, though none has been fixed by the legislature. Parcel traffic is interfered with by packed parcels companies and by Post Office. Circumstances, such as water competition, &c., might justify a less charge for 200 miles than under other circumstances for 120. Witness does not think that parcels are overcharged. A uniform mileage rate would put an end to competition with steamboats, &c., and all but shipping interests would suffer; *Sherriff* 16,270–16,275.

North-eastern Company have carried parcels at letter rates ever since introduction of penny post; *Gregory* 16,735.

Great mischief to trade and to the arts occasioned by want of facilities for the conveyance of parcels; *Chadwick* 17,179. Present state of railway communication greatly hinders the retail distribution of the country. Switzerland quoted to show how retail trade may be stimulated by cheap parcels post in connexion with cheap telegraphy; *ib.* 17,243. 17,253. Discussion of comparative advantages of English and Swiss and other continental systems of conducting telegraph business as bearing upon a parcels post; *ib.* 17,254–17,257. Transmission of agricultural produce by a branch of parcels post; *ib.* 17,258. Further illustrations of injury to retail trade in England, as compared with the continent, from high charge for parcels; *ib.* 17,259. Excessive cost of retail distribution of goods shown by comparison with Switzerland, &c.; *ib. Addendum, page* 852.

Particulars as to, on Irish railways; *App.* AW.

PARCELS POST:

Proposal of a plan for carrying parcels throughout the kingdom at a low uniform rate irrespective of distance, 3lbs. for 4*d.*, &c.; *Galt* 7391–7396.

Similar suggestion to the above, detailing advantages which would accrue, both to railway companies and the public. Hitherto companies have always opposed the project; *Page* 14,985–15,006. Statistics quoted to give an idea of present mileage of Post Office coaches, carts, messengers, &c. as compared with mileage by railway, with reference to payment to be made to Post Office and railways respectively if above scheme adopted; *ib.* 15,007–15,010.

See also POST OFFICE.

PARKER, MR. ALEXANDER. (*Analysis of his Evidence.*)

Is a merchant in Dublin; 6864. Railways of Ireland are in a very unsatisfactory position as regards the shareholders; have been for the most part very unprofitable speculations; directors unable to venture upon any experiment, such as a bold reduction of the fares and charges; might be attempted by Government without much peril to the Exchequer. This would induce great masses of the people to travel, especially the labouring classes. All Irish railways give too little encouragement to third-class passengers. Return tickets are granted to first and second class but denied to third-class passengers. How Lord Dunsandle, when chairman of Midland railway, by putting on fourth-class waggons induced harvest men to make use of railway, and although population much thinned by emigration, receipts from this source have increased. Facilities presented by extremely low fares induced people to emigrate. A trifling reduction would not be of much use, but a large and telling reduction would bring out such numbers as travellers that in two years there would be no diminution in the revenue. Does not lay much stress upon a large reduction in price charged for merchandise, as he does not think that it would largely increase traffic. Would join in pleading for Government interference in order materially to reduce present passenger fares, and considerably reduce charges for merchandise; would be extremely popular and a political, social, and great commercial advantage. Is of opinion that it would be a benefit to the country if Government would buy up railways. Directors would make reductions if prepared to run a risk for 12 months. Suggests that Government might guarantee railway companies against any loss below that which they may at present be incurring; 6865–6872. 6878. Is certain that if fares were lower persons who now carry on their business by correspondence would do so personally; 6873, 6874. At meetings of Irish railway companies very little union amongst shareholders, and very little cordiality between them and the directors; are generally an occasion for clamour for reduction of freight or passenger fares, but suggestion generally comes with a local bearing; 6875–6877. Present through-rate system operates to disadvantage of local merchant. States that goods can be sent cheaper from Liverpool to Cork, or from Liverpool to Limerick or Athlone, or to any of the inland towns more than 100 miles distant, than from Dublin. Difference paid to London by a Belfast and a Dublin merchant. Discussion thereupon. Generally speaking, English railway companies and Irish steamboat and railway companies are parties to through rates; 6878–6889. 6894–6899. Reduced rate would materially affect consumption of coal. Turf never very cheap and always an uncertain fuel. A dearth of good turf is nearly as bad as a dearth of potatoes. Railways carry coal at a very reasonable rate as compared with other merchandise, but high as compared with England. Was not aware that London and North-western carried coal for ½*d.* per ton per mile; 6890–6893. The Commission will be furnished with statements of some of principal rates charged; 6900.

PARLIAMENT:

Letter from the Board of Trade as to the power of Parliament to revise railway rates and tolls; *App.* BM.

PASSENGER DUTY:

Five per cent. on English railways; none on Irish; *Forbes* 1674–1676; *Hemans* 3881.

Passenger duty for six months of 1865 on six companies having termini in London amounted to upwards of 225,000*l.*; *Teulon* 16,490.

See also TAXATION.

PASSENGER TRAFFIC:

Increase in, is far exceeded by increase in mineral and goods traffic; *Allport* 13,794–13,797.

Returns by the several railway companies in Ireland, showing the traffic in passengers and goods during the year 1863; *App.* AA. Statistics deduced from preceding return, and comparative summary; *ib.* Abstracts from the half-yearly reports of the Midland Great Western Railway of Ireland from July 1851 to June 1864, both inclusive; showing amount realized from passenger traffic; in each half year distinguishing each class; also returns of passenger traffic and revenue in each year; *App.* AG. Statement of passenger traffic on Great Southern and Western Railway of Ireland from 1846 to 1864; *App.* AH. Diagram showing the number of passengers booked out of Paddington station each day during 1865; *App.* CF. Regulations for the transport of passengers and goods on the French railways; *App.* CH. Comparison of number of passengers carried by English and continental railways; *App.* CN. Conditions and fares for the transport of passengers on the State railways of Belgium; *App.* CT.

PASSENGER TRAINS:

Witness believes that in the course of three or four years some of the leading lines will be so choked up with traffic that it will be necessary to construct additional lines for passenger trains only; *Hawkshaw* 14,651.

Statement of passenger trains on certain English railways; *App.* EE.

PASSENGERS' LUGGAGE:

The quantity of passengers' luggage is frequently a great cause of delay; *Cawkwell* 11,725; *Clarke* 12,786

Suggestion that passengers having luggage should be at the station 10 minutes before starting, and that numbered receipts be given for luggage; *Low* 13,947–13,949.

Charges for passengers' luggage very rigidly exacted on the continent, and on English lines in connexion with them; *Clarke* 12,873, 12,874. Great Northern Railway Company are very liberal in this matter; *ib.* 12,844–12,847. 12,871, 12,872. Passengers have to pay for their luggage on French railways; *Stewart* 14,665.

Diagram showing the weight of excess luggage at Paddington station each day during 1865; *App.* CG. Comparison of the rates charged by English and continental railways for passengers' luggage, &c.; *App.* CN.

See also FOREIGN AND COLONIAL RAILWAYS.

PATTERSON, MR. JOHN. (*Analysis of his Evidence.*)

Is a merchant in Liverpool, largely engaged in foreign trade, especially in corn, and a member of the Chamber of Commerce; 212–214. The charges on several of the railways running out of Liverpool are, in some instances, 50 per cent. more than are charged on the same lines in other parts of the country; 215–218. The corn trade has prepared a tariff which they think would be equitable to the public and remunerative to the company; 219–221. The corn trade of Liverpool is unduly weighted by the railway charges; gives instances; 224–227. Derby, Sheffield, Gloucester, Todmorden, &c., suffer severely from being unable to buy their corn at Liverpool, through the excessive cost of conveyance; 228–231. Liverpool merchants have frequently to warehouse their goods at great cost, for want of cheap communication; 232. In consequence of the heavy rates, the annual cost of breadstuff, cotton, and cotton goods is greatly increased; 233–237. Preferential agreements are made between railway companies and individuals to the prejudice of others. At Manchester, a higher rate is charged to the grocers than to the sugar refiners; 240–246. Is unaware whether different rates are charged for precisely the same service, but discounts are allowed very capriciously; 247–254. At Hartlepool, docks and warehouses have been built by railway companies, who then favour their own ports by carrying at low rates, thus directing the traffic from its natural channel. Their constructing docks would not concern the mercantile community if they carried at equal rates; gives illustrations showing the contrary; 253–300. Excessive charges increase the cost to the consumers, entail loss upon the importers, raise up rival ports, admit preferential privileges, and impose a tax of 50 per cent. on the corn duties; 301, 302. Increased railway accommodation would greatly benefit Liverpool; 303–306. Facility of combination is much increased by the disproportion between the railway accommodation and the enormous traffic to be carried; 307, 308. Very difficult to suggest a remedy for the evils of combination, as such wealthy corporations would crush ordinary opposition; 309–311. A new line would not receive much support in Liverpool, in consequence of existing interests in present companies, and because it could not give a sufficient reduction of rates. The London and North-western propose increasing accommodation at Liverpool; 312–317. Rates, though less than formerly, are higher in proportion to present cost. Fixed terminal charges should be introduced into Railway Bills, scales of tolls as now inserted being no protection. No security will be given to the public unless the rates are graduated according to distance, and terminal charges distinctly fixed; recites rates for corn from certain places; 318–348. Fair to the railway companies and practicable for Parliament to compel all the lines, irrespective of cost of construction, to conform to some reasonable standard, as in the case of passengers; 349–352. Dock charges at Liverpool are necessarily high, but does not think they press upon the trade, though this may be a fair reason why independent parties should construct a harbour upon commercial principles; 353, 354. Great loss of trade from the high rates between Liverpool and the interior of the country. A portion of the loss in the corn trade is attributable to the high dock rates, &c. in Liverpool; 355, 356. Combination to keep up prices dangerous; an increase of railways to Liverpool might be advantageous, if unable to combine; present number too small for competition to reduce rates; 358–364. Uniform rates for uniform distances should be compulsory, except under special circumstances; 365–374. 381. The railway companies say that at Liverpool and London the terminal expenses are excessive; 374. The station at Liverpool cost an enormous sum beyond that at Holyhead, but the traffic more than

PATTERSON, MR. JOHN—*cont.*

compensates for the difference; 375–380. If Parliament fixes uniform mileage rates for uniform distances, it should do so upon the principle already adopted in fixing tolls; this rate should be uniform over all the system, and to all persons; reasons stated; 382–401. Rates might be reduced without lessening profits; 402–404. The dock accommodation at Liverpool is insufficient, but extensions are in progress at Birkenhead, and the scheme for connecting the two places by a tunnel, if practicable, would be most useful; 405–407. As to cost of construction in fixing the rates; 408. No difficulty in obtaining sites for stations; 409. Strong representations have been made to the railway companies, but a most inadequate reduction has been the only result; 409–411.

Papers referred to by witness:—Statement prepared by the Association of the Liverpool Corn Trade, showing imports and exports of breadstuffs, and stocks held in Liverpool in each year from 1858 to 1864; *Apps.* C. and K. Tariff of rates of railway carriage of grain proposed by the Association of the Liverpool Corn Trade from station to station; *App.* C. Rates from certain places existing and proposed; *ib.* Memorandum upon railway fares from; *App.* Z.

See also SMITHELLS.

PEAT:

Not adapted for use on railways; *Mallet* 2144.

PERMANENT WAY:

By means of strict daily inspection most railways in England are kept in a high state of repair; *Cawkwell* 11,695; *Clarke* 12,793. Companies paying badly have sometimes exercised an unwise economy by allowing line to get out of order; *ib.* 12,795. Great Northern Company are relaying a portion of their line year by year, rails being worn out; *ib.* 12,929–12,932. Cost of permanent way as now laid down is at least 50 per cent. more than it was a few years ago; *Harrison* 15,289.

Time which rails, sleepers, &c. are calculated to last. The earlier rails were better than subsequent ones, but steel rails are now coming in, which are superior to any other; *Bidder* 17,036–17,040.

Discussion as to mode of fastening down rails, and as to use of steel rails. Rails are now necessarily heavier than those formerly used. Mixed gauge has added very much to expense of maintaining permanent way; *Gooch* 17,401–17,422.

See also SINGLE LINES. STEEL RAILS.

PERRY, MR. HENRY ROBERT. (*Analysis of his Evidence.*)

Is a grain merchant in Dublin; 6817. Has given railway system of Ireland, in connexion with corn and flour trade, his especial consideration. Has always found companies disposed to extract extreme rate of remuneration for services performed, and was only by having Grand Canal that they have been kept from advancing rates still further. In 1860 Great Southern and Western and Midland Great Western promoted a Bill to buy up this canal, but failed; is now worked by original owners with great advantage to the district. Result of an agreement, confirmed by award, between these two companies entered into some years since, by which rates and fares fixed and healthy competition precluded, prejudicial to development of natural traffic and trade of the country, and calculated to retard materially commercial enterprise. How award arose, and matters which arbitrators were called upon to settle; reads the award, the result of which is that each company agreed not to compete with each other, but divide traffic in certain proportions, the object being to do away with canal opposition; no branch lines were to be promoted in a district which each considered as its own; 6818–6827. Rates for freight unequal, and considerably higher than the trade can afford; a moderate reduction would speedily induce an increased traffic over lines of greater part of Ireland; instances the low rates (½*d.* per mile) in operation in Westphalia, which, so far from being unremunerative, have developed a considerable source of national wealth, and largely increased profits of railways. Rates for passengers and facilities afforded are not such as to induce travelling to an extent remunerative to the companies, the poorer classes for this reason rarely use railway to attend market, fairs, &c. Midland Company have set a good example by issuing market tickets. Hardly any points to which a third-class passenger can go and return on same day; at some points he cannot make even direct distance in one day. Branch lines worked by small companies prove a serious obstruction to traffic. Great benefit would arise if railways of Ireland could be

PERRY, MR. HENRY ROBERT—*cont.*

worked as one general comprehensive system, and rates and fares lowered to a point analogous to those on the continent. Is of opinion that to make railways fully remunerative, rates they receive must be fixed in proportion exactly to circumstances of the country in which they are situate; 6828, 6829. If rates were lower trade in grain would increase. In witness's district rates have been advanced since canal competition. Result of canal reverting to original proprietors has been that they have made an arrangement by which they compete at certain rates without conflicting, and rates of railways have been increased 25 per cent. in every particular instance since that occurred; 6830–6833. High rates for grain do not prevent speculation. A reduction of one-third from present rate for grain would be fair, and that, after the lapse of two years, would pay company. Would not be such an increase in grain as in other articles if rates were lower. Reduction would make a difference of about 5*d.* on the quarter; is certain that this would lead to an increased growth; many mills idle by reason of rates of freight rendering them not able to be worked profitably. Mentions one at Athlone, and states in what way additional charge of 5*d.* per quarter prevents that mill from working. 5*d.* per quarter on oats would allow a profit to the grower. Has made out a table, which shows that charges generally are not equal on railways, governing point being contiguity of the seaboard; for instance, between Dublin and Cork rates are less than to many stations short of Cork, and from Dublin to Belfast (113 miles) the fare is 10*s.*, and from Dublin to Banbridge (87 miles) 15*s.*; 6834–6859. On Great Southern and Western, fares have been increased for some of the shorter distances in considerably higher proportions. Passenger fares have also been advanced 10 per cent. during past 10 years on both the Midland and Great Southern and Western; 6860–6862. Many of the smaller companies are burdened with capital by reason of difficulties in construction, consequently a large portion of capital is lost, and original shareholders receive no dividend. Reason why Streamstown and Clara line is not used; 6863.

PERRY, MR. THOMAS. (*Analysis of his Evidence.*)

Is connected with iron foundry trade, and chairman of Ironfounders' Association; 10,603, 10,604. Complains that foundry trade of South Staffordshire is restricted in consequence of railway companies charging a higher rate for castings than for bar iron. Where same values, and loading equally good, the rates should be the same, provided the freighter undertook all risk. Companies should be bound in all cases to give freighter a rate free of damage and a rate subject to damage. In the case of castings companies do not charge according to value, as the average price is lower than for bar iron; liability to fracture is the element. The extra rate charged by companies for insurance is excessive; would pay freighter well to take risk in consideration of paying a lower rate; 10,605–10,607. Castings can be packed as closely as other descriptions; mentions several that should be sent at same rates as bar iron. In consequence of an appeal to the railway company they have given a classification of certain castings which they would take at bar-iron rates; must be at sender's risk. Companies have thus admitted the principle, but have not gone far enough. When castings are very heavy, excessive in size, or weight not proportionate to size, special rates might be charged; in latter case, might be taken by the cubic foot; 10,608, 10,618–10,621. Principle upon which the additional charge for risk should be arranged. There would be scarcely any litigation if arrangements as to risk were made beforehand. Is now sometimes doubtful whether companies are liable or not; 10,622-10,628. Concurs in the suggestions made by South Staffordshire ironmasters as to classification, &c. of iron; their evidence principally turns upon bar iron; 10,629, 10,630. Board of Trade should make out classification; should take information from thoroughly practical sources; classification should be finally settled by law; 10,631–10,633.

See also GRIERSON.

PIM, MR. JONATHAN. (*Analysis of his Evidence.*)

Is a merchant and manufacturer in Dublin; in some degree firm are general merchants, but chiefly Manchester warehousemen, and cotton and linen manufacturers; 7050, 7051. A large reduction in rates would be a great advantage to the country. Attaches more importance to reduction in passenger rates than in goods rates, the former is less expensive traffic. As upon reduction there would be a deficiency in the receipts for four or five years, would not be warranted as a director in risking property of shareholders. Reason why experiment should be tried in Ireland; if successful should be extended to England. English railway companies might adopt it themselves; 7052–7058. 7062. 7065, 7066. Thinks difficulty not insuperable of getting rid of paid directors and uniting companies in two or three large companies; 7059–7061. Large reduction in rates for coal would not be so great a benefit as reduction in passenger fares, as that would enable lower classes to travel upon railways; 7063, 7064. Would reduce rates to about one third of present rates. It would rather take ten years than five to recover receipts. Would then be no necessity for return tickets and excursion trains. How want of concert between companies affects passengers and traders. All ordinary trains in United Kingdom should carry third-class passengers; 7067–7076. Is a director of Dublin and Kingstown railway; whole of working arrangements under control of Dublin and Wicklow; 7077, 7078. Has not thought much about railways being purchased by Government; all new Irish railways should be made at their expense under some general system. Reads passage from Quarterly Review for 1839, predicting present evils. Believes state of things existing in England is very much the effect of amalgamation of the great lines. Mentions railways out of Dublin, and difficulties that arise from want of concert. Has heard of some attempts being made to amalgamate; knows they failed. If there were two or three great companies, it would lessen present difficulties very much. Train from Belfast came into Dublin too late to catch train to Cork, so that passengers could not make the journey in the same day. Was a mere matter of accident, but where different interests, companies often pull very badly together; 7079–7086. Several railways which do not pay in themselves, but which greatly benefit country through which they run; if fares were lower would benefit country a great deal more. Why not worth the people's while to reduce rates. The floating debt would be a difficulty. Line from Athlone to Castlebar and Westport only partially completed; paid a dividend of 3½ per cent.; as a proprietor would advocate reduction. Many of the great companies could try it, but are not willing, believing it would not pay. As to loss that would be likely to arise if suggested rate were adopted; would be a diminishing sum each year. Receipts of first two or three years would show probable result. If unsuccessful would have to be given up. Instances success of Post Office. Some of the London companies have been compelled by late Acts to carry working men at low fares at certain hours morning and evening. Parliamentary trains generally put on at inconvenient hours for fear it should be made use of by any except lowest class. If fares were reduced many would travel second class who now go third, and first who go second; 7087–7092. Does not complain of the terminal charges, but complains of through-rate arrangements. Certain kinds of competition which companies ought to be prohibited from entering into. Labouring classes would travel much more if fares were cheap; their so doing would be a great benefit to the country; 7093–7098. 7103. Cattle and horses are driven by the road in consequence of the high rates by railway; 7099–7102.

POPULATION OF IRELAND:

Though reduced, still very large; sufficient, if fares reduced, to support railways; *Bewlay* 6974. Kept very stagnant by high fares; *Bagot* 7001.

POSTAL SERVICE:

Remarks by the Inspector-General of Mails on certain portions of Mr. Allport's evidence affecting the postal service; *App.* CW.

POST OFFICE:

Great postal facilities on Belgian railways; mails go by every train, and are carried free; *Fassiaux* 3144. 3153. Expenses of certain trains borne by, in Ireland; *Brady* 3353–3356. Delay at Limerick Junction to meet Post Office arrangements; no perceptible difference in the traffic in consequence; *Malcomson* 3531–3536. In Canada mails are carried by railway; mode of determining rate of payment; number of mails per day; *Brydges* 5424–5436. Delay of letters to and between Scotland and Ireland from want of concert between companies; *Boileau* 6804.

One great benefit to be derived from the State possessing the railways would be the carrying out fully Sir R. Hill's postal plans, especially in regard to the better

Post Office—*cont.*
transmission of mails in provincial districts; *Galt* 7398, 7399.

Operations of the Post Office greatly curtailed by the difficulty of obtaining the use of railways on reasonable terms; although disputes are referred to arbitrators, they generally lean to the companies rather than to Government; *Hill* 7938–7943. More frequent communications between many places in Belgium and France, than in England, mails being carried free of charge; *ib.* 7944. 7949, 7950. Reasons why mails are in many instances conveyed by horse and cart; *ib.* 7945, 7946. Special mail trains; *ib.* 7947, 7948. Post Office do not desire mails to be carried gratuitously, but to pay only a reasonable price; difficulty in Post Office availing themselves of ordinary trains from present state of the law; *ib.* 7953–7961. Witness would suggest a system of payments fixed by Railway Act according to circumstances of each particular case; *ib.* 7962–7967. The reason for not attempting this, is the opposition apprehended on the part of railway companies; *ib.* 7968–7980. A Bill to this effect was prepared, but met with violent opposition; *ib.* 7981–7986. Great additional postal facilities, in witness's opinion, would be obtained if railways came into possession of the State; *ib.* 8241–8253.

Witness believes that railway companies are anxious to meet requirements of Post Office in every possible way. Statement of sums paid to Midland Company, and services rendered. Very few mail trains run at times convenient for passengers, sometimes there are none (though passenger carriages are always attached). Post Office payments average 9*d.* per mile less than ordinary payments; discussion on this subject. Sum paid gives an average of 1*s.* 3*d.* per bag; packages of same size would be charged more to the public. *Allport* 16,943–16,953. Midland Company have had no arbitrations with Post Office for many years; *ib.* 16,944, 16,945. Railway companies have reason to complain that Post Office is gradually trying to absorb the parcels traffic; *ib.* 16,951. Small number of deliveries complained of in some places, the fault of Post Office, as they can have as many a day as there are trains running. Labour of Post Office sorting, &c., will bear no comparison to work done by railway companies; *ib.* 16,951.

Complaint that under the guise of carrying letters, Post Office have deprived railways of their parcels traffic. Railways cannot compete with Post Office, as they have to carry their parcels for them for nothing; *O'Brien* 12,328–12,338. 12,341–12,343; *Grierson* 13,424 *et seq.* Witness totally dissents from statement that book parcels are carried for Post Office for nothing; *Page* 14,976–14,978.

Annual cost of railway mail services for the United Kingdom; *ib.* 14,915. The fastest mail train is the London and Dover on the South-eastern railway; *ib.* 14,916. To get rid of serious irregularities in the service, the Post Office have now one "exclusive" and several "limited" trains, which are working with very fair punctuality; *ib.* 14,917–14,920. Particulars of numbers of miles daily traversed by the various mail trains; *ib.* 14,921; total daily number, 60,000; *ib.* 14,922. Control exercised by Postmaster General over trains; *ib.* 14,923, 14,924. Principles on which contracts are arranged, arbitration not unusually goes against the Post Office; decisions very unequal; *ib.* 14,925, 14,926. Rates awarded vary greatly; several cases cited; among them two, in which 3*s.* and 6*d.* respectively were given for very similar services; *ib.* 14,927–14,930. Arbitrators used to be able to agree, but latterly the decision has generally been given by the umpire; *ib.* 14,931, 14,932. List of various payments awarded, from 2*s.* to 4*s.* 6*d.* per mile; *ib.* 14,935: in all these cases passengers also are carried; *ib.* 14,936. The latter refers to state of things ten years ago; it is difficult to give similar details for present time; *ib.* 14,940–14,943. Other particulars of trains; *ib.* 14,937. Particulars of two cases of wide difference between Post Office and railway company, which have occurred under witness's own notice; *ib.* 14,944. Post Office are willing to pay all expenses and a good profit in addition, but companies often claim the whole cost of the train; *ib.* 14,996, 14,997.

Complete want of uniformity in sums awarded by arbitrators, from absence of any definite principle of valuation to guide them. Necessity for legislative definition of "a reasonable sum," this being the only guide laid down in Acts at present. Instances of want of uniformity; *Page* 14,948–14,950. Umpires act with perfect honesty, but have mistaken views; as a rule they lean to railway companies; *ib.* 15,091–15,096. System of arbitration is disliked by companies on account of its dilatoriness and uncertainty. Instances of companies being kept for years without their money from delay of arbitrators, arising

Post Office—*cont.*
generally from difficulty in agreeing upon an umpire; *ib.* 15,097–15,104. As to power of railway companies and of Post Office to make a fresh reference to arbitration; *ib.* 15,105, 15,106. With regard to trains within companies' own control (of which a large portion of the mail service now consists), Post Office cannot find means of bringing them under arbitration, and are worse off with their mail bags than public are with regard to parcels, though the service required is much less; *ib.* 14,951–14,953. The effect of above-named defect in legislation is a very high rate of charge, and consequently very great delay in establishing mail service, and in extending facilities to the public. Remarkable case in point, where mail service was delayed nine years; *ib.* 14,955, 14,956. Post Office have very seldom got what they consider reasonable terms for ordinary train service. The lowest charge ever obtained is the full parcels rate, which is at least twice what it ought to be, as Post Office do their own collection and delivery; in most cases they have to pay much more than that; *ib.* 14,957–14,959. It would in many instances be cheaper to send a mail guard as a passenger with the letters as luggage, but this plan would be rendered inoperative as companies deny right of Post Office to exchange bags at intermediate stations. The question has been tried in Ireland and Scotland, and conflicting decisions given, and the authorities in England consider the law doubtful. To send a porter with each bag would lead to excessive charge, and the companies have refused, except in one instance, to grant a yearly ticket for this purpose; *ib.* 14,954. 14,960–14,962. To avoid irregularities which now occur from throwing improper amount of traffic on to mail trains, Post Office should have right of requiring an exclusive train by paying for it, also one the amount of traffic on which should be strictly limited; *ib.* 14,963, 14,964. Companies constantly plead inability to help irregularities, on account of amount of traffic, whilst the Post Office are actually paying more than sufficient to clear the whole cost of the train. Case quoted of gross irregularities, which were readily cured by dividing the train; *ib.* 14,965–14,967. The substance of what Post Office require is, that some principle should be laid down to prevent present discrepancies in awards and payments for services very similar; *ib.* 15,011–15,016. New companies are always anxious to secure conveyance of mails; *ib.* 15,017. Discussion of principles on which railway charges should be framed. Witness considers that Post Office should stand in same position as a private trader desiring to make a contract; *ib.* 15,018–15,023. Highest rate ever paid as result of arbitration was 4*s.* 6*d.* per mile. The 5*s.* rate paid to Chester and Holyhead line is under special arrangement with Treasury, and is really somewhat of a subsidy; *ib.* 15,024–15,028. Discussion of what should be included in reckoning cost per mile of running a train, and observations to show profit that companies realize on mails; *ib.* 15,029–15,037. Contracts now generally provide for additional trains when required by Post Office, at fixed charges to avoid arbitration; also for special trains when required; the latter at charges much lower than would be granted to the public. Mail trains are generally for both directions; *ib.* 15,038–15,048. Fines are not provided for in any contracts with railway companies. In the case of the Dover and Calais mail packet service there is a provision for fines and premiums; *ib.* 15,049–15,051. Post Office can make no stipulation as to taking up passengers; *ib.* 15,052. Nominal remedy for unpunctuality is to enforce penalty contained in bond; in practice this is never done, although companies doubtless receive a larger subsidy in consideration of risk of incurring them; some of them are at the rate of 1*l.* 14*s.* per minute; *ib.* 15,053–15,062. No difficulty in framing a workable system of fines and premiums which companies would accept. One such was in operation some years ago, by which company gained considerably; no other company would at that time accept it; *ib.* 15,063–15,067. For ordinary train service a tariff might be fixed, but for special services it would be more satisfactory to define principles for calculations of arbitrators and umpires; *ib.* 15,069, 15,070. Post Office would be very glad to pay highest goods rate; *ib.* 15,071. Companies extract more from Post Office than from public, because they find them at their mercy, as public service must be performed; *ib.* 15,089. No railway competition for postal purposes; *ib.* 15,090.

Uncertain and unsatisfactory state of the law as to the speed which Post Office may demand; *Page* 14,968. Account of efforts made by Post Office to remedy defective state of the law, which have hitherto been frustrated by the powerful railway interest in Parliament. Bills were

Post Office—*cont.*
introduced in 1853 and 1857, neither of which passed. Extract from Post Office Report, and from Memorandum by the Duke of Argyll relative to the latter Bill, which, among other things, states "that its principal features are, "1. To enact a fixed tariff of charges in respect to all "services performed by ordinary trains, thus avoiding "the necessity of arbitration. 2. To maintain arbitration "for all *exclusive* and for all *special* services, but to lay "down certain rules of computation for the guidance of "the arbiters, and, as far as practicable, to confine them "within a fixed maximum and minimum;" *ib.* 14,969–14,972. 15,068. 15,123–15,125. Presumable explanation of certain increased payments under arbitration in cases where there was no corresponding increase of service; *ib.* 14,973. Reason why abolition of newspaper stamp was accompanied by lowering of book post rates; *ib.* 14,974, 14,975. Railways have doubtless greatly facilitated transmission of mails and increased number of letters, but charges to Post Office have not been diminished to same extent as they have to the public; *ib.* 14,979–14,984.

Question of a parcels post has been discussed for some years, but railway companies have always opposed it. Witness believes it could be established at a rate between letters and book post, greatly to advantage of public and of railway companies likewise, as the facilities afforded by the Post Office, with its 16,000 receptacles, are so great that large numbers would be sent that are now not sent at all. The suggestion is for a uniform price as to distance, increasing only according to weight. With present through arrangements, parcels to remote places cannot be prepaid throughout, nor even can charge be ascertained without application at railway station; *Page* 14,985–15,006. Statistics quoted to give an idea of present mileage of Post Office coaches, carts, messengers, &c., as compared with mileage by railway, with reference to payment to be made to Post Office and railways respectively, if above scheme adopted; *ib.* 15,007–15,110. Witness considers that for companies to base claims on the fact of Post Office carrying the book post is unjustifiable. Provisions in companies' Acts for carriage of parcels does not at all imply that they are to have a monopoly of that traffic. Discussion of this question; *ib.* 15,072–15,084. Post Office would be very glad to have a rate for letters only and pay same as booksellers and others for parcels; *ib.* 15,085–15,088. Companies benefit rather than not by book packets forming part of mail; *ib.* 15,107. If parties concerned met, witness believes there would be no difficulty in their amicably arranging matters for parcels post; *ib.* 15,109–15,111. Book post is at present a loss to Post Office, mainly through high railway charges; *ib.* 15,114–15,116. Clearing house arrangements might advantageously be applied to the parcel post; *ib.* 15,117–15,119. Composition arrangements for taking weight of bags in gross; *ib.* 15,120–15,122.

Items which should be considered in reckoning cost of a mail train; *Gregory* 17,662, 17,663; their total amount, 14*d.* per mile; cost of a through carriage would be about 1½*d.* per mile additional; *ib.* 17,664, 17,665. 17,679. Total additional bare cost of running a mail train of seven vehicles witness reckons at 1*s.* 9½*d.*; *ib.* 17,666, 17,667. Post Office should not pay so much for partial as for exclusive use of a train; *ib.* 17,668, 17,669. 17,680, 17,681. For "interest of capital, &c.," witness allows 100 per cent. on the bare cost; *ib.* 17,670. Principles upon which witness (who is a Post Office arbitrator) acts in fixing rates of payment; *ib.* 17,671. Is aware that mail trains are considered to be legally exempt from charges for use of road, but has never claimed such an exemption; *ib.* 17,672–17,674. 17,678; are not entitled to use of engines and carriages free; *ib.* 17,675, 17,676. At one time Post Office contemplated putting on their own rolling stock; *ib.* 17,677. Average earnings of a passenger carriage about 8*d.* per mile, of a horse-box 5·8*d.*, and of a carriage truck 5·2*d.*; from these and other calculations witness considers fair charge for use of a mail van would be about 7*d.* or 8*d.* per mile; *ib.* 17,684. 17,695. Carriage of ordinary parcels a more expensive service than mail bags; reasons for this opinion; *ib.* 17,696–17,699. In arbitrations witness has always proposed ½*d.* per cwt. per mile, reckoning at maximum weight of bags, though he believes Post Office might claim a lower sum; *ib.* 17,699–17,701. Denial of statement that railway companies carry Post Office parcels for nothing; *ib.* 17,702. Witness has never objected to Post Office parcels being considered part of mail,—award could not be made which should exclude parcels; *ib.* 17,703–17,710. Method of conducting arbitrations. Arbitrators are seldom able to agree without having recourse to umpires; *ib.* 17,711–17,713. High class of persons

Post Office—*cont.*
called in in the latter capacity; *ib.* 17,714, 17,715. Arbitrations less frequent of late from better agreement between Post Office and railways, but not more easy to settle than formerly when undertaken; *ib.* 17,716–17,719. Answer to statement by Capt. O'Brien that "Post Office "having got an award for carrying letters at a certain "rate, choose to call parcels letters, and thus get them "conveyed without paying a single farthing to the rail-"way company," and statement and discussion thereon; *ib.* 17,720–17,722. Post Office really pay company a higher rate than public would; *ib.* 17,726. List of payments under awards; *ib.* 17,723. If companies got all the parcels from the public that they now have from Post Office they might gain more, assuming that a separate charge were made on each, but it has been decided that packed parcels cannot be charged at same rate as if separate, nor have railway companies any legal monopoly of parcels traffic; *ib.* 17,728–17,734. When practicable, witness makes charges to public the foundation of his calculations for charges to Post Office; *ib.* 17,749–17,753. In the single instance where Post Office have an exclusive train, 3*s.* 9*d.* per mile was awarded; witness considered that 2*s.* 4*d.* would have been sufficient; *ib.* 17,760–17,763.

Returns received from, as to the service rendered to the department by the railways of the United Kingdom; *App.* BA. List of arbitrations between the Post Office and railway companies, showing the date of each award, the names of the arbitrators for the Post Office and the railway company respectively, and the name of the umpire, if an umpire has been appealed to; *App.* CV.

Necessity and reasons for; *Bidder* 16,599–16,603. 16,612.

Publication of Rates and Fares. *See* Rates and Charges, &c., 4.

Public Works Loan Board:

Statement from the, of loans advanced by Government to Irish railways, made up to 26th May 1865; *App.* AO.

Punctuality in Railway Travelling:

Should be enforced by penalty; *Hill* 8197 *et seq.* Witness does not see that greater punctuality than now obtains could be enforced by legislation; most companies keep as good time as they can. Public are continually obtaining damages for unpunctuality of trains; the number of applications is enormous, and companies often grant what is really unreasonable, rather than go into court; *Cawkwell* 11,707–11,716. A record is kept of the time of all trains (witness speaks of the North-western in particular, and of other lines generally,) and they are not more unpunctual now than formerly. The quantity of passengers' luggage is frequently a great cause of delay. Servants are called to account when a train is behind time; *ib.* 11,717–11,727. Explanations in answer to a complaint as to disconnexion of trains at Market Harborough, Northampton, Leicester, &c.; other arrangements are in progress; *ib.* 11,727–11,733. Not desirable to compel punctuality by Act of Parliament;

PUNCTUALITY IN RAILWAY TRAVELLING—*cont.*

reasons. The less legislative interference with the traffic the better; *O'Brien* 12,326–12,328.

Witness does not think that want of punctuality increases the risk of accident if the signals are attended to; *Allport* 12,440. Trains have been generally unpunctual where collisions have occurred, but that has not caused the accident; *ib.* 12,445–12,447.

Great Northern Company are about to duplicate several trains to ensure greater punctuality; *Clarke* 12,782–12,784. If punctuality enforced by law, trains would be timed more slowly; *ib.* 12,785. Passengers' luggage a great cause of delay; *ib.* 12,786.

Tickets should be issued a quarter of an hour before starting of every train, and trains should be started punctually at advertised times, under a penalty; *Low* 13,882.

Under proper regulations, punctuality is a secondary consideration as to safety; *Huish* 15,854.

Resolutions adopted at various towns in Ireland with reference to railway reform; *App.* EB.

RAILWAY SERVANTS:

1. *Employment.*
2. *Wages.*

1. *Employment:*

On Great Western Railway men do not work same train on following days; they have one day in the shed in each week besides their turn of Sundays; they are expected to run about 160 miles a day when on duty; *Gooch* 17,330–17,340. On short branches same drivers work continuously; *ib.* 17,349–17,351. Staff is employed indifferently for goods or passenger trains; *ib.* 17,352, 17,353. Medical attendance is provided by company; *ib.* 17,379.

2. *Wages:*

Are generally higher in large companies than in small ones, though the former are worked more economically; *Grierson* 6044–6056.

Salaries of station masters on North-western line; *Stewart* 14,802, 14,803.

Wages of railway servants are largely increasing in every department; *Harrison* 15,291.

Servants should have a pecuniary interest in increase of profits; *Chadwick* 17,246.

Statement of wages paid to guards, engine-drivers, and firemen on Great Western Railway; highest class of drivers get much higher wages than artizans in any establishment where machinery is employed; *Gooch* 17,344–17,348. Higher wages paid to drivers of passenger

RAILWAY SERVANTS—*cont.*

2. *Wages*—cont.

than of goods engines; *ib.* 17,358. Wages are rising seriously in all branches; *ib.* 17,386, 17,387. 17,426.

On Great Northern have increased 10 per cent. in the last 18 months; *Sturrock* 17,776.

Low rate of wages in Scotland; *Wainwright* 17,600.

RAILWAY SERVICE:

Comparison of the, in France and England between the metropolis and various naval arsenals, commercial seaports, suburban districts, royal palaces, celebrated cathedral towns, large and small provincial towns; *App.* DM. Particulars of, between various towns in Belgium, Prussia, Austria, Bavaria, Rhenish Germany, Central Germany, and Italy; *App.* DN.

RAILWAYS, UNITED KINGDOM:

Returns received from the Post Office as to the service rendered to that department by the railways of the United Kingdom; *App.* BA. Diagram showing the comparative weekly receipts on all railways in the United Kingdom for the year ending December 1864; *App.* CE.

RATES AND CHARGES MADE BY RAILWAYS, AND IRREGULARITIES IN SUCH RATES AND CHARGES;—REDUCTION IN RAILWAY CHARGES;—UNIFORM RATES AND EQUALITY OF TREATMENT:

1. *Classification of Goods and Charges.*
2. *Differential Rates, Preferential Agreements, &c.*
3. *Passenger Fares.*
4. *Publication of Rates and Fares.*
5. *Rates of Carriage for Goods.*
6. *Terminal Charges.*

1. *Classification of Goods and Charges:*

Unfair changes in, and regulations proposed as to; *Wright* 632–644. 746–750. Imperfection and inequalities in, at present; *ib.* 761, 762; *Cox* 8655–8664. Explanations in answer; *Cawkwell* 11,762; *Grierson* 11,941 *et seq.*; *Allport* 12,412.

Suggestion that goods should be divided into but two classes; rates proposed; *Renals* 8701–8710. Defective classification in Carriers' Act; *Nicholson* 8850.

Instances of unfair and improper classification of goods, and necessity for re-arrangement; provision in Railway Acts that goods of a different class are to be charged for separately should be altered; if sent at one time should be charged as one consignment, though they may consist of a number of separate packages; *Smith* 9050–9070. 9103–9110. Weight should be considered rather than value as an element in classification; bulk, liability to damp, speed at which conveyed, &c. must also be taken into account; *ib.* 9071–9084. Companies plead increased risk of transit as one reason for some of these objectionable classifications, but witness does not believe this to exist; *ib.* 9085–9102. There has been scarcely any alteration in classification since railways were established; *ib.* 9169–9171. General answer on the part of the Great Northern Company to the above; witness considers them all very trifling complaints; *Clarke* 12,555 *et seq.* The classification as it now stands is the result of long experience, and is revised at the end of each year; *ib.* 12,557.

Complaint of improper classification of iron forgings, &c.; *Williams* 10,403–10,407; of iron castings; *Perry, T.* 10,605–10,632. Complaint from hardware trade of Wolverhampton of improper classification; *Walker* 10,726–10,733.

Necessity for; *Brown* 11,228.

There would be no great difficulty in fixing a general classification. Present clearing house classification, modified and so arranged as to make it as generally applicable as possible, might be taken. A maximum toll could be established in lieu of the tables at present in the Acts of Parliament, which companies might reduce if they thought fit; *Cawkwell* 11,576–11,592.

Parliamentary classification is defective, but answers its purpose; no objection to its revision; *O'Brien* 12,293–12,299. Frauds to which companies are liable by packed goods being declared of a different class to what they really are; *Allport* 12,465–12,468. Discussion as to shot being in a different class from lead; *ib.* 12,469–12,473. Complaint from Derby as to classification of groceries in witness's opinion groundless; *ib.* 12,487.

Principles upon which classification of goods is based;

RATES AND CHARGES, &c.—*cont.*

1. *Classification of Goods and Charges*—cont.

Clarke 12,564–12,568. Classification is necessarily more minute than in Act of Parliament. No attention is paid to classification given in Act, except to keep within the maximum; *ib.* 12,569–12,573. In generalizing rates certain exceptions are necessarily made, which are invariably reductions; *ib.* 12,574–12,578. An article may be removed from a lower to a higher class, but it would not be in excess of Act; lowering one article would not lower the whole class; *ib.* 12,579–12,584. Comparatively there are but few exceptions, and it is necessary that this should be so; *ib.* 12,585. Classification of terminal charges is established by the clearing house; *ib.* 12,586. Classification of through rates; *ib.* 12,609–12,617. Numbers of the classes in the different classifications stated; exceptions are chiefly goods which come in great quantities at a low price; *ib.* 12,618–12,624.

To a certain extent classification might be uniform; with particular exceptions, it is so now; *Allport* 13,811, 13,812.

Necessity for a new classification for combustibles; *Gordon* 13,629.

A new classification of goods might be an advantage; *Sherriff* 16,295. Present classification altogether inadequate; it should be superseded, and a new one, subject to annual revision by clearing house, laid down by a General Act. Classification should be published, and whenever an article is removed from one class to another, there should be a notification thereof; *ib.* 16,359–16,372. Each company should still have its own tolls; classification would be simply that on which the rates are founded; *ib.* 16,373–16,376.

Railway Clearing House:—General classification of goods by merchandise trains upon railways; *App.* CP. Example of the French railway classification of goods; *App.* EC.

2. *Differential Rates, Preferential Agreements, &c.:*

Companies should not be allowed to make contracts with individuals to carry at lower rates than those charged to the public; *Clark* 189–194. Such contracts are at present made at Liverpool and Manchester; *Patterson* 240–254. Contradiction to this on the part of the Midland Company; *Allport* 12,362, 12,363. Private agreements with individuals should be prevented; *Atkinson* 910–917. 935–945. Preferential agreements are not allowed on German railways; *Mulvaney* 1132. 1251, 1252. Variable rates under certain circumstances should be allowed; *ib.* 1134–1139. 1219–1221. 1251–1260. Preferential agreements are made by North-eastern Railway Company, to the great injury of witness; *Oxlade* 1876–1923. Some few exist at present in Belgium, but are to be abolished; *Fassiaux* 3083–3088. No special rates on Waterford and Limerick line; *Malcolmson* 3645, 3646. In order to develop a certain district, Irish Great Midland Company agreed to take minerals at an exceptionally low rate, but from difficulty in getting them to the railway, they were not sent. Have had no other application for special rates; *Ennis* 4198–4203. Irish Great Southern and Western have sometimes allowed special rates to individuals, but parties have never acted up to their agreement; *Haughton* 4573–4575. Witness believes preferential agreements are sometimes made with Irish companies; discussion as to unfairness of the system; *Bagot* 7012–7016. Injury to Coleraine from differential rates in favour of port of Londonderry as against Portrush; *Macauley* 7288–7315.

Not entered into by Irish North-western Company; *Shaw, T.* 8322–8325. Unfair operation of, at Coleraine and at Liverpool; *Galt* 8485, 8486.

Complaint by merchants and tradesmen at Lincoln of want of; witnesses and others consider that upon a large consignment rates should be reduced; *Smith* 9117–9122. 9126–9133; *Gentel* 9256–9259.

Complaint against North-eastern Company of apparent favouritism and privately granting special rates; witness considers that they should be published; *Wooler* 9567–9619. Would not object to special rates if allowed equally to everybody; *ib.* 9668–9673. In answer to this, witness states that though publication would be difficult, practically every one can know them who wishes it; when special are granted they are open to everybody; *MacNay* 14,089–14,096.

Complaint of differential rates given by railway companies to northern iron districts as against Staffordshire districts; *Mathews* 10,450 *et seq.* Answer to this;

RATES AND CHARGES, &c.—*cont.*

2. *Differential Rates, Preferential Agreements, &c.*—cont.

Morris 14,120 *et seq.* Objection to special rates for large customers; *Matthews* 10,557, 10,558. Differential rates should not be allowed as between different parties, but only according to quantities carried; *Gibbs* 10,797–10,799.

Special rates should be allowed on large quantities of goods, but they should be published, and available to all; *Brown* 11,204–11,206. No objection to special contracts, if allowed equally to all traders within the district; *ib.* 11,244–11,247. Differential rates very objectionable; reasons; *Hollins* 11,303, 11,304. Discussion of this point; *ib.* 11,312–11,319. 11,329–11,331. 11,335. 11,361–11,363. 11,374.

Whenever London and North-western Company make a special rate (which is a rare thing) it is allowed to all traders at the same place; *Cawkwell* 11,596. 11,600, 11,601. Only one or two instances exist in which they have special rates with individuals; *ib.* 11,597, 11,598. Witness believes it is general now not to make special rates except for an article—not for persons; *ib.* 11,602.

Cases in which North-eastern Company give special rates; *O'Brien* 11,995, 11,996.

Great Northern Company make a difference according to quantity in a few cases; *Clarke* 12,631.

Lancashire and Yorkshire Company charge same rates to every one, except under very special circumstances; *Smithells* 13,121.

Principles upon which Great Western Company grant special rates; nothing unfair in them, so long as they are made known to the public; small tradesmen often object to them; *Grierson* 13,315–13,320. 13,333, 13,334. Plan formerly pursued by Midland Company of giving a special rate to large brewers, is not same principle as pursued by Great Western Company, as in that case there was a secret agreement; do not think companies would enter into them now; they can be prevented by Act of Parliament. Probable conditions of this agreement; witness does not know that Midland Company can make same charge to all the brewers; *ib.* 13,321–13,326. 13,329–13,332. 13,335–13,337. If a special rate given for a large quantity, say 500 tons, and the next week same person only sends 20 tons, the ordinary rate is charged; *ib.* 13,327, 13,328.

Midland Company give preferential rates under certain circumstances; *Allport* 13,745–13,747.

All traders should be placed upon the same footing; *Harrison* 15,152. Instances in which North-eastern Company occasionally grant special rates; *ib.* 15,166.

Differential rates for large quantities unfair, except extended to all the traders in the district; *Sherriff* 16,301, 16,302.

Witness has heard of companies allowing a rebate, but does not know it of his own knowledge. Great Western Company allow large traders to keep a ledger account and pay monthly, but allow no discount; *Gooch* 17,469–17,472.

Statement of Messrs. James and Frederick Howard, Britannia Iron Works, Bedford, as to irregularities of rates and other railway grievances; *App.* X.

See also STAFFORDSHIRE IRON TRADE.

Brewing Trade of Burton-upon-Trent.—Witness (who is manager to Messrs. Bass & Co.) is deputed to represent the brewing trade of the town generally; *Cosgrove* 15,674, 15,675. Complains of preferential rates given by railway companies; *ibid.* 15,676–15,678. Hands in a memorial, signed by eleven firms, giving detailed statements concerning the management of the railways radiating from Burton, viz., the Midland, the North Staffordshire, and the London and North-western, especially the first named, which, until the recent introduction of the London and North-western line, possessed nearly the whole of the traffic, and even at present retains by far the greatest share of the same. The grievances and abuses complained of are exhibited under three heads; viz., 1st, favouring rates; 2nd, terminal charges and their abuses; and 3rd, unequal rates; *ib.* 15,680. Memorialists, finding that lower carrying rates had been allowed to Messrs. Allsopp since 1859, also an allowance for having private lines on their premises, claimed similar reductions, as they have had an agreement with Midland Company since 1861 to be placed on as favourable terms as any other parties; *ib.* 15,681–15,685. Messrs. Allsopp's goods were invoiced by Midland Company for North-western stations at same rate as memorialists', but charges were privately reduced by latter company on certain "monthly overcharge sheets," three of which are given in as examples; North Staffordshire Company were

RATES AND CHARGES, &c.—*cont.*

2. *Differential Rates, Preferential Agreements, &c.*—cont.

also privy to this arrangement; *ib.* 15,686–15,688. Reiteration of, and discussion upon, the above complaints; *ib.* 15,689–15,700. Companies, having admitted the claim, 59,000*l.* has already been stopped from them, and parties are now only battling about the interest, a sum of 3,700*l.* So far the matter is settled, and there is only one point now in dispute; *ib.* 15,701–15,705. Witness hands in a copy of the agreement above referred to, which took effect from 1st January 1861, and is headed "Memorandum of agreement between the Midland Rail-"way Company and Bass, Ratcliffe, & Co., brewers, of "Burton-upon-Trent, for the conveyance of goods by "railway to stations on the London and North-western "line, branches, and leased lines," and the 3rd clause of which agrees to give Bass & Co. as favourable terms as any other firm may obtain; *ib.* 15,706. Company at first demurred to any liability prior to date of agreement, but have now consented to the full demand, viz., from November 1859, the date of the agreement with Messrs. Allsopp. Witness has no doubt that other firms will get settled with in like manner; *ib.* 15,708,15,709. Agreement with Messrs. Allsopp could not have been found out by examination of company's rate books; it was discovered by conversation with men employed about the railway. The thing went on for five years, and would doubtless have continued much longer had it not been discovered; *ib.* 15,710–15,724. Discussion of part of memorial relative to legislative enactment to prevent secret rates. Witness thinks present provisions should be made more stringent, by fine or otherwise, and that rates should be publicly registered, and no secret books allowed. If any rebate be given, it should be to all who send a certain quantity, and small traders should be allowed to unite to make up such quantity. Rate books should be at every station for inspection; *ib.* 15,725–15,738. Large sum which Messrs. Bass & Co. consider Midland Company owe them for overcharged terminals, and which they are endeavouring to recover. Extract from memorial, alleging unfair treatment of memorialists, and suggesting legislative enactment to compel companies to state what are their actual terminal charges on the various classes of goods, and the particular services they include, and that the secretary of the clearing house be invited to give evidence on the subject; *ib.* 15,739–15,741. More carting is charged for than is done; *ib.* 15,752. Firms wish for a station to station rate, and to do their own carting; *ib.* 15,757. The sum of 77,000*l.* claimed from Midland Company includes rates and charge for loading and unloading, but not terminals; *ib.* 15,755. Manager of railway must have been cognizant of overcharges; letters quoted in proof; *ib.* 15,757. Class in which witness considers ale should be charged; *ib.* 15,761. Comparison of rates of various railways throughout the country, to show unfairness and inequality of those charged on ales from Burton; extracts read from memorial, alleging, firstly, that great inequalities exist between Burton and the various stations on any one railway, and the anomalous fact that the home company have a variety of rates to one place; and, secondly, inequality of charges as between one railway and another. Numerous examples given, and discussion thereupon; *ib.* 15,778–15,782. As an instance, ten different rates are charged for the same thing between Burton and Oakenshaw; *ib.* 15,783–15,787. Details of rates to different stations on Lancashire and Yorkshire Railway, showing variations per mile of from 9-10ths of a penny to one penny and 8-10ths. Much of this irregularity is brought about by same gross rate being charged on various distances; *ib.* 15,787, 15,788. Statement in detail of scale of rates suggested for Burton ales, followed by actual rates at present charged; *ib.* 15,802. Above statement "exhibits the "fact that the trade of Burton is placed at a decided "disadvantage in the cost of conveyance of its produc-"tions to the important port and market of London;" statement from memorial to prove this; *ib.* 15,803. Quotation of gross sums paid between some of the towns; *ib.* 15,805. Great Eastern Company carry all at from 44 to 76 per cent. cheaper than Midland; *ib.* 15,807, 15,808. Proposed re-arrangement of rates would give, according to distance, 1½*d.* per mile for short distances, and 1*d.* for long; present Scotch rates are satisfactory. Witness asks that companies shall not charge a higher local rate than they receive for a shorter distance; *ib.* 15,810–15,818. Particulars of inequalities in rates on grain from different places to Burton. Great Eastern Company give a uniform rate from all their stations.

RATES AND CHARGES, &c.—*cont.*

2. *Differential Rates, Preferential Agreements, &c.*—cont.

Some railway rates are as much as rates from the continent. Water communication is superseded altogether. Rates from various places given. All the companies but Midland will carry at a computed weight; advantages of this; could not force Midland to do it, as they have been entirely in their hands; *ib.* 15,819–15,830. Traffic of brewers at Burton yields 300,000*l.* a year to railway companies; *ib.* 15,831. Ales were not sent from Burton by railway till 1850. Statement of charges by railway, and by canal previously to and since construction of railway; *ib.* 15,836–15,845. Previous to railways there was access everywhere by canal; *ib.* 15,846, 15,847. Witness finds it difficult to get explicit answers to the complaints made to Midland Company with regard to the London rates. Lengthened correspondence read to prove this; *ib.* 15,848. Witness cannot propose remedies, as company will not reply to his communications; *ib.* 15,849.

In reference to the foregoing, witness states that any allowance made by Midland Company to one brewer is made to all; that until the autumn of 1864, notwithstanding repeated efforts to obtain a copy, they knew nothing whatever of the terms of the agreement with the London and North-western Company complained of, although Mr. Cosgrove states "from high authority" that they were in possession of such knowledge; that immediately upon becoming acquainted with it they waited upon Messrs. Bass and others, in order to offer them similar agreements, and informed them that they would make them a drawback; *Allport* 16,877–16,881. To show that the brewers have not suffered, witness states that company allowed them to keep back their accounts to the extent of 40,000*l.* or 50,000*l.*, until they could ascertain terms of agreement. Mr. Cosgrove could not have made the incorrect statements he has, had he been more fully acquainted with the matters in question; his evidence goes much beyond what is contained in the brewers' memorial; *ib.* 16,882, 16,883. 16,895. Evidence as to the "overcharge sheets" is unfair and inaccurate; so far from Midland Company having them in their possession, until matters were settled between the two companies they could only obtain a few, although they did all in their power to get them, and those few were by accident; *ib.* 16,884–16,886. Explanation as to the overcharge sheets; the abatement was made wholly by the North-western Company. Midland Company were quite prepared to allow their proportion of whatever abatement North-western Company made, in fact were anxious to do so; *ib.* 16,887–16,892. North-western Company naturally wished to keep knowledge of these agreements from Midland Company, in order to get all the traffic they could, but latter company neutralized this by offering benefit of same terms whenever they could discover what they were. Messrs. Allsopps' interest also was to keep it secret. Midland Company knew of existence of agreement soon after it was signed, and knew therefore that when they should ascertain its terms they would have to refund considerable sums; *ib.* 16,893–16,895. Certain running powers granted by Midland to North-western Company without parliamentary compulsion. Favourable agreement with Messrs. Bass, which Mr. Cosgrove has omitted to mention. Witness is sure that every member of that firm is satisfied that Midland Company were unacquainted with agreement with Messrs. Allsopp. Although company have expended considerable sums on warehouses, &c. for the convenience of Messrs. Bass and other Burton brewers, Messrs. Bass complain of paying for the use of them; *ib.* 16,896–16,899. Only two points now unsettled between company and Messrs. Bass, and these company are anxious to have decided, and would willingly submit to arbitration. Particulars of what company have agreed to refund; *ib.* 16,900–16,903. Denial of one of the statements in the memorial as to the overcharge sheets; *ib.* 16,904. A considerable part of the sum stated to be due from Midland is really owing by North Staffordshire Company. Unfair treatment of Midland by Messrs. Bass in sending certain traffic by North Staffordshire, which they agreed to send by them, and then claiming from them the drawback really owing by North Staffordshire; *ib.* 16,905–16,910. Witness does not think that North Staffordshire have refused this allowance; *ib.* 16,911. Discussion relative to portions of demand still unsettled; improper claim for reduction of terminals; *ib.* 16,912–16,914. Correspondence relative to and particulars of agreement with various companies negotiated by Midland at request of Messrs. Bass, for

RATES AND CHARGES, &c.—*cont.*

2. *Differential Rates, Preferential Agreements, &c.*—cont.

which they received the thanks of the firm, who were well satisfied with it until Mr. Cosgrove joined them and complained of the cartage portions of the rate, which were really but mere matters of account between companies, and have nothing whatever to do with the brewers; *ib.* 16,915, 16,916. Referring to Mr. Cosgrove's lists of inequalities, witness has drawn out a table showing what company have a right to charge under their Act; "the "charge company make from Aberdeen," for instance, "including terminals, is 32*s.* 6*d.*; the charge they "could make, exclusive of terminals, is 115*s.*," &c. &c. Tables given in; *ib.* 16,916. Company's charge is never equal to mileage rates, leaving terminals out altogether. Whenever Midland can make an arrangement with other companies, they give brewers benefit of low rate. In certain low rates named terminals are included, but not cartage; *ib.* 16,917–16,922. Another fallacy in Mr. Cosgrove's quotation of rates shown; instead of the Burton brewers' trade being interfered with, there is probably no trade in the country which has advanced so rapidly. Figures given in proof; *ib.* 16,922, 16,923. Further correction of alleged incorrect rates quoted by Mr. Cosgrove, and discussion thereupon; *ib.* 16,923–16,925. Witness asserts fearlessly that the Burton brewers are indebted to the policy of the Midland Company for their enormous business, that company having induced almost all the other companies in the kingdom to reduce their ale rates; case in proof. Also in the matter of grain, they have arranged uniform through rates, with which brewers expressed themselves highly satisfied, but now it is complained that they charge a uniform rate without respect to distance; *ib.* 16,926. Matter referred to in correspondence at end of Mr. Cosgrove's evidence has been discussed with Messrs. Bass; the whole of the correspondence should have been put in. After all the money company have expended for their accommodation, it is unreasonable to expect the London rate reduced because rates are so low elsewhere. The water competition causes the low rates from Yarmouth to London. Unless company could be on same footing as the sea, it is unreasonable to expect their charges to be as low; *ib.* 16,927, 16,928. Clearing-house terminals cannot be applied to Burton or any other general traffic; *ib.* 16,930. If terminals were reduced on Burton traffic, rate must be raised to make charge up to what it now is; *ib.* 16,931–16,936.

3. *Passenger Fares:*

The receipts for passenger fares in the United Kingdom amounted in 1864 to 15,864,040*l.*; *Galt* 7376.

Higher fares at Rochdale, witnesses believe, than allowed by Act of Parliament; *Blackburn* 1321, 1322; *Fletcher* 1367. 1370. On the German lines are low,—lower than on the Irish railways; *Mulvaney* 1116–1130. If rates for passengers and goods were reduced to one-third or one-half on Irish railways, there would be a loss for three or four years but a great eventual gain. Question of a guarantee discussed; *ib.* 1176. 1187. 1226–1235. 1240–1250. Fares in Ireland are too high; contrast in this respect between German and Irish railways; *ib.* 1222–1226. Fares in Ireland are prohibitory of any development of traffic; *Forbes* 1458. They are in some cases higher than in England; *ib.* 1459. Rates and fares in Ireland are injuriously high; *Sullivan* 1944–1950; decline of traffic in consequence; *ib.* 2019. Desirability of half fares in Ireland; *ib.* 2093. Fares in Ireland should be considerably reduced; legislature should compel this, and guarantee any temporary loss; first and second-class fares should be reduced at least one-third; *Mallet* 2243. 2250–2290. 2295, 2296. Reduction and uniformity would be advantageous; *ib.* 2305–2307. High fares prevent intercourse between Limerick and western districts; much too high between Limerick and Dublin; were increased three years ago; *Tinsly* 2314. 2365. 2400. High fares from Limerick (especially third-class) prevent traffic; *Ryan* 2654, 2655. 2689–2691. Instance of increase of fares; *ib.* 2735–2739. Loss of traffic from high fares; *ib.* 2786–2790. Reduced fares in Ireland would increase traffic, but diminish profits; *Longfield* 2796–2799. 2809. Question of reduction of fares has been much discussed by Great Southern and Western Company; *ib.* 2834–2836. A reduction of third-class fares to ½*d.* a mile would cause numbers to ride who now walk; *ib.* 2861–2864. Fares on Irish Great Northern and Western as high as in England; if reduced 50 per cent. in four or five years would pay a better dividend; *Earl of Lucan* 2942, 2943. 2977–2979. Company could not

RATES AND CHARGES, &c.—*cont.*

3. *Passenger Fares*—cont.

afford to reduce them at present; *ib.* 2955–2960. Some method should be devised of trying the experiment of reducing fares without creating a loss; conditions under which a guarantee fund might be raised; *Hemans* 3885–3887. In England low fares have led to considerable increase of passengers in agricultural districts; want of money prevents Irish people using railways; *ib.* 3919, 3920.

Witness, who is chairman of Irish Midland Great Western, states that the question of reduction of fares has frequently been before the board. Thinks traffic in Ireland a limited quantity, and that any reduction would not bring a compensating return. Admits that company do not carry all that could be carried; *Ennis* 4014, 4015. 4066–4068. 4212. No experiments have been tried, the fares being low. For many years harvest labourers have been carried at ½*d.* per mile; a great many still walk or go by car; distance and rates by cars. If a large reduction were made in fares, the receipts might recover in four or five years, but shareholders would not like to go without a dividend for that time; *ib.* 4016–4024. Would not pay to charge such fares as are charged on some of the excursion lines in England; *ib.* 4025, 4026. Not aware that low fares have been tried on the Londonderry and Coleraine line. In Ireland passenger and goods rates nearly uniform. When a railway is subsidized low fares can be introduced, as shareholders do not suffer; *ib.* 4027, 4028. Third-class passenger fare is ½*d.* and one-tenth per mile; is not in excess of the Act. Parliamentary trains are run one each way daily at 1*d.* per mile; *ib.* 4029–4032. Harvest men are generally carried by ordinary train; sometimes sent by special; this traffic has increased; gives number carried in three half years. Reason why they are not taken by fast train. Doubts whether ½*d.* a mile would pay. Could take them for half-price if a certain number came in a day or week; *ib.* 4033–4035. 4072–4081. No reduction of fares would increase traffic; *ib.* 4041. In 1860 fares were advanced 10 per cent.; receipts considerably increased; *ib.* 4082–4084. Lord Clancarty, feeling convinced that low fares would prove remunerative, proposed trying a reduction between Athlone and Galway, guaranteeing company against loss; difficulties which led to proposition being declined; *ib.* 4107. If lower fares were tried, it must be at expense of shareholders; *ib.* 4212. Under improved management there would be a large passenger traffic in Ireland; one train a day at ½*d.* a mile would pay; it is only by applying a low rate continuously that extent of traffic can be ascertained; *Bidder* 4233, 4234. If passenger fares were reduced to ¼*d.* a mile, requisite increase would be obtained from more people travelling, and by trains taking goods from station to station on their way; *ib.* 4342, 4343.

The reduction of fares too hazardous an experiment to try in agricultural districts; *Haughton* 4479–4482. 4585. An advance of 10 per cent. on Irish Great Southern and Western nine or ten years ago, the only change since railway opened; *ib.* 4483–4487. Fares now charged; *ib.* 4531. If considerable reduction made, would not be recovered in witness's lifetime; *ib.* 4675–4677; if Commissioners desired it, would give it a trial; difficulties; *ib.* 4677–4680. Reduction in fares should be made gradually; *Murland* 4901–4904. Reduction of fares on Grand Trunk line of Canada has increased receipts; *Brydges* 5405–5407. Fares on Dublin and Wicklow Railway; large numbers carried at ½*d.* a mile; low fares have greatly increased numbers travelling, but have not increased receipts; *Dargan* 5467–5482. Dublin and Wicklow line have reduced fares within the last two years, but have not found much benefit; *ib.* 5640, 5641. Parcel rate low; season ticket holders get theirs carried for nothing; this is not a good system, being open to abuse; number carried by season ticket holders; *ib.* 5642–5647. 5650. 5653, 5654. Fares on Derry and Coleraine Railway reduced one half; this produced considerable increase in net receipts; *Roe* 5740–5743. Falling off from raising them again; *ib.* 5757–5761. 5835–5838. Reduction would cause increase in all classes; *ib.* 5879–5883. Fares on Belfast and Coleraine line; *Lanyon* 6066–6069; third class below the average of Irish lines; *ib.* 6143. Lowering fares has, on the whole, been beneficial; *ib.* 6147–6157. Any further reduction would injure company; *ib.* 6160–6164. Fares in Ireland must always be higher than in England from numbers, placing, and description of population; *ib.* 6165–6168. Discussion as to amount of fares people of Ireland are able to pay; *ib.* 6181–6190. Witness (a director of the Irish Midland Great Western) has strongly urged re-

3. *Passenger Fares*—cont.

duction of fares; in 1861 they were raised 10 per cent., previous to which period receipts had gradually risen, since then they have steadily declined, especially first class; *Earl of Clancarty* 6285–6305. 6308. Witness offered a personal guarantee if company would reduce fares 10 per cent. from January 1865 as an experiment, but the offer was declined, and receipts continue to fall off; *ib.* 6306–6310. Reasons for declining offer were expectations from the then forthcoming Dublin Exhibition, and fear of appearing in rivalry with other companies; *ib.* 6311–6324. Depression of the country and emigration probably contributed somewhat to receipts falling off; *ib.* 6314–6317. Dublin Exhibition has made no material difference in receipts; *ib.* 6319–6323.

Reduction of fares in Ireland desirable; *Macfarlane* 6545; *Boileau* 6804. Fares from Dublin to Galway excessive; should be reduced to one third, then numbers of poor people would travel who now walk, and the railway would also be greatly benefited; *ib.* 6805–6815; *Perry, H. R.* 6829. Advance of fares in Ireland during the last ten years; *ib.* 6860–6862. A bold reduction of fares in Ireland most desirable; witness believes, from eagerness with which people avail themselves of cheap trains, that in a year or two it would not only pay, but greatly improve position of companies; *Parker* 6865–6875. Necessity for reduction of fares in Ireland; *Bewlay* 6924–6929. If reduced 75 to 80 per cent., though there would be a temporary loss, witness believes that after about three years loss would be more than made up; *ib.* 6952–6958. Strong instance of increase in car passengers by reduction of their fares; *ib.* 6963–6968. Irish railways in some districts unremunerative, as people cannot afford to use them; fares might be sufficiently reduced to enable them to do so; illustration; *Bewlay* 6973, 6974, 6982–6986. All classes should be reduced; reasons; *ib.* 6975, 6976. Reduction to be of real service must be very large; *ib.* 6989. Fares lower from Ireland to places in England than from place to place of less distances in Ireland; *Bagot* 7001. Yearly tickets seldom issued; 7017. A large reduction of fares in Ireland most desirable to improve the country; but as it is not certain that it would pay, the nation should bear the risk; *Pim* 7052–7054. 7103. Irish cannot afford to pay as high fares as English; *ib.* 7063. Should be reduced to ½*d.* third class, ½*d.* second, and ¾*d.* first; it would be some years before this would pay; *Pim* 7067–7071. Difficulties in the way of reducing fares; effects of reduction; *ib.* 7087–7093. Success of recent reduction of third-class fares on Irish Midland Great Western; no reason why other classes should not be reduced; *Barrington* 7108–7116. Increase of fares latterly on Irish Northern Counties line; *Macauley* 7303, 7304.

Should be reduced to one-third the present rates; *Galt* 7337. 7349. Are much less than the old coach fares; *ib.* 7350. Considerably higher for ordinary trains than on the continent; table showing this; *ib.* 7351. 7479; but should not be affected by continental rates; *ib.* 7352. According to above-named tables the average 1st-class fare for 100 miles is in England 18*s.* 9*d.*, and in Belgium only 6*s.* 6*d.*, but after discussion and certain explanations, it would appear that 16*s.* 8*d.* and 10*s.* 3*d.* respectively are nearer the correct averages; *ib.* 8415–8440; and taking into account the much greater use of return tickets in this country will bring them nearer still; *ib.* 8441–8447. Belgian charges for passengers' luggage and other incidental matters, witness admits, may affect the comparison still further in favour of England, especially on short distances; *ib.* 8448–8457. But all this does not weaken witness's argument for reduction of fares; *ib.* 8458–8463. Mode of calculating expense of passenger trains; *ib.* 7353, 7354. Proposed passenger tariff; *ib.* 7355. Principles upon which founded; *ib.* 7356, 7357. Variations in charges in different parts of the kingdom; causes; *ib.* 7358. 7360. Instance of reducing lowest class of fares from ½*d.* to ¼*d.* causing a loss in the dividend of only 1*s.* per cent.; *ib.* 7361; this reduction did not apply to intermediate stations; *ib.* 7490–7496. Recent instances of excessively low fares from competition, &c., but results of these no criterion to judge of effect of reasonably low ones; there has not yet been any fair experiment over the whole country; *ib.* 7362–7364. No probability of proposed reduction being effected under present system; this opinion expressed by Mr. Gladstone in 1844; *ib.* 7365. Desirability of ascertaining fixed effect of low tariff by experiment for a considerable time on several lines; *ib.* 7366–7368. Lines suggested for trial; *ib.* 7369. Government should guarantee companies against loss; *ib.* 7370. Proposed fares for excursion trains; table showing present excursion fares on the principal lines; *ib.* 7371, 7372. Table showing profit and loss from exceedingly low fares; *ib.* 7372. Discussion of these tables; witness will prepare and give in amended ones; *ib.* 8464–8470. Annual and season tickets should be reduced one-half; *ib.* 7373. Amount paid for passenger traffic in the United Kingdom in 1864, 15,684,040*l.*; *ib.* 7376. Injurious effects of high fares; *ib.* 7478.

3. *Passenger Fares*—cont.

Mr. Galt's calculations being based upon the assumption of larger train loads than are really carried, must fall to the ground; *Allport* 16,941. Reduction of fares would not cause any material increase in number of passengers. Uniformity of fares would be as absurd as uniformity of goods rates. Experiment suggested by Mr. Galt of reducing fares on a certain three lines would lead to no true practical result.; *ib.* 16,942, 16,943.

Reductions should be made cautiously; *Hancock* 7671; could be better made by Government than by private companies; reasons; *ib.* 7672–7674. Reductions most desirable in 3rd-class fares, but should not go below actual cost of conveyance; *ib.* 7675, 7676. What should be considered the actual cost; *ib.* 7677–7681. 7685–7687. Discussion of principles upon which fares should be founded either by Government or by private companies; *ib.* 7681–7694. Statement of Mr. Roe as to fares on Derry and Coleraine railway contradicted; *Cotton* 7787 *et seq.* Reduction of fares in Ireland unnecessary; fares on Belfast and Northern Counties Railway; *ib.* 7825–7827. An advance of 5 per cent. on Derry and Coleraine line, and one of 10 per cent. on the Great Southern and Western, witness believes, has not checked the traffic, but the companies have made the whole of the money; reference to statistics, and discussion of this point; *ib.* 7834–7852. If State acquired railways, witness believes a large reduction of fares might be made without loss; *Hill* 8039.

High and unequal fares on Great Western; *Nicks* 8947–8952. Observations in reply; *Grierson* 11,768 *et seq.* Instance of inequality of fares on Midland Railway; *Gentel* 9275. Irregularity of fares between Darlington and Newcastle; *Wooler* 9556–9566. 9698–9703. Observations in reply; *O'Brien* 12,123 *et seq.* Railway Acts for some years past have contained a clause subjecting rates and tolls to future general revision; *Lees* 9493–9500. Discussion as to Parliament acting upon this and reducing them; *ib.* 9532–9539.

Companies should not be allowed to charge between any two places a less sum than between one of those places and an intermediate place; *Hollins* 11,305–11,307. Witness would have a uniform rate for passengers as well as for goods; companies should charge same fares over whole system, though a rate that would pay in a densely populated district would not in one sparsely peopled; *ib.* 11,380–11,384.

Witness does not think that a reduction to 1*d.*, ¾*d.*, and ½*d.*, for 1st, 2nd, and 3rd class, with 3*d.*, 2*d.*, and 1*d.* additional as a station charge, would materially increase traffic if made over the whole country. A great reduction between certain given points increases traffic there, but draws it off from other places; *Cawkwell* 11,601–11,610. Does not think that additional facilities would largely increase third-class traffic; case quoted in proof; *ib.* 11,614–11,618. Fares are pretty uniform over the whole of the London and North-western system; *ib.* 11,627; they are mainly fixed on the mileage principle; *ib.* 11,636. Compulsory interference with rates would very much disturb arrangements for working lines at fixed rentals, and would prevent companies making reductions to encourage traffic in districts where needed; *ib.* 11,681–11,683.

Particulars of fares on the Great Western Railway; *Grierson* 11,767 *et seq.*

Any attempt to coerce companies into compulsory uniformity of charge per mile would displace the Parliamentary security on which they have expended their capital, and diminish the facilities now voluntarily given to the public; *O'Brien* 12,152. Low fares in populous places advantageous to companies and the public; *ib.* 12,153–12,155. Companies would lose by a large general reduction; *ib.* 12,177–12,180.

Great Northern fares are pretty uniform, and near the maximum; effects of the severe competition some years ago between this company and the Midland Company; the numbers then carried form no criterion of what effect a fair and uniform reduction of fares might have; *Clarke* 12,861–12,870. Charges for passengers' luggage very rigidly exacted on the continent, and on English lines in connexion with them; *ib.* 12,873, 12,874. Great

RATES AND CHARGES, &c.—*cont.*

3. *Passenger Fares*—cont.

Northern Company are very liberal in this matter; *ib.* 12,844–12,847. 12,871, 12,872.

Discussion of question of fare between two given points by different routes of unequal lengths; unless the charge be equal, the traffic would all necessarily be driven on to the shorter line; *Smithells* 13,036–13,069. If uniform mileage fares were adopted present system of working on commercial principles must be departed from; *ib.* 13,061. As to allowing companies to charge a higher fare for a shorter distance than for a longer one, witness thinks they should act as they think fit, within their maximum; *ib.* 13,083–13,089. Speaking of Lancashire and Yorkshire railway, witness does not think a general reduction of fares would much stimulate traffic; a partial experiment is being tried at present, but witness is not sanguine as to the result; *ib.* 13,216–13,226. Fares on this line are very low, but many of them are good paying ones; tendency has been to reduce, and the result so far is satisfactory; *ib.* 13,227–13,235. Witness believes that to reduce 50 per cent. would take away their dividend; *ib.* 13,236.

If equal mileage rate adopted, competition would be destroyed where routes were of different lengths, as passengers would not use the longer; *Grierson* 13,260 *et seq.* As a rule, fares are the same in agricultural and in thickly-peopled manufacturing districts, but in some districts (on Great Western) third-class carriages are attached to most of the trains; *ib.* 13,290. If third-class fares were much reduced, agricultural labourers would not travel three or four miles backwards and forwards to their daily work; in no case carries people from suburbs four or five miles into a town to their employment. Question of carrying from city to Hammersmith at a weekly fare of 1*s.* 6*d.*; *ib.* 13,300–13,304. Explains how it has arisen that express fares are charged in some cases and not in others, the trains stopping at and missing same stations; *ib.* 13,483–13,486.

Suggestion that Board of Trade should have power periodically to revise fares; *Low* 13,894. Express fares on Great Western are a great inconvenience; they are much too high; none on the Midland; *ib.* 13,950–13,955. Express fares should be abolished, and all fares greatly reduced on all the lines; *ib.* 13,882.

Particulars of alterations in fares on North-eastern, and Stockton and Darlington lines; *MacNay* 14,004–14,007.

Through fares, Midland railway; *Allport* 13,769–13,777. Reduction of fares to 2*d.*, 1½*d.*, and 1*d.* per mile now accomplished over nearly the whole of their system, without loss to company; *ib.* 13,777–13,779. In some of the thickly populated parts fares are less than half the Parliamentary scale; in such places low fares pay best; this would not answer in agricultural districts; *ib.* 13,780, 13,781. Increase of passengers since reduction not, as witness believes, drawn from other lines; *ib.* 13,790.

Witness (general manager of North Staffordshire Railway) is strongly in favour of a large reduction in third-class fares for long distances; believes it would pay, and hopes to see it carried out on his line. There should be one train a day each way, at a time that would only suit working people. 1*d.* a mile on long distances is far too much for the labouring classes; where fare is above a shilling they will walk; *Morris* 14,369–14,389. Witness believes that agricultural population has never yet been touched for short distances, and that low fares would greatly develop this traffic; *ib.* 14,393, 14,394. First-class fares might be reduced to 2*d.* per mile, but not lower; *ib.* 14,391.

There may be cases in which public interests would not suffer by companies charging a lower fare for a longer distance in same direction; *Hawkshaw* 14,413–14,420. Speaking generally, interests of public and of companies coincide in respect to charges; *ib.* 14,423–14,425. Reduction of fares has been silently going on for some years, and may continue to some extent; *ib.* 14,536–14,538. Companies are reducing fares as well as they are able; *ib.* 14,551, 14,552. Fares for short distances; *ib.* 14,561.

In France, first-class fares about the same as in England, but second and third class lower; *Stewart* 14,665. Effect of violent competition has been to lessen accommodation between intermediate points; it has in many instances left fares higher than before; *ib.* 14,727–14,729. Express fares abandoned on most of the trains on the North-western system; *ib.* 14,730. Low fares induce a great development of traffic in manufacturing districts, but nothing will make agricultural a travelling popula-

RATES AND CHARGES, &c.—*cont.*

3. *Passenger Fares*—cont.

tion; *ib.* 14,760, 14,761. Reduction of rates and fares should be contingent on increase of dividend, interests of companies and of public would then lie in the same direction; *ib.* 14,767–14,774. Any general reduction of fares would not be judicious; reductions must depend on local circumstances; *ib.* 14,798–14,801. People will only be induced to travel by very low fares; this should be done at certain seasons of the year, by excursion or special tickets. If matters are left to themselves there will be a large general increase of second and third class traffic without intervention of Parliament, and managers will make a reduction whenever they see their way to do so; *ib.* 14,804–14,808.

Argument in favour of a proportionate reduction of fare per mile as length of journey increases; *Harrison* 15,191–15,196. Local fares necessarily vary according to circumstances; cases (on North-eastern line) cited in proof. Companies are in their infancy yet as to knowledge of what will produce the largest remunerative amount of traffic; *ib.* 15,197–15,199. Effect of increase of fares felt much sooner than reduction; *ib.* 15,200, 15,201. Witness believes that a general gradual reduction of fares in populous districts is advantageous to companies as well as to public, but it must be done in a manner that will be really felt, and at the same time cautiously, as there is the greatest difficulty in raising them again after being reduced; *ib.* 15,202–15,207. North-eastern Company have raised fares again after reduction in but one instance; *ib.* 15,237. If Government tried experiment of reduction of fares on a large scale it must be between populous places at not too great a distance from each other, such, for instance, as Liverpool and Manchester; *ib.* 15,208–15,213. Extensive reduction of fares in agricultural districts would be attended with certain loss; *ib.* 15,209, 15,210. 15219. 15,225. Effect of wages of a district upon fares; *ib.* 15,214, 15,215. Fares would now be lower if Parliament had refused many of the speculative lines which have been sanctioned; *ib.* 15,327. Difficulty in persuading directors to reduce fares when line is not paying well; *ib.* 15,327. Instance of reduction of fares from fear of a competing line; *ib.* 15,331. Reduction of nearly 50 per cent. of fares on Brighton line, a few years since, reduced dividend at the time, but company is now fully recouped. This reduction has not prevented attempts for a competing line; *ib.* 15,332–15,335.

Fares in general are considerably below the Parliamentary maximum; *Huish* 15,884.

South-eastern Company charge on the whole about 20 or 25 per cent. below Parliamentary maximum. Fares to intermediate stations sometimes as much as (but never exceed) those to places beyond; *Eborall* 16,138–16,149. The best step towards reduction of rates and fares would be to get poor companies into a paying condition; *Sherriff* 16,412–16,414. Large companies (especially those which are doing well) are gradually reducing them. Reductions should be gradual; they do not pay at first; *ib.* 16,415–16,417.

Effect of competition has been to reduce fares generally; *Bidder* 16,759, 16,760. Fares on Ipswich line of Great Eastern are high; witness believes it would pay to reduce them; *ib.* 16,761, 16,762. Lower fares, especially for workmen, much needed; *ib.* 16,809, 16,810.

With present increasing expenses, witness does not see how fares can be reduced, but rather the reverse; *Gooch* 17,477–17,482. Believes it would be prejudicial to interests of companies; *ib.* 17,487. Fares have on the whole been reduced by competition; *ib.* 17,544–17,549.

Memorandum upon railway fares from Mr. John Patterson of Liverpool; *App.* Z. Particulars as to, on Irish railways; *App.* AW. Return of fares received by Londonderry and Coleraine Railway in 1861 to 1865, showing increase in 1865; *App.* BB. Letter from Mr. Oldham in respect to the through charges for passengers between England and Ireland; *App.* BD. Letter from Board of Trade as to the power of Parliament to revise railway rates and tolls; *App.* BM. Communications from Mr. Peter Roe on the results of lowering fares on the Newry, Warrenpoint, and Rostrevor Railway; *App.* CC. Comparison of the rates charged by English and continental railways for passengers; *App.* CN. Statement of fares on certain English railways; *App.* EE.

RATES AND CHARGES, &c.—*cont.*

4. *Publication of Rates and Fares:*

Necessity for publication of rates; *Bagot* 6999; *Mathews* 10,545–10,576. Special rates should always be published; *Wooler* 9611. Inconvenience felt from want of publication of rates, and of notice of alterations; three months' notice ought always to be given; *Williams* 10,408–10,417. Present system is open to the exercise of favouritism; *ib.* 10,418–10,422. A month's notice of changes and thorough publicity of rates, (including differential rates where charged,) should always be given; this is not the case at present; *Mathews* 10,545–10,556. 10,559, 10,560. Publication is calculated to prevent favouritism; *ib.* 10,561–10,573. Although upon inquiry rates can generally be ascertained, their systematic and thorough publication would be a great protection; *ib.* 10,574–10,576. Anyone can obtain copies of rates on application; *Grierson* 11,855–11,859. Companies should publish the items of which each rate is made up; *Gibbs* 10,821. Rates should be published; *Brown* 11,204.

No necessity for an office (as has been suggested) for publication of rates in each district; from the frequent changes, regular publication would be very difficult; *Cawkwell* 11,593, 11,594. London and North-western Company always give a month's notice before raising rates; *ib.* 11,603–11,606. Rates (on Great Northern) are too numerous to be published, but are accessible to all who want to know them; *O'Brien* 12,300–12,302.

Lancashire and Yorkshire Company have about 2,000,000 of rates, and these are constantly changing; it is therefore impossible to publish them, and there is no reason for so doing. On inquiry they can be ascertained, except in very special cases; *Smithells* 13,115–13,120. 13,129. 13,132–13,133. Reason of number of rates being so great, and discussion as to desirability or not of simplifying them or reducing the number; *ib.* 13,130. 13,134–13,141. The number is likely to increase every year; *ib.* 13,142.

Impossibility of publishing rates in same way as canal and turnpike tolls were posted, unless they were uniform. Probable that when arrangements are completed for through booking, the rates and fares in Great Western books will amount to 5,000,000. A portion of rates has taken nearly two years to complete; large alterations made since book printed; *Grierson* 13,305, 13,306. 13,363, 13,364. 13,375–13,381. Parties desirous of learning rate could see the books. Any one can get it who applies; applicant would also be told that a reduction might be made if large quantity sent, otherwise he might charter a vessel and send it by sea. A person could obtain information as to rates at any station as to a particular station, but not generally; *ib.* 13,307–13,320. 13,333, 13,334. Would not tell people in London the Liverpool or South Wales rate. General publication of rates not necessary. Inconvenience to companies if Legislature gave power to examine books of rates; discussion as to whether public should not be able to see whether equal rates are imposed under similar circumstances; *ib.* 13,338–13,345. 13,347. 13,355–13,360. 13,582–13,585. Maximum rates could be published, but it would be of no practicable use to public. Compulsory upon company to put up toll boards; are now useless. Fares were published on Great Western line until they became so numerous; some of the old fares are published now to a small extent; *ib.* 13,348–13,355. Witness is aware that all fares and rates (which as a rule are unalterable) are published every three months; no difficulty in publishing them in England if unalterable; would be merely the expense; *ib.* 13,365–13,372.

Impossibility of publishing all rates, from their large number and the frequent alterations; public can always know what they are. In ordinary cases a month's notice of alterations always given; *Allport* 13,813–13,819. In France rates are published every three months; inconvenience of this, in interfering with making through arrangements; *ib.* 13,822–13,833. Parcels rates are published occasionally, but cannot be published continuously; *ib.* 13,423.

Speaking of coal, &c. on Stockton and Darlington railway, witness considers that it would be difficult to publish rates, but practically any one wishing to do so can know what they are; *MacNay* 14,089–14,096.

North Staffordshire Company give a month's notice of alteration of rates; *Morris* 14,236. Publication of rates unobjectionable, but impracticable. Information is readily given whenever asked for; *ib.* 14,237–14,243. Publication would not prevent private arrangements for special rates; *ib.* 14,244–14,246.

No objection to publication of terminal charges, but is impossible; *Hawkshaw* 14,481, 14,482.

RATES AND CHARGES, &c.—*cont.*

4. *Publication of Rates and Fares*—cont.

Impossibility of publishing rates under some circumstances; discussion of this point; no objection to publication, but the number is too great. In point of fact rates are perfectly well known; *Harrison* 15,154–15,164.

Urgent necessity for publication of all rates; rate books should be open for inspection at every station; *Cosgrove* 15,726–15,738. Terminals should also be published; *ib.* 15,744.

Arrangements in France as to obtaining sanction of minister and publication of rates witness thinks fetters business very much; *Eborall* 16,217.

Rates are so numerous and complicated that publication would be very expensive. If railways compelled to publish them, all other carriers must do the same. No objection to publication at each station rates applicable to that station; *Sherriff* 16,348, 16,349. 16,351–16,358. Publication of terminal charges impracticable; *ib.* 16,350, 16,351. Passenger fares also should be published at stations. Reasons why canal and shipping companies should publish their rates; *ib.* 16,377–16,382.

Rates should be published as far as possible, terminals being distinguished; *Bidder* 17,106–17,108.

Rates on Great Western are too voluminous to be published, but they can always be known by inquiry. To have the books open to public inspection would cause needless loss of time, and people would not like to pay a fee to compensate for it. No desire to conceal them, as all parties are put on same footing for same service, and real publication could easily be evaded by rebate or otherwise by any company wishing to do it; *Gooch* 17,451–17,458. Any reduction is always speedily known throughout district to which it applies; *ib.* 17,473–17,475.

5. *Rates of Carriage for Goods;*

Mileage rates for goods traffic to Liverpool greatly in excess of those to other places mentioned; *Clark* 3–8. 30, 31; *Patterson* 215–218. Explanations on this point; *Cawkwell* 11,402 *et seq.* Should be exclusive of terminal charges; *Clark* 107–109. Equal rates should be charged for equal services; *ib.* 141. 149; *Patterson* 365–374. 381; *Lawton* 1446. Rates should be fixed by Parliament for every town on the principle of so much per mile, and so much for terminal expenses, and there should be a tribunal of appeal for special cases; *Clark* 150–155. 175–181. 185–188. Equalization of rates; *ib.* 163–174. Interest on capital expended in construction of line, &c., should be included in mileage rate; *ib.* 182–184. Rates between Liverpool and Manchester would long since have been reduced, had not the Act of 1826 been evaded; a general reduction of rates by Parliament, witness considers, would not be any breach of faith; *ib.* 203–211. The corn trade of Liverpool have prepared a tariff which they think would be just to the companies and the public; *Patterson* 219–221. Evils of excessive rates; *ib.* 301, 302. Rates should be graduated according to distance; *ib.* 327. All railway companies should be compelled to conform to some reasonable standard, as in the case of passengers; *ib.* 349–352. Principles upon which uniform mileage rates should be founded; *ib.* 382–401. As to bearing of cost of construction in fixing rates; *ib.* 408. Instances of increase of rates; *Stead* 444. 451–454. Rates at Birmingham are high and unequal; instances; *Wright* 627–631. Statements made and table given in to disprove this; *Grierson* 11,941 *et seq.*; *Allport* 12,390 *et seq.* Occasional and unfair changes are made in rates and classification, &c.; *Wright* 632–644. To prevent combination, rates should be placed under the supervision of some independent board, and regulated by a graduated mileage rate; *ib.* 657–676. 688–707. 750. Reasons why unequal charges are made; *ib.* 677–687. 708–715. A reduction of rates would increase traffic; *ib.* 725–738. Uniform mileage rates should be compulsory over every complete railway, and, if practicable, throughout the country. There should be some body to whom an appeal would lie, to ensure carrying this out; this body might also have power to modify rates and terminal charges under special circumstances; *Sturge* 845–867. Statement to show that this witness's views are not in all cases reasonable or practicable; *Grierson* 11,959. Answer on the part of the Midland company; *Allport* 12,415 *et seq.* Companies might be allowed to reduce rates uniformly over their whole system; *Sturge* 868–873. Where two companies run between the same places, one line being longer than the other, the rates might be allowed to be the same; *ib.* 874–877. Equal mileage rates should be enforced throughout each railway system; *Atkinson* 896–909.

RATES AND CHARGES, &c.—*cont.*

5. Rates of Carriage for Goods—cont.

Companies should not be allowed to favour some places at the expense of others; *Lawton* 1446, 1447.

Reduction of, on German railways; *Mulvaney* 1119, 1120. Variable rates not generally allowed on German railways; *ib.* 1131–1138. Should be allowed, witness considers; *ib.* 1134. 1139. Are allowed in England and Ireland, to the advantage of the companies, and, in one instance named, in Germany; *ib.* 1219–1221. 1251–1260. Full train loads frequently a condition for low rates on German railways; *ib.* 1195–1197. Principles upon which coal rates are fixed in Germany; *ib.* 1261, 1262.

Great disparity in rates at Rochdale as compared with neighbouring places, causing considerable loss of trade; *Fletcher* 1385–1409; *Lawton* 1414–1428. 1447–1451. Rates to Rochdale 25 per cent. more than to Oldham; *ib.* 1429, 1430. 1433. 1442, 1443. Rates in Ireland are prohibitory of any development of traffic; *Forbes* 1458. They are in some cases higher than in England; *ib.* 1459. The rates for coal are double the English rates; *ib.* 1464. Higher rates charged by North-eastern Railway Company than are authorized by Act; *Oxlade* 1917–1922. Reply to this; *O'Brien* 12,061. Rates in Ireland are injuriously high; *Sullivan* 1944–1950. Decline of traffic in consequence; *ib.* 2019. Irish rates should be considerably reduced; *Mallet* 2243. Legislature should compel this, and guarantee any temporary loss; *ib.* 2250–2290. 2295, 2296. Reduction and uniformity of rates very desirable; *ib.* 2305–2307. Within the last two or three years the rates from Limerick for some goods have been increased 80 to 100 per cent.; traffic fallen off in consequence; *Tinsly* 2412. Rates from Dublin to Limerick less by canal than by railway; *ib.* 2492–2494. Rates from Limerick are too high; *Ryan* 2653, 2654. The custom of hucksters going through the country buying up produce would be altered if rates were reduced; freight cheaper from the Shannon by sea as compared with Waterford; *ib.* 2711–2733. Complaint at Bruree that coal traffic is encouraged at the expense of turf; *ib.* 2742. Individual instance of great inconvenience from high rates; *ib.* 2771. There would be an increase in the produce of the soil if the rates were lower; *ib.* 2781. Reduced rates in Ireland would increase traffic, but diminish profits; a cheap parcels rate tried on Great Southern and Western, but failed; *Longfield* 2796–2807. Question of reduction of rates much discussed by company; *ib.* 2834–2836. Traffic in corn and coal would be greatly developed by a reduction of rates; *ib.* 2854–2860. Irish Great Northern Company could not afford to reduce rates at present, though they are too high; *Earl of Lucan* 2955–2960. Quantity of goods carried would be doubled if rates reduced to 3*d.* per truck; *ib.* 3039. Timber comes direct by sea to Westport and Ballina; *ib.* 3045, 3046. A night train would secure a considerable fish traffic; *ib.* 3053–3058.

Rates on Belgian State railways are fixed more with a view to the public good than to profit; *Fassiaux* 3079–3081. A gradual reduction has been made, the results of which have been highly satisfactory; *ib.* 3097–3101. 3112–3115.

High rates depress the fish trade of Ireland; *Brady* 3195. Reduction of rates would increase quantity of fish sent from Sligo and Ballina; *ib.* 3292. Irish Fishery Commissioners state that moderate rates, especially for small parcels of fish, and quick transit, would benefit the trade, but that in 1855 the rates were increased from Cork to Dublin; *ib.* 3308, 3309. 3315. Reduction in freight would increase consumption of fish; *ib.* 3333. Changes in rates are left pretty much in the hands of traffic managers; *Malcolmson* 3461, 3462. If rates reduced, a permanent falling off of receipts will result; *ib.* 3587. If rates on corn and hay from Limerick were reduced, much that now goes round by sea would be sent by rail; *Cooper* 3717. Unequal rates on turf and parcels; *ib.* 3744–3747. If rates were lower there would be more cattle traffic; *Hemans* 3817; if reduced one-half there would be a temporary loss, but probably in five or six years present net revenue would be realised; *ib.* 3819–3822. Amalgamation, with protection from monopoly, and a large reduction in the rates, would be popular with shippers of goods and cattle; how temporary loss could be met; barony rate could not be put on; illustration; *ib.* 3861–3869. 3871–3874. 3899–3902. Although landowners and agriculturists derive great advantage from railways, they would not agree to bear temporary loss; general feeling that it should be borne by the United Kingdom; under such an arrangement Great Britain would pay nine-tenths; *ib.* 3870. 3875–3884. Witness has not estimated the effect of reducing rates 50 per cent.; thinks traffic would come gradually; at the end of ten years the loss would probably recoup itself; *ib.* 3903–3911. Low charges will tend to gradual establishment of manufactories in Ireland, though merely as an agricultural country it would pay to reduce rates; *ib.* 3917, 3918. Mills and manufactories would be established in Ireland if rates were reduced; *ib.* 3933.

In Ireland rates are nearly uniform; *Ennis* 4027. Rates on Grand Canal lower than on railways; *ib.* 4165. Witness some time ago agreed to take ironstone at exceptionally low rates, but in consequence of difficulty in getting it to railway, it was not sent; has had no other application for special rates; *ib.* 4198–4203. If low rates were tried, it must be done at expense of shareholders; *ib.* 4212. Reduction of rates will stimulate the industry of any country; *Bidder* 4232. Wherever low rates are introduced a fresh source of traffic springs up; *ib.* 4330. Whether traffic be at high or low rates it is made up by quantity, and comes to this, that the normal earnings of a railway are 5*s.* a train mile, and normal expenses 2*s.* 6*d.*; *ib.* 4330–4333.

Rates vary considerably on Irish Great Southern and Western; *Haughton* 4577–4579. 4666–4669. Reduction of rates in Ireland would increase traffic but diminish profits; *Cawkwell* 5146, 5147. Reduction of rates on Irish railways would entail permanent loss; *Dargan* 5457–5459. 5483. Rates on Wicklow line; classification same on all Irish railways; rates for minerals, including loading, unloading, haulage, &c., under 1*d.* a mile; *ib.* 5460–5467. 5622. 5631–5636. Witness would make an uniform charge per mile, and allow a terminal charge that would regulate it; there should be a higher rate per mile for a short than for a long distance; *ib.* 5688–5699. Would have a fixed terminal charge at a particular place; cartage and labour should be separate. Terminals include only loading and unloading at stations. Should be a maximum rate for terminals. Would allow companies to carry any particular description of traffic at any rate they pleased, but they should not carry between same places at different rates for different persons. Not fair to carry at a less mileage rate into one district than over line generally. A discount might be allowed for quantity. If all railways were in the hands of one company Board of Trade should prescribe and equalize rates. Special rates could not be prohibited. All rates should be published; *ib.* 5700–5718. If railways in hands of one company, and they found upon one part of their system they could get traffic at 1*d.* per mile, whilst upon another it could not be got if they charged more than a halfpenny, they should be left free to act, provided they did not exceed maximum, and treated all alike; *ib.* 5719, 5720. System of discounts places small traders at a disadvantage; allows a differential rate upon a single waggon, so that it does not affect the poor man so much as it did; *ib.* 5721–5724.

Increase of net receipts from gradual reduction of rates; *Roe* 5748. 5805. Trade prevented by high rates; *ib.* 5804. Rates excessive, especially in west and north-west; *ib.* 5854–5860. In some instances prohibitory; *ib.* 5861–5863. Injury of high rates to internal traffic; quantities of goods sent by road that would go by rail if rates were reasonable; case in point; *ib.* 5863–5870. 5884–5889. Rates should not be reduced without prospect of a large increase of traffic; *Grierson* 5932–5934. Large increase in coal traffic on Great Western line since reduction of rates; *ib.* 6001–6004. Some little traffic by road in Ireland still, but for short distances only, the lowering of rates having brought nearly all to the railways; on very short distances road cheaper than rail, terminal expenses being heavy and labour cheap; *Lanyon* 6216–6225. Rates should be low enough to put down all road traffic for distances exceeding 25 or 30 miles; *ib.* 6227, 6228. Reduction of rates would bring considerable traffic off the road, and cause a general increase; *Jones* 6500–6506. Rates to Omagh less from Liverpool than from Dublin; *Macfarlane* 6534, 6535. Instance of prohibitory rates; *ib.* 6546.

With better through arrangements and reduction of rates between Galway and Belfast, traffic might be trebled; *Meldon* 6736–6741. Reduction of rates and fares necessary for development of commerce of Ireland; *Boileau* 6804; *Perry, H. R.* 6828. Rates in Ireland very unequal; governed by no system; table of rates introduced; *ib.* 6856–6859. Great reduction necessary in Ireland; would pay in a year or two; *Parker* 6865. Necessity for reduction and equalization of rates in Ireland; *Bewlay* 6924–6930. The greater the reduction the

greater will be the success; *ib.* 6989. High and unequal rates in Ireland, affecting especially the Dublin trade; necessity for published tariffs; high rates for parcels; want of correspondence in trains; *Bagot* 6994–7001. Instance of inequalities; *ib.* 7001–7011. 7018–7021. Some rates recently raised at Dublin; *ib.* 7020–7025. Further instances of unequal rates; goods sent greater distances by sea for lower rates; *ib.* 7032–7039. Reduction of rates on goods in Ireland desirable, but not so necessary as reduction of passenger fares; *Pim* 7052. 7062. Goods are taken to various parts of Ireland from England more cheaply than from Dublin, in consequence of high rates; *Barrington* 7131–7147. Very desirable to reduce rates on coal to ½*d.* a ton; *ib.* 7221–7240. Recent increase of parcels rates on Irish Northern Counties line; *Macauley* 7304.

The receipts on goods traffic in the United Kingdom amounted in 1864 to 18,331,524*l.*; *Galt* 7377. Rates vary, but are altogether too high; average about 1*s.* 4*d.* per mile for 100 tons; *ib.* 7378–7381. Should be reduced, but reduction should be entirely in proportion to increase of traffic which it might be expected to produce; *ib.* 7389, 7390. 7396. 7471–7475. Reduction would be a benefit to the country; *ib.* 7476.

Unfair and unequal rates charged by Midland Railway Company at Derby, prejudicially affecting to a great extent the trade of that place; *Cox* 8578–8589; *Renals* 8684 *et seq.*; *Nicholson* 8796–8798; *Wheeldon* 8863. Number of instances cited, and comparisons with other places given; *ib.* 8864 *et seq.* Inequality of rates as between one place and another, as well as between one class of goods and another; *Cox* 8586. Under some circumstances inequalities may be justifiable, but not in the case under consideration; *ib.* 8590–8595. Instances of inequalities; *ib.* 8579, 8582–8585. 8595, 8604. Answer to these statements on the part of the Midland company; *Allport* 12,449 *et seq.* By a change in charges witness thinks companies might obtain a better profit; *Cox* 8596–8598. Would like to see an equal mileage rate; *ib.* 8599–8603; but cannot quite say how it is to be accomplished, as, if a rate were fixed by Act of Parliament, and a company chose to go below it, they could scarcely be prevented doing so; *ib.* 8626–8631; *Nicholson* 8823. 8832. Argument in favour of a uniform mileage rate; *ib.* 8799–8812. 8815, 8816. 8821; *Nicks* 9008–9011. Cases where it might not be just; *Nicholson* 8813, 8814. If, after a uniform mileage rate had been established, powers were sought to make a line through a difficult country, a higher rate might reasonably be asked; *ib.* 8817–8820. Rates at present inserted in Acts of Parliament unsatisfactory; *ib.* 8824–8831. Rates should be levied simply by weight; *ib.* 8837–8847. Desirability of an equal mileage rate; *Wheeldon* 8875–8878. Classification should be altered to equalize them, at least for heavy goods; *Cox* 8655–8664. Cannot say how railway companies would be affected by such a change; *ib.* 8604. Does not complain that the variations at Derby are caused by favouritism; *ib.* 8614–8622. 16*s.* 8*d.* per ton, exclusive of cartage, &c. is charged for conveying lead 16 miles; witness cannot say whether this is more than the Act allows; *ib.* 8632–8642. The charge from Matlock to London (passing through Derby) is less than from Matlock to Derby; *ib.* 8643–8645. This is caused by water competition, brought about by high charges; *ib.* 8647–8653. Suggestion that companies should divide the merchandise into but two classes, and should charge on the first 1½*d.* per ton per mile, with 5*s.* for terminal expenses, and on the second 2*d.* and 7*s.*; *Renals* 8701–8710. Discussion as to limit of rates by Act of Parliament; *ib.* 8716–8737. Unequal pressure of rates on carriage of ribbons, from mode of packing which manufacturers are compelled to adopt; *Nicholson* 8781–8795. Answer to this; *Allport* 12,492, 12,493. Unequal rates on Staffordshire line; *Wheeldon* 8903. Instance of Midland Railway Company raising rates without any notice; *ib.* 8922.

Unfair and anomalous rates from improper classification of goods; *Smith* 9050 *et seq.* Rates charged at Lincoln are excessive as compared with other places named; *ib.* 9111–9116. Between Lincolnshire and the manufacturing districts the rates are excessive, and are not based on any fixed principle; *Gentel* 9176 *et seq.* Argument in favour of uniformity of rates; *ib.* 9263–9273. Answer to Mr. Smith's and Mr. Gentel's complaints; *Clarke* 12,555 *et seq.*

Railway Acts for some years past have contained a clause subjecting rates and tolls to future general revision; *Lees* 9493–9500. 9540–9548. Discussion as to Parliament acting upon this, and reducing them; *ib.* 9532–9539. Complaints from Nottingham of unequal rates charged by Midland Company; *Hutchinson* 9723–9756. Witness suggests as a remedy for present inequalities the adoption of a mileage rate with exceptions to meet particular cases; *ib.* 9809–9816.

Companies carry at a loss, hoping to secure a monopoly and raise rates; *Wilson* 10,025–10,034.

Complaint of inequalities and anomalies in rates in iron districts of Staffordshire; *Williams* 10,115–10,121; *Mathews* 10,450 *et seq.* Instances of similar rates charged for different distances; *Williams* 10,122–10,128. 10,265. Companies who carry for witness always give notice of any intended change in rates; *ib.* 10,146–10,148. Witness advocates a uniform mileage rate, on which calculations could be based, exclusive of terminal charges; where more than one route, rate should be based on the shortest; *ib.* 10,231. 10,245–10,248. Desirability of a uniform mileage rate; principles upon which it should be founded; *ib.* 10,284–10,303; *Mathews* 10,452. It should be uniform over each complete system; witness does not think that companies being obliged to reduce on the whole system, if at all, would discourage reductions; *Williams* 10,319–10,328; *Mathews* 10,498–10,517. Would like to see all the railways in the kingdom worked as one system, and a uniform mileage rate, much lower than the present average, adopted over the whole; *Williams* 10,329–10,338. An Act should be passed fixing maximum, &c., and a Rates Board established in connexion with the Board of Trade to carry it out. Good notice of intended alterations should be given, in view of parties making or holding contracts; *ib.* 10,342–10,352. A month's notice of alteration is given by Great Western Railway Company; *Grierson* 11,844. Rate should apply to all new railways; board should have no power to increase rates; *Williams* 10,353–10,357. Objection to special rates for large customers; *Mathews* 10,557, 10,558. Rates should be alike to all; *Williams* 10,423, 10,424. Board suggested above should have power (within the Act) to settle questions of rates summarily without recourse to law; *ib.* 10,425–10,429. Appeal to present tribunals is so expensive that the least injury is to put up with the first damage. Advantage of suggested Board is that it would be already in possession of the special knowledge, which it costs so much for present courts to acquire in each particular case; *ib.* 10,430–10,440. Such a tribunal unnecessary; present courts sufficient; *Smithells* 13,090–13,095. Statements on behalf of North Staffordshire Company in answer to Mr. Mathews' complaints; *Morris* 14,117 *et seq.*

Low rates from Middlesborough iron district through water competition; *Williams* 10,248–10,264; and from Cardiff through competition between railway companies; *ib.* 10,266–10,273. Witness thinks that coal is (or could be) carried at ½*d.* per ton per mile; *ib.* 10,311–10,318. Exception taken to this statement; *Grierson* 11,843.

Railway companies having monopolized the carrying of the country, equal facilities should be given to all; present inequalities should be removed, and uniform rates enforced. Witness is not prepared to define precisely to what extent uniformity should be carried, but thinks it is for the Commission to propose and Government to carry out what may be necessary; *Mathews* 10,522–10,538. In the case of amalgamations, the lesser branch should adopt the rates of the greater; the lowest are now generally adopted; *ib.* 10,541–10,544. Instances of advantages of competition in keeping rates down; even after competing companies have combined, the rates have been lower than they would have been but for the competition; *ib.* 10,577–10,586. Terminal charges should be separated from mileage rate; no difficulty in classifying terminal charges; *ib.* 10,588–10,601.

Complaint of present classification, by which iron castings are placed at a great disadvantage; should be carried at same rates as rolled or forged iron. Classification should be modified to meet case of freighters not insuring, as the insurance rate charged is excessive; this arrangement would save litigation. Board of Trade should make out classification, and it should be finally fixed by law; *Perry, T.* 10,605–10,632. To carry out these views would entail great loss on railway companies; *Grierson* 11,866, 11,867.

Complaint from Wolverhampton of injury to hardware trade from unequal rates and improper classification; *Walker* 10,637 *et seq.* Statement in reply; *Grierson* 11,868. 11,879.

Witness has been requested to represent views of Wolverhampton Chamber of Commerce, of which he is

RATES AND CHARGES, &c.—*cont.*

5. Rates of Carriage for Goods—cont.

secretary; *Gibbs* 10,791. Hands in resolutions of Chamber respecting unfair and unequal rates; *ib.* 10,748. Instances of such rates discussed; *ib.* 10,749–10,759. As near an approximation to a mileage rate as possible desirable; *ib.* 10,760–10,763. Companies should publish the items of which each rate is made up, showing mileage rate, terminal charge, &c. separately; *ib.* 10,819–10,826. Objection to practice of companies carrying at a loss in one district and making it up by exorbitant charges in another; they should not carry at a loss, even for the sake of developing traffic; *ib.* 10,761–10,771. Witness believes companies carry at a loss to destroy sea competition; *ib.* 10,772–10,779. Parliament having practically granted to railway companies a monopoly of the carrying trade, should enforce better terms for the public, either by fixing a lower maximum and also perhaps a minimum,—in fact, more equal rates,—or by some other means; *ib.* 10,780–10,794. There should be but a small margin between highest and lowest charge; *ib.* 10,837–10,845. As to how maximum should be fixed; *ib.* 10,795, 10,796. 10,800–10,803. Differential rates should not be allowed as between different parties, but only according to quantities carried; *ib.* 10,797–10,799. Traders cannot get a station to station rate, and collect and deliver their own goods; companies allow a rebate if goods are brought to them, but insist on keeping delivery in their own hands; *ib.* 10,804–10,809. Complaint that low rates are given in one case and withheld in others; wherever the same work is done, the same charge should be made; *ib.* 10,828–10,836. Argument to show that rates should be as low as is consistent with a profit; *ib.* 10,848–10,851. Lower rates would increase business of railways, and might possibly increase production of the country; *ib.* 10,852–10,858. Reduction in the price of any commodity is always followed by increased consumption; *ib.* 10,867–10,869.

Complaint by witness (who is proprietor of Stoke Salt Works, Worcestershire,) of heavy rates to London compared with those from salt works in Cheshire; rates should be in accordance with distance; *Corbett* 10,873–10,875. 10,881, 10,882. 10,922, 10,923. 10,937–10,943. Observations in answer to this, and table of salt rates given in; *Grierson* 11,895 *et seq.* Inconvenience from absence of through rates, and desirability of uniformity in rates; *Corbett* 10,900–10,902. Discussion of probable effects of a uniform mileage rate on salt trade; *ib.* 10,932–10,935. Probable reasons for variations in rates; *ib.* 10,945. Rates quoted by witness do not include cartage; *ib.* 10,953. Further discussion of question of a uniform mileage rate; *ib.* 10,966 *et seq.*

Witness advocates a uniform mileage rate; at present coals are brought many miles further than his at same price, which he considers unfair; *Brown* 11,212–11,219. From refusal of companies to grant a through rate, witness is compelled to pay two local rates; *ib.* 11,220–11,227. In rates fixed by Parliament, maximum for mileage, risk of carriage, loading, unloading, station accommodation, &c., should each be separately defined; *ib.* 11,230–11,235. Where two routes between same places, charge for both should be on shortest mileage; *ib.* 11,237–11,239. Companies should be allowed a minimum charge on short distances; *ib.* 11,241–11,243.

High rates charged by North Staffordshire Railway Company in comparison with those to other districts. Tables of rates given in, and explanations of railway company quoted, but witness thinks these unsatisfactory, rates appearing to be considerably in excess of those allowed by Act; at present public have no guarantee against any charges companies choose to make, as they can run them up to any amount they think proper by the addition of heavy terminals; necessity for proper regulation of the latter. Instances given in proof; *Hollins* 11,275–11,287. Explanatory table furnished by company given in, which would appear to show that terminal charges remain the same, whilst the haulage rate on similar distances varies greatly; inconvenience resulting from the uncertainty thus brought about; *ib.* 11,293–11,296. Witness would abolish terminal charges and levy a mileage rate that would cover them, or compel through booking and limit the terminals; *ib.* 11,297–11,302. When companies carry at a certain rate between two places, they should not be allowed to charge more than that rate between one of those places and an intermediate place; *ib.* 11,307–11,311. Statements on behalf of North Staffordshire Company in answer to Mr. Hollins's complaints; *Morris* 14,135 *et seq.*

Witness considers that a mileage rate would shut out competition; *Cawkwell* 11,416. London and North-western Company always give a month's notice before raising rates; *ib.* 11,603–11,606. Alterations in rates are always authorized by or reported to directors; *ib.* 11,611–11,613. Uniformity in rates is impracticable where the traffic is large; *ib.* 11,634, 11,635. Uniform mileage rates undesirable; public would suffer from them; case of coals quoted in proof; *ib.* 11,637–11,639. 11,656. Compulsory interference with rates would very much disturb arrangements for working lines at fixed rentals, and would prevent companies making reductions to encourage traffic in districts requiring them; *ib.* 11,681–11,683.

Before introduction of railways, Manchester packs were charged 6*l.* per ton from London to Bristol, with 1*l.* additional for collection and delivery. The present railway rate is 30*s.* per ton, including collection and delivery; *Grierson* 11,955.

Argument to show the impracticability and inexpediency of a uniform mileage rate, and history of nine attempts in Parliament to force it on North-eastern system, each of which was rejected; *O'Brien* 11,969. Further argument of this subject, and statement to the effect that if the principle be adopted it will destroy a very large portion of the traffic of the kingdom, and will prevent the quotation of low rates in cases where it is the interest of all parties to adopt them; *ib.* 11,970. Rates are not determined upon length of route or cost of line, but upon purely commercial principles; *ib.* 11,971–11,974. Discussion as to what constitutes a "remunerative" rate; *ib.* 11,975–11,978. Particulars of matters which govern coal rates; *ib.* 12,003–12,014. Uniform mileage rates would give a monopoly, to the injury of others and of the consumer; *ib.* 12,028–12,032. Not desirable that companies should lay down a scale of terminals and a mileage rate in order to simplify rates; *ib.* 12,303–12,306. So long as rates are kept within parliamentary maximum, no town has a right to complain because another gets a lower rate, object of company being in each case to make a profit; *Allport* 12,379–12,384. Midland Company fix their rates as a gross charge, varying according to circumstances, not according to mileage; *ib.* 13,737–13,741. 13,745. Objection to a uniform mileage rate; it would considerably damage companies; unfairness of many of the complaints is that whilst people are very well satisfied with low rates for long distances, they want same scale for short runs; *ib.* 13,748–13,750. Advantage to themselves and the public of companies having power to charge differential rates; *ib.* 13,751–13,753. A uniform charge would be the most fatal thing to the traffic of this country that could occur; case of coals quoted in proof; *ib.* 13,755–13,760. A month's notice given of alterations in rates; *ib.* 13,819.

Uniform mileage rates impracticable; *Clarke* 12,796. One effect would be to destroy competition with water conveyance; *ib.* 12,797–12,800. Other practical inconveniences. No such demand has ever been made upon Great Northern Company; *ib.* 12,801, 12,802. The French system of making a distinction between the slow and fast traffic could not be adopted here, it would stop the traffic altogether; *ib.* 12,875–12,877.

Witness does not believe that companies carry goods at rates which do not pay, and make up on passenger fares; *Smithells* 13,015. Reasons why companies sometimes carry at unremunerative rates; *ib.* 13,015–13,027. If a uniform mileage rate were adopted on one railway, it must be on all; objection to it, that it would drive all the traffic on to the shortest lines, except the distance were reckoned as the crow flies, but this is what is practically done now. Discussion of this point; *ib.* 13,036, 13,037. 13,039–13,047. 13,052–13,069. This view stated somewhat at length; *ib.* 13,038. Upwards of 2,000,000 of rates on Lancashire and Yorkshire railway: number likely still to increase; *ib.* 13,115–13,149.

With reference to recommendation that a uniform mileage rate should be first tried on some one railway, witness explains that if the Great Western Company were compelled to adopt it, the effect would practically be the same as making it compulsory upon all companies in the country, or competition would cease; if mileage rate uniform, passengers and goods would go by shortest route; if same company had two lines of different lengths between same points they would not be able to use the longer as a relief line; *Grierson* 13,254–13,266. As to suggestion that there should be a uniform rate per mile over the whole country, witness states that if this were brought about, either by Parliamentary enactment, or as just stated, it would be prejudicial to trade in various ways, unless it were made in many cases unnecessarily

low, and then it would seriously injure railway companies; manner in which it would affect iron trade, conveyance of emigrants and other passengers from London to Falmouth, and lines passing through agricultural districts. If a Government board had power to interfere with tolls of a company which had voluntarily reduced any of their rates, such interference would discourage any further reduction being made, although so doing would benefit the company and the public. Reasons for charging a higher rate where consumption is small; *ib.* 13,267–13,272. 13,287–13,289. 13,291. Thinks low rates in agricultural districts would not develop resources or increase trade of country. If salt were carried at half present price it would not increase quantity, and if same rates were charged to London for shipment as for local consumption, then it might stop trade altogether. It is necessary to charge a rate which traffic will bear, so that the article can be sold at such a price as will enable it to compete with same article from any other place. Ground upon which witness thinks he is entitled to take into consideration use to which article is to be applied. Is of opinion that companies are entitled to charge maximum rates where they can get them, and reduce where they cannot; *ib.* 13,273–13,286. 13,346. Goods manager decides upon special rate if trade small; if large, the question would come before the board. Revision of rates a continual business, and occupies a great part of general manager's time. Principal grounds of revision; *ib.* 13,361, 13,362. 13,365–13,367. Number of rates in force in England must be 50 times greater than those in France. Believes that a uniform mileage rate is adopted in France; *ib.* 13,373, 13,374. If there were uniform rates and terminals a court of appeal would be unnecessary. If court of appeal had power to compel companies to charge rates, irrespective of powers which have been given to them by Parliament, their decision might be most prejudicial to railway companies. Quotes answers of some of the witnesses showing their different views as to proper mode of fixing rates, and states how the public interests are now protected; *ib.* 13,390. Witness, believing the Commission desired the information, has had prepared, and hands in, the following tables:—"Rates, London and Birmingham, by canal in "1836, by railways and canal in 1842, and by railway in "1866;" also, "Rates, London and Manchester, by "quick vans in 1838–4, by canal in 1834, by railways in "1840 and 1866;" also, "Rates, Birmingham and Man-"chester, by canal in 1836, by railways and canal in "1842, and by railways in 1866;" and also "Rates, "South Staffordshire and Liverpool, by canal in 1831, "and railways in 1866." These show that in no case are the present rates so high as formerly; instance; *ib.* 13,554–13,558.

Complaint from Bristol Chamber of Commerce, and from Bath, of unfair and unequal rates charged on timber, rice, carriages, &c. by Great Western and Bristol and Exeter companies, especially as compared with Newport; *Low* 13,882. 13,919–13,929. Information as to the timber trade, and discussion of a Table of Rates given in; *ib.* 13,883–13,893. Rate on rice was advanced from 9*s.* 11*d.* to 17*s.* 8*d.* per ton; *ib.* 13,936. Remedy suggested (if it be not illegal), that Board of Trade should have some control over railways generally, and should have power periodically to revise rates, and that the public should be able to appeal to it; *ib.* 13,894. 13,906, 13,907. Discussion as to powers of companies to vary rates; *ib.* 13,895–13,905. Witness believes that a reduction of charges is more likely to increase than to reduce dividends; *ib.* 13,929–13,931.

Various particulars as to coal and coke rates on Stockton and Darlington railway; *MacNay* 13,994 *et seq.*

Impracticability of a uniform mileage rate; would deprive public of much of present competition; *Morris* 14,156. 14,197. Discussion of uniform mileage rate, measured as the crow flies; *ib.* 14,202–14,207. Would be completely prohibitory of some traffic; *ib.* 14,197–14,200. Many circuitous lines have been made to avoid expense of going direct through a difficult country, but where companies have adopted the latter course, witness thinks they are clearly entitled to a higher charge. There are numerous instances of special tolls authorized in consideration of circumstances of construction of line; *ib.* 14,211–14,225. North Staffordshire Company charge rates which they think will best develop district and give largest profit; *ib.* 14,226, 14,227. Tables of rates on pottery ware given in; *ib.* 14,310. 14,320.

Witness does not think that companies make a different charge under similar circumstances; *Hawkshaw*

14,402. In some cases it may be for the public benefit that charges should be lower in one direction than another; *ib.* 14,404. Witness does not see that public interests can suffer by companies making unequal charges to get traffic they could not otherwise obtain; *ib.* 14,406. Railway charges should no more be restricted by Legislature than charges on ordinary merchandise; *ib.* 14,408–14,410. Object of companies is to secure the largest possible income, and they should be allowed to charge any rates within maximum which they think will accomplish this; *ib.* 14,411. Attempts to make companies charge less per mile between A. and B. than between B. and C. mischievous; *ib.* 14,412. Companies are compelled by law to carry for long distances at lower rates than for shorter; *ib.* 14,421, 14,422. Speaking generally, interests of public and of companies coincide in respect to charges; *ib.* 14,423–14,425. The "variable distance" clauses would to some extent justify certain unequal charges quoted. Difference in coal rates according to distance carried is greater than in those just referred to; *ib.* 14,446–14,449. Companies are reducing rates as well as they are able; *ib.* 14,551, 14,552. Witness does not think that maximum rates are of the slightest use; minimum rates would be more absurd still; rate clauses might be struck out altogether; *ib.* 14,648–14,653.

In France a different charge is made when goods are carried by passenger trains; no comparison can be fairly made between their rates and ours; *Stewart* 14,706–14,710. Witness advocated revision of rates on London and North-western irrespective of existence of competing lines, but would never advise a uniform mileage rate; *ib.* 14,748–14,754. Reductions in charges should be contingent on increase of dividends, interests of companies and of public would then lie in same direction; *ib.* 14,767–14,774. Traffic which will bear high rates is very limited; the coarser descriptions of merchandise offer the only field for development; *ib.* 14,796. Argument against uniform mileage rates; *ib.* 14,893–14,899. No injustice in one port having a lower mileage rate than another; *ib.* 14,896.

Equal charges "under similar circumstances" desirable in the abstract, but it is difficult to determine what is strictly meant by above phrase; the rule must however be frequently considerably relaxed. The North-eastern Company find it necessary in many instances to charge the same gross rate on coals for different distances, otherwise the more remote collieries would be practically excluded from the market; *Harrison* 15,130–15,133. They also adopt a similar rule with respect to goods; *ib.* 15,168. Owners of the nearer collieries complain of this, and sometimes threaten, but have never tested its legality in a court of law; witness considers it perfectly equitable; *ib.* 15,134–15,136. North-eastern Company's rate for coals inland varies according to circumstances. Rates must frequently be determined by amount which traffic will bear; this plan is the most advantageous to companies and to public; case given in proof. It sometimes, in fact, pays to do one business at a losing rate to develop another; *ib.* 15,137–15,141. In the case of a similar article used for very different purposes, it is not unfair to make a different charge; *ib.* 15,141–15,145. No alteration of the law as to equal charges necessary; *ib.* 15,147. Witness does not advocate companies carrying at prime cost unless with the prospect of bringing a large accession of traffic; *ib.* 15,148–15,151. A rigid equal mileage rate would entirely stop some traffic; *ib.* 15,151. Justification of North-eastern Company's course with respect to rates to Hull as compared with other ports; *ib.* 15,169 *et seq.* Uniform mileage rates would stop nine-tenths of the traffic of the country; *ib.* 15,185. Further defence of system of inequality of charges between places at different distances; *ib.* 15,191. Cattle rates, witness believes, are generally satisfactory; *ib.* 15,220. Difficulty in persuading directors to reduce rates when line is not paying well; *ib.* 15,327.

Frequent difficulty in ascertaining what charges can legally be made. Companies often take advantage of this, and, by adding together items for use of waggons, haulage, and terminal expenses, make up an exorbitant charge. Case in point. Objection to dues for sidings; it would be as unreasonable to charge passengers for use of platform. Sidings are provided for convenience of companies, not of traders. Companies presume upon the present uncertainty of the law, and it is useless to bring an action; *Wragge* 15,415. Witness thinks these practices are general with companies, and believes them to be illegal; *ib.* 15,416–15,421. Particulars of the case above

RATES AND CHARGES, &c.—*cont.*

5. Rates of Carriage for Goods—cont.

referred to, in which, under the six-mile clause, bricks were charged 1*s.* 1½*d.* per ton on three-quarters of a mile, being in witness's opinion more than double the legal charge; *ib.* 15,422–15,433. Charges originally made up of separate items, because Legislature contemplated traders sometimes finding their own locomotive power. Companies say that they are or are not common carriers, according as it suits their purpose. Witness's complaint is of the uncertainty in the interpretation of the law; *ib.* 15,434–15,443. Law should be altered so that trader could know at once whether company could exercise option of acting as carriers or not; *ib.* 15,461, 15,462. Publication would not meet the case; charges should be clearly defined by a General Act. Inconvenience and loss to traders from not being able to ascertain charges readily and with certainty. A uniform maximum mileage rate should be adopted throughout the kingdom; *ib.* 15,444. 15,458. 15,475. Argument to show that maximum charges for similar services should be applicable to all railway companies; *ib.* 15,491. Discussion of the latter point. Charges should not be higher because of cost of line; cost may be considered before, but not after construction; *ib.* 15,445–15,460. Further statement of difficulty in ascertaining what charges companies will make, and whether legal; *ib.* 15,481, 15,482. 15,492–15,498. Witness entertains a strong opinion that companies do break the law by exceeding the maximum; *ib.* 15,499–15,501. Witness is prepared to support his statement that companies "consider how much they can pro-"bably 'get' out of the trader, and defer to the occur-"rence of a future possible but improbable dispute the "items by which they make up the amount of the charge." In some instances, witness is sure that managers "never "trouble themselves about Acts of Parliament or legal "powers at all," but charge what they think they can get without raising a disturbance. In some cases of dispute companies have been unable to state items of charge; *ib.* 15,531–15,534. Sometimes companies have great difficulty in obtaining their money from traders who are allowed credit; *ib.* 15,535.

Suggestion of a tribunal of appeal (somewhat analogous to Poor Law Board or Committee of Council on Education,) to save expense of going to law, but from which companies should have an appeal to a higher court; *Wragge* 15,467–15,472. Or authority might be given for appointing an arbitrator who should decide upon legality of charges; *ib.* 15,473–15,480. From uncertain state of the law there is great difficulty in getting a satisfactory decision in County Court; *ib.* 15,477. Present ordinary tribunals so expensive that a trader of small means is practically without redress. Instances of annoyance by companies to traders who had offended them, where to have gone to law would have caused great loss and inconvenience, and the result would at best have been doubtful; precedents are very conflicting and uncertain; *ib.* 15,507–15,522. If law were clear, it might take away necessity for a new tribunal. County Courts are satisfactory and inexpensive, but witness thinks that companies would generally appeal from their decisions when adverse; traders would probably accept their decisions as final if companies would do so, provided rates and charges were clearly laid down in Acts; *ib.* 15,523–15,530.

Alleged instance of an exorbitant rate on coals charged by Great Western Company at Wolverhampton; *Lancaster* 15,563–15,590. Coal rates on North-western system limited to ¾*d.* per ton per mile; *ib.* 15,591–15,597. Present short distance rates satisfactory; *ib.* 15,606. If charges were made uniform (as witness desires), doubtless changes might still be found necessary, but railways being now better understood it is pretty well known what rates will pay; *ib.* 15,611–15,615. Necessity for uniform maximum rates on coal for the whole country, including terminals, in order that traders may know that they cannot be charged beyond a certain sum; *ib.* 15,669–15,773.

Account of alleged unequal and unfair rates charged to brewers of Burton-on-Trent. Large number of cases cited, and comparisons made with rates in other parts; *Cosgrove* 15,676 *et seq.* [*For account in detail, see* COSGROVE.] If uniform mileage rates over all the lines impossible, witness would like to see the nine best railways amalgamated and subject to Government control, and a uniform maximum rate adopted; *ib.* 15,791–15,801.

Rates in general are considerably below the parliamentary maximum; *Huish* 15,884. Uniformity of rates is destructive of competition; *ib.* 15,924. Policy of companies has been to fight one port against another,—to carry to ports at different distances for same rate, which could not be done if equal mileage rate were adopted; Liverpool has always considered this a great grievance; *ib.* 15,925–15,928.

Equal mileage rates would be a great injustice; would annihilate the bulk of the long distance traffic. Must be applied to canals and all other means of conveyance if to railways; *Sherriff* 16,258–16,260. 16,299. Tolls on canals are tolerably uniform, but not so much so as on railways. Canals more resembling highways, people carrying on them cannot be bound to certain charges as railway companies can. Short distance rates are generally higher in proportion than long distance, but they must depend upon circumstances; *ib.* 16,261–16,269. Has strong objections to equal mileage rates for parcels; *ib.* 16,270–16,275. Examples given to show that competition would be destroyed, and that other evils would arise from equal mileage rates. No one is damaged by 40 or 50 miles being charged the maximum, and longer distances less in proportion. Witness, who has had long practical experience in the management of railways and as a trader, believes that though there are anomalies and some hardships, the present system is the only practicable one, and that, though traders in one district may complain of rates in another, equality of treatment is the invariable rule; *ib.* 16,276–16,283. Present system enables traders from different districts to compete with each other in a particular market; striking instance in witness's own business; this would be prevented by uniformity in rates; *ib.* 16,284, 16,285. Railway companies are the most fit to judge impartially what rates will best develop a district. Arbitration would cause continual interruptions, and would lead to more evils than it would cure; *ib.* 16,286–16,292. The best plan is to let traders fight it out with companies; the latter being so often before Parliament, any apparent grievances get thoroughly sifted. "The present system "is as good as it can be, and is continually getting "better;" *ib.* 16,293, 16,294. Rates are constantly reducing; causes of this; *ib.* 16,299, 16,300. The nearest approach to unfairness that witness knows of is when special low rates are given contingently on a certain quantity being sent; *ib.* 16,300. Differential rates for large quantities unfair, except extended to all traders in district; *ib.* 16,301, 16,302. The best step towards reduction of rates and fares would be to get poor companies into a paying condition; *ib.* 16,412–16,414. Large companies, especially those doing well, are gradually reducing. Reductions should be gradual; they do not generally pay at first; *ib.* 16,415–16,417.

In case of Government assistance, when profit reached a certain point, some of the most burdensome rates should be reduced; *Bidder* 16,651. Railways should, as far as possible, be assimilated to Post Office; inequality of mileage rates, therefore, absolutely essential, in order to bring products of different places into fair competition. Mileage rate should be simply the cost of working. A certain profit should be fixed, and to this should be added merely the cost of transit. Raw articles should be supplied to manufacturers, wherever they may be, with least possible difference of charge. This could all be done under present rates; *ib.* 16,671. Statements and argument to show that companies are justified in charging a less mileage rate as length of journey increases. Coals and cattle on Great Eastern line quoted in illustration; *ib.* 16,684–16,690. Discussion of statement by witness that it pays better to carry coals 60 miles at ½*d.* per ton per mile than 10 miles at 1*d.*; *ib.* 16,691–16,695. Witness has a strong opinion that lowering rates would be beneficial to companies as well as to the public; *ib.* 16,807, 16,808. Rates on coal, iron, stone, bricks, manure, and some articles of agricultural produce should be quite exceptional to any that at present prevail. This could be accomplished by an inexpensive direct line, constructed specially for the purpose, from the north to London. History of attempt to establish such a line. By this means coals, &c. could be carried at ¼*d.* per ton per mile; *ib.* 16,186.

Argument and statistics to prove doctrine of ascending ratios of consumption with reduced ratios of charges; *Chadwick, Addendum, page* 849 *et seq.* Public opinion abroad is tending in favour of reducing rates to actual cost of transit; *ib. page* 852. It would be worth while to pay an increased income tax, though witness does not believe it would be necessary, in order to obtain reformed general rates; *ib. page* 855.

With present increasing expenses, witness does not see

5. *Rates of Carriage for Goods*—cont.

how rates can be reduced, but rather the reverse; *Gooch* 17,477–17,482. Rates have on the whole been reduced by competition; *ib.* 17,544–17,549.

Statement referred to by Mr. Clark, showing charges for carriage of timber and deals, chemicals, sugar, &c., to and from Liverpool, as compared with other places; *App.* A. Declared real value of the total exports from certain ports; *App.* B. Table showing railway carriage rates from Liverpool as compared with other places; *App.* D. Memorial from Wolverhampton Chamber of Commerce respecting railway charges; *App.* BF. Abstract of returns from Irish railways on various kinds of goods; *App.* BH. Comparison of the rates charged by English and continental railways for goods, &c.; *App.* CN. Statement from the Board of Trade on railway charges for conveying rockets for saving life from shipwreck; *App.* CO. Schedule of tolls and charges authorized in the Railway Construction Facilities Act, 27 & 28 Vict. c. 121.; *App.* DS. List of actual rates per ton charged for certain goods between certain towns in England, and comparison of the same with the French rates for corresponding distances; *App.* ED. Examples extracted from the evidence of actual charges made for goods between certain places, showing also the rates per mile when the terminals allowed by the clearing house are eliminated; *App.* EG.

6. *Terminal Charges:*

Should be equal for all distances; *Clark* 107. 175. Particulars as to; *ib.* 105–124. Should be distinctly fixed in Railway Acts; *Patterson* 320. Railway companies state that in London the terminal expenses are excessive; *ib.* 374. Discussion as to meeting terminal expenses, specially in regard to the coal traffic on German railways; *Mulvaney*, 1139–1147. Terminal charges in Ireland considerably lower than in England; *Forbes* 1820, 1821. Instance of bearing of terminal expenses upon rates; *Malcomson* 3458. Traffic still carried on by road for short distances in Ireland, terminal expenses being proportionally so heavy; *Lanyon* 6224.

Expense of collection and delivery varies so much in different places that no rule can be laid down; in London within a certain limit, it is done for 3*s.* 4*d.* a ton; *Williams* 10,130–10,134. 10,151. Further particulars as to terminal charges in London; *ib.* 10,173–10,176. 10,194–10,202. It should be a charge distinct from the mileage rate, regulated according to circumstances; *ib.* 10,135. Discussion as to proportion upon certain rates quoted; *ib.* 10,136–10,145. 10,149, 10,150. 10,156–10,162. Certain terminal work done by witness, for which companies allow a rebate; *ib.* 10,152–10,155. 10,163, 10,164. 10,184–10,187. Low terminal charges at Hull, Hartlepool, and Cardiff; *ib.* 10,165–10,170. Same charge made in London for delivery of iron at wharf to put on board ship as if carted to warehouse; hardship of this, as cartage is paid in the former case, though not required; *ib.* 10,177–10,182. Companies object to freighters sending to stations for their own goods; *ib.* 10,189. Cartage should be paid only according to the duties performed; a differential charge also should be made according to quantity if goods merely delivered alongside railway; *ib.* 10,206–10,222. Witness advocates a uniform mileage rate, and suggests definition of "terminal;" statement of his views as to charges for use of, and fo running into and out of sidings, &c.; *ib.* 10,231–10,245. Necessity for definition by Act of Parliament of "terminal;" *ib.* 10,248. System of terminal charges proposed by witness; *ib.* 10,293–10,304.

Instances of excessive terminal charges in Staffordshire iron districts. The Parliamentary maximum is too high, but an attempt to legislate satisfactorily on the question has failed. Unwillingness of both freighters and railway companies to go to law on the subject. Particulars quoted of undue terminal charges, as far as they can be gathered from the whole rate charged; *Mathews* 10,464–10,488. What services should be rendered for terminal charge. There should be a power of appeal to the Board of Trade. Dispute between witness and North Staffordshire railway company, in which company declined going to law, and eventually reduced the charge considerably, but not so low as witness desired; *ib.* 10,489–10,492. Even if railway companies lose (as they allege) on short distances, terminal charges should be reduced; *ib.* 10,493–10,497. Should be always separated from mileage rate; no difficulty in classifying them; *ib.* 10,588–10,601. Statement on the part of company that by their Act there is a power of appeal to Board of Trade, but that it has never once

6. *Terminal Charges*—cont.

been acted upon; *Morris* 14,134–14,142. Tables quoted by Mr. Mathews include terminal charges at both ends; he appears to work them out so as to include them only at one end; *ib.* 14,143. Where company act as common carriers they have special power to charge for terminal services, out of which they may make a profit, which it is impossible to do when they act simply as toll takers; *ib.* 14,150–14,152. Impossible to make terminals invariable; should be higher for short distances; *ib.* 14,159, 14,160. Arbitration clause for terminals in North Staffordshire Company's Act; *ib.* 14,162–14,166. Companies have a right to a reasonable profit out of terminals; *ib.* 14,174. Description of what witness considers included in terminal services, and in what proportions should be borne by freighters; loading and unloading form a very small proportion of terminal expenses, and it is an omission in Act where company can make no charge beyond maximum for that purpose; *ib.* 14,247–14,258. If carrier loaded and unloaded, witness considers he would be bound to find sidings and all other conveniences. Railway companies would decline to be common carriers if they could not charge terminals, but traffic of the country could never be carried on in that way; *ib.* 14,259–14,263. Certain articles named could not be carried even at maximum rates unless companies could add terminals; *ib.* 14,264–14,266. No terminals on passenger traffic; *ib.* 14,267, 14,268. From an account got out by witness, he found actual cost of terminal service over North Staffordshire system to be 2*s.* 3*d.* per ton; *ib.* 14,269–14,272; upon coal it varies from 3*d.* to 6*d.*; *ib.* 14,273, 14,274; causes of this variation; *ib.* 14,289. Clearing house arrangements between companies as to terminals; *ib.* 14,275–14,279. Discussion as to high terminal charges in London and Liverpool. From large amount of business done, it might at first sight appear that a small sum would pay, but expenses are so great that present charges are barely sufficient. If revised, witness believes they would be advanced; *ib.* 14,280–14,285. If a uniform terminal were laid down it would necessarily be so heavy as to be prejudicial in some cases; *ib.* 14,337.

Difficulty of making a uniform fixed terminal charge; *Grierson* 11,842.

Higher terminal charges necessary in London than elsewhere; *Gibbs* 10,753–10,756. Public have no means of knowing what is included under terminal harges; companies should be paid fairly for whatever duties they perform, but public should know for what they are paying; *ib.* 10,810–10,821. Witness's opinion is that Parliament should fix terminal charges; *ib.* 10,827.

Terminals should be distinct for each end of journey, to meet cases where freighters collect and load, and companies unload and deliver; accommodation to be given should be defined; charge should be universal throughout the country; companies should be under legal obligation to collect and deliver, with certain exceptions; *Brown* 11,248–11,269.

Necessity for limitation and definition of terminal charges; *Hollins* 11,277, 11,278. Witness would abolish terminal charges and levy a mileage rate that should cover them, or compel through booking and limit the terminals; *ib.* 11,297–11,302.

Objection to a proposal for submitting terminal charges to arbitration under the Board of Trade, considering that there is at present every facility for resisting companies if any unfair charge be made; *Cawkwell* 11,531–11,545. Would not object to Parliament fixing a reasonable maximum; *ib.* 11,546. In 1861 an agreement was nearly arrived at for uniform maximum terminals, but when negotiation almost complete, it was broken off on the question of minerals; *ib.* 11,547–11,550. Necessity for higher terminal charge in London than in the country; *ib.* 11,551. Companies would have no objection to a settled terminal charge, nor to its being published; *ib.* 11,552, 11,555. Large amount involved in terminals; *ib.* 11,556, 11,557. Certain statistics of London and North-western line as bearing upon terminal expenses; *ib.* 11,559–11,569. Various particulars quoted to show that 8*d.* per ton on goods and 1*d.* on minerals are not sufficient terminal charges; *ib.* 11,570–11,572.

Statement made that terminals are charged whether work be performed or not is incorrect; *Grierson* 11,844. Great Western Company, although they suffer inconvenience from it, allow freighters to do their own cartage; *ib.* 11,845. Great Western charges; *ib.* 11,846. Discussion as to the difficulty of giving the mileage rate and terminal charge as separate items; *ib.* 11,882–11,892.

Rates sometimes exceed Parliamentary maximum in

RATES AND CHARGES, &c.—*cont.*

6. *Terminal Charges*—cont.

order to cover terminal expenses; *O'Brien* 12,210, 12,211. 12,215, 12,216. 12,231. A maximum terminal might be fixed to be fair on the average, but it must be unfair under some circumstances; *ib.* 12,210–12,214. 12,223. The highest terminal charge is in London; *ib.* 12,217. Silk takes a higher terminal, as a set-off against risk; *ib.* 12,218–12,221. Clearing house charges are fair enough as between companies, but would not do as charges to the public; *ib.* 12,223–12,230. Discussion as to what services may be properly brought under terminal charges; *ib.* 12,233–12,243.

Classification of terminal charges is established by clearing house; these charges quoted; *Clarke* 12,586. The whole system of terminal charges is misunderstood by the public from companies having become carriers; *ib.* 12,592. Acts do not lay down maximum terminals, but provide that they must be "reasonable;" if public think them otherwise they can appeal to law; *ib.* 12,587–12,591. 12,593. It is desirable that what may be charged for terminal expenses should be clearly laid down, and that there should be an easy mode of appeal,—but not to the Board of Trade; *ib.* 12,592–12,594. No objection to terminals being fixed by Act of Parliament; *ib.* 12,595. No difficulty in arriving at a fair maximum. In 1861, after inquiry, it was almost settled; 2*s.* 3*d.* a ton was spoken of; *ib.* 12,596, 12,597. This failed through opposition of Durham coal owners; *ib.* 12,692–12,694. 12,706–12,711. Map (published by arrangement between the companies) given in and explained, showing the distances included in London terminals; within a certain line 8*s.* 6*d.* is charged, more if beyond that; *ib.* 12,597–12,608. Terminal charges in London are increased by necessity for rapid collection and delivery; *ib.* 12,626–12,628. There would be no objection to making the terminal a separate charge, if fixed by Act of Parliament, and publicly understood and recognized; *ib.* 12,687–12,693. Great Northern Company's terminal charges on coal; *ib.* 12,695–12,705. 12,712–12,715. Terminal charges on through rates should be defined; *ib.* 12,924.

No complaints from customers (on Lancashire and Yorkshire railway) as to terminal charges; objections to their being fixed by Act of Parliament; *Smithells* 13,150–13,157. Customers cannot really tell what these charges amount to, as mileage rates are not charged up to the maximum; *ib.* 13,158–13,162. Witness does not consider that carting comes within denomination of terminals. Description of services which he thinks should fairly be included; *ib.* 13,163–13,185. Lancashire and Yorkshire Company do not adopt clearing house terminals in fixing local rates; *ib.* 13,178.

What services a terminal charge should cover. Canal companies either charged a sum beyond the toll where they provided wharfage, craneage, &c., or carriers charged for these services. Gives an illustration showing the impracticability of including terminals in mileage rate, and disadvantage to those sending goods short distances; *Grierson* 13,486–13,489. 13,497–13,499. Would not object to a maximum terminal being fixed if an average of whole outlay on all the stations were taken into consideration. Reason company do not charge a higher rate at those stations where there are extra expenses. Gives costs of stations and sidings, and total sum expended on Great Western railway, including sidings; *ib.* 13,490–13,496.

Terminal expenses of Midland railway quoted to show the injustice that would be committed by abolishing terminal charges; *Allport* 13,724, 13,725. Some goods are carried for short distances at rates below what witness considers ought to be paid as terminal charges alone; 13,726–13,735. No objection to a fixed maximum terminal if properly adjusted; *ib.* 13,728. 2*s.* 3*d.* a ton would not pay at large stations; *ib.* 13,732, 13,733. Clearing house terminal being from the necessity of the case merely a rough arrangement between companies, could not possibly be adopted for the public; *ib.* 16,930. 16,937.

On passengers no terminal charges are made, the terminal expenses being exceedingly small; *Allport* 13,782–13,789.

Suggestion that Board of Trade should have power periodically to revise terminal and other charges; *Low* 13,894.

No better means needed for deciding disputed terminal charges than county courts at present afford; case quoted in proof; *Hawkshaw* 14,466. Their limited jurisdiction no obstacle; *ib.* 14,478, 14,479. No difficulty in getting

RATES AND CHARGES, &c.—*cont.*

6. *Terminal Charges*—cont.

at actual charge; *ib.* 14,480. Witness does not see how a maximum can be fixed; reasons; *ib.* 14,467–14,469. 14,477. What terminal charges include; interest on cost of station a legitimate item; *ib.* 14,470–14,476. No objection to publication, but impossible; *ib.* 14,481, 14,482. Terminal should bear some proportion to amount of labour; *ib.* 14,481. Great variation in terminals on coals and other minerals, too great to allow of publication; *ib.* 14,482. 14,492, 14,493. No better rule can be laid down by law than that charge shall be "reasonable;" witness's definition of this term; *ib.* 14,483–14,488. Fixed scale of clearing house agrees precisely with companies' charge; but this applies only to certain goods; *ib.* 14,489–14,491. To lay down a law would probably make matters more obscure than at present; *ib.* 14,495. County court preferable to appeal to Board of Trade. No real difficulty in deciding what is a reasonable charge; *ib.* 14,497, 14,498. Litigation should be prevented, but county court decisions should be subject to review; *ib.* 14,499–14,505. No difficulty in getting a combination in any trade to try a question; *ib.* 14,506. Clearing house terminals; *ib.* 14,507–14,509.

Terminal charge is literally that which is applied to the duties of carriers, independently of the question of tolls; it must be variable according to circumstances; reasons; *Harrison* 15,238–15,245. Discussion as to whether Acts of Parliament authorize construction of sidings and certain other expenses to be allowed for in terminal charge; also, as to definition of "reasonable amount;" *ib.* 15,246–15,253. The whole charge made by companies, including terminal, is generally less than authorized maximum; *ib.* 15,254, 15,255. No objection to a maximum toll to include terminal; but great difficulty in fixing it; *ib.* 15,256–15,258. Witness questions whether appeal to an arbitrator appointed by Board of Trade would be a more satisfactory method of deciding upon a charge being "reasonable" than present appeal to Court of Common Pleas. If some tribunal, consisting of a judge and two assessors, in which all parties would have confidence, could be established, it might perhaps be beneficial; *ib.* 15,258–15,261; but witness is not at all sanguine about it; *ib.* 15,262–15,264. Witness, who is himself an arbitrator, would not recommend arbitration where it can be avoided; *ib.* 15,261. No objection to a maximum terminal, but if fixed it must necessarily be so high as to be practically inoperative; *ib.* 15,265–15,268. Discussion of this question; *ib.* 15,269–15,273. Causes of high terminal charges in London; *ib.* 15,274.

Objection to dues for use of sidings. It would be as unreasonable to charge passengers for use of platform; *Wragge* 15,145. Objection to companies' power of charging whatever they consider "reasonable;" *ib.* 15,463–15,466. Discussion of question of uniform maximum terminal charges; *ib.* 15,483–15,490. Terminal charges should be defined in classes by a General Act, and services to be rendered should be specified; uniformity and certainty would counterbalance many disadvantages; *ib.* 15,502–15,506.

Witness (who confines his evidence to coal, iron, and raw materials) considers that there should be no terminal charge where waggons are merely shunted into owners' premises; *Lancaster* 15,538, 15,539. 15,598–15,605. Terminal charges at present generally indefinite and too high; they should be defined and kept as a separate account. Desirability of uniform maximum terminals for the whole country. An arrangement at present existing between owners and two companies, who provide wharves and sidings for coal and iron at 2*d.* per ton, witness thinks should be made universal by law; *ib.* 15,540–15,562. When goods go upon two lines, but one terminal charge should be allowed; *ib.* 15,563.

Complaint from brewers of Burton-upon-Trent of unfair terminal charges, and suggestion that companies should be compelled to state plainly what are terminal and what mileage rates, that all should be open to the public, and that Parliament should fix maximum terminals; *Cosgrove* 15,739–15,748. Discussion as to what expenses should be included in terminal charge; *ib.* 15,749. 15,762–15,777.

Terminal charge, witness considers, is for "loading" or unloading, invoicing and checking, and delivery," must necessarily bear a heavy proportion on a short distance; circumstances vary so much that it is impossible to lay down a standard rule; *Huish* 15,964–15,972. 15,985–15,987. Necessity for terminals as between companies; witness thinks that for long journeys rate

RATES AND CHARGES, &c.—*cont.*

6. Terminal Charges—cont.

including terminal charge will be found to be less than maximum toll. Terminals a very difficult question. Witness does not see any way to meet present dissatisfaction except by more competition; *ib.* 15,973–15,977. 15,984. Maximum or scale of terminals impracticable; publication very troublesome and easily evaded; *ib.* 15,978–15,983. Witness does not see that traders would be benefited by companies stating what proportion of charge is for terminals. Discussion of "reasonable charge" provision in Acts. Actual cost to company, with a certain per-centage added for profit, might perhaps be taken; *ib.* 15,988-15,998. Objection to giving power to Board of Trade to arbitrate on the subject; action at law preferable; *ib.* 15,999–16,002. Clearing house scale was fixed almost at hazard, but witness believes it gives satisfaction; it might be used approximately, perhaps, to fix a charge for the public; *ib.* 16,003–16,010.

What expenses should be provided for in terminal charges. No objection to a Parliamentary maximum, if a sufficient margin allowed. No terminals paid on passengers, though witness considers such a charge could be legally sustained; *Eborall* 16,122–16,137.

Companies should be allowed to charge cost of everything but transit under terminals, but not to make a profit on them; *Sherriff* 16,325–16,331. Better left as now than attempt to fix a maximum; *ib.* 16,332, 16,333. In charging rates companies should not be compelled to state how much is for terminal; *ib.* 16,334–16,337. The outcry about terminal charges is quite new. In case of dispute as to "reasonable charge" it could go to county court. Witness would be quite content to allow decision of a county court judge to be final, but not of county court jury; reasons; *ib.* 16,338–16,343. Variation of terminal according to expense of station; *ib.* 16,344. Clearing house terminals not calculated for charging to the public; *ib.* 16,345–16,347. Publication of terminal charges impracticable; *ib.* 16,350, 16,351.

Terminal charges should be so apportioned that mileage rate should be bare cost of working only; *Bidder* 16,672. Rates should be published as far as possible, terminals being distinguished; (arbitration suggested;) everything but station to station rate should be included in the latter, if that could be done; *ib.* 17,106–17,116. 17,121. This could not be carried out for short distances; *ib.* 17,116. Clearing house terminals are satisfactory as between companies, but witness cannot say whether they would be between companies and public; *ib.* 17,117–17,120. Terminals could not be the same at every place; *ib.* 17,122–17,124. If companies compelled to publish a terminal, it would probably be the clearing house rate; *ib.* 17,125, 17,126.

Letter from the Board of Trade on the subject of terminal charges. 25 May 1866; *App.* CR.

RENALS, MR. JOHN. (*Analysis of his Evidence.*)

Is a wholesale grocer; has been a member of Derby Chamber of Commerce since its formation; attends at their request; 8679–8682. Has had twenty years' experience of the accommodation afforded by the Midland Railway Company; 8683. Great complaints of the unequal charges made for conveying first-class merchandise, such as sugar, dried fruit, rice, soap, &c. Charges are much lower from Sheffield, Chesterfield, or Leeds to London than they are from Derby to London, although distance in each case greater. Quotes rates, which includes cartage. Chesterfield and Derby in same position as to want of competition. Rates from Derby to Bristol have been slightly reduced since January last; are now higher than from other places of greater distances; line entirely in the hands of the Midland Company; is a narrow gauge; 8684–8700. How goods should be charged; should be only two classes, instead of four; gives present rates for each class from

RENALS, MR. JOHN—*cont.*

London to Derby; 8701–8705. 8708–8710. Should be a re-arrangement and classification of goods, as, owing to alteration in duty and value, many articles charged in the first or lowest class are of greater value than those of the higher class; 8706, 8707. How unequal rates (attributable in a great measure to Derby having service of only one railway company) interferes with witness's business; rates no doubt would be lower if there were a rival company. House of Commons, last year rejected a Bill for connecting Derby, at Nottingham, with the Great Northern; does not know upon what ground; did not interest himself beyond giving evidence as to unfairness of rates of Midland Company. Believes there is a scheme to connect Derby with London and North-western. Connecting Derby with one of the competing lines would remedy evils complained of. Parliament should fix a certain rate per ton per mile for goods, and a fixed sum for terminals. Discussion as to how companies could be prevented reducing rates below those fixed by Act; is done now in many cases, particularly with third-class passengers; 8716–8730. Thinks that inasmuch as charges for goods from Derby to London are higher than from other places of greater distance, railway has injured the Derby trader; 8731–8737. Discussion whether rates for goods are higher from Bristol to Derby than from Bristol to Sheffield in consequence of Derby being further removed from certain ports; 8738–8747. Rates for conveyance of tea from London to Derby have been raised from 35*s.* to 57*s.* 6*d.* per ton within the last 11 years; 8748–8751. Believes railway proprietors have some influence over the canal at Derby; there is a slight competition on first-class goods, but not on the other classes. Nothing to prevent a person setting up as a canal carrier; would merely have to pay toll; does not think it possible for canal to compete with railway; 8752–8756. Rateable value of property seriously injured by conduct of railway company; gives value in 1855 and now; 8761.

See also ALLPORT, Further Examination (1.) MIDLAND RAILWAY.

RETURN TICKETS:

Seldom issued on German railways; *Mulvaney* 1121. Inconvenience to public and loss to railway for want of, at Limerick; *Ryan* 2660–2677. Discussion of question of market trains; *Longfield* 2874–2883. On Belgian railways; *Fassiaux* 3060. Return tickets between market towns are issued on Irish Great Midland; *Ennis* 4086. Witness is opposed to third-class return tickets; *Haughton* 4593-4595. But little real inconvenience from want of day return tickets between Dublin and Limerick; *ib.* 4607. Third-class return tickets for short distances answer well on Dublin and Drogheda line; *Murland* 4766, 4767. Belfast Junction Company issue third-class return tickets, Ulster Company do not; *ib.* 4771. No objection to transfer of; *ib.* 4896, 4897. Dublin and Drogheda Company issue Sunday return tickets at single fares for all classes; adds much to traffic in summer time; time for which return tickets available extended according to distance; *ib.* 4943–4949. Return tickets on Grand Trunk line of Canada; *Brydges* 5396–5401. Return tickets on Dublin and Wicklow line at ½*d.* a mile; *Dargan* 5469. Return third class to nearly all the trains on the Belfast and Coleraine line at about ½*d.* a mile; *Lanyon* 6067–6076.

Great Western Company issues return tickets for two days where distance exceeds 50 miles, within 50 miles one day, for 300 miles four days; similar practice is adopted by other companies; *Grierson* 13,386–13,389.

A large number issued on Lancashire and Yorkshire railway, but not many third-class, the single fare being so low; *Smithells* 13,190, 13,191. 13,212. Witness does not think it advisable to abolish return tickets and reduce single fares; the former are a great convenience. Difficulty of preventing transfer of return tickets, and discussion as to advisability of removing restriction on so doing, which cannot really be enforced; *ib.* 13,192–13,207.

Not generally issued in France; *Stewart* 14,665. 14,684.

RISK OF DAMAGE, &c. *See* INSURANCE OF GOODS.

RIVER NAVIGATION. *See* WATER CONVEYANCE.

ROBBERIES, &c. *See* PROTECTION TO PASSENGERS. SAFETY OF RAILWAY TRAVELLING.

ROCHDALE:

Want of accommodation; disparity of fares and limited number of trains, especially third-class, as compared with other towns; *Blackburn* 1289–1320; *Fletcher*

ROCHDALE—*cont.*

1347–1377. Fares, witnesses believe, are higher than Act of Parliament allows; *Blackburn* 1321, 1322; *Fletcher* 1367–1370. Witness considers that these evils are caused by a want of competition; *ib.* 1378. On representations being made to company, they conceded some return trains, but at inconvenient hours; *Blackburn* 1329; *Fletcher* 1348. 1354–1365. Inconvenient arrangement of Sunday trains; *Blackburn* 1333–1339. Want of reduction in first-class fares; *ib.* 1342. Goods rates much higher than to other towns at greater distances in the neighbourhood; *Lawton* 1414–1428. 1447–1451. Goods traffic entirely in the hands of the company, as they have bought the canal; *Blackburn* 1331. There being no competing line, charges are 25 to 30 per cent. more than to Oldham; *Lawton* 1429, 1430. 1442, 1443. The great disparity in goods rates causes considerable loss of trade; many cases quoted, among them that of cotton; 12*s.* per ton is charged on this article from Liverpool to Rochdale, whilst it is carried to Heywood (three miles further) for 10*s.* The difference was greater until strong representations were made to the company; *Fletcher* 1385–1409. Machine brokers at Oldham can send their goods to any part of England 25 per cent. cheaper than witness can from Rochdale; *Lawton* 1433. The high rates prevent the opening of manufactories; they apply to all classes of goods; *ib.* 1438. 1440. Witness believes that want of competition is the cause of these rates; *ib.* 1443.

The traffic manager of the Lancashire and Yorkshire Company states that, since the foregoing evidence was given company have substantially met the views of the Rochdale people, but they are still dissatisfied with the passenger fares between there and Manchester. The evidence given by Messrs. Blackburn, Fletcher, and Lawton refers to complaints, some of which were first made to the Lancashire and Yorkshire Company by the Tradesmen's Association of Rochdale in January 1865, and the remainder on the 13th May 1865. Some of the complaints made in January appear reasonable, and were remedied by the directors before the 1st March 1865, others were proved to be unfounded, and one demand, which was for a reduction in fares between Rochdale and Manchester, the directors considered unreasonable. The remaining complaints made in January the directors could not dispose of without the assent of other companies, and they are now [Feb. 23, 1866,] under consideration. The complaints communicated to company on the 13th May 1865, witness states were unfounded. In proof of the foregoing witness submits a lengthened correspondence between company and the Rochdale Tradesmen's Association; *Smithells* 12,986, 12,987. Fares as between Manchester and Rochdale are not higher than on the other portions of the line; *ib.* 12,988. On some parts fares are lower, and Rochdale people think theirs should be same, but company think otherwise; reasons for these lower fares; company have a most perfect service of trains for them; a large number of third-class trains are run; *ib.* 12,989–12,994.

ROCHDALE CANAL. *See* WATER CONVEYANCE.

ROCKETS:

Statement from the Board of Trade on railway charges for conveying rockets for saving life from shipwreck; *App.* CO.

ROE, MR. PETER. (*Analysis of his Evidence.*)

Has been manager of Midland Great Western, and of the Derry and Coleraine Railway Companies; 5725–5728. Became lessee of latter railway under Loan Commissioners. Circumstances under which it fell into their hands. Time witness continued lessee, increase in receipts, rent paid, expense of maintaining permanent way, and by how much gross receipts exceeded working expenses; 5729–5737. 5768–5777. Lease was annual, but liable to be cancelled at a week's notice unless railway kept in good repair, and a portion of the rent paid every Monday. When line given up, rolling stock was valued at more than at commencement of lease; 5738. 5791–5797. Transferred interest in lease to Northern Counties Company; 5739. 5844. During lesseeship reduced passenger fares one-half, and there was a considerable increase in receipts. Made similar reduction for goods and coal, the latter increased from 1,500 to 5,000 tons in the year; 5740–5745. 5874. Population of Londonderry and Coleraine. Reduced rates on third-class, and on all classes of goods to Newtown Limavady (a good intermediate town), and receipts of that station doubled. The increase of third-class passengers was remarkable. Introduced upon Midland the experiment of carrying harvest men (fourth-class passengers); increase of this

ROE, MR. PETER—*cont.*

traffic, and by what trains carried; 5746–5753. While manager of Midland, directors lowered rates a little; the result was beneficial to traffic. Never tried market trains on the Midland; tried them in the north, and got a considerable increase; 5754–5756. Directors of Coleraine line last year (the lease having expired) raised rates upon passengers and goods (coal excepted); trains are now half empty. Local rates much higher than through rate. Gives an instance. Cannot account for their raising the rates. Line now worked by the Northern Counties Company, who have assimilated rates between Londonderry and Coleraine to those on their own line between Belfast and Coleraine; 5757–5765. 5835. New line opened, giving another route to Belfast, which has taken a little of the through traffic from between Liverpool and Belfast, and Glasgow and Londonderry. When rates were reduced on Coleraine line, there was no reduction made on line from Coleraine to Belfast; 5766, 5767. When first connected with Coleraine line, gross receipts were not equal to working expenses, plus the Government interest (4½ per cent. on 80,000*l.*); claim the Government had to the rental; thinks that after they had been paid there was sufficient to pay the bondholders. Bonds from being a drug in the market at 5*s.* in the pound, rose to 20*l.* No dividend to original shareholders; they never expect any; 5778–5784. Will supply reports giving statistics from year to year; 5785–5791. Directors of Irish railways not much disposed to lease lines; would be advantageous to shareholders. Can say from experience that three practical men would be able to give results from any of the Irish lines far beyond what they are now doing; 5798, 5799. Many of the Irish lines are not paying their expenses; 5800, 5801. If lines were amalgamated and placed under one general management, and then leased to a few intelligent energetic men, results would astonish shareholders; expenses would be greatly reduced. If witness was one of the lessees of all the lines, would propose reduction similar to that made between Londonderry and Coleraine. Reason why reduction should be made in Ireland; 5802–5804. Tried reduction for six months first upon one or two sections; result so satisfactory that he made it general. No additional expenditure incurred, consequently there was an increase of profit; 5405–5410. Similar reduction applied to whole system of Ireland would not be followed by any loss; 5811–5812. Manufactories in Londonderry and Coleraine; the latter has become an important seaport. Condition of working population; 5813–5818; arrangement witness made for agricultural labourers on Coleraine line. Accommodation that should be provided if rates low for third class; 5819–5826. 5879–5883. Would divide Ireland into three districts; it would be an extensive undertaking even for three to manage; 5827, 5828. 5843. Travellers going from west of Ireland to the north are stopped at Cavan, and compelled to rebook there, and wait three or four hours; 5829. Desirable to have a central station at Dublin. There is an Act for it; 5830–5832. No difficulty in getting persons to lease lines on terms remunerative to themselves and beneficial to shareholders; 5833, 5834. Receipts of Londonderry and Coleraine line fell off last year 2,000*l.* upon 10,000*l.* Loan Commissioners have been paid their debt. Railway now the property of the bondholders; 5836–5838. 5871–5873. No other company have tried the experiment of lowering rates metrically. Objects to plan of meeting loss in the agricultural districts by getting a very high profit in the more densely-populated part; 5839, 5840. Amalgamation would improve present value of property as far as shareholders are concerned. Working system under one management would be a great advantage, as there would be uniform rates and a continuous communication kept up; 5841, 5842. Explains why, when the Midland was once leased, the receipts were unsatisfactory; 5845–5848. Seven-eighths of the whole traffic from north to south of Ireland pass through Dublin. Reason why another communication is needed; 5849–5852. Has been engaged in agricultural pursuits since ceasing to lease the railway. Has found as a merchant great cause of complaint of the rates, especially to the west and north-west. States situation and nature of his business. Has made complaint to the company of the high charges; in some cases quite prohibitory. Charge to Galway for such articles as washing soda, rough sulphur, copperas, &c. was 50 per cent. on the first cost value. Gives an instance of the excessive charge made for carrying American oil; 5853–5862. 5865–5867. Internal traffic affected by high rates. Complains that goods from Manchester and Wigan are booked through to Limerick, Ballinasloe, and Kilkenny upon such a toll and same rate as is paid for them to Dublin; 5863, 5864.

ROE, MR. PETER—*cont.*
Does not think there is a limited quantity of traffic, and that railways get nearly the whole of it, and consequently any reduction in rates would be so much less money. Sent goods last week by road; frequently cheaper to use the road. Mentions a case where, by reducing the rates, carmen were driven off; 5868–5870. 5884–5891. If rates were reduced, consumption of coal would considerably increase; if it could be brought into Dublin at 11*s.* or 12*s.* per ton, and sent into interior at the rate of ½*d.* per mile, it would be cheaper than turf. Witness imported coal, and gave the station master a commission to dispose of it; 5875–5877. Considerable reduction in price of coal would encourage manufactures in Ireland; 5878. No regular carriers between Dublin and certain other towns; cheap communication by canal. Arrangements between railway and canal; 5894–5898. Low rates to and from Carlow would produce a considerable amount of traffic; butter and potatoes might be sent from there to Dublin if rates were low; 5899–5902. Not the same necessity for low rates in England; are generally lower than in Ireland; 5903, 5904.

Remarks in reply to Mr. Cotton's evidence before Royal Commission; *App.* BE. Communications on the results of lowering fares on the Newry, Warrenpoint, and Rostrevor railway; *App.* CC.

See also COTTON, MR. E. J.

ROLLING STOCK:
Where private parties provide their own waggons, &c., great delay frequently occurs, probably either from companies giving the preference to their own traffic, from want of locomotive power, or from companies not being responsible for demurrage on any waggons but their own; suggested remedies; *Corbett* 10,892–10,899; *Brown* 11,070 *et seq.* Companies should either treat all waggons alike or provide a sufficiency themselves for their customers; *Corbett* 10,897. 11,050. Regulations of clearing house as to companies repairing damage done to other companies' stock; *Brown* 11,116; these should be made to apply to stock of private owners also; *ib.* 11,125–11,142; discussion of this point, and of the question generally of supply of waggons for mineral traffic; *ib.* 11,146–11,155. Information as to companies who do or do not supply such stock, and as to cost; *ib.* 11,143–11,145. 11,156. 11,162. Railway companies should have the option of providing them if they think fit; *ib.* 11,159. If railway companies so worked the coal traffic as to return the waggons promptly, one-half the present number would suffice; *ib.* 11,165–11,168. If railway companies found all the waggons, witness doubts if the collieries would get a fair supply; *ib.* 11,169. If found for the whole country by the clearing house, witness fears that both coal owners and railway companies might be stinted, though it would greatly economise the number necessary. Discussion of the question of one common supply for the whole country; *ib.* 11,169–11,181. This would be the best system, but witness thinks it not practicable; *ib.* 11,182.

On the London and North-western line coal owners find all the trucks; these generally go back empty; company return them free, but do not pay demurrage if they are detained on the line; *Cawkwell* 11,645–11,650.

On North-eastern railway, engines cost from 2,500*l.* to 3,000*l.*; keeping up, about 1,200*l.* a year; renewals and repairs are charged to revenue; *O'Brien* 12,018–12,027. 12,058. Goods engines consume more fuel than passenger engines; frequent stoppages add to wear and tear; *ib.* 12,057. 12,059. But few private owners' waggons on North-eastern line, company prefer to use their own; owners' waggons are frequently detained beyond their line (as are also company's), but never by company; company neither get nor pay demurrage; *ib.* 12,320–12,324.

When Great Northern Company provide waggons for coal or coke they charge for them at the rate of 9*d.* per ton; *Clarke* 12,625. Account of an invention for getting hauling power to the extent of about 30 per cent. out of the tender; advantages of this improvement to the coal traffic; *ib.* 12,724–12,728. 12,738. Cost of an engine is about 11½*d.* per mile: they are never run more than 200 miles a day; saving effected by use of coke; coal is more used for passenger trains than formerly; *ib.* 12,733–12,744. Passenger carriages are made more commodious than formerly; witness does not think their weight could be reduced; *ib.* 12,941, 12,942.

Witness explains fully course taken by Great Western Company in the case of private waggons, and of those of their own; and gives reasons why demurrage should not be paid by company for detention and delay, as would be the case if private waggons were admitted upon clearing house system, as suggested by one of the witnesses. Company, in fixing rates for the conveyance of traffic in

ROLLING STOCK—*cont.*
owners' waggons, allow such a sum as will enable traders to find them; gives cost of a narrow-gauge waggon and number of tons it will hold. Traders look after the waggons much more carefully when they find them themselves; delays generally take place at the terminal stations; irregularities arise from variation in quantity delivered to customers. Company sends a notice in case of a break-down of a waggon, but not when they are detained by the consignees. Colliery owner is to blame sometimes for detention by sending to certain customers a greater number than they can unload in a given time; gives an illustration; *Grierson* 13,500–13,509. 13,524–13,526.

On Midland railway waggons are found by coal owners; it would be better that they should be provided by company; profitable use made of company's waggons; *Allport* 13,634 *et seq.* Instances of railway company owning coal waggons, and of the system working well; *ib.* 13,691, 13,692. No goods waggons belonging to independent parties; this arrangement is peculiar to the mineral traffic; *ib.* 13,695, 13,696.

Witness wholly disapproves of one common stock of waggons for all the railways; *Allport* 13,715, 13,716. Hire of stock from rolling stock and waggon companies; *ib.* 13,717–13,721. Waggons are now more profitably worked than formerly; *ib.* 13,722, 13,723.

North-eastern and Stockton and Darlington companies supply coal waggons; witness thinks it would be impracticable for colliery owners to find them; *MacNay* 13,995 *et seq.*

From peculiarity of line, North Staffordshire Company have found it advisable to provide all the waggons; this has given general satisfaction, and witness believes it to be the best plan for mineral traffic; *Morris* 14,176–14,186. Advantages stated; *ib.* 14,192–14,195. Most of the mineral traffic of the country, however, is carried in owners' waggons; *ib.* 14,196. It is a general understanding that empty waggons should be returned free, but there is no legal right, as far as witness is aware, to this effect; *ib.* 14,188–14,190.

Rolling stock now infinitely superior to what it was 10 or 15 years ago, and is still improving; *Harrison* 15,289. The cost of rolling stock for working a line is equal to one year's gross receipts for traffic; *ib.* 15,405–15,411.

Complaint that owners are not allowed to inspect their waggons whilst in possession of companies; that companies unnecessarily delay and sometimes lose them for three months at a time, thus entailing enormous loss upon owners. They should be subject to demurrage for delay; *Lancaster* 15,616–15,630. Witness does not propose that owners should be admitted to the clearing house, or that companies should provide waggons; reasons why he thinks the latter not desirable; *ib.* 15,631–15,639. Parties must have their own waggons returned to them, as they have to keep them in repair; *ib.* 15,640–15,642. Witness thinks that 1*s.* 6*d.* per day on each waggon would be a very moderate demurrage; *ib.* 15,643. Each company should report when waggon leaves its line, in order that any detention might be traced. There is no legal remedy for delay at present, and it is a question on which owners feel very strongly. Instances of delay given; *ib.* 15,644–15,658. 15,660–15,665. If companies were liable for demurrage, witness believes delays would not occur; *ib.* 15,659. Owners would not ask for a drawback for delay caused by accident; it is when they think that undue preference has been given to certain traffic that a feeling of soreness prevails; *ib.* 15,669.

Although witness does not believe companies act unfairly, where waggons belong to private owners there is not the same interest to prevent delays as if owned by themselves; *Sherriff* 16,305. Delays sometimes arise from misunderstanding between consignee and consignor; *ib.* 16,306. If company found waggons, and consignee neglected to unload, consignor might be charged with expense of delay. Great loss to owners at present from delay with waggons; *ib.* 16,307, 16,308. Witness would compel companies to find waggons; it would be an advantage to all parties. Companies would doubtless have done so hitherto if they could have afforded it. At present some do, some do not; *ib.* 16,309–16,313. Companies should be compelled to buy present private stock; this would be a saving of money, and of danger and inconvenience; *ib.* 16,314–16,316. 16,323. Witness thinks that two-thirds of present number would then suffice; other advantages,—safety, &c.; *ib.* 16,317–16,320. Private stock is not so well inspected as companies' would be. Owners would not object to part with them on fair terms; *ib.* 16,321, 16,322.

ROLLING STOCK—*cont.*

Method adopted by Great Western Railway in purchasing waggons of spreading cost over several years; *Gooch* 17,317, 17,318. Engines that company commenced with in 1839–40 are still running very well; *ib.* 17,328, 17,329. A carriage will run a great deal further than a waggon; *ib.* 17,369. The bulk of the mineral waggons belong to company, but there are a great number of private ones; inconvenience attending the latter; *ib.* 17,523–17,527.

Advantages of use of steel in rolling stock; *Sturrock* 17,832 *et seq.* Improved tenders for mineral traffic on the Great Northern; *ib.* 17,879–17,883.

See also COST OF CONVEYANCE AND WORKING.

ROYAL CANAL, IRELAND. *See* WATER CONVEYANCE.

ROYAL PALACES:

Comparison of the railway service in France and England between the metropolis and various royal palaces; *App.* DM.

RUNNING POWERS:

Powers for running trains by private parties on their own account practically inoperative; *Atkinson* 928–933.

Better facilities for, should be enforced; *Hill* 8215–8220. Railways and canals should be kept as highways open to anybody; *Wilson* 9954. Theoretically, anyone may run trains and carry what they please on railways (as was the case to some extent formerly), but practically this power is kept inoperative by railway companies; *ib.* 10,061–10,074. Argument to prove that railway companies should not themselves be carriers; since they have been so rates have been reduced, but not in consequence thereof; the public should have full powers and facilities as carriers for use of lines; canal companies have been compelled to become carriers to compete with railways; *ib.* 10,075–10,098. 10,113.

Are now freely accorded by companies, thus increasing competition; cannot be too largely encouraged; *Huish* 15,852. May be exercised over a single line, if under proper regulations, with perfect safety, even though companies are in direct opposition, and although punctuality not always attainable; *ib.* 15,853, 15,854. Remuneration always by arbitration, parliamentary tolls being too heavy. Better to give running powers to a rival company than have a competing line; *ib.* 15,860–15,867. Method of fixing times of trains of the different companies; *ib.* 15,868. If a line become so crowded that necessary running powers cannot be granted, it is evidence that a new line is required. New line now making to London by Midland Company is not from inconvenience found in working traffic over Great Northern, but for increase of traffic. The traffic is well carried at present; *ib.* 15,869–15,873. Traffic between London and Redhill, though line is quadrupled, is now getting crowded; *ib.* 15,873–15,875. Running powers are more frequently arranged by mutual agreement than by Act of Parliament; *ib.* 15,876. Discussion as to how far they may fairly be granted. To a certain extent, it is going back to the original theory of railways being public highways, open to any one paying the tolls; *ib.* 15,897–15,903. Danger from present diversity of signals, now that running powers are so freely used; *ib.* 15,941–15,949. Discussion of this point; *ib.* 15,950–15,953.

Running powers should be universal. Discussion of regulations under which they should be granted and used; *Bidder* 16,816–16,820. 16,827–16,832. Company having running powers not allowed to take up local traffic; *ib.* 16,821. Concession of general running powers would secure in all cases the forwarding of traffic between neighbouring railways; *ib.* 16,849, 16,850. Companies should have power to forward their traffic over neighbouring railways at same rates they themselves are charging; if other company disapprove of these, an appeal should lie; should result of this be an increased rate, it should apply to the past as well as the future, in order to check companies recklessly forcing their traffic on other lines; *ib.* 16,964. Difficulties in enforcing universal running powers by legislation, but arrangement suggested above, witness thinks, would secure the main objects desired, one of which is to enable companies to make arrangements on the spur of the moment as traffic offers itself. Statements in illustration and proof; *ib.* 16,964–16,966. 16,969. If company over whose line goods were to be passed took them on, it would do just as well as other company running over line; *ib.* 16,967. Sufficient notice should be given; *ib.* 16,970. Discussion of foregoing, and of inconvenience to which, as witness alleges, some companies are put for want of power to enforce prompt forwarding of their traffic; *ib.* 16,969–16,976. Powers should be applicable to all goods; *ib.* 16,977, 16,978. Discussion as to terms for running powers or conveyance of another company's traffic along line; *ib.* 16,979–16,983.

See also INTERCHANGE OF TRAFFIC, 2.

RYAN, MR. MICHAEL ROBERT. (*Analysis of his Evidence.*)

Is a merchant of Limerick, and member of the Chamber of Commerce; 2651, 2652. Present passenger rates prevent traffic, and better arrangement required as to keeping time for the third-class passengers between principal lines and tributaries; gives instances of the delay and inconvenience to the public. Thinks Government should buy up all railways, especially small and non-paying ones; 2653–2658. 2683–2684. Traffic between Limerick and Dublin diminished in consequence of delay. A large class would travel to Dublin and Cork if they could return same day; formerly they could do so. The company charged full fare. Describes class who travelled by the train; 2659–2677. Impediments in the way of third-class travellers mainly attributable to number of small companies and conflicting interests; 2678, 2679. The Great Southern and Western tried last session to buy or lease the Limerick and Castleconnell line, but the Bill was lost; 2680. 2682. Railways about Limerick not doing the work of the country; carriers numerous on the road. Directors should try, by reducing rates, to obtain cattle traffic; believes traffic would pay; 2685, 2686. Many passenger trains empty; with lower fares, traffic (especially third-class) might be considerably increased; many walk or drive instead of using the railway. The Limerick and Foynes Company and the "Kelpy" steamer in connexion with Foynes line, increased rates 10 or 12 per cent., and there was a considerable decrease in the number of passengers and receipts; 2687–2696. 2699–2702. 2734–2740. 2785–2791. Very rarely passenger fares for market days. Several fairs are held at Rathkeale, but railway arrangements such that only half an hour can be got to transact business in the town 2697, 2698. Shareholders have remonstrated against present management, but as all local lines are in the hands of one party they are powerless; 2703–2708. The putting on of a later third-class train from Limerick to Dublin would be profitable to company, and would not affect the second-class trains; 2709, 2710. The custom of hucksters going through the country buying up the produce would be altered if rates were reduced. Mode adopted by railway company in Tipperary district. Proceeding discourages trade from Limerick and favours Waterford. Freight cheaper from Shannon by sea as compared with Waterford; 2711–2733. Complaints at Bruree (where there is a very large flour mill) that coal traffic is encouraged at the expense of turf; gives relative rates; question discussed; 2741–2751. 2755–2765. Turf more suitable than coal for dairy purposes; 2752–2754. Thinks directors of Great Southern and Western Railway are large shareholders in steamboats; 2766, 2767. Is not aware that there is a maximum charge in Railway Acts beyond which companies cannot go; 2768. All railways should be placed under one management. Directors at Waterford, Cork, and Dublin vie with each other to get the greatest loading for their steamers, and port of Limerick does not get a fair mileage in consequence; 2769. States that Sir David Roche, owner of a large flour mill near Limerick, suffers much inconvenience from high rates; 2770–2775. Would like to see the Government take all Irish railways, and try the experiment of having one central management; discussion as to how loss should be met; 2776–2780. 2793. There would be an increase of the produce of the soil if rates were lower; 2781. Does not know the rates by Bianconi's cars before introduction of railways, but since rate increased shares have depreciated and dividends diminished; 2782–2784. Mentions a case of inconvenience to emigrants in consequence of there being no third-class train; 2792.

S.

SAFETY OF RAILWAY TRAVELLING:

1. *Generally.*
2. *Accidents and Robberies.*
3. *Communication between Passenger and Guard, &c.*

1. *Generally:*

Under proper regulations, punctuality a secondary condition as to safety; *Huish* 15,854. By use of

SAFETY OF RAILWAY TRAVELLING—*cont.*

1. *Generally*—cont.

telegraph and of a "train staff," perfect safety can be ensured on single lines; plan now recommended by Board of Trade; *ib.* 15,855–15,857. Witness is in favour of extending powers of Board of Trade to seeing that proper regulations are carried out for the safety of the public; *ib.* 15,929–15,933. Necessity for a uniform code of signals on all the railways to ensure safety now that running powers are freely used; *ib.* 15,941–15,953.

Witness does not think that number of accidents can be reduced. Telegraph, which is in use on all the large lines, increases safety; present amount of traffic could scarcely be worked without it; *Bidder* 17,090–17,093. As great safety is attained as can be expected; the number of accidents varies a good deal; *ib.* 17,094–17,096. Legislative enactments would be more likely to increase than to decrease safety; responsibility better left on companies; *ib.* 17,097, 17,098. Four lines of rail where traffic is large (except to avoid crossings) witness thinks are no safer than two; *ib.* 17,100–17,105.

2. *Accidents and Robberies:*

Greater security against, should be ensured by uniformity of signals; *Hill* 8197 *et seq.*; *Huish* 15,941–15,953. Witness does not think that want of punctuality increases the risk of accident if signals are attended to; *Allport* 12,440. Trains are generally unpunctual where collisions occur, but that does not cause the accident; drivers get so accustomed to find everything clear that they do not keep a sufficiently good look-out; *ib.* 12,445–12,447.

As few accidents occur as can be expected; the number varies a good deal; *Bidder* 17,094–17,096.

On an official inspection of railways and the management of the traffic thereon, as a means of preventing accidents and loss; *App.* BK.

3. *Communication between Passenger and Guard, &c.*

Should be provided; *Hill* 8197 *et seq.*; *Low* 13,882.

Witness was one of a committee appointed to examine 193 inventions, none of which he considers practicable. The best, an electric communication, is now being tried on the South-western line, and is about to be tried on Great Northern; but witness fears it will fail at junctions through separating the trains. Witness also fears that without some legislative penalty it will be wantonly or unnecessarily used, and thus cause collisions, though the experience as yet gained does not warrant this conclusion; *Clarke* 12,754–12,761. Footboards outside witness considers dangerous, and a passage through the train objectionable; the former is just being abandoned in France. No legislative enactment would give greater safety than exists at present; *ib.* 12,762–12,764. Account of the communication between guard and driver on Great Northern Railway; *ib.* 12,948–12,950.

No necessity has ever come within witness's own personal knowledge for communication between passenger and guard; *Morris* 14,396. Communication could easily be made, but train should on no account be allowed to be stopped. An additional guard would be required, who could, if called, walk along footboard of train, but it would be dangerous. It is done on the continent, and used to be done here; *Hawkshaw* 14,618–14,628. Description of a carriage in use in Russia in which there is a passage from end to end, and other convenience. It is not very expensive, and witness advocates its introduction here. It would not facilitate communication with guard, but would in many cases obviate necessity for it; *ib.* 14,629–14,635.

Witness sees no necessity for communication between passenger and guard; reasons. It would really introduce a source of danger. In the case of a train on fire, witness believes that guard must know of it without being informed by a passenger. Board of Trade returns of accidents show that such a facility would have been of no use; there is no sufficient evil existing to require such a remedy; *Gooch* 17,582–17,589.

See also COMPENSATION FOR ACCIDENTS. SIGNALS. TRAFFIC ARRANGEMENTS.

SALT TRADE:

Diversion of, from Liverpool; *Clark* 45. Explanation of this circumstance; *Cawkwell* 11,429.

Complaint by witness (who is proprietor of Stoke Salt Works, Worcestershire,) of unequal rates, inconvenience from break of gauge, want of through rates, &c.; *Corbett* 10,871 *et seq.* But little salt comes by sea; *ib.* 10,876–10,879. Witness sends annually to London about 24,000 tons, of which 16,000 or 17,000 come by rail, and the rest by canal; *ib.* 10,890. Heavy loss by demurrage from delay of railway companies in forwarding witness's vans; remedies suggested; *ib.* 10,892–10,899. Discussion of probable effects of a uniform mileage rate on salt trade; *ib.* 10,932–10,935. Probable reasons for variations in rates; *ib.* 10,945. Some particulars of witness's London trade; rates quoted do not include cartage; his agents load and unload trucks; *ib.* 10,946–10,959. Some particulars of his shipping and foreign trade, and further discussion of uniform mileage rate; *ib.* 10,960–10,985, 10,989–11,002. He does not believe that the latter would drive the Cheshire salt out of the London market; *ib.* 10,979. Has complained to railway companies, but they refuse to make any alteration; *ib.* 10,986, 10,987. Particulars of canal traffic; cost about the same as rail; if railway rates were reduced, canal would still be useful for certain purposes; *ib.* 11,003–11,025. Delays in forwarding witness's trucks; *ib.* 11,025 *et seq.* Statement delivered in relative to the railway traffic to and from witness's works; *ib.* 11,069.

Objections to mileage rate suggested above, that it would injure Mr. Corbett's trade and railway profits also; *Grierson* 11,896, 11,897. Answer to preceding complaints of delay; *ib.* 11,898–11,900. Company have given Mr. Corbett (at his request) reduced rates, specially to enable him to compete with Cheshire salt; *ib.* 11,902–11,905. Answer on the part of the Midland Company to Mr. Corbett's complaints; *Allport* 12,523–12,529.

Mr. Corbett's complaint that salt sent in narrow-gauge waggons to Gloucester was detained for want of broad-gauge trucks, and that Midland Company demanded demurrage, no doubt is a great hardship, and arises partly from the irregular amount of traffic received; traders do not give an hour's notice of quantity they are going to send; would not be practicable to demand notice; *Grierson* 13,510–13,515.

SALTAIRE (near Bradford):

Saltaire was chosen for an extensive manufacturing place in anticipation of competition between railway and canal companies, instead of which a combination has taken place, and the rates are raised; *Stead* 461–472. The rates, except for an agreement with railway company, would now be double what they were; *ib.* 474–487. There would have been two routes to Liverpool if companies had not amalgamated; serious inconvenience felt; *ib.* 488–491. 519. To force goods over a certain route, the same charge made for 25 as for 46 miles; *ib.* 506. Particulars of some of the rates; *ib.* 516–531.

Correction of some of Mr. Stead's statements, which witness thinks are likely to mislead the Commission; *Allport* 12,389, 12,390.

Witness states that Mr. Stead is labouring under a misapprehension altogether; *Smithells* 12,981. Evidence to this effect, with statement that every necessary accommodation is given, that traffic is not diverted, &c. List of trains, and table to show that route is not obstructed; *ib.* 12,980–12,982.

Payment of contractors, landowners, &c. in shares very objectionable; reasons; *Hancock* 7610–7622.

SHAW, MR. THOMAS. (*Analysis of his Evidence.*)

Is traffic manager of the Irish North-western railway; 8268. Although traffic receipts are much improved

SHAW, MR. THOMAS—*cont.*

this current half year, position is not flourishing; gives cause and amount of increase; preference and ordinary shareholders are receiving nothing; 8269–8271. 8349–8352. Length of line, and cost per mile; railway was made by share capital; gives cost, and explains that the sum is only for a portion of present line; pays 500*l.* per week for other portion. Obligations to be discharged before ordinary shareholders are paid a dividend; working expenses of line; 8272–8293. 8401–8407. Names companies that have joined Irish North-western Company in the subscription to the Cavan and Clones line; works in harmony with them. Difficulty in booking through between Irish North-western and Great Southern and Western lines; 8294–8300. Passenger traffic principally third-class; goods traffic, agricultural produce and such goods as agricultural people require. Thinks if rates were reduced for long distances, traffic would increase; has tried experiments, but, with one exception, not successful. Has remodelled cattle rates, but in consequence of bad seasons, traffic not so good as it was three years ago; 8301–8307. 8317–8321. Reason why line does not pay a dividend. Gives number of trains per day; 8308–8316. 8332–8344. Is not aware that they have ever received a proposal for preferential rates; no reason to suppose that traffic is kept off line by present rates. Do not, on principle, make preferential rates; 8322–8325. Carry a great deal of coal, considering that there are no manufactories upon the line; the traffic seriously interfered with by local bogs; 8226–8229. Has through booking from most of their stations; books with London and North-western both for passengers and goods; 8329–8331. Has severe competition with the Ulster Company; rates by this company rather higher; 8345–8348. 8387–8391. Thinks the directors take as much interest in this railway as those of more profitable lines. Directors have great hopes that matters will improve; 8353–8356. Would be an advantage to public and to proprietors if all lines north of Dublin were amalgamated; fares would not be raised, but railways would be worked more economically, would be a better communication between Dublin and witness's district; reasons why service not so good as it should be. Would not go further south than Cavan; 8357–8367. 8374–8385. Effect that amalgamation would have upon the different ports; steamboat communication would greatly affect traffic to any port; 8368–8373. No competition between Clones and Belfast; passengers go now by Ulster line; 8386. Irish North-western does not communicate with any line at Londonderry; if it did, would get some flax traffic; this traffic was carried by Northern Counties line until Omagh junction was made. Northern Counties pay about 800*l.* a year to Irish North-western Company; 8392–8400. Directors of Irish North-western line elected by the ordinary shareholders; hands in a list, and states that 12 directors manage whole system (145 miles); 8408–8412.

SHAW, MR. WILLIAM. (*Analysis of his Evidence.*)

Is director of a bank, and of a flax spinning company; resides near Cork; 6382, 6383. Cork and Bandon Railway not managed with profit to shareholders or advantage to the public. Line made at great cost. Directors and shareholders have not much interest in increasing traffic. Line in hands of preference shareholders. Supposes directors and preference shareholders hold original shares; 6384–6386. 6393–6396. Traffic in agricultural produce might be more developed if rates were lower, and better facilities afforded for bringing to market; 6387–6389. Thinks if line were leased it would be worked with profit, and traffic largely increased. Some extension lines in the course of construction. Cork and Bandon Company have impeded construction of further extensions; 6390–6392. Cost per mile for making line; is carried through a country giving hardly any business. Difficulties in making line. Money wasted in engineering and law expenses. Engineer incompetent; 6397–6403. Amount of interest paid to preference shareholders; there are two classes, on one interest has been regularly paid, but not on the other. Motive for managing railway better. Ordinary shareholders have no hope of getting much out of line. Not sufficient speculative spirit in the country to buy up the ordinary shares, and get efficient officers to manage railway profitably; 6404–6411. Rates could not be reduced to any great extent on Cork and Bandon line, but better system of return tickets, excursion trains, &c., would develop business upon it. It would be too great an experiment to reduce 20 per [illegible] England, reduction increases business, not so [illegible] Would look to increase more by a better [illegible] looking after traffic; 6412–6414. Rich agri-

SHAW, MR. WILLIAM—*cont.*

cultural district lying to west of Bandon; a great deal of produce now sent by cart would go by railway if rates were lower, and business looked after; 6415–6421. Is not aware that an experiment for making a great reduction in charges has been successfully tried on Coleraine and Londonderry line; different country from Cork and Bandon line. Moderate reduction would tell, both in goods and passengers. Gives length of line, and number of persons to manage it; 6422–6427. Bandon Company work a little branch line to Kinsale; get 30 per cent. of gross receipts for three years; 6428, 6429. Would be an advantage to amalgamate Cork and Bandon line with Great Southern and Western, as trains would then be arranged in a proper manner, and economy effected in management; 6430–6432. Cheaper to send flax from Bandon to Belfast by way of Liverpool, and re-ship it there for Belfast. Much traffic lost for want of proper system. Freight paid from south of Ireland to Belfast, and distance by railway. Ten years ago there was rather a large quantity of flax sent, and it is expected there will be again. Will in time be sent in sufficient quantity to make it a remunerative traffic. Hopes flax will be continued to be grown in south of Ireland. Is a remunerative trade; requires much rain; is generally grown in west part of county of Cork. Would send flax to Belfast by railway if rates same as round by sea. Mileage rate by water; cannot give railway rate; 6433–6450. Vessels never go direct from Cork to Belfast; not enough traffic to load them. Continuous railway communication (except break at Dublin) between Cork and Belfast. Thinks goods are not sent by way of Tullamore and Mullingar; would be an intricate way. No through communication from Bandon to Dublin by that route. Has transhipment and carriage across the city, which adds to the expense. As stations are nearly opposite each other, might be possible to establish a ferry; goods would then have to be carted to the ferry; the rails might be brought down to it, if the Commissioners of Cork gave their consent; 6451–6460.

SHERRIFF, MR. ALEXANDER CLUNES, M.P. (*Analysis of his Evidence.*)

Has had many years' experience in railway management; mentions railways with which witness has been connected; 16,255, 16,256. Mr. Oxlade's statement that witness favoured particular individuals, and also his statement that witness demanded a partnership with him, promising him, if he consented, an unlimited number of waggons, long credit, and to get his bills discounted, and threatening, upon refusal, to stop his trade, and finally stopping it, is a tissue of untruths from beginning to end; reads letters from Mr. Mason and Captain O'Brien fully entering into these charges, and denying most positively the truth of these statements. Refers the Commissioners to Brown's Railway and Canal Act Cases, and judgment given by Mr. Justice Cresswell in case brought by Mr. Oxlade into Court of Exchequer in July 1856; 16,257. If system of uniform rates were established, would be unjust to railways and injurious to commerce. Companies would be compelled to charge nearly maximum rates; would not materially affect short distance traffic; would have to apply to canal companies, and persons trading on canals, steam packet companies, and even carriers by road; 16,258–16,260. Believes canal rates are much less uniform than railway rates; difficulty in being able to bind owners or hirers of boats to fix average rates; tolls on canals are tolerably uniform; 16,261–16,265. Would approve of a railway company charging a higher rate for a short distance than for a long one; are circumstances which would even justify a company charging a lower rate from Birmingham to London than from Liverpool to London; 16,266–16,269. Is practically a maximum charge for parcels, although not fixed in any Act. Might be cases where it would be justifiable for a company and beneficial to public to take a parcel for 200 miles for less than for 120 miles; 16,270–16,274. If uniform rates adopted competition would cease between railway companies and steam or sailing vessels trading coastwise, and also in most cases between railway companies themselves, and give a monopoly to water conveyance, and the shortest route by railway. Exceptional charges could not be chosen as the uniform rates, and advanced rates would destroy long mileage rates. Loss of exceptional traffic would compel high rates for ordinary traffic. No one injured by companies having the power and right to carry for a long distance at same or even lower rates than for a short distance. Considers public admirably served by present system. Does not believe that companies now give preferential rates; might have been done many years ago; 16,275–16,280. Has

SHERRIFF, MR. ALEXANDER CLUNES, M.P.—*cont.*
had experience, both as a railway manager and a trader, having large works in Durham and Worcester. Complaints are frequently made by traders that they have not such low rates as those in another district, but they seem to forget that they, generally speaking, have rates quite as low in their own districts. Contends that present system of charging such rates as railway companies can obtain enables traders from different districts to compete with each other in a particular market; mentions a case showing how this system operates; 16,281–16,285. Why witness considers it much safer to leave in companies' hands the system of charging special rates, whereby they become the arbiters as to what the trade of a particular district shall be, than let matters go to arbitration; 16,286–16,294. New classification of goods might be an advantage; 16,295. Same system in force now on North-eastern as when witness was manager. Considers system of carrying at equal rates from all the different ports is a right one. Is aware that traders of Hull complain that they are placed at a disadvantage as compared with other ports to the north, but if mileage rates adopted their trade would probably go to Goole or some place nearer. Enforcement of uniform rates would be one of the greatest blows that could be given to commerce. Causes in operation which have led to a reduction in the average rates for goods and minerals. Making a reduction for large quantities sent, unless circumstances greatly disproportionate, is unjust to majority of traders, and injurious to railway companies; assumes a case to illustrate this opinion; if reduction made to one trader should be made to all in same district; 16,296–16,304. Reasons why it would be an advantage to companies and traders if railways were compelled to find all the waggons; would economize working expenses. Thinks companies never give their own stock or that of other companies a priority of transit over waggons of private traders. How detention is frequently caused; 16,305–16,307. 16,309, 16,310. 16,312. 16,315, 16,316. 16,318–16,320. Inconvenience and loss that sometimes occurs to traders in consequence of the limited number of their waggons; 16,308. Thinks poverty of railway companies has been to a great extent the reason of private waggons being employed; 16,311. Would compel railways to buy the private trucks; thinks traders would be willing to sell on fair terms. Unless companies had additional power to borrow they would not be able to purchase them. Method that might be adopted to enforce the borrowing powers to sole purchase of this rolling stock. Could be a reduction of one-third if whole of rolling stock belonged to railways; 16,313, 16,314. 16,317. 16,322–16,324. Private waggons are frequently defective in make and quality, and not kept in such good running order as those of the companies; 16,320, 16,321. Why terminals must of necessity vary at different places. Terminal charge should include everything but the transit; a per-centage upon the cost of the stations appropriated to goods traffic should also be included. Companies have no right to receive any profit out of terminals; 16,325–16,331. Why witness objects to a classified maximum; would prefer to leave it as it is. Reason for companies not separating mileage rate from terminals; 16,332–16,337. Complaint about terminal quite a new outcry. Would make an allowance when trader did the carting. Would be satisfied with a decision, and would not object to its being final, of a county court judge, as to whether charge made be reasonable. Would not take the decision of a county court jury; 16,338–16,343. Terminals vary for goods; those recognized at clearing house are tolerably satisfactory to companies; is something like 4*s.* for the country and 8*s.* 6*d.* for London; 16,344–16,347. Does not see any objection to companies publishing rates, provided all the carriers did so; should be bound to declare all discounts, drawbacks, and credits; discussion as to whether shipping companies should be compelled to publish their rates. Why it would be almost impossible to publish terminal charge; companies would not object to publish rates charged to each station. Might be no difficulty in having a book of rates to refer to; 16,348–16,358. 16,378–16,382. Should be a general Act altering classification of goods, subject to periodical revision by clearing house; present classification altogether inadequate; has been very little altered during last 25 years. If special rate required, article has to be transferred to another class, as each article in same class is charged at same rate; 16,359–16,365. 16,370–16,372. The classification of goods should be published; 16,366, 16,367. Classification is revised once a year at the clearing house, and new articles inserted or a certain article transferred to another class; 16,368, 16,369. No rates are altered by the clearing house. Does not mean that there should be uniform system of maximum charges for all the companies, but simply a classification upon which rates should be founded; 16,373–16,376. Approves of plan adopted by some companies of hanging up in their booking offices the number of places to which they book and the fares; 16,377. Through booking arrangements are now carried on to a great extent between companies; system extending; is no difficulty in establishing them throughout kingdom; 16,383, 16,384. Gives a case where it would be fair for a company with only a short mileage to take a larger proportion of gross toll than its mileage would justify. Gives an instance showing the good resulting from the exercise of certain compulsory powers of arrangement given in the Great Western Amalgamation Act. Reason why same system is not carried out by other companies. Course pursued when a company using another's line does not work the traffic satisfactorily; 16,385–16,390. 16,392, 16,393. 16,395. Why it is not desirable for Parliament to introduce a new regulation, making through booking compulsory; 16,391. Through rates would not enable railway companies to reduce passengers or goods rates; 16,394. Why some competitive lines are got up; their cost a bar to leasing or amalgamating. Knows of one railway which ought to have been made for 10,000*l.* per mile, but which cost between 30,000*l.* or 40,000*l.* West Midland made the line from Honeybourne to Stratford for about 5,000*l.* a mile; is a single line; how made. Arrangements between companies might be much facilitated if there were some sort of tribunal within themselves which could take up practical difficulties, such as working at stations, trains meeting, &c. Tribunal might be a committee chosen from railway clearing house; is not exactly prepared to say what power should be given; should be an Act of Parliament allowing them to arbitrate upon questions relating to interchange of traffic; are many companies who would view such an arrangement with jealousy. Power of railway clearing house now limited; might be increased to public advantage; how clearing house now constituted. Was not aware that companies in some cases acted as arbitrators amongst themselves by consent; 16,396–16,411. In some cases a material reduction of passenger fares might be made with advantage to public and to railway companies. Poor companies very prejudicial to convenience of a classification; are better nevertheless than no company at all; would be good thing to limit their numbers, and thereby enable them to pay a dividend of 4 or 5 per cent.; 16,412–16,414. Principal railway companies are making experiments on a considerable scale in reduction of rates and fares generally. North-eastern have reduced year after year; experiment not profitable at first; is now improving. Would have more hesitation in reducing on part of a company paying only 2½ or 3 per cent. than on others paying 5 or 6. Safer to reduce gradually; 16,415–16,417. No possibility that cost of running trains will ever be less; more likely to increase. Expenses of maintaining permanent way are on the increase; may lessen by putting steel rails at the station; 16,418, 16,419. Would have all the public against you if attempt were made to reduce number of carriages; if fewer ran cost would be lessened, but not enough to materially affect the accounts. Almost every first-class passenger expects two seats; 16,420–16,423. Has never seen anything upon foreign railways to wish for an exchange of systems; 16,424. Has been to Ireland. States that engineer of West Midland (formerly engineer of an Irish line) did not think that there was the same amount of energy in developing traffic there as in England. Not so much traffic to develop. Was shown some specimens of ironstone discovered on or near Midland Great Western line which witness thinks might be made more of in England. If an amalgamation of Irish railways took place they could do more than they do now. Companies paying 4 or 5 per cent., and others paying no dividend on their ordinary shares, should not be amalgamated on equal terms; would be no difficulty in arriving at the value of those shares only having a prospective value; 16,425–16,432.

SHORT DISTANCE RATES. *See* RATES AND CHARGES, &c., 5.

SIGNALS:
Uniformity of, highly desirable; *Hill* 8197 *et seq.*
Want of attention to signals one chief cause of accidents; drivers get so accustomed to the line being clear, that they do not keep a sufficiently good look-out; *Allport* 12,440. 12,445–12,447.
Although lines vary in signalling, &c., which may confuse drivers running over two lines, witness does not

SIGNALS—*cont.*
think that if signals and mode of working had been laid down by Board of Trade at first opening of railways they would have been as well matured as they now are; *Huish* 15,936–15,938. Danger of present diversity of signals, now that running powers are so freely exercised; *ib.* 15,941–15,953.

Systems of different companies vary considerably, but witness does not think this causes inconvenience or increases danger; *Gooch* 17,528–17,532.

SINGLE LINES:
Running powers may be exercised over, with perfect safety; *Huish* 15,852–15,856. Repairs more difficult and heavier in proportion than on double lines; *ib.* 15,858, 15,859.

SLEAFORD:
Comparative statement of grain rates from Sleaford, &c. districts, with Northampton, Norfolk, and other barley districts, to Burton-on-Trent; *App.* BI.

SMITH, MR. JOHN. (*Analysis of his Evidence.*)
Is senior partner in the firm of J. Smith and Co., wholesale grocers at Lincoln; 9044, 9045. Was at a meeting of leading merchants and tradesmen of Lincoln to take unequal rates into consideration; 9046–9049. Mentions several anomalies that exist in the classification of goods in the grocery trade. Companies consider cost and trouble in conveyance, not intrinsic value of goods sent. Quotes rates for sugar, dried fruit, tapioca, &c., and states difference made by company in conveying a box of onions and a box of grapes, both coming by goods train, fetched from same house, and delivered at same time; rates charged were strictly in accordance with provisions of the Act; discussion thereupon; 9050–9070. Would have separate general charges for all grocery goods, fruits, draperies, and drugs. Could hardly take value as an element in the classification, although not doing so would be unjust in principle; bulk, liability to damp, and speed at which carried should be also elements. Companies say they make different rates on account of increased risk in transit; do not think they take more care of one class of goods than of another. Articles carried are liable to be stolen, damaged by rain, or breakage, but not to extent to justify difference made in the charge; 9071–9090. 9095–9104. Reduction in price of certain articles may account for high comparative charges made; 9091–9094. When six packages are sent from same house at same time company should only make one general charge, and not six different charges; 9105–9110. Rates charged for teas and sugars are excessive as compared with those of other towns near Lincoln, particularly Sheffield and Gainsborough; gives illustrations; 9111–9114. Firm divides their goods between Great Northern and Midland; gets no advantage from the competition. Explains preliminary statement wherein he says that reasonable rates could not be obtained on account of existing railway monopoly. Reason companies make no reduction for sending a quantity; charged witness as much for bringing 100 chests of tea from London as if they had been 100 different people wanting one chest each, although in latter case 40 or 50 vans would have been employed in the collection. Is not sure that a special rate could have been obtained if living at Gainsborough; would have been conveyed cheaper, there being water competition. Could have had a rebate by delivering and receiving at the station, but not worth while, as the company can cart more economically; 9115–9133. Greater facilities for personally attending the metropolis are given to merchants and tradesmen of neighbouring towns than to those of Lincoln; 9134–9138. 9167, 9168. Does not advocate unreasonable competition; would be a benefit if there were less lines, and Government take some general supervision of railways, and fix a uniform mileage rate; discussion as to whether it would be just to companies, if, after fixing certain rates in their Acts, and upon the faith of which they have spent their money, they should be compelled to reduce them; 9139–9141. 9153–9157. Railway company charge 1*l.* per ton for bacon from Sheffield; can be got from Liverpool, above double the distance, for 18*s.* 9*d.* including cartage; 9142–9145. Lincoln people will not be better off when Midland Company get direct line to London from Bedford; 9146, 9147. Should have same advantages as possessed by towns on main line; 9148–9152. Does not know whether companies would be deterred from making a reduction, if, the moment they did so, Parliament should insist that reduction should be general; 9158–9163. Representations have often been made to companies of the bad classification of goods, and unjust rates as compared with neighbouring towns, but they say that existing arrangements with other companies prevent an alteration being made; 9164–9166. 9172, 9173. There has been no alteration in the classification since railways established; 9169–9171.

SMITH, MR. JOHN—*cont.*

SMITHELLS, MR. JAMES. (*Analysis of his Evidence.*)
Is traffic manager of Lancashire and Yorkshire railway; 12,951. Has read the evidence of the several gentlemen complaining of inequalities of charges from Liverpool as compared with other places; 12,952, 12,953. States that company have spent upwards of 2,000,000*l.* in providing stations and lines in Liverpool; are deeply interested in prosperity of that port; have been and are anxious to develop the traffic, but feel bound also to consider claims of other ports and places. Why low rates are given to Newcastle, Hartlepool, Hull, and Grimsby; discussion as to whether they are to the interest of the company or the public. A uniform mileage rate would have the effect of excluding traffic from ports and places, and would give port of Liverpool and other west coast ports a monopoly of the trade. None of the witnesses have stated that Liverpool rates are excessive; a principle of admitting produce of other ports at low rates has been prejudicial to interest of those towns. Liverpool people would like these low rates raised. Delivers in Table showing station accommodation in acres, and the cost incurred; half the space provided is available for increasing requirements of the traffic. Circumstances which delay the rapid delivery of goods. Reason why terminals are higher in Liverpool. Witnesses in error in saying that 1*s.* per ton is sufficient to cover cost, as in Liverpool alone it is above 2*s.* Pays 1*s.* 3*d.* for general goods and 1*s.* for grain for carting; would be glad if Mr. Clark would undertake it for 10*d.* Gives an explanation as to the through rates complained of between Dunkirk and Liverpool and Manchester; 12,254–12,956. 12,961–12,964. 12,975. 13,027. Hands in map showing accommodation provided for traders in Liverpool; gave 200,000*l.* ten years ago for land upon which to build North Docks station. Land in neighbourhood more valuable in proportion; 12,957–12,960. Rates for timber from Hull are higher than from Liverpool; mileage much less; people look at total amount. Traffic more profitable by the shorter route. Loss incurred in Hull traffic has to be made up upon that of Liverpool, but rate charged is within the Parliamentary maximum. Great good results from giving low rates to Hull and other ports; 12,965–12,974. Gives general traffic in tons of the company for goods, coal, coke, and timber in 1858 and 1864. Traffic very large from eastern ports, and is increasing, but does not increase in a greater ratio than Liverpool traffic; 12,976, 12,979. Denies the truth of Mr. Stead's evidence that company obstructed traffic between Saltaire and Manchester or Liverpool by the Colne route, and explains fully that it is their interest to forward as much traffic as possible; if Mr. Stead has complained, it must have been to the Midland Company who have not forwarded it on; 12,980–12,982. Explains Humber agreement as complained of by Mr. Atkinson and Mr. West, and states that it is not adverse to interest of port of Hull, and that company received a net less amount per ton per mile upon traffic between Hull and Manchester than between Hartlepool and Manchester. As to complaints of inequalities of charges, witness states that rates generally between Hull and Hartlepool, and Lancashire and Yorkshire towns are the same. Benefit that results from Hartlepool rates being same as those of Hull. Have met views of Rochdale traders with respect to goods traffic; are still dissatisfied. Certain complaints were made by Tradesmen's Association of Rochdale in January and May last; some of those of January were found reasonable and remedied, remainder under consideration; the complaints of May unfounded. Explains fully what has been done, and reads correspondence and puts in Tables in support of statement; 12,987. Fares between Manchester and Rochdale are not higher than on other portions of line. Why company did not accede to demand for reduction of fares. Reason low rates are given to Oldham traffic and traffic between Bury and Manchester. Number of trains between Rochdale and Manchester carrying third-class passengers and fares. Thinks it is prejudicial to railway companies to run third-class carriages with all trains. Generally speaking trains to which third-class carriages are not attached run more quickly; those between Manchester and Rochdale and Manchester and Bury are express trains. Gives average distance travelled by passengers, and average price paid; number carried last year. Majority

SMITHELLS, MR. JAMES—*cont.*
of third-class passengers were working men and small shopkeepers; 12,989–13,002. 13,227, 13,228. Explains arrangement entered into between four railway companies and Rochdale canal; was leased for 21 years, and tolls raised; why lease entered into. Mr. Wilson, though apparently against amalgamations, has made two or three attempts to bring about amalgamations of Aire and Calder Navigation with other companies; 13,003. 13,028–13,035. As to that gentleman's statement that where railway company obtains possession of a canal the tolls are raised to a sufficiently high point to prevent traffic passing, witness admits that raising the tolls has had the effect of placing traffic upon railway which probably might have been carried by canal. Finds that traffic can be worked more advantageously upon railway; ultimate result will not be that it will be worth while to hold canal without working it at all. Company carry themselves by canal, and also allow public to carry; tolls fixed by Act of Parliament; do not exceed them; in some cases they are less. The Manchester and Bolton canal is the only one that belongs to Lancashire and Yorkshire Company. Have an interest with other companies in the Rochdale and Leeds and Liverpool canals that have been leased for a term of years. Leases can be renewed; 13,004–13,014. Mr. Wilson is wrong in saying that companies lose upon considerable portion of goods carried upon railways and canals, but make up by profits on passenger traffic. Some of goods traffic unprofitable; motive which induces companies to carry it. Taking it altogether traffic in line not a losing traffic; 13,015–13,026. If uniform mileage rates were adopted on one railway must be adopted on all. Objects to system, as it would drive traffic upon shortest line; 13,036–13,041. Would not object to a uniform mileage where there are competing routes if distance taken as crow flies; discussion thereon; why it would be unfair to adopt the system where route circuitous, and no competition. In many cases, from nature of the country, a direct route between two places impracticable; 13,042–13,046. 13,052–13,059. 13,062–13,069. 13,071. A uniform mileage rate would not be fair in the case of those lines which either cost much or little to make. In fixing fares companies disregard the cost of the railway; in many cases they are lower on the costly lines, because these lines are generally between places in thickly-populated districts; 13,047–13,051. Contends that competition cannot exist if a uniform mileage rate is charged; 13,060, 13,061. Company some years ago applied to Parliament for an advance upon maximum rates, both for goods and passengers, on ground of line being costly and unprofitable. Charge nearly maximum rates from Burnley, Blackburn, Accrington, and Colne. Charge less than maximum between Liverpool and Manchester, and between Rochdale and Bury, Bolton, Oldham, and Ashton, a very low rate. Considerations which guide companies in fixing rates; 13,070. 13,072–13,086. In the case of there being two routes to a place (say London to Cambridge), companies both charge same fare; witness thinks that company should be allowed to charge more to a place short of Cambridge than to Cambridge, providing fare did not exceed maximum allowed by Act, 13,087–13,089. Reason why witness is strongly opposed to any court of appeal or tribunal being established for purpose of modifying rates or investigating complaints, as courts of law, already established, afford ample protection to the public. Do not have very many disputes to settle; majority of cases settled in county court; is a very expeditious and inexpensive process. Company generally acquiesce in decision of the court; is very easy to take disputes respecting rates before county court; 13,090–13,095. 13,097, 13,098. Very few packed parcels forwarded over line; 13,096. Have ledger accounts for the carriage of goods with an immense number of customers; a month's credit given; 13,099–13,101. Company receiving a parcel can only take the carriage upon it to any other station where they have through rates; have them to almost all the important stations; 13,102–13,109. Is a scale for parcels according to distance and weight; 13,110–13,114. In consequence of the immense number and constant alteration of rates and fares it would be impracticable to publish them. Any person applying can learn rate upon any article, and whether it is same as charged to others. Special rates are very seldom given, and then only in exceptional cases such as in the case of a builder requiring stone to be conveyed for building a bridge or viaduct for railway company; is bound to carry for all persons alike where circumstances are the same. Is not necessary that special rates should be published; 13,115–13,129. Explains how it is that there are about 2,000,000 rates; unless uniform mileage rates were adopted, they could not be reduced in consequence of demands of the public; tendency is to increase. Not necessary to publish passenger fares between every station on line. Is not aware that London and South-western do so; reason why it would be necessary to have a great many more classes if uniform mileage rates were adopted; 13,130–13,149. Has no complaints from customers respecting charges for terminals; do not inform them, nor have they any means of knowing what is for terminals and what for carriage. Why witness objects to terminals being fixed by Act of Parliament. Companies are allowed to charge a reasonable sum; public can appeal if they think it otherwise; is not an expensive process; would not be difficult for court to settle; might try case in county court; 13,150–13,162. Cartage does not come within denomination of terminal; the "reasonable sum" applies to station service only, as porters' labour, shunting at station and marshalling trains, putting tarpaulings on goods, and warehousing; 13,163–13,172. Gives terminal charge for goods where maximum rates are imposed, as at Burnley. Collection and delivery are included in Burnley terminal. Do not adopt clearing-house rate of terminal in fixing local traffic. Charge for collection and delivery varies at Liverpool; 13,173–13,181. Considers that interest on capital expended on sidings, rails, sleepers, and land, and also maintenance of that part of the permanent way, ought to be covered by terminal charge; 13,182–13,185. Company has a large amount of excursion traffic; thinks it pays very well; it does not interfere much with ordinary passenger service; occasionally they are less punctual. Issue large number of return tickets, but not to third-class passengers. Difficult to prevent return tickets being transferred; does not think companies would be much injured if transfer allowed, or that people would take them in order to sell them at one end of journey. Does not think it would be better to abolish return tickets and charge a less sum for the single excursion. Convenience of return tickets; 13,186–13,207. Third-class carriages are run morning and evening, and to some places more frequently; is an increasing traffic; second-class traffic also increasing. If greater facilities were given to third-class traffic does not think it would much increase. Why return tickets are not given to third-class traffic. In some cases fares are considerably lower than 1*d.* per mile. Has omnibus competition between Bury and Manchester; 13,208–13,215. A general reduction of passenger fares would not be followed by any gain. Nature of an experiment tried between Bury and Manchester and between Manchester and Rochdale; present impression is that it does not answer; discussion as to whether experiment was a fair one considering that reduction has not been adopted with all the trains to those places; 13,216–13,226. Fares are unusually low; have reduced them gradually, and have always been satisfied with the result; 13,229–13,235. Would not take any dividend if fares were reduced 50 per cent. as company would not be recouped by increase of traffic. Cannot give reduction during last 20 years, but have not reduced them 50 per cent.; gives reduction from 1860 to 1865. Tendency to meet public wishes by reducing; 13,236–13,240. Hopes that provision will come into operation, that where dividend of company averages 8 per cent. for three years, tolls and fares will be subject to revision by Board of Trade, Would prevent company dividing more than 8 per cent. Has not considered how Act might be evaded. Thinks the Act would allow them to convert their mortgage debt into shares, so as to increase their capital and allot it amongst shareholders. Last year's dividend was 5*l.* 7*s.* 6*d.*, a long way from maximum per-centage; 13,241–13,253.

SMOKE FROM LOCOMOTIVES:
Statement from Mr. John Miley in regard to the emission of smoke from locomotives; *App.* Y.

SMOKING:
Suggestion by Bristol Chamber of Commerce that smoking carriages be set apart in each train on principal lines, and that smoking in other carriages be strictly prohibited; *Low* 13,882.

SOLDIERS:
On Belgian railways are conveyed at half-price; *Fassiaux* 3163, 3161.

SOUTH-EASTERN RAILWAY:
Complaint that company will not undertake the delivery beyond their own limits, within a specified time,

South-eastern Railway—*cont.*
of military stores from Woolwich; inconvenience and expense consequent thereon; *Gordon* 13,559–13,633.
Company never refused to carry military stores through, but having no railway at Portsmouth they cannot deliver them the same day or the day following that upon which they receive them at Woolwich. There would be no difficulty in making through arrangements with other companies for Government stores if required, but they have never been officially requested to do so; *Eborall* 16,087–16,101. Coal traffic into company's district is too small to warrant extensive through arrangements, but for ordinary traffic they have them with all the lines; *ib.* 16,102–16,117. With respect to complaints on this subject, witness states that company were compelled to abandon through rates to some stations on account of the very small amount of traffic; *ib.* 16,118–16,121. In one year 15,000,000 passengers were carried by company on 291 miles of railway; *ib.* 16,188–16,191. Very little goods or mineral traffic; *ib.* 16,225, 16,226. Rates higher than on French railways; *ib.* 16,227. Comparison of fares with those of some other companies; *ib.* 16,229–16,232. Unduly heavy amounts paid by company as compensation for accidents; suggested remedy; *ib.* 16,223–16,246. Particulars of rating of railway; *Teulon* 16,434 *et seq.*
See also Gordon.

Special Rates. *See* Rates and Charges, &c., 2.

Special Trains:
A charge so high as to be almost prohibitory is made, to avoid disruption of traffic that frequent special trains would cause; *Page* 15,043.

"Speculative Companies:"
Very objectionable; reasons; *Hancock* 7610, 7611. Capital of companies should all be brought to credit in cash; *ib.* 7621. Owing to desire shown by companies to obtain possession of an entire district, speculative companies get up unprofitable lines on the expectation of their being bought up; *Wilson* 10,113.
Speculative lines projected between solicitor, engineer, and contractor on improper terms, for which there is really no capital, and generally are never intended to be made; *Harrison* 15,313, 15,314. Witness considers these very disreputable; their failure may in the end put a stop to them; *ib.* 15,317. 15,320. Many of these lines are promoted in order to be sold to large companies, who, if they buy them, generally do so at a great loss; *ib.* 15,321–15,323. One good result of amalgamation and of greater experience is that the large companies are beginning to refuse to buy them; *ib.* 15,324–15,326. Fares would now be lower if Parliament had refused many of these lines; *ib.* 15,327.
Speculative lines not on the whole objectionable; *Bidder* 16,744, 16,745. 17,162 *et seq.*
Objections to "contractors' lines;" contractors should never be paid in shares; *Hancock* 7610 *et seq.*
The greatest difficulties in the way of through arrangements between companies are the absurd contractors' lines, which have been forced upon them; *Gooch* 17,509. Witness would like to see the old system of proving subscription contracts revived, to check these lines; it cost Great Western Company 40,000*l.* in 1865 to fight them in Parliament. Large companies have hitherto been too ready to take them up after they have obtained their Acts, but they are making up their minds not to do so in future; *ib.* 17,568–17,570. Attendance of staff of the great companies on Parliamentary Committees to oppose these schemes entails great loss on companies; *ib.* 17,577.

Speed. *See* Expedition.

Spence, Mr. C. S. (Lord Ashtown's colliery agent):
Statement showing some of the disadvantages that senders and consumers of minerals have to contend with in consequence of the regulations of railway companies, with suggestions for the removal of excessive charges, &c.; *App.* O.

Staffordshire Iron Trade. *See* Iron Trade of Staffordshire. North Staffordshire Railway and Canal.

Staffordshire Potteries:
Witness, a large manufacturer, who represents views of Staffordshire Potteries Chamber of Commerce, of which he is chairman, puts in a statement showing injury caused to trade of the district by absence of competition and amalgamation of railway and canal interests, &c.

Staffordshire Potteries—*cont.*
Hollins 11,270–11,274. 11,319. Instances and particulars given of high rates charged, in comparison with other districts; *ib.* 11,275 *et seq.* Previous to opening of North-western railway, charge for conveying earthenware to London was 3*l.* 3*s.* per ton; it is now 30*s.* Rates from Liverpool remain the same, although there is canal communication. North Staffordshire Company have bought the Trent and Mersey canal; they impose high tolls by railway up to junction at Crewe, in order to drive traffic on the canal. High rates are brought up by heavy terminals; no terminals on the canal. Rates charged for clay by London and North-western from Birkenhead to Crewe, and those charged by North Staffordshire railway from Crewe to Stoke. Value per ton of clay and flint; *ib.* 11,320–11,328. 11,334. The public as well as the manufacturers would gain if the latter had two companies to treat with, to ensure competition, and keep rates fair and reasonable. How the four attempts made to introduce competing lines into Staffordshire have been defeated. Bills have passed the Committee of the House of Commons three times. No present intention to renew the attempt. If either line had passed, grievances complained of would have been remedied. Public get the benefit of the Newcastle low rate; Staffordshire Potteries cannot compete with manufacturers there; *ib.* 11,336–11,338. 11,341–11,346. 11,352, 11,353. 11,355, 11,356. 11,387. Reason why North Staffordshire terms offering to reduce rates if a certain competing line were withdrawn were accepted; *ib.* 11,339, 11,340. Reason why it would not be unfair to Newcastle potteries if rates were reduced; *ib.* 11,377–11,379. Witness delivers in table of tolls charged by various canal companies between London and Staffordshire Potteries, which shows that while canal companies to the south have largely reduced their tolls, owing to competition of the London and North-western railway, the Trent and Mersey Canal Company have made no reduction; *ib.* 11,398.
North Staffordshire Railway Company paid but three times the original cost for the Trent and Mersey canal, not nine times, as stated; *Morris* 14,292. Witness denies that company endeavour to force traffic on canal rather than on railway; *ib.* 14,301–14,303. Company's interest is to keep canal charges down; *ib.* 14,307. Statement of rates to Liverpool, in answer to Mr. Hollins's complaints. Table of freights given in, showing reductions over 33 years; *ib.* 14,339. Witness gives in statements of traffic before and after the opening of the North Staffordshire railway, intended to prove "that instead of forcing the traffic on the canal, as "alleged by Mr. Hollins, the weights carried by railway "are constantly increasing;" *ib.* 14,341. Witness gives in table of rates for pottery-ware from Newcastle, Knottingley, and Stoke, also from Bristol, Worcester, and two other places; *ib.* 14,310. Mr. Hollins selected a few only, which suited his argument; *ib.* 14,311. A great many collections and deliveries have to be made for these articles; *ib.* 14,311. Answer to Mr. Hollins's complaint as to carriage of Minton's tiles. Witness is quite at a loss to know why he should complain. Company do their best to develop the district, and have carried on that gentleman's trade to the satisfaction of firm with which he is connected for many years; *ib.* 14,3–2–14,317. Again, Mr. Hollins is in error in stating that company's charges are the same where there is no expense for collection and delivery. Witness is astonished at the number of errors he has fallen into. He has frequently been put right before Committees of both Houses, but still maintains his statements. In 1866 he quotes a table of 1862; "he might just as well have quoted one "of 1797, which would have been just as applicable;" *ib.* 14,318–14,320. Witness gives in an entire list of the original tolls, and the reductions which have since been made; *ib.* 14,320. Company do cartage so reasonably that manufacturers never cart their own goods. For short distances company charge maximum toll and a terminal as well; *ib.* 14,321–14,331. In disproof of Mr. Hollins's complaint that company retard development of district, witness states that he knows of no district that has become so rapidly prosperous; *ib.* 14,340. The census shows an increase in population of these potteries as compared with other potteries which Mr. Hollins states are competing with him; *ib.* 14,351. Considerable increase in the pottery trade in china-ware, but bulk of increase is in earthenware; *ib.* 14,361, 14,362. To induce working population to travel, very cheap trains are run at frequent intervals between the pottery towns; *ib.* 14,353–14,356. Large numbers travel to and from their work by these trains; *ib.* 14,359. 14,363–14,368. Excursion trains from agricultural districts to Manchester;

STAFFORDSHIRE POTTERIES—*cont.*
ib. 14,357, 14,358. Witness strongly advocates lower third-class fares; *ib.* 14,369.

STATE RAILWAYS:
Regulations for the working of the Prussian State railways; *App.* CB. Statement laid before the Chamber of Representatives on March 7, 1865, concerning tariffs for passengers and luggage on the railways of the State; *App.* N. Official collection of tariffs for the transport of goods, &c. on State railways of Belgium; *App.* AS.

STATISTICS:
Affecting the value of certain railways in Ireland; *App.* AQ.

STEAD, Mr. CHARLES. (*Analysis of his Evidence.*)
Is a member of the firm of Salt & Co., spinners and manufacturers of alpaca, &c., at Saltaire, near Bradford; 437–440. The four railway companies and the canal companies entered into a lease of the canal tolls, which have since been increased from ¾*d.* to 1½*d.* per ton per mile from Liverpool to Bradford, the railway companies charging the same as the Canal Company; 441. 448. 465. Has more traffic in bringing raw materials than in sending away manufactured produce; 449, 450. Gives instances where the rates have been increased; 451–454 There is no canal to London, goods are sent either by railway or by sea to Hull and Grimsby, and from thence by railway; 455. There were formerly a great number of trading boats and carriers on the canal, but now only those of the lessees. Thinks the Midland Railway Company, which only had about 25 miles to Liverpool, has withdrawn from the agreement; 456–459. 493. 612, 613. Before the combination the rate was lower to Bradford. It is more to Saltaire than to Bradford (four miles less); 459–462. Goods are taken by the Midland Railway to Colne, and thence to Liverpool; 469–471. Saltaire was chosen, as competition was expected between the railway and canal; 472. The canal dues are so heavy, that goods cannot be carried at the old rates; 473. 614–616. The maximum rates fixed by the Act have never been exceeded, but previous to arrangement were only half. Does not really pay double, as an agreement has been made with the railway company; 474–487. There would have been two routes to Liverpool if the two companies had not amalgamated. Are paying more for the carriage of goods, and seriously inconvenienced in point of time; 488–491. 519. The Midland Company has about 46 miles of the Sheffield route—36 from Leeds to Sheffield, and 10 from Leeds to Saltaire; 492–496. The same rate charged for the shorter route as for the longer. Instead of goods going by the loop line from Penistone, they are taken to Sheffield, over the Midland to Leeds, and thence to Saltaire; 497–505. The Lancashire and Yorkshire select the longer route in order to get all the freights. By their agreement this company loses all the Manchester traffic, amounting to 70,000*l.* a year; 506–509. The firm opposed the amalgamation of the two companies; 510–514. There has been no serious difference in the rates since amalgamation. Gives rates to Manchester; 516–518. 520, 521. The carriage does not make a material difference in the price of cotton warps, but the cost is more for wool, oil, soap, &c. Gives the rates at which certain goods are carried; 519–531. After construction of railway, the Canal Company considerably reduced their rates, which advantage ceased upon amalgamation; 532–537. Complains that companies should have the power of leasing canals and amalgamating competing lines, but does not see how Parliament could prevent understandings and agreements being entered into; 538, 539. Before amalgamation the Canal Company paid a good dividend. 100*l.* share has been as high as 800*l.*; 540–542. Shows that if no amalgamation had taken place the rates would have been much lower. Discusses the effect of the amalgamation; 543–550. In consequence of the Lancashire and Yorkshire Company leasing the tolls on the Rochdale Canal, the dues were considerably increased; 551–556, 561, 562. Parliament should compel railway companies to make public intended amalgamations, &c.; 557–560. States cause of delay in the delivery of goods, and gives rates by different routes; 563–583. Suggests that when the company's lease falls out Parliament should prevent a renewal; 584, 585. Rates are lower since construction of railway, but for want of competition the benefit has not been so great as it should have been. Gives illustrations; 586–598. The principal traffic in manufactured goods is from Manchester, and in raw materials from Liverpool; 617–620. Their goods are sent to Bradford in an unfinished state, and are then sent to Hull, London, or Liverpool; 621, 622.
See also ALLPORT, Further Examination (1.) SMITHELLS.

STEAMBOATS:
Railway companies should not be allowed to run; *Sturge* 840; *Atkinson* 965. Witness is of opinion that steamboat traffic across Irish channel is not in a satisfactory state; *Hemans* 3830. Putting on powerful steamers by railway companies in connexion with Irish ports would be beneficial. The London and North-western is the only company that has power to expend capital in that way, and they had considerable difficulty in getting sanction of Parliament; *ib.* 3949–3954. Railway companies participate in property of steamboats between Fleetwood and Belfast, and between Morecambe and Belfast. Not so well managed as they would be in the hands of railway companies; *ib.* 3955, 3956. If Great Western Company had power to put on steamers between Waterford and Milford, the service would be better. Does not know if they applied to Parliament to get this power; general impression that it is difficult to obtain. Shareholders can stop companies from embarking in such undertakings; *ib.* 3957, 3958. 3985, 3986. Would introduce competition between railways and independent steam ship companies; private companies must either improve their accommodation or succumb. The Waterford Company, with their numerous fleet of steamers, and also the Dublin Company, would be able to hold their own against any railway companies' boats. Places to which Waterford Steam Company ply; *ib.* 3959–3967, 3983, 3984. Not sufficient sea service between Waterford and Bristol, *ib.* 3967, 3968. An efficient service similar to that which exists between Holyhead and Dublin would stimulate the export trade all over the country, *ib.* 3969–3982. Would make steamboat traffic between English and Irish ports a combination between English and Irish railways, so as to work together; *ib.* 3970. English companies should be able to put on steamers in connexion with Irish railways, so as not to give an exclusive monopoly to any one line; *ib.* 3972. Might be profitable for a railway company to put on steamers when it would not pay a private company. Is not aware of any difficulty in the way of through rates between Waterford and Wales; *ib.* 3973, 3974. Places where it would be advantageous to establish steamers in connexion with railways where they do not exist, or are insufficient; discussion thereon; *ib.* 3975–3981. 3989–3992, 3994. Difficulties in the way of companies indirectly establishing boat communication; *ib.* 3993. Thinks Midland Company are only interested in the boats from Morecambe to Belfast; *ib.* 3995, 3996. Would establish a system of through booking from every port in Ireland to every port in England. There is booking through Dublin and may be some in the north, there is some also by Waterford, but service is not good; *ib.* 3997–3999. Passage from south of Ireland to Fishguard; *ib.* 4000, 4001. Compares difference in point of time and distance, supposing there was a good sea service between Waterford and Milford, of a journey from London to south of Ireland with route by Holyhead and Dublin; *ib.* 4002–4006. Could hardly expect boats of equal power and speed to those running between Kingstown and Holyhead; *ib.* 4007–4010.
Great Midland Company have an arrangement with Great Southern and Western Company by which steamers are prohibited from plying upon any navigation; *Ennis* 4211. Opposition of railway and steamboats between Dublin and Cork; *Haughton* 4670. Interests of London and North-western Company injured through diversion of Irish traffic to suit Irish steamboats; *Cawkwell* 5058 *et seq.* Steamboats run by London and North-western Company; *ib.* 5118–5120. Instance of steamboats purchased by a railway company and kept idle to prevent competition; *Perry, H. R.* 6863.
See also WATER CONVEYANCE.

STEEL:
Advantages of use of, in construction of engines; *Sturrock* 17,832 *et seq.*

STEEL RAILS:
Cost of, as compared with iron, 8*l.* or 9*l.* to 13*l.* or 14*l.* London and North-western are now trying some. An important question, but not yet solved; *Clarke* 12,932–12,936.
Witness think that the most likely way of reducing working expenses will be by the use of steel rails; *Eborall* 16,220.
Steel rails are superior to any other, and should be adopted wherever traffic is large; *Bidder* 17,039. Cost

STEEL RAILS—*cont.*
is about 13*l.* a ton, and they are practically indestructible; *ib.* 17,087, 17,088.
Discussion of effects of use of steel rails on cost of working; *Gooch* 17,401–17,411. Advantages of use of steel rails; *Sturrock* 17,837, 17,838.

STEWART, MR. CHARLES EDWARD. (*Analysis of his Evidence.*)
Was secretary to London and North-western Railway Company for nearly 20 years; ceased to be so at commencement of this year; has never been connected with any other railway; 14,662, 14,663. Accompanied a deputation from North-western board in 1863 for purpose of inspecting some of the principal stations in Paris and Marseilles; 14,664. First-class passengers in England travel long distances at a greater speed and at about same fares as in France; by ordinary and third-class trains French rates are lower. Rate of speed of express trains in England and France. Stoppages more frequent in France; reduces speed by about four miles an hour; actual speed while train in motion much less than in England; 14,665–14,673. Weight of luggage allowed in England and France. Gives fares, weight of luggage allowed, and number of trains a day, from several places in England and France, which shows that second and third-class passengers are much better off in France than in England. Thinks that in consequence of there being generally no arrangement as to return tickets in France, English people who can avail themselves of these tickets travel cheaper. In what way there is a greater accommodation in France. First-class carriages on Great Northern and North-western are quite equal to those of France; not much superiority in the second-class carriages; did not observe the third. Extra luggage in France charged according to distance; 14,674–14,688. 14,699, 14,700. Gives average speed of trains between certain places in England and France; third-class about the same; in advance of the French as to first and second; 14,689–14,692. No third-class trains between Glasgow and Aberdeen; third-class passengers are carried by the nine o'clock fast trains. On continent a third-class passenger would not be allowed to travel by express trains; 14,693–14,698. States French system as to time allowed for delivery of goods; if same system in England, would be five days allowed from London to Birmingham; the broad-wheeled waggons used to take three days; 14,701–14,703. Cannot speak as to the goods rates in France as compared with England; they have a different charge for light goods; practically same in England; 14,704–14,708. Thought French mineral rates moderate, but very difficult to compare them with the English; 14,709, 14,710. French Government have lent great aid to railways. English railways represented by a system of unrestricted competition, in France system based on monopoly regulated by State, who exercise a direct control of railways. Power of the minister as to alteration of rates; differences between companies are submitted to him; 14,711–14,716. Does not know whether French railways are effected by water competition; 14,717. French government guarantee the railways, and have a reversionary interest in nearly all; several Parisian railways not under Government control; 14,718–14,720. 14,724. Original French railways pay much better now; those recently constructed are likely to be a burden to the Government; 14,721–14,723. None of the French railways entirely in possession of the Government; boards of managers similar to boards in England; 14,725. An establishment of railway monopoly would not be to interest of public or shareholders; course matters take when companies compete, and ultimate effect competition has upon the rates; reason North-western abandoned express fares throughout whole system; has been an advantage to public and no injury to company; 14,726–14,731. 14,735, 14,736. Higher charges were continued by mail trains to Chester by Irish express; 14,732–14,734. Public derive advantage from having two different lines between same point when trains start at different hours. Discussion as to whether, by companies competing between valuable points, such as between Birmingham and London or Manchester or London, they do not sacrifice the convenience of intermediate places; on the whole advantages have resulted from competition; 14,737–14,745. 14,755. Why free trade as applied to railway system would be impracticable. Reason why in 1851 witness advised a reduction in rates; reduction not made; did not advise a uniform mileage rate; 14,746–14,754. 14,783–14,785. If competing lines had not been made, companies would have been in a position to make considerable reductions in the rates; doubts whether there would then have been the same economy in the working. Parliament might have insisted that with every increase of dividend there should follow a reduction in rates; is not aware that Parliament possesses authority to reduce rates at any time, irrespective of dividend; discussion thereupon; 14,756–14,759. 14,762–14,764. 14,767–14,777. Under what circumstances moderate charges are more profitable; 14,760, 14,761. Has heard that principle was laid down in first Liverpool and Manchester Act that when dividend amounted to 10 per cent. a corresponding reduction should be made in the rates; does not know whether principle has been evaded; 14,765, 14,766. Companies coming before Parliament with agreements for exchange of specific rates and terms are looked upon with suspicion, as if scheme must be injurious to public. With regard to railway legislation, would much prefer having a permanent tribunal of the highest character appointed either by Parliament or the Crown, who should have power to sanction the making of new lines, subject to veto of Parliament; question discussed; 14,778–14,782. 14,845–14,860. How a considerable reduction might be made in the cost of working railways; 14,786–14,793. 14,829–14,832. If all railways belonged to one proprietor, waste in the cost of working would be prevented; 14,794. Should aim at having competition between markets by means of railways rather than between railways; 14,795. Gives statistics showing increase per cent. in receipts from merchandise and passengers from 1850 to 1864, which shows that a great increase has taken place in mineral and second and third class traffic. Thinks increase upon third class is capable of being still further enlarged. A reduction of second and third class fares should be left to judgment of managers; must depend upon local circumstances. Result of an experiment tried between Shrewsbury and Wellington; 14,796–14,801. Station masters are now all charged rent; 14,802, 14,803. Is in favour of a general reduction only at certain seasons of the year. Permanent low fares in an agricultural district would not be beneficial to companies; are as low as they should be. If matters left to themselves, second and third class traffic will largely increase; 14,804–14,808. Why proper arrangements between companies for the forwarding goods and passengers are not made. Not more delay at junctions than could be justified. Exception now for one company to make arrangements on purpose to inconvenience another; 14,809–14,811. Through booking now generally adopted, would be great jealousy if it were made compulsory; mentions a case that occurred illustrative of evils that might arise if compulsory through-booking established; 14,812–14,815. Amalgamation might be carried further with great advantage; why it should be done while railways are in a tolerably prosperous condition; mentions course pursued by Shrewsbury and West Midland lines to force Great Western to purchase them; these lines had attempted to amalgamate previously; 14,816–14,820. States that in order to send through carriages to certain towns accommodation is provided in the trains for nearly three times the number that actually go; cost of conveying empty carriages nearly as great as full. Would not suggest anything like filling up the carriages; public fee the porters to keep places. Has very small intermediate traffic. Express trains have generally fewer unoccupied seats; 14,821–14,828. 14,833–14,837. Carriages are put on at the discretion of station master. Waste arises from having to send carriage to so many points; would be avoided if passengers would change at branch lines; so doing would tend to greater punctuality; 14,838–14,840. Carriages are dropped on North-western; no means devised to take up a carriage; 14,841–14,844. General opinion that considerable advantage has arisen from appointment of referees before whom Bills are now taken; 14,861, 14,862. Believes that a much larger amount of railway accommodation will be hereafter required by country; not much room for additional through communication, but for cheap single lines between points throughout country. A larger amount of accommodation could have been afforded from expenditure incurred if duplicate lines had not been granted or lines had been made less costly; 14,863–14,867. 14,872. A narrow gauge has been suggested for the hilly parts of Wales, but inconvenience would arise from break of gauge; in Wales there is a 2-feet gauge which does very well for slate quarries; have them also in India and Australia; 14,868–14,871. Causes which operate in preventing companies making additional lines which public convenience really requires. Was an agitation about three years since among the North-western shareholders, when dividend decreased, to

STEWART, MR. CHARLES EDWARD—*cont.*
stop all expenditure; decrease in question not due to expenditure of capital, but abstraction of traffic, reduction in receipts, and an increase of expenditure; 14,873–14,876. Working expenses on North-western were formerly 27 or 28 per cent. are now 46 or 47; every 10 per cent. effects dividend to amount of 2½ per cent. Believes that a reduction of 10 per cent. might be made upon general working expenses throughout the kingdom; or a total saving of 3,400,000*l.* Result would be either that charge to public could be considerably reduced or dividend considerably augmented; would like to divide the advantage. Cost of conveyance of minerals could not be reduced so much as passengers. Coal traffic worked economically and on commercial principles; would like to see same principle extended to conveyance of passengers and goods; 14,877–14,884. 14,900–14,908. Thinks evils of competition have for some time outweighed the benefits; is also the opinion of the old companies and public who understand question; 14,885–14,888. A reduction from three to two classes would not materially affect amount of waste room in a train; would not be advisable to do so; 14,889–14,891. Inequalities of rates would come more under notice of manager than secretary; 14,892. Why uniform mileage rates would be inadmissible; discussion thereupon; 14,893–14,899. Cannot give any information as to rating of railways; 14,909, 14,910.

STOCKTON AND DARLINGTON RAILWAY:
Company is amalgamated with North-eastern Company, except as to management; *MacNay* 13,962. Share of management respectively held by each Board; *ib.* 13,972–13,980. 14,056–14,059. On main part of the line, there are about 14 passenger trains each way daily; none but mail trains on Sunday; *ib.* 14,019, 14,020. Company carry about 1,000,000 passengers annually; particulars of fares; proportion of labouring population who travel; *ib.* 14,003–14,009.

Mr. Wooler is mistaken in supposing that directors or other parties connected with company have any facilities not shared in common with all the company's customers; *ib.* 13,966–13,969. Mr. Wooler's trade has increased more than that of any one else on the line; *ib.* 13,970. Manner in which complaints are investigated; *ib.* 13,971. Originally rebate was allowed to coal owners who sent large quantities, though even then smaller ones could unite and get the benefit of it, but system is now abolished; *ib.* 13,981–13,987. If a colliery owner applied for a lower rate, with a view of endeavouring to obtain a large foreign connexion, company might listen to him; *ib.* 13,988, 13,989. Answer to Mr. Wooler's complaint, as to being prevented from sending coke to Glasgow; *ib.* 13,990–13,993. Company charge ¾*d.* per ton per mile for coke, and find the waggons; *ib.* 13,993–13,995. Company adhere to same rate for coal and coke, though a waggon that carries 3 tons of one will only carry 1¾ of the other; *ib.* 14,012. Dividend paid by company; *ib.* 14,013. Answer to Mr. Wooler's complaints as to supply of waggons, and principles on which company act in this matter; *ib.* 14,016–14,018. Denial of Mr. Wooler's statement, that company give undue preference to other colliery owners, and that "mineral manager was part owner of a colliery," he having quitted company's service about that time; *ib.* 14,021–14,024. 14,027–14,031. No objection to an officer of company being part owner in a colliery, as they would not give him any undue preference; *ib.* 14,025, 14,026. Witness thinks that Mr. Wooler has got more than his fair share of business; companies "should have a view to equality" between their customers; *ib.* 14,032–14,036. Impracticability of coal owners providing their own waggons, and advantage of company doing so; *ib.* 14,033–14,039. Company have about 17,000 or 18,000 waggons, those of 8 tons being the largest, and are still increasing the number; *ib.* 14,041–14,043. 14,048. Purposes for which the various sized waggons are used; *ib.* 14,043–14,047. Although several of the directors are interested in collieries, they get no undue preference; *ib.* 14,050–14,056. Explanation as to Mr. Wooler's complaint regarding short supply of coke for furnaces in the winter of 1860, to the effect that the frost was so severe that there seemed a danger of a panic at York for want of coals for the poor; *ib.* 14,060–14,065. Company's traffic is gradually increasing; quantity of minerals carried annually by them; *ib.* 14,066–14,069. Company have various rates; reasons for this; the ¾*d.* per mile named above, includes terminals; this sum refers chiefly to coal for iron making; the charge is higher for household purposes; *ib.* 14,070–14,088. It would be difficult to publish rates, but practically any one can know them

STOCKTON AND DARLINGTON RAILWAY—*cont.*
who wishes it; notice is given of alterations; any special rate granted to one would be open to any other; *ib.* 14,089–14,906. A good deal of iron carried by company; *ib.* 14,098–14,100.

STRIKES:
Materially affect passenger traffic; *Harrison* 15,216–15,218.

STURGE, MR. CHARLES DICKINSON. (*Analysis of his Evidence.*)
Is a corn merchant at Birmingham, extensively engaged in foreign grain; 773, 774. Railway companies should not have the power of diverting traffic; the London and North-western Company, by raising their rates, diverted the corn trade from Gloucester (the natural port) to Liverpool, and having the control of the canal, no cheaper transit was available by that conveyance; this for a time much injured the Birmingham trade. The opening of the West Midland line, however, brought the rates down to the old level; but a combination might at any time raise them again; 775–784, 805, 806. Railways having compulsory powers to take land, witness thinks they should do their utmost to increase the value of the property through which they pass. The Great Western Company having given better local accommodation than the Midland, has increased in value the property near it; 785–804. The terminal charge at Gloucester should be less than at Liverpool, as the merchants there load the trucks themselves; 807–814. Witness believes it to be of little use for private persons to oppose railway bills, as the expense is enormous, and the chance of getting restrictive clauses inserted but slight; whilst on the other hand, when local interests require a new line, there is the greatest difficulty in obtaining it if opposed by one of the great companies. In illustration cites the case of the line from Birmingham to Stourbridge; 815–838. Witness objects to railway companies owning dock or steamboats, that being a temptation to divert traffic; 839–843. Uniform mileage rates should be compulsory over every complete railway, and, if practicable, throughout the country. There should be some body to whom an appeal would lie, to ensure the carrying this out; this body might also have power to modify rates and terminal charges under special circumstances; 845–867. Companies might be allowed to reduce rates uniformly over their whole system; 868–873. Where two companies run between the same places, one line being longer than the other, the rates might be allowed to be the same; 874–877.

See also ALLPORT, Further Examination (1.) GRIERSON.

STURROCK, MR. ARCHIBALD. (*Analysis of his Evidence.*)
Is locomotive superintendent of Great Northern Railway; 17,764. States various elements constituting cost of running trains in the locomotive department. Cost of engine greatly determined by the amount of work it does. On Great Northern average for 10 years for working, maintaining, and renewing an engine has been 8¼*d.* per train mile; increased in 1865 to 9½*d.*; this sum does not include interest on original cost of engine; increase mainly due to rise in price of labour and fuel. Great Northern are gradually giving up coke and taking to coal; 17,765–17,784. 17,789–17,792. 17,865. Price of engines increased owing to the great demand for them; 17,785, 17,786. Everything expended upon an engine after it has once been purchased by capital, and money expended for new engine, is charged to revenue; 17,787, 17,788. Difficulty in keeping the accounts so as to be able to separate cost of engines for passenger trains from those of goods and minerals trains; gives cost of each on two lines and in London district; 17,793–17,800. How train mileage calculated on Great Northern; why it is very difficult to form any comparison between railways; would not venture to make an average for all the railways in England; 17,801, 17,802. 17,808–17,814. Engines run 200 miles a day on main line for four or five days each week, which is above the average of other companies; are never more than two days in the shed per week. Goods engines run about 24,000 miles a year; is not economical to run them more than 20,000; they have to spend some months each year in the workshops and sheds; 17,803–17,807. 17,818–17,823. Disadvantageous for companies to contract for locomotive power; 17,815–17,817. 17,828, 17,829. Great Northern practically turn out a new engine every week. Have now about 437 engines, will very soon have 453. An engine should be replaced every 10 or 12 years. Purchase all the new

STURROCK, MR. ARCHIBALD—*cont.*
engines; can only repair and rebuild the old ones; 17,824–17,827. 17,830, 17,831. Are using steel tires in the engines; believes they will last twice as long as iron. An express engine on Great Northern wore out a pair of best iron in 40,000 miles; have got 112,000 miles out of steel; both of them were turned twice; price of each per ton; 17,832–17,836. Have had some steel rails laid down; are told that result is favourable; particular steel used; requires more careful manipulation than iron in applying it to wheels; 17,837–17,841. Are using steel axles, which are preferable to iron; average life of an iron crank axle; precautions taken to prevent accidents from breakage of axles; 17,842–17,845. Are trying steel tires to the tenders; have not yet put them on to the carriages, but believes they will be applied soon; 17,846–17,849. Use of steel will reduce cost of working railways. In what way economy of working passenger traffic would be effected if French system of massing the trains and passengers were introduced; 17,850–17,854. Speed adds very largely to the cost of running trains; thinks a difference between 30 and 40 miles an hour would make a difference in the cost of an engine of 1*d.* to 1½*d.* per mile, and would increase cost in every other account; 17,855–17,857. Reason why witness thinks that cost of locomotive power in France and Belgium (now often greater than in England) will be reduced; 17,858–17,864. Cost of working a carriage and waggon per mile on Great Northern; what cost includes; 17,866–17,871. Cost of a coal train of 35 vehicles about 9½*d.* per mile, or with engine and vehicles about 1*s.* 3*d.*, which sum is equal to 2*s.* 6*d.*, as they run one way empty. Coal trucks a more expensive article than ordinary trucks. Speed of coal trains much more than 20 miles per hour; about 15 the most economical. Coal trains could be worked much cheaper if there were not passenger trains on same line; difference this and reduced speed would make in the carriage of coal per ton per mile; 17,872–17,878. Number of tons carried by coal trains. By making use of tender have increased load 100 tons; have 50 of these tenders at work; would not recommend plan where gradients are as bad as 1 in 200. Length of train witness considers manageable; 17,879–17,887. Loose coupling of waggons quite unavoidable with goods traffic. Goods trains have generally full loads; those called "picking-up trains" necessarily start with light loads; 17,888–17,890. Reason witness thinks that there is no prospect of any reduction in number of goods trains; 17,891, 17,892. Gives figures showing increase in the various items of cost in the year 1865, due in a great measure to rise in price of labour; 17,893–17,896. Cannot give any information as to average number of miles run by carriages and waggons, but it is a comparatively small mileage; 17,897–17,899. Would be a great advantage if all the railway companies were to furnish their returns on same principle; thinks there would be some difficulty in getting their different officers and accountants to agree; such a plan has never been attempted by the managers; general tendency to a better understanding by railway companies on these points than there used to be; 17,900–17,906. Thinks competition for convenience and accommodation is as great as ever it was, but competition from difference in charge not quite as fierce; 17,907–17,911. If Great Northern were to reduce number of carriages there would instantly be a reduction in traffic; 17,912. Hands in various tables showing "Cost of working a train of 16½ " mixed vehicles a mile on Great Northern Railway to " end of 1865." "Statement showing cost per train " mile for locomotive power from 1st January 1856 to " 31st December 1865." "Cost of repairing carriages and " waggons, 1852 to 1865 inclusive." "Value of Great " Northern rolling stock, &c. &c., and estimated value " of shops and sheds on 31st December 1865." "State- " ment of cost of maintaining road, coaching and mer- " chandise, traffic expenses, &c. &c." "Statement show- " ing cost of working trains of various sizes and descrip- " tions." "Calculations showing the cost of hauling a " train of coals with an ordinary engine compared with " an engine fitted with an auxiliary tender;" and " Relative cost of engine with ordinary auxiliary steam " tender;" 17,912.

SUBURBAN DISTRICTS:

SUGAR REFINERS:
Memorial of, and others interested in the commerce of London, to the chairman and directors of railway companies connected with the Metropolis; *App.* CQ.

SULLIVAN, MR. WILLIAM KIRBY. (*Analysis of his Evidence.*)
Is professor of chemistry to the Museum of Irish Industry; 1925. Has directed his attention to Irish railways generally, and to the transport of mineral products specially; 1926–1928. High rates and fares charged in Ireland are injurious to trade, and a reduction would greatly benefit mineral and agricultural produce; gives opinion as to results that would follow such reduction, and quotes rates charged by the Dublin, Wexford, and Wicklow Railway Company to the Wicklow Copper and other mining companies; rates in some cases 50 to 72 per cent. of the total value of the produce; 1929–1939. 1944–1950. The mining company have complained to the railway company of their high rates, but no reduction made. The mining company pays a high dividend,—the railway company 4 or 5 per cent.; 1940–1945. Limits of production in mines referred to will not be reached for many years, and were rates reduced the quantity of ore sent would be trebled. Thinks iron ore could be sent by ship for 3*s.* per ton at a profit; 1951–1953. Difficulties in the way of mining company's making a branch line to one of the railways; 1954, 1955. Particulars of market value and cost of raising certain ores; 1956–1971. If coal could be had at a moderate price the ore would be made into oxide; most of the ochre found runs into the river; 1972–1974. If the ore had been carried at half the rate it would have yielded a profit of 5 or 6 per cent. to the mining company, and slightly increased the dividend of the railway company; 1975–1977. The working expenditure on the Waterford and Limerick line for part of 1863 was 301·39*l.*; 1978, 1979. If rates were reduced one half, mines should contract to send a certain quantity, and inasmuch as the railway would carry full loads and bring back coal, there would be no additional expense; 1980–1984. By having a railway wharf at Limerick the ore could be sent at a reduction of one-third. Is not aware of any wharves having been proposed at Waterford, Cork, and Limerick; 1985–1987. If railways to the south of Ireland were amalgamated, it would pay to make a branch to the mines; saving that would be effected; 1988–1990. Inexpedient for Great Southern and Western to carry the ore to Cork, with a view of shipping it. Reasons why railway have never proposed to mining company to take their ores to Dublin; 1991–1994. Sulphur chiefly exported to Liverpool; route by which it might be sent; 1995–1997. Reasons why rates for minerals are higher on Irish than on English lines; 1998–2000. Waggons always found by the Irish railway companies; 2001. Port of Wicklow better than Arklow; 2002, 2003. Before railway constructed sulphur was carried by ship. Competition in sulphur; supply from Sicily diminishing; large chemical trade carried on in pyrites (from which sulphuric acid is made), used in the large bleaching works in Dublin; 2004–2010. A large district at Boyle containing iron ores and a coal-field not worked in consequence of the high rates. Unsuccessful attempt made to send clay and ironstone of superior quality to England; 2011–2015. Communication between railways of Dublin and quays will remove objections. Difficulty in getting several boards of directors to agree to any change; 2016–2018. Steady decline in passenger and goods traffic in proportion to increase of mileage upon all the Irish lines, which may be attributed to high rates; conflicting opinions prevent reductions; 2019–2026. 2048. Wicklow line have reduced rates, and contemplate a considerable further reduction; 2027–2030. Difficulty of dealing with various interests might be obviated by having one central administration for Ireland. Upon reduction of fares there would be a temporary loss, but this might be met by a decrease in expenses; 2031–2033. Cost of management not large, and traffic as a rule well conducted; quotes working expenses; 2035–2039. Possibility of as great a development of passenger and agricultural traffic as of mineral; good results that would follow reduction shown; rates for passengers and for certain agricultural produce; 2040–2047. 2049–2073. Unequal rates between town and town. Goods can be sent from Dublin to Belfast (111 miles) cheaper than to Newry (70 miles), there being competition by sea to Belfast; rates to Belfast profitable to company; earnings on certain lines; 2074–2082. Rates unequal on the Cork and Limerick line when there is no sea competition; charges to different places for butter, coal, and turf; 2083. One source of increase of traffic in Ireland will be from coal; in 1825

SULLIVAN, MR. WILLIAM KIRBY—*cont.*
it was 750,000 tons, it is now more than 2,000,000, and witness estimates that in 4 or 5 years it will be 4 or 5 millions. Thinks consumption of turf will increase, and that it will rise in price; one ton would occupy the space of six tons of coal; 2084–2089. If rates were reduced there would be an increase in the cattle trade. No cattle now carried on the Bandon line, rates having been raised. Particulars of practice adopted by the Great Southern and Western Company, as to rates for carrying cattle and fish. Desirability of passenger half-fares; 2090–2096. Believes traffic has not decreased upon the substantial lines. Decrease attributable to undeveloped branches; 2097, 2098. Cattle traffic between Navan and Dublin, &c.; variation of rates; 2099–2101. Cattle rates not reduced on the branches to Belfast, Newry, Dundalk, and Dublin; on one they are increased. Cattle to be profitable must be carried at low rates; 2102–2106. General feeling that it would be advantageous to place all the lines under one management. Good effects would follow amalgamation, even if rates were not reduced. Thinks same principle should be applied to railway traffic as is applied to the valuation of land in Ireland; mode of application; discussion of this question; 2107–2119. Reductions which are necessary for development of coal traffic; 2120. Growth of flax, especially in the Midland districts, might be stimulated by low rates; disadvantages under which the cultivation labours; 2121, 2122. Reasons why amalgamation into one company would be beneficial on the future extension of the railway system of Ireland. It might be advantageous to a district if two lines competed for a certain time and then amalgamated, as in the case of the Grand Canal; 2123–2127. Undue pressure of cost of carriage upon the poor lands of the Irish farms; 2128. A fat bullock can be conveyed from Normandy to London for less than from Limerick to London; 2129. Recent case of a large agriculturist making arrangements to drive his cattle to Dublin rather than employ railway; 2130–2133.

Memoranda on foreign railways; *App.* AE. Memorandum on the coal trade of Ireland; *App.* BL.

SUNDAY TRAINS:

Inconvenient arrangement of, at Rochdale; *Blackburn* 1333–1339. The first intimation company had of this was from seeing Mr. Blackburn's evidence; additional trains have been since put on; *Smithells* 12,987.

In Ireland a Sunday train is run morning and evening; they do not pay on long lines; *Hemans* 3730, 3791. Cheap Sunday excursion trains between Cork and Limerick; *Haughton* 4689–4691.

None but mail trains ever run on Stockton and Darlington Railway; *MacNay* 14,020.

SWITZERLAND:

Switzerland quoted to show how retail trade may be stimulated by a cheap parcels post in connexion with cheap telegraphy. If the Swiss system were adopted in Manchester the business of some of the larger houses would be increased tenfold; *Chadwick* 17,243. 17,253. Discussion of comparative advantages of English and Swiss systems of conducting telegraph business; *ib.* 17,254–17,258.

T.

TARIFFS:

Statement laid before the Chamber of Representatives on March 7, 1865, concerning tariff for passengers and luggage on the railways of the State; *App.* N. Official collection of tariffs for the transport of goods, finances, equipages, horses, and cattle on the State railways of Belgium; *App.* AS.

TAXATION:

1. *National.*
2. *Local.*

1. *National:*

On Irish railways heavier than on English; *Dargan* 5610. Proposed, to meet loss from reduction of fares; *Barrington* 7166 *et seq.* Passenger duty 5 per cent. on English railways; none on Irish; *Forbes* 1674–1676; *Hemans* 3881.

Fares throughout the country should be reduced to one-third their present amount, which would be equivalent to a reduction of 24,000,000*l.* of taxation; *Galt* 7349. 7430. If Irish railways purchased by Government, Imperial Exchequer should not suffer; *Hancock* 7648, 7649;

TAXATION—*cont.*

1. *National*—cont.

Galt 8506. Nobody in Ireland would object to a penny income tax to obtain better management and reduction of fares; *ib.* 8485.

Passenger duty for six months of 1855 on six companies having termini in London amounted to upwards of 225,000*l.*; *Teulon* 16,490.

Trunk lines might be economically aided out of the public taxes; *Chadwick* 17,266. It would be worth while to pay an increased income tax, though witness does not believe it would be necessary, in order to obtain reformed general rates; *ib. Addendum, page* 855.

Government duty on passenger receipts on Great Western Railway for 1865 amounted to 1·12*d.* per mile run; rates and taxes 1·10*d.*; *Gooch* 17,316, 17,317.

If Government purchased Irish railways and lost unexpectedly in consequence, an Irish income tax might fairly be laid on to indemnify them; *Harrison* 15,395–15,397.

2. *Local:*

Parochial rates paid by South-eastern Company in the year 1855 in 151 non-metropolitan parishes amounted to 26,371*l.* 11*s.* 10*d.* (equal to 3*s.* $1\frac{29}{105}$*d.* in the pound), whereas had the land remained agricultural, 723*l.* 6*s.* 8*d.* only would have been paid; in other words the company has been taxed for an excess of 25,648*l.* 5*s.* 2*d.* over what land would have come to if it had remained agricultural; *Teulon* 16,434–16,439. Other statistics quoted and statements made to show that railways are exorbitantly rated; that inhabitants of parishes get unduly benefited at expense of companies; *ib.* 16,440–16,449. The grievance is, that railway companies are rated on their profits, which no one else is; any other party is rated according to value of property occupied, irrespective of whether his profits are 5*s.* or 500*l.*; *ib.* 16,450–16,452. 16,475–16,478. South-eastern Company have frequently appealed to quarter sessions, but never to superior courts, as they have decided that rates should be upon traffic passing through the place; *ib.* 16,453–16,456. 16,464. 16,492, 16,493. This decision has arisen from custom, not by statute law; 16,467, 16,468. Case in which witness discovered that South-eastern Company were grossly overcharged for church rate; *ib.* 16,456. In one parish, in which they have no station, they pay $2\frac{1}{4}$ per cent. of the rate. In another, where land at one time was not worth 12*s.* an acre, line is rated on 3,150*l.* per mile; *ib.* 16,459–16,462. Witness thinks that railways should be rated only for the value of the land they occupy, and refers to clauses in Acts of Parliament which he considers a precedent for this; *ib.* 16,463. 16,466. Railway companies should be treated same as, for instance, a carrier, whose income is derived probably from all the places he passes through, but is rated, not on his traffic, but for the premises, &c., which he occupies; discussion of this point; *ib.* 16,470–16,472. Witness never knew a line not rated, although he has known some which paid no dividend; *ib.* 16,473, 16,474. Besides frequently reducing poor rates by being considerable employers of labour, railways pay large proportion of rates of many parishes they pass through, and enhance the value of the land; instances of the latter; *ib.* 16,479–16,487. Witness will put in a return from London, Brighton, and South Coast Company of number of parishes, amount of rates, &c. From published statements of six railway companies having termini in London, the rates for six months of 1865 amounted to 299,177*l.* 10*s.* 9*d.*; passenger duty for same period was 225,266*l.* 15*s.*; *ib.* 16,489, 16,490. Witness is not aware of any difference in principle of rating throughout the country; *ib.* 16,496–16,498. Discussion as to data upon which rating is founded; *ib.* 16,500–16,503. Railways have not all been made with a full knowledge of what they would be liable to; *ib.* 16,504. Principles upon which present system of rating could be improved; *ib.* 16,505–16,509. Though dividends of some lines have fallen considerably, witness does not think that rating has been reduced; *ib.* 16,510, 16,511. Whether a reduction of fares would be made if railways were relieved from rates and taxes would be a matter for consideration; *ib.* 16,512–16,515. Witness does not suppose that the large proportion of rates paid by companies has led to their being used extravagantly; *ib.* 16,519–16,521. Rates on canals; *ib.* 16,522. In early times railways felt rating a great grievance; they are now used to it; *ib.* 16,523. In illustration of parts of the foregoing witness hands in the following papers:—South-eastern Railway; Statement of Rates, Taxes, Duty per Mile, and Rates per Acre; Statement of Amount of Parochial Rates

TAXATION—*cont.*

2. *Local*—cont.

paid for year ending December 31, 1865. Statement of Rates, Taxes, and Government Duty paid by several Railways for six months of 1865. Table of Gross and Rateable Value, Acreage, &c., in the parish of Limpsfield, Surrey; *ib.* 16,585.

Nothing can be worse than the law as to parochial rating of railways; state of things however cannot now be interfered with, but amount should be kept within present limits, and corresponding advantages exacted for the public. Payments, if made at all, should go to the State. Highly unsatisfactory manner in which assessments are now made. Companies should be liable only for rates of property which they take; *Bidder* 16,851–16,858.

Suggestion for making branch railways by means of local or county rates; *Chadwick* 17,266–17,268. Parochial taxation upon railways might be abolished with advantage; *ib.* 16,298, 16,299.

Earnings of a railway are the proper basis on which parochial rates should be assessed; *Gregory* 17,659.

TELEGRAPHING TRAINS. *See* TRAFFIC ARRANGEMENTS.

TEULON, MR. SEYMOUR. (*Analysis of his Evidence.*)

Was for 12 years a director of the South-eastern railway; 16,433. His attention has been called to subject of rating of railways. Has prepared a statement showing amount paid in the year ending 31st December 1865 by South-eastern for poor's rates, highway rates, and church rates, and quotes figures showing that after deducting for metropolitan parishes the amount paid by this company was upwards of 25,000*l.* more than the land would have produced if it had remained agricultural land. Witness lives at Limpsfield; employs a carrier to fetch goods; charges rather more than railway; reason it is more convenient to employ carrier. Gives statistics showing that although net rateable value in Limpsfield is 12*s.* 4*d.* per acre, railway is rated at upwards of 57*l.* per acre. To what extent land in Limpsfield is benefited by railway. Railway should not be rated upon the profits made; the carrier, although in competition with railway, is only rated upon his house and stables, and not upon his profits; discussion thereupon; 16,434–16,452. 16,475–16,478. South-eastern have frequently appealed against rating, but not to a superior court; is an expensive process. Principle laid down by superior courts as to rating of railways. Mentions result of an inquiry made into a claim for upwards of 16*l.* for church rates for Edenbridge parish; railway only goes about three miles through parish; 16,453–16,459. 16,466. 16,469–16,474. 16,492, 16,493. 16,520. States that parish of Colesden is rated at 3,150*l.* per mile for land, which at one time would not have been worth 12*s.* per acre; railway goes two miles through the parish; have only one small house for the signalman in it; believes company pays more than two-thirds of the rates in Colesden and Merstham. Practical injustice done to companies by present system of rating. Would have land where not used for stations rated at some fair advance upon value as agricultural land; stations should be rated same as carrier's house and warehouse; is a precedent for this. Carriage of mails upon South-eastern line would cost considerably less than amount of excess of rates paid; 16,460–16,468. 16,484, 16,485. 16,505–16,509. Railway does not add at all to expenses or rates of parishes mentioned; has rather relieved the poor's rate. Effect of making a railway in a rural parish is to reduce rates; 16,479–16,483. Mentions cases where land within a reasonable distance from the station has greatly increased in value; is benefited, if roads level, to a distance of five or six miles from line of railway; gives the average benefit per acre upon agricultural land within five miles of a station, and also near stations within 32 miles of London. Caterham line made for purpose of letting land adjoining to builders; the value increased from 20*l.* or 25*l.* to 400*l.* per acre. Line cost 42,000*l.*; was afterwards sold to South-eastern for 16,000*l.*; 16,485–16,488. 16,582–16,585. Has prepared a statement showing rates paid by the large railway companies out of London; total amount paid upwards of 299,000*l.*, exclusive of passenger duty, which is upwards of 255,000*l.*, and puts in returns made by Brighton Company showing number of parishes, with amount paid for poor's rates in the year 1865, together with average rate in the pound; and also a return showing number of parishes, with amount paid for highway rates in the year 1865, &c. South-eastern, with exception of London and North-western, pays the largest amount of rates and taxes and Government duty of any line out of London; 16,489–16,491. Does not know whether railways are rated differently from water and gas companies; believes rates paid by these are in the nature of royalties for use of land, of which the ownership is not in the companies. Thinks there is no rating of turnpike roads; 16,494, 16,495. Principle upon which railways are rated universal throughout country; 16,496–16,498. General principle for assessing all properties is the supposed value for letting; in the case of railways a wide margin should be left for different judgments. Railways have been let; data upon which valuation made. How parochial authorities arrive at rateable amount. South-eastern railway was not made with knowledge of principle of rating to which they would be liable; 16,499–16,504. Dividends of South-eastern have fallen in the last two years, but doubts whether rating has been diminished. Alteration in rating in the case of South-eastern would add 6*s.* per annum upon 100*l.* stock; would be question for consideration whether company in return should reduce fares. Appeals have been made to get a certain reduction, and not to get line rated at its agricultural value. Does not think that fact of railway companies paying so large a proportion of the rates has led to extravagance in their administration; 16,510–16,519. Unless in cases of water and gas companies is not aware that other descriptions of property are unjustly affected. Are express clauses in some canal bills to prevent this system of rating. Is not aware whether a clause has been inserted in recent Acts defining rating upon railways; 16,520–16,526. Considering companies are bound to carry at same fares, thinks it unjust in case of accident that one person may claim thousands more than another, riding in same carriage and under precisely similar circumstances. London, Chatham, and Dover have a limit for workpeople; would have a limit fixed for 1st, 2nd, and 3rd class passengers; in Merchant Shipping Act the amount paid depends upon the number of persons and value of vessel and freight on board. Gives two or three illustrations, showing objections against present mode of obtaining compensations. If limit were fixed objections now existing would not equally apply, as in majority of cases the maximum would be paid; mentions a case where a man appeared in court with a seton in his neck in order to excite compassion, and thereby obtain a larger amount of compensation; 16,527–16,538. 16,558. If limit fixed in case of death or serious injury at 1,000*l.* for a first-class passenger, irrespective of the value of the life, 500*l.* for a second, and 250*l.* for a third, it would be cheaper for companies; if amount paid was in proportion to mileage rate it would come to pretty much the same thing. Is a maximum fixed for any horse killed; is open to companies to dispute whether horse is worth maximum; would apply similar principle in the case of passengers injured; 16,539–16,550. 16,573–16,575. 16,578. Disposition on the part of juries to go beyond summing up of judge in regard to damages. Would be better if question of fact only were left to a jury, and question of compensation to some other tribunal; are many cases in which parties sustaining a loss make no claim. In the case of the Staplehurst accident there was no claim made for the loss of a wife; such cases are rare; 16,551–16,557. Would be as much care and caution on the part of companies if law was altered. South-eastern paid 73,000*l.* for compensation for Staplehurst accident. Such provisions were made by company as ought to have prevented this accident, and also that at Blackheath. More limited penalties would not diminish precautions. Companies sustain great loss from an accident beyond sum paid for compensation. Object of the law is to make companies cautious, and compensate individuals for accidents; 16,559–16,568. Compensation granted to individuals excessive; 16,569–16,571. If amount of compensation limited, companies should allow an individual to insure his life for a greater sum; 16,572. Could in a few cases state how money expended in litigation compares with that paid for compensation; 16,576, 16,577. An alteration required in the two clauses in each of the Criminal Consolidation Acts with regard to cases of injury done by boys throwing stones at trains; hands in two clauses which might be adopted; 16,579–16,581. 16,585.

THIRD-CLASS TRAFFIC:

Only two third-class trains a day on Great Northern railway, as a greater number would injure second-class traffic; *Clarke* 12,879–12,882.

It would be injurious to railway companies to attach third-class carriages to all trains, and would scarcely, witness thinks, be an advantage to the public; reasons for this opinion; *Smithells* 12,995–12,997. The majority of third-class passengers on Lancashire and Yorkshire

THIRD-CLASS TRAFFIC—*cont.*
railway are working men and small shopkeepers; *ib.* 13,001, 13,002.
Third-class carriages should be attached to all but express trains; *Low* 13,882. Insufficient third-class accommodation on Great Western; *ib.* 13,950–13,955.
There should be a large reduction on third-class fares, 50 per cent. on long distances; *Morris* 14,369–14,373. A great development of traffic possible out of agricultural population if this were done; *ib.* 14,393, 14,394.
Companies as a rule afford as much opportunity for third-class travelling as desired; *Hawkshaw* 14,553–14,556. Third-class passengers usually travel only short distances, and are apt to delay trains; *ib.* 14,557–14,559.
In France lower fares and more frequent trains than in England, but trains travel at a lower rate of speed; *Stewart* 14,665. 14,689. Third-class passengers carried by a fast night train between Glasgow and Aberdeen; *ib.* 14,693–14,698. Great increase in third-class traffic on London and North-western; this is capable of further development; *ib.* 14,796, 14,797.
In manufacturing districts the great bulk of the travelling is third-class; *Harrison* 15,227.

THIRD-CLASS TRAFFIC, IRELAND:
Urgent need of low fares for third and fourth class passengers; *Mulvaney* 1276. No market trains or third-class return tickets at Limerick; *Tinsly* 2383–2385. From want of the latter and bad arrangement of the trains at Limerick continual inconvenience is created, and great hardships inflicted, especially on the small shopkeepers and traders; railways also suffer considerable loss of traffic; *Ryan* 2655–2679. 2689, &c. Better third-class accommodation needed between Limerick and Dublin; *Longfield* 2837–2844. A reduction to ½*d.* a mile would get numbers to ride who now walk; *ib.* 2861–2864. In Ireland third-class accommodation is very bad; in consequence of delay from want of trains running in connexion with one another, it is frequently cheaper to travel to the Dublin markets by first-class than by third-class; *ib.* 3359–3362. Witness thinks that third-class passengers do not want day return tickets, except on short lines; the experiment tried, but abandoned as unremunerative; market tickets at reduced fares are issued; *Malcomson* 3401–3418. Witness thinks that no hardship arises from the fact that it takes a third-class passenger four days to get from Ennis to Dublin and back; *ib.* 3528–3530. Third-class carriages only half filled; *Hemans* 3824. Witness does not think that third-class would use railway unless fares were reduced one-half; *ib.* 3912. On Midland Great Western third-class fares are ½*d.* and one-tenth per mile; *Ennis* 4029; third-class passengers increasing, which may be partly attributed to emigration; *ib.* 4038. 4039.
On Great Southern and Western third-class passengers increasing whilst first and second diminishing; *Haughton* 4536–4538. Witness is opposed to third-class return tickets; *ib.* 4593–4595. Third-class return tickets for short distances answer well on Dublin and Drogheda line; *Murland* 4766, 4767. Third-class traffic bears a small proportion to first and second on long distances; *ib.* 4780. Third-class receipts very small on Dublin and Drogheda line; *ib.* 4906. If third-class fares reduced, first and second should also be somewhat reduced; *ib.* 4911–4913. Witness would not reduce third-class fares from 1*d.* to ½*d.* at once, but gradually, until seen how far reduction may be carried with profit to company; *Allport* 5343. Such a state of things as that a third-class passenger upon any part of Southern and Western Railway could not go to and from Ennis same day should not exist, as it tends to check traffic. Midland issue third-class day tickets at a reduction of 25 per cent. from double fares; these are much taken between country places and market towns; would be to interest of railway companies in Ireland to do the same. Has been for some years trying to get same system adopted from all places in England to all places in Scotland, but has not yet succeeded; *ib.* 5344–5356. Has tried to establish a low scale of third-class fares in purely agricultural districts. Result of an experiment made to abolish second-class carriages and only have first and third, and how long it took to recover itself; *ib.* 5358–5374.
On part of Dublin and Wicklow line third-class carriages by every train, and return tickets issued; *Dargan* 5467–5469. Doubts whether third-class fares could be so low as to take away inducement to walk. Irish labourers have no occasion to travel, small shopkeepers do. There would be a great advantage in reducing third-class fares; *ib.* 5657–5662. Remarkable increase in third-class passengers from reduction of fares; *Roe* 5749. Cheap third-class accommodation between Londonderry and Coleraine much used by agricultural

THIRD-CLASS TRAFFIC, IRELAND—*cont.*
labourers; *ib.* 5819–5823. Third-class return tickets to nearly all the trains on Belfast and Coleraine line; the traffic is consequently large, but it slightly injures the second class; *Lanyon* 6067–6076. True source of profit to Irish railways is the third-class traffic, but directors throw every difficulty in the way; *Bewlay* 6962. Third-class fares should be reduced to ½*d.* a mile, which, witness believes, would pay; *Bagot* 7040, 7041. Every ordinary train should be obliged to carry third-class passengers; *Pim* 7071–7076. Success of recent cheap third-class trains on Midland Great Western; *Barrington* 7108–7115.

THROWING STONES AT TRAINS. *See* JUVENILE OFFENDERS.

TICKETS:
Suggestion that tickets should be sold at principal stations and offices at any time, and that at all stations they should be issued a quarter of an hour before starting of every train; *Low* 13,882. 13,956–13,958.
Annual and season tickets should be reduced in price to one half; *Galt* 7373.
Family tickets are issued between Dublin and Killarney; *Haughton* 4692, 4693.
Season tickets are not issued on German railways; *Mulvaney* 1122; nor on Belgian railways; *Fassiaux* 3062.
See also MARKET TICKETS. RETURN TICKETS.

TIMBER:
Unfair and unequal rates charged by Great Western Company; *Low* 13,882 *et seq.*
Railway charges for carriage of, to and from Liverpool, as compared with other places; *App.* A.

TINSLY, MR. JOHN RICKARD. (*Analysis of his Evidence.*)
Is mayor of Limerick, and connected with the Chamber of Commerce; 2308, 2309. Attention of Chamber has been called to the railway accommodation and fares; 2310, 2311. Witness complains that the high fares prevent intercourse with the western districts. General opinion that traffic would be increased by a reduction; 2312–2315. Gives fares between Dublin and Limerick, and states that the number of trains is insufficient; 2316–2343. Intercourse between Dublin and Limerick would be increased were facilities afforded. Considerable communication between Limerick and Cork, the trains being more convenient; 2344–2349. Accommodation more easily arranged if matters were in the hands of one company; 2350. Between Limerick and Waterford the trains are sufficient, there not being much passenger traffic. It is a cheaper route, but the sea passage is longer; 2351–2354. Merchants and traders require more accommodation. Retail traders deal with wholesale merchants in both Limerick and Dublin. Population of Limerick 50,000; 2355–2359. Great trade in cattle between Limerick and Dublin, principally by railway; 2360–2362. Many travellers come to Limerick from Dublin wholesale houses; 2363, 2364. Fares are much too high between Limerick and Dublin; upon reduction, traffic in passengers (especially third-class) and goods would increase. The larger proportion would be from Limerick; class of persons likely to travel; 2365–2382. Companies do not run excursion trains on market days, or issue third-class return tickets; 2383–2385. Steamboats on the Shannon are crowded in summer. Distance and fares to Kilrush. Not much traffic to Foynes; 2386–2392. First-class return tickets are issued. Reasons why they are of no practical use; 2393–2398. Three years ago the fares were increased; 2399, 2400. Lines of communication between Limerick and England; 2401–2409. Complaints in Limerick as to charges for goods. Within the last two or three years rates for certain goods have been increased 80 to 100 per cent. Traffic fallen off in consequence. Persons sending goods have to insure against sea risk; 2410–2415. Describes certain routes from Limerick to Liverpool, and rates charged by each; 2416–2427. Discussion as to how far charges interfere with trade of Limerick; 2428–2458. Particulars as to the Limerick Steamship Company; they were threatened with opposition by the railway if they did not increase their rates; 2439–2454. 2458–2462. Witness is an import merchant at Limerick; sends his goods by steamers; 2455–2457. Advantage to railway companies of steamboats raising the rates; places from which coal is brought to Limerick, and rates of charge; 2465–2481. 2523–2536. Distance between Liverpool and Dublin, as compared with distance between Liverpool and Limerick, less than half. Gives rates for coal by certain routes; 2481–2490. 2496–2506. Does not know whether railway

TINSLY, MR. JOHN RICKARD—*cont.*
companies stated old rates to be unremunerative; 2481. Charge for goods from Dublin to Liverpool less by canal than by railway. Differential rates settled by canal company in concert with railway company; 2491–2495. Turf is not used in Limerick so much as formerly, it is scarce and dearer. When price above 3*s.* 6*d.* a horse load, considered dearer than coal at 20*s.* per ton; is now 4*s.* Thinks consumption of coal will increase. 10 or 15 miles from Limerick turf would be cheaper. A great deal comes from Kilrush and by railway from Castleconnell; 2507–2522. Advantages given to Waterford in consequence of the rates being lower in proportion to Tipperary than from Limerick to Tipperary; 2423–2536. Quantity of coal brought to Limerick would not be equal to the consumption. Coal has to be carted from the ship to the railway, and cost added to freight; 2538–2546. With exception of coal, has no further complaint to make against railway companies; 2547, 2548. Places in the interior to which salt is sent; 2549–2551. Enumerates commodities which would be brought from the interior to Limerick upon reduction of rates, and states that coal would be carried further into the interior than at present, and in what direction. Believes it would come into competition with turf; 2552–2571. Large cattle trade from Limerick, which would be increased if rates were lower. Very little mineral produce near Limerick; 2572–2578. Flax manufactured in Limerick, but produce not increasing. Very little brought into Limerick by railway. Manufactories worked by steam power. Water power of Shannon principally used for corn and flour mills; 2579–2586. Would have railways amalgamated under one Government board, who would make uniform rates according to mileage. Discussion as to how board should be constituted, the rights of shareholders preserved, and loss, if any, met upon a reduction of rates, and also as to choice between a local and Government management; 2587–2590. 2594. 2600–2616. 2621–2643. No difficulty in booking goods through to different ports in Ireland. Scarcely any trade with the north; 2591, 2592. Is in favour of competition, not combination; 2593. In contemplation to take railways down to the river wharves. At Waterford the railway is in communication with water. All trains (except mail train) from Limerick to junction lines correspond with South-western down trains at junction; 2595–2599. On some railways scarcely any profit; the Foynes and Limerick is a very bad line; 2617–2620. People of Limerick would rather submit to present rates than have to make up deficiency caused by reduction; 2644–2648. Unfair to tax a district; nor should the whole kingdom be taxed to benefit Irish railways; 2649, 2650.

TRAFFIC:
Statement of, on Great Southern and Western Railway of Ireland, from 1846 to 1864; *App.* AH.

TRAFFIC ARRANGEMENTS:
Proposal that where practicable passengers and goods may be conveyed on different lines; *Hill* 8179. Witness does not consider present arrangements the best for the public; *ib.* 8188. Complaint of bad traffic arrangements between Lincoln and London; *Smith* 9134 *et seq.*
"Monster trains," as they are called, unmanageable, and consequently dangerous; a train is safer divided into two, than drawn as one by two engines, though at times the latter is obliged to be done; *Clarke* 12,851–12,860. Witness would not have Government interfere with traffic arrangements; companies can judge best for themselves. Trains should not be allowed to start at a less interval than five minutes from each other; this is the time allowed on the Great Northern. Telegraphing trains is coming more into use every day; it is on all the lines for a certain distance out of London, and has been done by the companies voluntarily at a great expense; *ib.* 12,886–12,902. On the Great Northern two trains are never allowed between any two stations at the same time; *ib.* 12,903.
Irregularities of trains caused in a great measure by irregular amount of traffic; diagrams given in, illustrating irregularities; *Grierson* 13,475. 13,485. Method adopted to prevent trains being unduly delayed; delay sometimes attributable to want of vigour on part of station master and guard. Gives an illustration of inconvenience caused by a train not arriving punctually at Wells station. Trains not so punctual at excursion times; are generally heavier; *ib.* 13,476–13,482. Practicable to reduce dead weight in passenger trains, and give sufficient accommodation to public by running a smaller number of carriages, but public would be averse to it. Great length of trains one of the causes of irregularities

TRAFFIC ARRANGEMENTS—*cont.*
in the time. Cannot, as a rule, fill an ordinary train with passengers; all calculations founded upon such hypothesis are fallacious. No doubt public pay more in the long run for the additional convenience they get; *ib.* 13,533–13,538. Gives pretty much the same convenience to second-class passengers as to first-class, of passing them from branch to main line, and *vice versâ.* Takes third-class passengers on to long branch lines in same carriages; third-class have to change much more frequently than the other classes; *ib.* 13,529–13,542.
Railway interests are suffering materially from undue cost of working. Economy of full trains, if obtained, would be enormous; *Stewart* 14,786–14,792. If companies could divide traffic to competing places, and make friendly arrangements so as to avoid waste of room in trains, cost of conveying passengers would be largely reduced, and punctuality increased; *ib.* 14,829–14,835. Public are very unreasonable in exacting more than sufficient room; *ib.* 14,836, 14,837. Much waste of room is caused by having separate carriages for different places; this might be saved if public had less objection to change; *ib.* 14,838–14,840. North-western drop carriages at some stations; no means yet devised of taking up carriages; *ib.* 14,841–14,844. Mineral traffic is worked with full train loads; passenger traffic should be the same; *ib.* 14,881–14,883. Reduction of classes from three to two would not save the waste of room spoken of; *ib.* 14,889–14,891.
On South-eastern line witness considers that carriages are well occupied; *Eborall* 16,223, 16,224.
On Great Western line carriages average about one-third full; *Gooch* 17,483–17,486.
On an official inspection of railways, and the management of the traffic thereon, as a means of preventing accidents and loss; *App.* BK. Regulations for the transport of passengers and goods on the French railways; *App.* CH.
See also MANAGEMENT.

TRAFFIC RECEIPTS:
Comparison of receipts per mile by English and continental railways; *App.* CN.

TRAMWAYS:
Desirability of a system of tramways for large towns; these have hitherto been prevented by opposition. Also for agricultural districts; expense of obtaining Acts prevents these; *Chadwick* 17,181–17,187.
General list of Tramway Acts passed from 1801 to the end of the session 1866; *App.* EK.

TRAVELLERS' PATTERNS:
Answer to complaint as to, to the effect that Midland railway carry them at half the rates charged for ordinary passengers' luggage; *Allport* 12,412.

TRENT AND MERSEY CANAL. *See* HOLLINS. MORRIS. NORTH STAFFORDSHIRE RAILWAY AND CANAL.

TURF:
Cause of failure of attempt to smelt iron with turf; *Mallet* 2197, 2198. Cheapness of turf will prevent a coal trade being established in the west of Ireland; *Earl of Lucan* 3034–3037. Unequal rates on turf; *Cooper* 3744. Tendency to discontinue use of turf; *Hemans* 3921. Turf cannot be used so economically for steam engines as coal; all attempts to compress it into a small compass have commercially failed; three times the bulk of coke or coal. By the time good turf is dug, dried, kept, and sent to market, it is not a cheap article; only burnt on railways to light the fires; an engine near a peat bog might possibly be driven at a cheap rate; *ib.* 3926–3932. When much coal is used, it must be from difficulty of getting turf; *Ennis* 4117–4122. Cheaper for witness to burn coal than turf; in wet seasons the latter is worthless; *ib.* 4136–4138. 4148–4150. Irish Great Midland do not carry turf, it is taken by the Royal canal; *ib.* 4163. Not likely to be superseded by coal in the interior of Ireland; *Macfarlane* 6547–6550. Has never been a cheap fuel for the Irish poor; is getting dearer, and supply is uncertain; coal much preferable, consumption of which is greatly increasing; *Parker* 6890–6893. Cost increasing, and supply uncertain, whilst consumption of coal is greatly increasing; *Bewlay* 6930. It would be an advantage if coal could be cheaply and freely introduced into Ireland, although it would probably supersede turf, the wages for cutting which are now hardly remunerative; *Barrington* 7226–7230.

U.

Ulster Railway:

Reply received from company to extracts from evidence sent to them for explanation or remark; *App.* AX. Returns showing company's charges for various kinds of goods; *App.* BH.

W.

Wages:

Emigration has caused rise in wages throughout Ireland; no one now need be unemployed; *Earl of Clancarty* 6379–6381.

In Ireland the wages of the labouring classes are advancing, giving a prospect of their being able to travel more; *Cotton* 7828.

Wages of a district have some effect on 3rd class fares; *Harrison* 15,214, 15,215. Public travel more when wages are good; *ib.* 15,228.

Wages of Railway Servants. *See* Railway Servants, 2.

Waggons. *See* Rolling Stock.

Wainwright, Mr. William. (*Analysis of his Evidence.*)

Is secretary to Glasgow and South-western Railway Company; 17,590. Cost of locomotion for passenger trains 5*d.* per mile. Unusually short trains on line partly account for small expense of these trains; cannot say additional expense of adding another carriage. Length of line 250 miles. Average earnings 4*s.* per train mile; 17,591–17,600. 17,611–17,616. Expenses per train mile, 1*s.* 3*d.*; would be 2*d.* additional if renewal of permanent way were provided for; sum does not include taxes, which are included in the establishment charges; delivers in table showing total traffic receipts, total expenditure, and receipts per train mile on certain lines; 17,601–17,610. Fairest way in estimating expenses to take a per-centage on the traffic. Cheapness of fuel affects the per-centage. Burns coal almost exclusively. Nearly half the traffic is minerals. How cost of maintaining permanent way divided as between passenger and mineral trains; 17,617–17,621. Working expenses could be reduced on line if certain arrangements were made with Caledonian Railway Company; have arrangements now with them, but not of a sufficiently extended character; 17,622–17,625. If Parliament would give railway companies more extended powers to make agreements which would be of a legal character, interchange of traffic would be facilitated. A better understanding exists now among neighbouring companies in this respect than formerly; 17,626–17,630.

Walker, Mr. William. (*Analysis of his Evidence.*)

Is a member of the Chamber of Commerce of Wolverhampton; represents that chamber, and also manufacturers and merchants who are not members of it. Is a merchant in the hardware trade; 10,634–10,636. Gives instances of inequalities in rates for the conveyance of hardware and nails; all the rates given include collection and delivery, which would be more in a large town than in a small one. Practically, for commercial purposes, Wolverhampton people are at a greater distance from northern towns than London people. Quotes rates showing difference in charge for nails for same 13 miles of railway between Birmingham and Wolverhampton; does not find same disparity elsewhere; instances Wolverhampton and Dundee and Aberdeen, and Wolverhampton and Perth and Stirling, where same rate charged, although distance between each place is greater. Discussion as to the best route for traffic from Birmingham to Liverpool; 10,637–10,647. 10,677–10,684. Mentions that steel, an indispensable article to the Wolverhampton manufacturer, is sent from Sheffield to London for less than to Wolverhampton, although distance nearly double; are two lines of railway from Sheffield, but rates the same. Has to pay 5*s.* per ton more on hardware, cutlery, files, &c. from Sheffield and Wolverhampton than to Birmingham. Railways and canals regulate their rates together, consequently there is only competition where sea rates exist; 10,648, 10,649. 10,666–10,676. 10,744, 10,745. Inequalities generally tend against Wolverhampton; 10,650, 10,651. Cannot suggest a remedy for these wrongs. Thinks rates are levied without reference to profit or loss, mileage, or any principle of business; 10,652–10,656. 10,705. 10,715, 10,716. Discussion as to how inequalities originated. Thinks companies charge as much as they can in every place, but that in some places, for want of competition, they charge more than in others; 10,657–10,665. Is not prepared to say how rates should be fixed; at present they are partial and capricious. Parliament never intended that companies should establish preferences in favour of one town against another; 10,685–10,689. 10,743. Places where nails are manufactured in competition with Wolverhampton. If rates were kept up at the higher rate from Wolverhampton to Perth and Stirling would not be able to compete with Newcastle manufacturers; 10,690–10,697. Reason why Wolverhampton manufacturers would not be injured by the establishment of a more uniform rate; is not prepared to say how it should be fixed; 10,698–10,704. 10,707, 10,708. Very important to have reduced rates to London, as the best ships leave there for Australia, New Zealand, &c.; 10,706. 10,709–10,711. Thinks Australian trade from Wolverhampton now equally divided between London and Liverpool; if rates were lower to London the bulk of that trade would be sent from there; 10,712–10,714. With exception of a reduction in nails from Birmingham to Wolverhampton, the rates have not been varied for many years; 10,717–10,720. Two railways come into Wolverhampton, but although one is 40 or 50 miles more circuitous the rates are the same; 10,721–10,725. Present classification of goods objectionable; states that certain goods are sent as nails to avoid being placed in a higher class; would not pay to send them by the higher class. Railway companies are aware that this is done; 10,726–10,733. No complaints of companies giving preferential rates to individual hardware firms. Do not charge less for a large quantity. Complaints from iron dealers that by companies charging for two tons as a minimum the trade with small blacksmiths is injured. In nail and similar trades anything from two cwts. to two tons is charged at the same rate; 10,734–10,741. Has competition in hardware with Belgium and Zollverein; manufacturers of these countries are able to deliver at a port cheaper than Wolverhampton manufacturers; 10,742.

See also Grierson.

War Department. *See* Military Stores.

Warehouse Room:

Statement from superintendent of docks at Birkenhead as to practice of railway companies giving warehouse room free of rent; *App.* T.

Water Conveyance:

No unfair competition with canal companies would arise from State becoming possessed of railways; *Hill* 8254–8262.

In England and Scotland there were about 3,890 miles of inland navigation, of which nearly one-third has been either leased to or converted into railways; *Wilson* 9902–9904. Railway companies with which canals have been amalgamated; *ib.* 9905. Object of companies in these amalgamations has been to prevent competition; *ib.* 9907, 9908. Canals can compete successfully with railways if their feeders are not closed; railways act but slightly as feeders of canals; amalgamation of railways and canals should be prohibited, as they are injurious to the latter and to the public; *ib.* 9931–9945. 9955–9958. 10,012–10,018. 10,099–10,101; *Hollins* 11,724. Discussion of the latter point; *Wilson* 9947–9953. This does not argue inferiority of canals to railways; *ib.* 9946. Railways and canals should be kept as highways open to anybody; *ib.* 9954. If tolls were not raised, still witness objects to amalgamation; *ib.* 9962, 9963. Though the canal company may sometimes gain by the amalgamation, the public suffers; *ib.* 9964–9971. Discussion as to whether canals ever really gained by it; *ib.* 9972–9982. Canal companies should be compelled to keep up canals in certain cases; *ib.* 9976. 9983, 9984. Low cost of haulage on canals; *ib.* 9992, 9993. On rough goods only, the toll and cost of haulage are about equal, on more expensive goods the toll is greater; *ib.* 9994–10,004. Under similar circumstances canals are quite able to compete with railways; speed, which is not always needed, the only advantage of the latter; *ib.* 10,005–10,011. 10,019. Public would be much better served by free competition between railways and canals; *ib.* 10,020. One reason why canals pay better than railways is that they are not carriers; *ib.* 10,021–10,024. Witness will give in a list of cases in which tolls have been raised after amalgamation; *ib.*

WATER CONVEYANCE—*cont.*

10,035–10,040. Tolls raised by railway companies after obtaining lease of Rochdale Canal, causing great injury to the Aire and Calder Navigation, who unsuccessfully opposed lease, but prevented amalgamation; clause of Act under which this lease was granted is now repealed; *ib.* 10,041–10,048. Injury to same navigation from amalgamation of Huddersfield Canal; *ib.* 10,049–10,052. Canal Carriers Act has not produced the good its promoters intended; difficulty of getting it amended; *ib.* 10,053–10,060. Canal companies have been compelled to become carriers to compete with railways; *ib.* 10,092. 10,098. Competition of railways has compelled canal companies to reduce rates; canals are not so profitable as formerly; no doubt the public has gained; *ib.* 10,102–10,112.

Low rates from Middlesborough iron district through competition by water; *Williams* 10,248–10,264.

Low timber rates from Liverpool to Hull caused by sea competition; *O'Brien* 11,979.

Statement that Great Western Company offered to parties complaining of their management of the Kennett and Avon Canal to meet them and arrange differences, but the parties have determined to take the matter into court. Witness does not think that there is any real ground of complaint; *Grierson* 11,928–11,932. Table of rates by canal between London and Bristol; *ib.* 11,932. Witness believes this table includes all important articles, and does not think that railway charges exceed canal charges; *ib.* 11,933–11,935. In witness's opinion, amalgamation of Kennett and Avon Canal with railway has not tended to keep rates up; thinks it more probable that the canal would have been closed than that it would have carried at lower than present railway rates; *ib.* 11,937–11,941.

Raising of tolls on Rochdale Canal above complained of was forced on railway companies by Aire and Calder Navigation in self-defence. Statement that the latter endeavoured to effect an arrangement by which competition would have been prevented; *Smithells* 13,003. 13,032–13,035. Witness admits that when railway companies purchase canals they raise tolls in order to bring the traffic over the railway; *ib.* 13,004–13,010. Particulars of Lancashire and Yorkshire Railway Company's lease of canals; *ib.* 13,011–13,014. Competition at one time between Aire and Calder Navigation and Lancashire and Yorkshire Railway. The former wished to sell their undertaking to two railway companies, they have now an agreement with North-eastern Company to prevent reduction of rates; *ib.* 13,028–13,031.

Water conveyance is superseded altogether for the carriage of grain to brewers at Burton; *Cosgrove* 15,822.

Railways and canals should not be allowed to amalgamate; *Huish* 15,917–15,923. General list of Acts passed from 1801 to the end of the session of 1866 for canals owned, leased, or worked by railway companies; *App.* EK.

See also COMPETITION.

WATER CONVEYANCE, IRELAND:

Railways into Dublin have nothing to fear from competition by sea; *Mulvaney* 1183. At Limerick no competition by water in consequence of agreements between railways and canals; *Tinsly* 2442. Water competition between Tipperary and Waterford and Dublin; *Malcomson* 3459, 3460. Midland Great Western Railway does not itself carry turf, it is taken by the Royal canal, which is owned by it; it does not interfere with the traffic on it, but leaves that to option of freighters and private enterprise; may charge any rates it thinks proper. The Grand canal is empowered to charge from 10 to 15 per cent. lower than the railways, and the freighters may charge what they like; *Ennis* 4160–4180; 4210. As soon as company possessed the canal (about 18 years since) they reduced the rates in order to secure traffic which before was sent by road; there was a large increase in traffic and receipts, which continued until company ceased to be carriers on the canal, and threw it open to public competition. From that time the tonnage receipts have not increased; *ib.* 4181–4183. 4186, 4187. 4190–4197. Does not obtain an income from canal equal to interest parted with in price paid for it, but was enabled to make part of railway on banks of the canal. Expense of keeping canal in repair small; *ib.* 4184, 4185.

Corn is carried from Cork to Dublin cheaper by water than by rail; *Haughton* 4537–4655. Witness thinks traffic from south of Ireland to Scotland is nearly all by sea; *Cawkwell* 5205. Instance of oil carried for 1*d.* per gallon by steamer, while charged 4½*d.* by railway; *Roe* 5861. Instance of superiority in time and price of canal over railway accommodation; *ib.* 5894–5898. Water competition (Grand Canal) has kept the railways from advancing the present high rates still higher. Railways some time ago endeavoured to purchase canal, but failed. Canal and railways have advanced rates 25 per cent. recently; *Perry, H. R.* 6819–6833. Steamboats purchased by railway company and kept idle to prevent competition; *ib.* 6863. Instances of lower rates by water than by rail, though for longer distances; *Bagot* 7032–7039; *Barrington* 7131–7147.

See also STEAMBOATS.

WATER POWER, IRELAND:

Less than generally supposed; horse-power can be obtained by, nearly as cheap as by a steam engine; *Mallet* 2146. Instance of failure of water power; *Malcomson* 3573. Plenty of water power in Clonmel; *ib.* 3644. A good deal of water power would come in aid of manufactories; where there is large water power and auxiliary steam it ought to be able to compete with steam; witness thinks manufacturers in Ireland using water power could compete with English manufacturers using steam power; *Hemans* 3934–3937. Much water power at present lying idle from stoppage of flour mills; *Haughton* 4547.

WATERFORD:

Complaint of great want of railway communication with, &c.; *Delahunty* 5011 *et seq.* Resolution adopted at a meeting complaining of certain arrangements injurious to traders, &c. of the town; *ib.* 5051.

Report of the Committee of the Chamber of Commerce of the City of, appointed to investigate into the present working of the railways to and from Waterford, and to bring the result of their inquiries before the Royal Commissioners; *App.* U. Supplemental report from same committee; *App.* AC. Report of a committee appointed to inquire as to the best means to be adopted to promote, protect, and develop the trade and commerce of Waterford; *App.* AL.

See also DELAHUNTY. MALCOMSON.

WATERFORD AND LIMERICK RAILWAY:

Offer from, to reduce their fares on certain conditions; *App.* AT. Reply received from company to extracts from evidence sent to them for explanation or remark; *App.* AX. Returns showing company's charges for various kinds of goods; *App.* BH.

WATERFORD AND TRAMORE RAILWAY:

Returns showing company's charges for various kinds of goods; *App.* BH.

WEST, MR. STEPHEN. (*Analysis of his Evidence.*)

Is a timber merchant, and vice-president of the Chamber of Commerce at Hull; 984, 985. Unfair treatment of Hull by North-eastern Railway Company in carrying over longer distances at equal rates, practically making the mileage per ton, from various places in the West Riding, 1¾*d.* to Hull, and 1½*d.* to Hartlepool, to bring traffic to the docks at the latter place; 986–992. 1001–1004. Evils of monopoly of the coast by North-eastern Company; the Hull trade is forced unnaturally to Hartlepool; the rate per mile should be equal; representations made to the company, but quite in vain; Legislative interference necessary; 993–1000. 1006–1018. Hull is rather better situated as to York, there being a competing water conveyance; 1010–1015 The evils will be increased if the railway company acquire the Hartlepool docks; 1019, 1020. Further particulars of trade and freights as between Hull and Hartlepool. Dock dues at Hull higher than at Hartlepool, and not likely to be reduced, but the town dues have been abolished; 1021–1039. Illustration of the unfairness of the railway rates to Hull; 1039, 1040. Rates per mile should be uniform over each railway system, and railways should not be permitted to run steamboats; 1041–1045. Easy gradients to Hull, 1046.

See also O'BRIEN. SMITHELLS.

WESTPHALIAN COLLIERIES. *See* MULVANEY.

WHEELDON, MR. GEORGE. (*Analysis of his Evidence.*)

Is a corn merchant at Derby; attends on behalf of the Chamber of Commerce there; 8861, 8862. Makes a statement and delivers in a table showing unequal charges made by Midland Railway Company to certain places; 8863–8866. Inequalities materially injured corn and malt trade in Derby; 8867, 8868. Thinks high rates are charged in consequence of having only a single railway communication; competition would reduce rates, and benefit the town. In commerce each one tries to

WHEELDON, MR. GEORGE—*cont.*
get as much trade as he can for himself. London and North-western are trying to come to Derby; if successful part of grievance will be remedied without legislative interference. Thinks that if London and North-western Company were told that maximum rates must be lower than those hitherto allowed, it would not discourage them; might make a slight difference in the route taken; 8869–8876. 8908–8914. Equal rates for equal distances should invariably be charged; 8877, 8878. Charges for goods were lower from Newark through Derby to Manchester than from Derby to Manchester; was caused by there being an alternative route. Company have reduced rates to those at Newark, but cart at Newark and not at Derby; 8879–8885. Rates less from Norfolk to Newark or Burton-upon-Trent than to Derby, although distance greater; delivers in a table showing several inequalities. In some cases rates may be lower in consequence of there being full train loads. Difference in rate in carrying five tons as against two; no reduction made beyond the five; 8885–8902. How the unequal and excessive rates charged on the Staffordshire line have injured Derby. Effect of railway legislation on trade. Trent navigation has kept railway rates down in districts through which it passes; quotes rates. Navigation not under railway control; 8905–8907. Gives population of Derby, and increase in last 10 years; nearly doubled itself in last 20 or 30 years, but trade has decreased. Water-power not available in consequence of high rates charged from the ports. Mentions that rates from Lynn to Newark are 3*s.* 3*d.* per ton lower than to Derby (105 miles less), and from Derby to Burton-upon-Trent more than double the rate per 100 miles than from Newark to Burton. Rates from Derby to Bolton (11 miles) were increased 50 per cent.; no notice was given of increase. Companies say they can alter rates without notifying alteration to public; 8915, 8916. 8922. 8924–8928. 8933–8935. Midland Company get as much as they can from Derby; have represented to them that the high rates drive traffic on to the Great Northern and other lines; some of the shareholders hold the same views; 8917–8921. Goods could be sent cheaper to Northampton by first going to Burton and then forward than by sending them from Derby direct; company has since reduced the rate to make it equal; 8923. 8929–8932.

WILLIAMS, MR. WALTER, jun. (*Analysis of his Evidence.*)
Is hon. secretary of the South Staffordshire Ironmasters Association; 10,115. Association has collected evidence of inequalities in railway rates, and anomalies in traffic from South Staffordshire districts, more especially with respect to London market; has sent a report to railway companies of district which is still under their consideration; hands in copy of report; discussion upon a table therein, giving rates for bar and pig iron to principal towns in England from Wolverhampton and Stourbridge; great difficulty in making a comparison in consequence of uncertainty as to whether charges for collecting and delivering goods are taken into account in every case; 10,116–10,144. Charges quoted are those usually paid, and include collection and delivery; considers that same rate exists until company give notice to the contrary. The alteration made two years ago of long weight into short was equal to an increase of 7½ per cent. upon the rates; 10,145–10,148. 10,223–10,230. Rates in table should be taken as statement of mileage rates with an uncertain charge added for collection and delivery, which varies considerably in different localities. Railway company allows witness a rebate of 1*s.* per ton for loading and putting trucks upon siding; rebate not allowed in London; is regardless of quantity sent. Quotes rates (which include delivery on board ship) for bar iron to London. There are no dock dues when railway runs alongside the docks. Rates given in table have been actually charged to ironmasters; 10,149–10,164. 10,173. 10,184–10,187. Lowest charge for collection and delivery is at Hull and Hartlepool; has paid 1*s.* 6*d.* per ton, in addition to rates quoted, at Cardiff, which included putting on to the side of ship, and freighter's dues; 10,165–10,172. Was not acquainted with amount paid for terminals in London and the country, or that where goods are carted by the sender, the charge is only 1*s.* 6*d.*; 10,174, 10,175. Complains that same charge is made for delivery of iron into the docks as into warehouses; reason why it should be less; 10,176–10,182. Cannot furnish a statement of charges from station to station; 10,183. Witness has never undertaken his own cartage in London; does not know what rebate railway company would allow a freighter who delivered his own goods from the station to the

WILLIAMS, MR. WALTER, jun.—*cont.*
warehouse. Companies are not disposed to give up the delivery. In a few instances, under special arrangements, freighters are allowed to send for their own goods; companies then quote a lower rate. Gives rates from Shelton Bar Iron Works in North Staffordshire, which shows that the cartage rate of 3*s.* 4*d.* is deducted. In this case rebate made is same as allowed to company by the contractor. Contractors offered to take entire traffic from South Staffordshire, and deliver it in London within certain limits from Camden station at 3*s.* 4*d.* per ton; 10,194–10,202. Question now under discussion with the various heads of railways to allow ironmasters the option of delivering at the station; are bound to give it by law; 10,203–10,205. Considers that deliveries of large quantities to be shipped or delivered alongside a warehouse on the river should be at lower rates than for small quantities; should be also at a lower rate than when distributed over London; what should be considered a large quantity; 10,206–10,222. There should be a uniform mileage rates, and terminal defined according to service done; would not deprive trader of benefit of competition; discussion as to terminal that should be charged where certain goods are loaded or unloaded at any siding belonging to railway company; should be a less charge where siding extends beyond line into premises of freighters; as to rate where siding some distance from a station; 10,231–10,247. Gives instances of great inequalities in rates charged from South Staffordshire; in one case low rate owing to competition by sea. Reason why rates should be as low as from any other place engaged in similar manufactures. Where more than one route, rates should be charged on the shortest; 10,248–10,251. 10,262, 10,263. Considers that rates charged from Middlesborough to London pay the railway company; if not, South Staffordshire people ought not to pay high rates to make up loss from traffic injurious to them; 10,252–10,254. Reason why it would not benefit South Staffordshire people if companies were compelled to carry at same mileage rates from Staffordshire as from Middlesborough. Discussion as to whether the cost of conveying iron from Middlesborough to London by sea would not in the end be as much as by railway; 10,255–10,259. If railway did not exist same quantities of iron would not be brought from Middlesborough into competition with South Staffordshire district. Quotes rates for pig iron from certain places, showing discrepancies in the charges made, and how it affects South Staffordshire trade; 10,260, 10,261. 10,264, 10,265. 10,280–10,283. Believes it is in contemplation to connect South Staffordshire with Sheffield with a new line of railway; 10,266. Rate low to Cardiff in consequence of competition; great facilities there for shipment 10,267–10,273. Gives toll by canal to London, and states canals and railways from South Staffordshire are an actual monopoly; 10,274–10,279. Would fix mileage rates at so much per ton in a certain classification; mentions certain articles that should be in classes A and B. Refined iron included in class A is used in same way as pig iron; is of higher value; considers that rate for Class A should not exceed 1*d.* per ton per mile, with 9*d.* for a terminal at each end; would be a varying charge for cartage. Thinks 4½*d.* would be a fair charge for a terminal in the country at siding of company. In event of these charges being adopted there would be a great reduction in the rates from South Staffordshire; from Glasgow and Middlesborough they would be considerably increased; 10,284–10,310. 10,356, 10,357. Thinks it was given in evidence last year that on Midland and London and North-western lines coal was carried for ¼*d.* per ton per mile; this charge was applicable to whole train loads laden in the siding and taken off railway by the freighters. London and North-western has the best gradients of any line; 10,311–10,318. Parliament should fix a uniform mileage rate, and establish a rates office under direction of Board of Trade, for the purpose of settling disputes and publishing rates; would then get rid of certain existing anomalies, and do away with power that companies now have of favouring particular persons or trades. Companies have no printed statement of rates. Officer appointed should not allow alteration to be made without giving reasonable notice, and stating grounds for such alteration. Alteration need not be delayed in consequence of persons having entered into contracts based upon the then rates, and which contracts have still some time to run, as special arrangements might be made beforehand. Companies should be prohibited from charging less than fixed rate, unless reduction made over whole system. Does not think that compelling a company to reduce over whole system would be injurious to trade. The maximum rate fixed should

WILLIAMS, MR. WALTER, jun.—*cont.*

apply to all new railways. Such grievances as mentioned in the case of Middlesborough would not be remedied if one company kept to the fixed rate and another reduced; fixed rate would be lower than at present, and therefore variation less violent; 10,319–10,338. 10,342–10,355. 10,408–10,422. Witness charges same price to customers, as the effect of competition; variation in price in tenders for railway bars is in consequence of variation in the specification; 10,339–10,341. Does not think rates are fixed with a view to favour any one manufacturer. Rates given from Glasgow and Kilwinning for pig iron seriously affects Staffordshire manufacturers. In some measure it may be gain to get this pig iron introduced into South Staffordshire; different views are taken of this question by makers of pig iron and manufacturers of finished iron; 10,358–10,366. Suggestion made by independent promoters that if railway company did not alter rates a new line should be made; has grave doubts whether such a course would be of any advantage; 10,367–10,372. Traffic in goods has much increased within last 20 years; cost of conveyance about the same as formerly by canal. In 1857 and 1858 rates were considerably reduced in consequence of competition between Great Western and North-western; companies have since combined and raised all the rates; 10,373–10,383. Believes that as far as regards getting iron into London in good condition at regular periods manufacturers were better off when they relied upon the canal; there is an advantage now as to time. Companies do not bind themselves to deliver within a certain time; would not be necessary to compel them; are rather dilatory in attending to complaints; 10,384–10,402. Objects to the classification made in February 1864, wherein high rates are charged for damageable goods; thinks this class of goods should pay same rates and freighters take risk. Delivers in Appendix to Report previously handed in, containing several suggestions as to rates, classification, &c.; 10,403–10,407. Proposes that rates officer should have power to settle all disputes without reference to law; discussion as to the expense of proceeding before such a tribunal; reason why it would not be necessary often to go to law; 10,423–10,443.

See also CAWKWELL. GRIERSON.

WILSON, MR. THOMAS. (*Analysis of his Evidence.*)

Has been for 23 years principal agent of the Aire and Calder Navigation, and for 10 years honorary secretary of Canal Association of Great Britain; states object of the association; 9899–9901. Gives number and length of canals in England and Scotland, also number and mileage of canals converted into, amalgamated with, or leased to railways. Names the companies amalgamated with the canals; will supply names of canals amalgamated with railways; 9902–9906. Object of railways amalgamating with canals is to destroy competition and secure a monopoly. Is no permanent competition between railways; always ends in combination. Reason why this is different between railway and canal companies. Has not heard of any complaints of fares being higher in districts where there is no competition than where competition exists between separate companies; 9907–9912. When a railway becomes possessed of a canal the tolls are raised so as to drive off traffic. States returns companies get after going to the enormous expense of buying up large systems of canals. London and North-western and all other companies lose by their canals, but recoup themselves by the higher rates they get by the railway; 9913–9917. Four railway companies took the lease of the merchandise traffic of Leeds and Liverpool canal for 21 years, and raised tolls to maximum; Mr. Cardwell's Act had not then passed. No difficulty in making an arrangement with Leeds and Liverpool Company with respect to mineral traffic; 9918–9923. Objects to the purchase of canals by railways. Reasons why they would not combine and arrange their fares if they were prohibited from amalgamating. Might be prevented by extending the principle upon which Parliament acted in the Amalgamation Act of Lancashire and Yorkshire and East Lancashire railways. If railway companies enter into agreements or amalgamations with canal companies, they generally turn out injurious to the latter. Both think they will be able to make greater profits and get a monopoly of the traffic of the district. How the public and the other canals are injured; 9924–9931. 9934–9945. 9949, 9950. 9963, 9964. 9974, 9975. Railway and canal companies are prohibited from amalgamating, except by Act of Parliament; such Acts should not be passed. Would keep railways and canals as highways open to anybody who liked to carry, as

WILSON, MR. THOMAS—*cont.*

they were up to 1847 or 1848, the railways regulating the running of trains; 9932, 9933. 9951–9958. 10,061, 10,062. Explains why he thinks that canals are not inferior to railways as an assistance to the public. 9946–9948. Unless railways come to Parliament for new powers, the Legislature would not have power to lower their maximum tolls; doubts whether they would do so; 9959–9962. Canal proprietors sometimes act upon principle that they are not able to compete with railway. In some cases do not oppose construction of new lines, upon understanding that railways shall take over the canal. Great Western had to take over the Avon and Kennet Navigation; 9965–9967. 9972, 9973. Canal rates form a very small portion of carrying expense; tolls on canals from London to Bristol before purchase were higher than whole charge now by railway. Cannot give the relative amount of toll and cost of haulage; the latter most difficult to estimate. Coal rates on canal ½ of a penny per ton per mile. Number of tons a barge can contain and pass the Aire and Calder Navigation. Only in the case of roughest goods that toll and cost of haulage are about the same, for more expensive goods the toll would be the most. No comparison between cost of haulage on the canal and on the railway; 9968–9971. 9991–10,004. If canals were likely to suffer from competition by railway, they should be compelled to run the risk, and not be allowed to amalgamate. Discussion as to whether Parliament would compel them to remain separate; 9976–9984. Railways should not amalgamate with canals or with one another; amalgamations have been the rule for years; 9985–9988. Is not aware that the complaint in Ireland is the want of amalgamation; 9989, 9990. Thinks that canals could compete with railways for the conveyance of goods. In some cases difference in speed immaterial; 10,005–10,008. 10,019. Aire and Calder Navigation compete with railway; only small canal companies amalgamate; 10,009–10,011. Would allow several small corn factors to amalgamate with one large one; discussion as to why a different rule should be applied to railways and canals; 10,012–10,018. Thinks, as far as the carriage of goods is concerned, canals are more profitable than railways. Railways carry many descriptions of goods at a loss, and reimburse themselves by undue rates upon passengers. Canals have only to maintain highway; are not carriers. Is not aware of any canal making 10 or 15 per cent.; if Vale of Neath canal divide 12 and 15 per cent. it must be due to something more than mere profit on the carriage. Reason why railways sometimes carry at a loss; if they were to carry no goods but what were profitable they could lower the passenger rates; nothing to prevent them discontinuing the carrying of goods. Thinks he can give the Commission a list of cases where railway companies have raised the rates after purchasing the canals. Mentions a case where the amalgamation of a canal with a railway company was prevented, but a lease afterwards taken under the power of a clause in the Canal Carriers Act of 1845, and the rates increased. In such a case could not appear before Parliament, and secure maintenance of existing rates; Clause now repealed. Act was passed to benefit canal companies; would have inserted a clause in Act if evil had been foreseen; 10,020–10,045. 10,047, 10,048. 10,053–10,057. Clauses were inserted in Act amalgamating Huddersfield Canal with London and North-western Railway, which give power to Board of Trade to remedy evils arising from amalgamation. Inconveniences did arise, but there was no appeal to Board of Trade; reason why a similar clause is not inserted in all railway and canal amalgamation Acts; 10,046. 10,049–10,052. 10,058–10,061. Railway companies by law are simply owners of the road; are also empowered to carry. Reason why it would not be practicable for different people to be carrying goods on a railway. Railways were formerly only carriers of passengers, all goods traffic being carried on by independent persons, such as Pickford & Co., &c., who collected and distributed the goods, the railway finding the engine power. Carriers paid railway toll, and charged public their own rates. Change of system has benefited the public, but thinks some reduction would have taken place in time if they had been independent. Advantage of company having the methodizing of all traffic more than counterbalanced by increased activity of individuals. Reason as to how canal companies got an Act enabling them to become carriers as well as receivers of tolls if it were a benefit to the public for railway companies to take tolls only. Is not the constant practice for persons having manufactories, &c. by the side of railways to collect and distribute goods; minerals are collected at sidings of proprietor and delivered at the siding of party

Wilson, Mr. Thomas—*cont.*
to whom consigned; 10,063–10,096. Motive that induced Messrs. Pickford to give up their canal establishments; 10,097, 10,098. Canals remaining independent are injured by having their feeders cut off; railways very seldom act as feeders to canals; 10,099–10,101. Canals are not so profitable now as they were before they had to compete with railways; have very largely reduced their tolls and charges. Traffic has been larger on Aire and Calder Navigation, but profits less. Cannot say whether Duke of Bridgewater's canal has suffered as much as many others; 10,102–10,107. Discussion as to whether conveyance by railway has proved cheaper than conveyance by canal; 10,108–10,112. There is a temptation to engineers and contractors to make unprofitable lines upon speculation that they will be bought by other companies; 10,113, 10,114.

Wingerworth Coal Company:

Observations by the proprietors of, on the railway companies' working of coal traffic; *App.* BV. Further statement from, in reply to Mr. Allport's evidence; *App.* BW. Further observations by, in reply to Mr. Allport's additional evidence; *App.* CM.

[For Answers to Complaints from, *see* Allport, Further Examination, 2.]

Wolverhampton:

Complaint from, of inequalities in rates on hardware goods; particulars of numerous instances given; *Walker* 10,637–10,647. Rates on steel; Sheffield traders can deliver steel at London for less than at Birmingham or Wolverhampton, both places being nearer to Sheffield and requiring the article more than London. Inequalities tend generally against Wolverhampton; *ib.* 10,648–10,651. Capricious nature of rates; some of the inequalities arise through water competition elsewhere; *ib.* 10,652–10,663. Rates are low where there is competition, but where there is none companies seem to charge as much as they can get; *ib.* 10,664, 10,665. No apparent competition now with canals; *ib.* 10,670–10,676. Sea competition not available, Wolverhampton being so far inland; *ib.* 10,688. Discussion as to probable causes of inequalities; *ib.* 10,690–10,697. 10,715, 10,716. Town would gain by a revision of rates; *ib.* 10,698–10,704. Rates appear to be fixed without reference to profit or loss; *ib.* 10,705. Witness would leave to others to remedy what he complains of. Necessity of lower rates to London; *ib.* 10,706–10,712. Present rates have been in existence for years; *ib.* 10,717–10,720. Although two railways come into the town, rates are identical; *ib.* 10,721–10,725. Classification is very imperfect; *ib.* 10,726–10,733. Foreign competition is aggravated by high rates; *ib.* 10,742. Statement on behalf of railway company in reply; *Grierson* 11,868–11,874. 11,879.

Witness is Secretary of the Wolverhampton Chamber of Commerce; *Gibbs* 10,746. Hands in resolutions of Chamber respecting unfair and unequal rates; *ib.* 10,748. Proceeds to discuss same and to state views of the Chamber, which he has been deputed by them to do; 10,749–10,870.

Answer to the above on behalf of the railway company; *Cawkwell* 11,681; *Grierson* 11,880 *et seq.*

Memorial from the Wolverhompton Chamber of Commerce respecting railway charges; *App.* BF.

Wooler, Mr. William Alexander. (*Analysis of his Evidence.*)

Is a coal owner at Darlington; represents Chamber of Commerce there; 9552–9554. Complains of the high and unequal passengers rates charged by North-eastern Railway Company; gives instances, and delivers in table showing rates per mile for each class, and the percentages; 9555–9559. Rate per mile from Darlington to Newcastle; much higher than to other places on same line. With one small exception, North-eastern Company hold whole of district between York and Newcastle and Newcastle and Carlisle; 9560–9566. 9678. Parties having influence, and directors being competitive coal owners, are much favoured by railway company. Witness owns two collieries. Company make a practice of charging to Middlesboro' from the collieries 3*s.* per ton, but if more than 20,000 tons per annum are sent, a drawback of 1*s.* per ton is allowed; small collieries that do not send this amount lose the drawback. No stipulation as to the quantity to be sent at a time. Company find the waggons and take the coal away when it suits them. Reduction

Wooler, Mr. William Alexander—*cont.*
of price to large coal owners does not represent any real saving of trouble to the company. Two or three coal owners would be allowed to unite to make up the required quantity, and company would send to the different collieries to collect from them; but it would have to go in one man's name. Some years ago company gave notice that they would not take less than eight waggons, but this order has not been acted upon; 9567–9590. Believes there are special rates and drawbacks allowed to different dealers. Tried a year or two ago to send coke to Glasgow, but could not compete with a neighbour (a director of the railway), for although he was selling his coke at the ovens at 3*d.* to 6*d.* per ton higher, and had to pay for the hire of the waggons (which witness had not), he was able to send it to Glasgow by same route, and sell much cheaper. Witness lost nearly 3*s.* per ton. Did not ask for special rates; thinks they should be published; 9591–9619. Mentions a case where trade was quite stopped for want of waggons, although at one director's colliery they had abundance, and at another 70 empty waggons were standing, with not coke enough at the benches to fill one-third of them. Coal owners do not use own waggons in the general trade; 9620–9628. Produces a tabular statement, showing that in 1864 and up to end of last month there was a deficiency in the supply of waggons to witness to the number of 77,666; was not only a loss of profit that would have been gained upon such a number, but a serious inconvenience from the accumulation of coal at the collieries, and deterioration from breakage; 9629–9633. Met a deputation of the directors, and stated a case where on a particular day they had failed to send the required number of waggons; upon inquiry of the mineral manager, it was found that undue preference had been given to another coal owner. Appointment did not result in any good. Mineral manager resigned; 9634, 9635. 9646, 9647. Mentions another case where a shipper was subjected to inconvenience and loss in consequence of company failing to supply waggons; 9636. How mineral manager, who was a part owner of small colliery, supplied himself with waggons to injury of witness. Does not contend that company should find all the waggons required, but that those possessed should be equally divided. Trade upon the Stockton and Darlington line most extensive of any, and traffic pays well. Thinks waggon supply rather short. Collieries never supply their own waggons for shipping trade or local trade to iron works; 9637–9645. 9648–9656. Thinks a special commission to attend to interests of public with reference to railways would remedy these grievances; should be a roving commission with a central board in London; such a board would soon settle matters in dispute. Companies publish dues authorized by Parliament, but not those really levied. Would not prohibit special rates being made, provided everybody had same advantages under similar circumstances. No special rates or drawbacks should be permitted except by ruling body in London. Should not be allowed to lower rates without special permission; must be lowered universally, and notice given; 9657–9673. Is objectionable in many ways that persons interested in the communication should act as railway directors, but sometimes advantageous to have those who know wants of trade as well as management of line; 9674–9676. Witness has no water communication to his colliery; 9677. Had no advantages of competition when Stockton and Darlington line was a separate undertaking. Mentions a case where undue preference was given to a director of the company to the injury of certain large ironworks; 9679–9682. Does not know reason for company allowing a drawback upon some coke sent to the other side of Leeds; 9683–9686. All the depôts of household coal are built by the company, and they allot them only to such colliers as they select; would not allot any to witness; offered to put some old buildings in repair, and pay same rent as others, but was refused. Sent agents round and sought private orders, but when waggons were sent company charged 1*s.* per ton more; the reason they gave for so doing. No work in any shape that represented that 1*s.* per ton. System adopted by North-eastern Company has raised price of household coal over all the district; 9687–9698. Irregularities in rates greater in second class than in first; rates are heavier from Darlington than they are from almost anywhere else. Does not know any reason; 9699–9703. North-eastern do not give same facilities for coke as for lime. A large coal owner was obliged to sell some hundreds of his waggons because they were not regularly supplied by company; thinks they wish to discourage use of private waggons. States that safety of passengers is not sufficiently cared

WOOLER, MR. WILLIAM ALEXANDER—*cont.*
for at Yarmouth; two persons have lost their lives; 9704–9715.

WORKING EXPENSES. *See* COST OF CONVEYANCE AND WORKING.

WORKMEN'S TRAINS:

Very cheap trains on North Staffordshire railway for workmen in the Potteries, by which large numbers travel daily to and from their work; *Morris* 14,353–14,356. 14,359. 14,363–14,368.

Suggestion of a workmen's train at ¼*d.* per mile; *Bidder* 16,987.

WRAGGE, MR. FREDERICK. (*Analysis of his Evidence.*)

Is commercial manager of Earl Granville's Shelton Collieries and Ironworks in North Staffordshire, chairman of North Staffordshire Coal and Iron Masters Association, and formerly manager of goods and mineral traffic on Midland railway; 15,413, 15,414. Charges companies may legally make are not defined with sufficient exactitude; gives an illustration showing how a certain company charged under the six miles clause 1*s.* 4*d.* per ton for carrying bricks a distance of only three-quarters of a mile; charge was 2½*d.* more than they were entitled to under this clause, and 8½*d.* more than their maximum legal charge; under what heads the excess occurred; company stated that in this case, not being common carriers, they were not bound by their maximum clause; how matter was finally settled. Law should be altered so that public could tell when companies could exercise option of acting as common carriers or not. In the case mentioned, although charge was illegal, trader was advised not to resist claim. Considers that terminals are constantly made when companies perform no service whatever beyond mere conveyance of traffic; would be just as reasonable to charge a terminal for passengers. The "reasonable" sum allowed to be charged for terminals should be defined by Act of Parliament; 15,415. 15,418–15,441. 15,461–15,464. 15,466. Believes that in generality of cases companies charge more than they are entitled to; does not mean to say that they charge more than is laid down in their Acts for haulage; 15,416, 15,417. 15,442, 15,443. 15,465. Publication of maximum tolls and terminal charges at each station would not remedy evils; mentions some of the inconveniences and delays caused by traders not knowing exact maximum charges for goods between two given points. Would be a great improvement if a uniform maximum charge were adopted and fixed by a general Act. Why it should be applicable to all railways for similar services. Speaking from a trader's point of view, companies should not be allowed to charge high rates because line was expensive to make. Variation between charges of different companies very numerous; 15,444–15,448. 15,458–15,460. 15,475. 15,491–15,493. Success of a railway depends more upon amount of traffic than upon charge per mile. If Government were to grant a mere maximum in regard to cost of lines, it is probable that it would not be to interest of companies holding those lines to charge maximum rates. Knows there are companies who find it profitable to charge less than the maximum rates. Would be a mistake if companies took into consideration cost of line in determining charges; cost is a very important point for consideration before a line is made, but not after. Best managed railways take into consideration whether a small traffic at a high charge or a large one at a small charge is most profitable; 15,449–15,457. There should be some tribunal to whom traders could apply in case of differences, without necessity of going in first instance into a court of law. Instances the Poor Law Board and Committee of Council on Education. Decision should have the effect of a legal judgment, but giving either party power to appeal to a court of law; thinks right would not be always exercised. Thinks if people could legislate claims free of cost to themselves they would not be tempted to make those that were unsustainable. The reason traders do not appeal to law through its present tribunal is that it is not worth the while of small traders, and the large ones fear of offending companies; gives two or three illustrations where they did cause inconvenience to traders who disputed their charges; 15,467–15,472. 15,507–15,523. Agrees with suggestion that, assuming the law to remain as at present, an appeal might be made to Board of Trade to appoint an arbitrator to say whether charge was or was not reasonable, the party decided against paying all expenses. Such a course would be less expensive than an appeal to a court of law. Would rather have an authority appointed to decide whether charges made for services rendered and for terminals were legal; cannot tell now what are the legal charges. Maximum tolls are defined by Act of Parliament, but not terminals. Appeal can be made to a county court, but great difficulty in getting a satisfactory decision; if charges were clearly defined, county court judges would have much less difficulty in deciding differences; 15,473, 15,474. 15,476–15,482. 15,486–15,490. 15,502, 15,503. 15,524–15,530. Would have a fixed terminal charge according to services performed. Terminal should be higher for London only when it includes delivery of the goods; 15,483–15,485. 15,504–15,506. In many cases companies charge more than the maximum for iron for distances of from 50 to 100 miles. In what way witness considers they break the law; is not prepared to give any instances to prove the charge; 15,494–15,501. States that companies charge without reference to their Acts, but according to what they conceive the traffic will bear; have been cases where charges having been disputed companies have been unable to state items of charge; 15,531–15,534. Companies have often great difficulty in getting traders who send their traffic on credit to settle their accounts; 15,535.

WRIGHT, MR. JOHN S. (*Analysis of his Evidence.*)

Is a manufacturer and merchant at Birmingham, vice-president of the Chamber of Commerce, and acting Chairman of the Council; 623–625. Is familiar with the railway charges on goods; 626. Those from Birmingham are generally very high, and also very unequal. Gives examples; 626–631. 754–760. Railways make occasional and unfair changes in the rates and classification and in the division of goods sent; 632–644. Railways own and influence canals, by which they prevent competition; 645–652. There are several railways running into Birmingham, but competition between them has always been suppressed by combination; 653–656. Proposes as a remedy that the rates should be placed under the supervision of some independent board, and regulated with some regard to uniformity, by a graduated mileage rate. This proposition discussed; 657–676. 688–707. 750. Reasons why unequal charges are made; 677–687. 708–715. Lower rates would increase traffic; 716–724. Unjust charges on travellers' patterns; 725–738. Difficulty of redress by litigation against railway companies; 739–745. Regulations proposed as to classification; 746–750. Chamber of Commerce does not ordinarily appeal to railway company for redress; 751, 752. Increase of traffic from Birmingham; 753. Imperfection and inequalities of present classification of goods; 761, 762. Liability of goods to damage, and responsibility of railway companies for same; 763–772.

NOTICE.

The present Volume contains a series of Returns made by the Railway Companies to Inquiries addressed to them by the Commission.

The inquiries were arranged under nine heads, viz. :—

Nos. 1, 2, 3, contained questions in regard to Railway Charges for the Carriage of various kinds of goods, and the Conditions applicable thereto.

No. 4 asked for a List of the Acts of Parliament under which Rates and Tolls were levied.

No. 5 contained inquiries as to Passenger Fares ;—

No. 6 as to the Rates for Parcels ;—

No. 7 as to the Charges for Horses, Carriages, and Dogs by Passenger Trains ; and,

No. 8 as to the Charges for Live Stock by Goods Trains.

No. 9 was for the purpose of comparing the present Rates and Charges with those levied on the same lines about 10 and 25 years ago respectively.

LONDON AND NORTH-WESTERN RAILWAY.

INQUIRY No. 1.—Questions in regard to Railway Charges.

1. Give a list of the lines to which this return refers, and state their respective lengths.

The lines of the London and North-western Railway Company; 1,268 miles in length.

FOR ARTICLES CARRIED FROM STATION TO STATION ONLY, OR FROM JUNCTION TO JUNCTION ONLY, ON ALL YOUR LINES.

(A.) In Companies' Waggons, when loaded and unloaded by the Owners.

2. State in the following Table the charges on your lines for the conveyance of the various articles named, in tons of 2,240 lbs., or the equivalent measurement:—

Name of Article.	(a.) What is the Minimum Charge per Ton for each Article for the shortest Distance?	(a.) What is the Minimum Load of each Article below which you refuse to take it at these Rates?	(a.) What is the Distance to which this Charge is applicable?	(b.) What is the Charge per Ton per Mile when this Distance is exceeded, and up to 50 Miles?	(b.) What is your Scale of Charges according to Distance for Distances beyond 50 Miles?	(c.) What is the Charge per Ton for Terminal or Station Accommodation?	(c.) Is it included in the foregoing Charges?	(d.) What is the Charge for Loading and Unloading when done by the Company?	(d.) Is it in addition to the foregoing Charges?
Bricks, *common*	1*s.* 6*d.*[1]	4 tons	Usually 6 miles, but the distance varies according to circumstances, the requirements of trade, &c.	½*d.* to 1½*d.*[2]	½*d.* to 1*d.*[2]	The charge for terminal services and station accommodation on this description of traffic varies from 6*d.* to 9*d.* per ton. On the St. Helen's line, in two or three cases, for particular articles, there are special rates lower than these, including terminals.	The terminal charges are included in the rates given in the preceding columns. As a matter of convenience to all parties quotations of rates and terminals are made to the public in gross sums.	The Company do not ordinarily undertake the service of loading and unloading this description of traffic, unless requested by the consignee to do so, when a charge is made to cover the cost.	Yes.
Cannel	The Company do not find waggons for this traffic except in a few special cases.								
Chromate ores									
Cinders									
Clay									
Coal									
Coke									
Compost									
Coprolites, *for manure*	1*s.* 6*d.*	4 tons	Same reply as given for bricks.	1*d.* to 1½*d.*	½*d.* to 1*d.*				
Culm	The Company do not find waggons for this traffic.								
Draining pipes and tiles (*com. for agricultural draining*).	1*s.* 6*d.*	4 tons	Same reply as given for bricks.	¾*d.* to 1½*d.*	½*d.* to 1*d.*				
Dross	The Company do not find waggons for this traffic.								
Fire bricks and clay	1*s.* 6*d.*	4 tons	Same reply as given for bricks.	¾*d.* to 1½*d.*	½*d.* to ¾*d.*				
Flagstones									
Granite, *undressed*									
Gravel									
Iron ore	6*d.*	4 tons	Do.	¾*d.* to 1*d.*	½*d.* to ¾*d.*				
Iron, *pig*	1*s.* 6*d.*	4 tons	Do.	¾*d.* to 1½*d.*	½*d.* to ¾*d.*				
Iron stone	1*s.*	4 tons	Do.	¾*d.* to 1½*d.*	½*d.* to 1*d.*				
Lime and limestone									
Manure, *in bulk*	1*s.*	4 tons	Do.	¾*d.* to 1½*d.*	½*d.* to 1*d.*				
Materials for road repairs.	1*s.*	4 tons	Do.	¾*d.* to 1½*d.*	½*d.* to 1*d.*				
Peat									
Potters' earth									
Pyrites									
Salt, *rock, and unmanufactured.*									
Salt, *in bulk*, including manufactured salt, when so carried.	The Company do not find waggons for this traffic.								
Sand									
Scoriæ									
Slag									
Slates, *common*	1*s.* 6*d.*	4 tons	Same reply as given for bricks.	¾*d.* to 1½*d.*	½*d.* to 1*d.*				
Stone, *in the rough state, building, pitching, paving, kerb, or flags.*									
Sulphur ore									
Tiles	1*s.*	4 tons	Do.	¾*d.* to 1½*d.*	½*d.* to 1*d.*				
Turf									
Zinc ore									

[1] In fixing the rates and charges regard is had to the local circumstances, the nature and value of the article to be carried, the existence and extent of competition by sea or by inland navigation or otherwise, between the same or neighbouring places, and also to the rates and charges from other producing districts to the same market.
The minimum rate in this column includes all charges and terminals, but such minimum is modified in special cases, according to circumstances.

[2] The mileage charge stated in these columns (*b.*) is in all cases in addition to the before-mentioned minimum.

3. Are the above mileage charges uniformly applied between all stations on your system of railways?

No; they are modified according to circumstances.

4. If not, state the nature of the exceptions?

Traders finding their own sidings, shunting and marshalling their own trucks into trains, sending full train loads at one time, &c., &c., &c.

5. Is the traffic of this class conveyed at the owner's risk, or otherwise?

At owner's risk.

6. If not, state in what respects you depart from this condition?

See answer to No. 5.

7. Do you undertake to deliver this class of traffic within a specified time?

No.

8. What time is allowed at the stations for loading and unloading this class of traffic?

A reasonable time for loading, according to the nature of the traffic, and two clear days for unloading.

9. What charge do make for demurrage of waggons?

Three shillings per waggon per diem after two clear days.

London and North-western Railway.—Inquiry No. 1.—*continued.*

(B.) In Owners' Waggons.

10. State in the following Table, the charges on your own line for the conveyance of the various articles named, in tons of 2,240 lbs., or the equivalent measurement:—

Name of Article.	(a.) What is the Minimum Charge per Ton for each Article for the shortest Distance?	(a.) What is the Minimum Load of each Article below which you refuse to take it at these Rates?	(a.) What is the Distance to which this Charge is applicable?	(b.) What is the Charge per Ton per Mile when this Distance is exceeded, and up to 50 Miles?	(b.) What is your Scale of Charges according to Distance for Distances beyond 50 Miles?	(c.) What is the Charge per Ton for Terminal or Station Accommodation?	(c.) Is it included in the foregoing Charges.
Bricks, *common* Cannel Chromate ores Cinders Clay Coal Coke Compost Coprolites, *for manure*	See note 1 to the Table above.—The public very rarely, if ever, find waggons for this traffic, but if they did, we should make an allowance of about ½*d.* per ton per mile for so doing.						
Culm	Same as coal.						
Draining pipes and tiles (*com. for agricultural draining*). Dross Fire bricks and clay Flagstones Granite, *undressed* Gravel Iron ore Iron, *pig*	The public rarely find waggons for this traffic. In cases where private waggons are used an allowance special to each case is agreed on. One-eighth of a penny per ton per mile is a common allowance.					The charge for terminal services and station accommodation on this description of traffic varies from 2*d.* to 6*d.* per ton.	The terminal charges are included in the rates given in the preceding columns as a matter of convenience to all parties. Quotations of rates and terminals are made to the public in gross sums.
Iron stone Lime and limestone Manure, *in bulk* Materials for road repairs Peat Potters' earth Pyrites Salt, *rock, and unmanufactured* Salt, *in bulk*, including manufactured salt, when so carried. Sand Scoriæ Slag	The public rarely find waggons for this traffic. Where private waggons are used an allowance special to each case is agreed on.						
	6*d.* to 1*s.*	4 tons	Usually 6 miles, but varies according to circumstances.	¾*d.* to 1*d.*	½*d.* to ¾*d.*		
Slates, *common* Stone, *in the rough state, building, pitching, paving, kerb, or flags.* Sulphur ore Tiles Turf Zinc ore	Same reply as to iron stone, &c. as above.						
	Varies from 6*d.* to 1*s.*	4 tons	6 miles, but varies according to circumstances.	½*d.* to 1*d.*	$\frac{7}{10}$*d.* to ¾*d.*	2*d.* to 6*d.*	No.

10*d.* Do the charges include returning empty waggons? — Yes.

11. Are the above charges uniformly applied between all stations on your system of railways? — No. They vary according to circumstances (see special note in preceding page).

12. If not, state the nature of the exceptions? — See answer to No. 4.

13. Is the traffic of this class conveyed at the owner's risk, or otherwise? — At owner's risk.

14. Do you undertake to convey this class of traffic within a specified time? — No.

15. And to return the empty waggons within a specified time? And if so, in what time? — No. The waggons are conveyed and returned in the same time and by same trains as the company's waggons, and are otherwise treated in transit the same as the company's waggons.

16. Do you allow demurrage on owners' waggons when not returned within the specified time? — No.

FOR THROUGH TRAFFIC, WHETHER IN COMPANIES' OR IN OWNERS' WAGGONS.

17. Do you make through charges for this class of traffic with all other railway companies connected with your system by junctions? — Yes, with all companies willing to book through.

18. Are junctions considered as stations for this class of traffic? — Not always, but generally as places for interchange of through traffic.

19. If not, state the exceptions? — When there is no station there.

20. What arrangements are made for the interchange of traffic with other companies, when through charges are not given? — Traffic is handed in the same waggon to the next company for forward transit, without delay or trans-shipment, except in cases of break of gauge.

CONTRACT CHARGES, WHETHER IN COMPANIES' OR IN OWNERS' WAGGONS.

21. Have you any scale of charges applicable to contracts? If so,— — No.

a. Is the charge based on a minimum annual payment, or on the quantity carried?

b. Or how otherwise?

22. Have you any special contracts independent of the foregoing scale of charges or conditions? — No.

London and North-western Railway—*continued.*

INQUIRY No. 2.—Questions in regard to Railway Charges.

FOR ARTICLES CARRIED FROM STATION TO STATION ONLY, OR FROM JUNCTION TO JUNCTION ONLY, ON ALL YOUR LINES, IN COMPANIES' WAGGONS.

1. State in the following Table the charges on your lines for the conveyance of the various articles named, in tons of 2,240 lbs., or the equivalent measurement :—

Name of Article.	(a.) What is the minimum Charge per Ton for each Article for the shortest Distance?	(a.) What is the minimum Load of each Article below which you refuse to take it at these Rates?	(a.) What is the Distance to which this Charge is applicable?	(b.) What is the Charge per Ton per Mile when this Distance is exceeded, and up to 50 Miles?	(b.) What is your Scale of Charges according to for Distances beyond 50 Miles.	(c.) What is the Charge per Ton for Terminal or Station Accommodation?	(c.) Is it included in the foregoing Charges?	(d.) What is the Charge for Loading and Unloading when done by the Company?	(d.) Is it in addition to the foregoing Charges?	Is any and what Deduction made when the Loading or Unloading is done by the Owner?
For the whole of the articles included in the SPECIAL CLASS of the Clearing House Classification. Appendix CP.	Two shillings per ton in a few instances, but generally from 3*s.* to 4*s.* per ton.	Generally two tons, but in special cases one ton.	Six miles.	From 1½*d.* to 2½*d.* per ton per mile generally, but lower rates than these are sometimes charged to meet special cases.	From 1*d.* to 2*d.* per ton per mile generally, but lower rates are made to meet special cases.	Generally from 1*s.* 6*d.* to 2*s.* 6*d.* per ton at each end, and is not included in the two previous columns.		No separate charge is made, as these services are included in the terminal.		No, except in the case of private sidings, when the loading or unloading is done by the owner of the sidings, in which cases an allowance is made by agreement.

2. Are the above mileage charges uniformly applied between all stations on your system of railways?

3. If not, state the nature of the exceptions, and give an instance of each class of exceptions.

No; the charges vary according to circumstances; competition both by rail and by water; the distance between the manufactory and the markets; and the general development of traffic to encourage it to come on to the line.

4. Is the traffic of articles in this return conveyed at the owner's risk, or otherwise?

5. If not, state in what respects you depart from this condition.

Principally at company's risk; certain articles are carried at owner's risk, when a lower rate is charged to the public.

6. Do you undertake to deliver the traffic of articles in this return within a specified time?

No specific time agreed upon; but generally, in practice, from 24 hours to 48 hours, except in very long distances.

7. What time is allowed at the stations for loading and unloading this class of traffic?

Twenty-four to 48 hours are allowed.

8. For what period do you keep any of the articles in this return in your warehouses free of charge?

9. What charge for warehousing is made after the period has expired?

This class of traffic is not, as a rule, warehoused; the scale of warehousing charges varies in different districts, and according to the cost of service and accommodation rendered.

10. What charge do you make for demurrage of waggons?

Three shillings a day.

FOR THROUGH TRAFFIC.

11. Do you make through charges for this class of traffic with all other railway companies connected with your system by junctions? If not, state the exceptions, and give an instance of each class of exceptions.

This company do so under agreements with the other companies.

12. Are junctions considered as stations for the traffic of articles in this return?

13. If not, state the exceptions, and give an instance of each class of exception.

Not as stations, but as places of interchange when entered at through rates, but if it is booked to the junction, then, for the purpose of forward transit, the junctions become booking stations.

14. What arrangements are made for the interchange of traffic with other companies, when through charges are not given?

Local rates are charged to the junction where the traffic is handed over to the other company, who carry it forward at their local rates, but such cases are very exceptional.

GENERAL QUESTIONS.

15. Have you any scale of charges applicable to contracts? If so,—

No.

a. Is the charge based on a minimum annual payment, or on the quantity carried?

No.

b. Or how otherwise?

No.

16. Have you any special contracts independent of the foregoing scale of charges or conditions?

No.

17. Is the traffic in all cases sent by the shortest railway route in connexion with your system of railways? If not, state the exceptions, and give an instance of each class of exceptions.

Not always by the shortest route; the company have several routes between the same stations on their system, and they classify the traffic so as to work it conveniently and carry it to its destination in the shortest time; for instance, Liverpool and Manchester, London and Manchester, London and Liverpool, Birmingham and Wolverhampton.

London and North-western Railway.—Inquiry No. 2.—*continued.*

18. Do the mileage rates apply to the shortest railway route? If not, state to what distance they apply. — Yes; the shortest route on our own line.

19. Are any articles in this class ever carried in owner's waggons? If so, state the particulars. — Yes; salt, gas-tar, sanitary tubes, pit or prop wood.

INQUIRY No. 3.—Questions in regard to Railway Charges.

1. State in the following Table the charges for the conveyance of the various articles named, between Stations on your own lines, in tons of 2,240 lbs., or the equivalent measurement, including collection and delivery. Specify against any of these articles those which are from station to station only.

Name of Article.	(a.) What is the minimum Charge for Articles under 112 lbs. Weight?	(a.) What is the Scale of Charge for Articles under 112 lbs. according to Distance?	(b.) What is the minimum Charge per Ton?	(b.) What is the Distance to which this Charge is applicable?	(c.) What is the Charge per Ton per Mile when this Distance is exceeded?	(d.) What is the Charge per Ton for Porterage and Station Accommodation?	(d.) Are these Charges included in the Mileage Rates?	(e.) What is the Charge per Ton for Collection and Delivery?	(e.) Are these Charges included in the Mileage Rates?	(f.) Are there any exceptional Charges for Collection and Delivery? If so, state the Stations and Charges.	(g.) Are any of these Articles carried upon Toll, and, if so, at what Rates?
For the whole of the articles included in the First Class of the Clearing House Classification. Appendix CP.	Sixpence.	Minimum scale. 25 miles and under 26 „ to 50 miles: 28 lbs. 0 6; 56 lbs. 0 6 / 51 „ to 100 „: 0 9 / 0 8 / 101 „ to 150 „: 1 0 / 1 3 / 151 „ to 200 „: 1 3 / 1 6 / 201 „ to 300 „: 1 9 / 2 3	Five shillings.	Six miles.	From 2*d.* to 2½*d.* per ton per mile.	From 1*s.* 6*d.* to 2*s.* 6*d.* per ton at each end, but in cases of very light, fragile, or bulky articles the charge is more.	Not in the mileage rates, but they are included in the gross rate charged to the public.	It varies from 2*s.* per ton in the country to 7*s.* per ton in London for collection, and the same for delivery.	Not in the mileage rates, but in the gross rate quoted to the public.	Yes; special arrangements are required for articles of great weight, bulk, or of a fragile character, and for delivery beyond the usual limits.	No.

2. State in the following Table the charges for the conveyance of the various articles named, between Stations on your own lines, in tons of 2,240 lbs., or the equivalent measurement, including collection and delivery. Specify against any of these articles those which are from station to station only.

Name of Article.	(a.) What is the minimum Charge for Articles under 112 lbs. Weight?	(a.) What is the Scale of Charge for Articles under 112 lbs. according to Distance?	(b.) What is the minimum Charge per Ton?	(b.) What is the Distance to which this Charge is applicable?	(c.) What is the Charge per Ton per Mile when this Distance is exceeded?	(d.) What is the Charge per Ton for Porterage and Station Accommodation?	(d.) Are these Charges included in the Mileage Rates?	(e.) What is the Charge per Ton for Collection and Delivery?	(e.) Are these Charges included in the Mileage Rates?	(f.) Are there any exceptional Charges for Collection and Delivery? If so, state the Stations and Charges.	(g.) Are any of these Articles carried upon Toll, and, if so, at what Rates?
For the whole of the articles included in the Second Class of the Clearing House Classification. Appendix CP.	Sixpence.	Minimum scale. 25 miles and under 26 „ to 50 miles: 28 lbs. 0 6; 56 lbs. 0 6 / 51 „ to 100 „: 0 9 / 0 8 / 101 „ to 150 „: 1 0 / 1 3 / 151 „ to 200 „: 1 3 / 1 6 / 201 „ to 300 „: 1 9 / 2 3	Five shillings.	Six miles.	From 2*d.* to 2½*d.* per ton per mile.	From 1*s.* 6*d.* to 2*s.* 6*d.* per ton at each end; but in cases of very light, fragile, or bulky articles the charge is more.	Not in the mileage rates, but they are included in the gross rate charged to the public.	It varies from 2*s.* per ton in the country to 7*s.* per ton in London for collection, and the same for delivery.	Not in the mileage rates, but in the gross rate quoted to the public.	Yes; special arrangements are required for articles of great weight, bulk, or of a fragile character, and for delivery beyond the usual limits.	No.

London and North-western Railway.—Inquiry No. 3.—*continued.*

3. State in the following Table the charges for the conveyance of the various articles named, between Stations on your own lines, in tons of 2,240 lbs., or the equivalent measurement, including collection and delivery. Specify against any of these articles those which are from station to station only.

Name of Article.	What is the minimum Charge for Articles under 112 lbs. Weight? (a.)	What is the Scale of Charge for Articles under 112 lbs. according to Distance? (a.)	What is the minimum Charge per Ton? (b.)	What is the Distance to which this Charge is applicable? (b.)	What is the Charge per Ton per Mile when this Distance is exceeded? (c.)	What is the Charge per Ton for Porterage and Station Accommodation? (d.)	Are these Charges included in the Mileage Rates? (d.)	What is the Charge per Ton for Collection and Delivery? (e.)	Are these Charges included in the Mileage Rates? (e.)	Are there any exceptional Charges for Collection and Delivery? If so, state the Stations and Charges. (f.)	Are any of these Articles carried upon Toll, and, if so, at what Rates? (g.)
For the whole of the articles included in the THIRD CLASS of the Clearing House Classification. Appendix CP.	Sixpence.	Minimum scale. 25 miles and under 26: 28 lbs. 0 6; 56 lbs. 0 6 8 26 „ to 50 miles: 0 6; 0 8 51 „ to 100 „: 0 9; 1 0 101 „ to 150 „: 1 0; 1 3 151 „ to 200 „: 1 3; 1 6 201 „ to 300 „: 1 9; 2 3	Five shillings.	Six miles.	From 2¾*d.* to 3*d.* per ton per mile.	From 1*s.* 6*d.* to 2*s.* 6*d.* per ton at each end; but in cases of very light, fragile, or bulky articles the charge is more.	Not in the mileage rates, but they are included in the gross rate charged to the public.	It varies from 2*s.* per ton in the country to 7*s.* per ton in London for collection, and the same for delivery.	Not in the mileage rates, but in the gross rate quoted to the public.	Yes; special arrangements are required for articles of great weight, bulk, or of a fragile character, and for delivery beyond the usual limits.	No.

4. State in the following Table the charges for the conveyance of the various articles named, between Stations on your own lines, in tons of 2,240 lbs., or the equivalent measurement, including collection and delivery. Specify against any of these articles those which are from station to station only.

Name of Article.	What is the minimum Charge for Articles under 112 lbs. Weight? (a.)	What is the Scale of Charge for Articles under 112 lbs. according to Distance? (a.)	What is the minimum Charge per Ton? (b.)	What is the Distance to which this Charge is applicable? (b.)	What is the Charge per Ton per Mile when this Distance is exceeded? (c.)	What is the Charge per Ton for Porterage and Station Accommodation? (d.)	Are these Charges included in the Mileage Rates? (d.)	What is the Charge per Ton for Collection and Delivery? (e.)	Are these Charges included in the Mileage Rates? (e.)	Are there any exceptional Charges for Collection and Delivery? If so, state the Stations and Charges. (f.)	Are any of these Articles carried upon Toll, and, if so, at what Rates? (g.)
For the whole of the articles included in the FOURTH CLASS of the Clearing House Classification. Appendix CP.	Sixpence.	Minimum scale. 25 miles and under 26: 28 lbs. 0 6; 56 lbs. 0 6 8 26 „ to 50 miles: 0 6; 0 8 51 „ to 100 „: 0 9; 1 0 101 „ to 150 „: 1 0; 1 3 151 „ to 200 „: 1 3; 1 6 201 „ to 300 „: 1 9; 2 3	Five shillings.	Six miles.	From 3*d.* to 3¼*d.* per ton per mile.	From 1*s.* 6*d.* to 2*s.* 6*d.* per ton at each end; but in cases of very light, fragile, or bulky articles the charge is more.	Not in the mileage rates, but they are included in the gross rate charged to the public.	It varies from 2*s.* per ton in the country to 7*s.* per ton in London for collection, and the same for delivery.	Not in the mileage rates, but in the gross rate quoted to the public.	Yes; special arrangements are required for articles of great weight, bulk, or of a fragile character, and for delivery beyond the usual limits.	No.

5. State in the following Table the charges for the conveyance of the various articles named, between Stations on your own lines, in tons of 2,240 lbs., or the equivalent measurement, including collection and delivery. Specify against any of these articles those which are from station to station only.

Name of Article.	What is the minimum Charge for Articles under 112 lbs. Weight? (a.)	What is the Scale of Charge for Articles under 112 lbs. according to Distance? (a.)	What is the minimum Charge per Ton? (b.)	What is the Distance to which this Charge is applicable? (b.)	What is the Charge per Ton per Mile when this Distance is exceeded? (c.)	What is the Charge per Ton for Porterage and Station Accommodation? (d.)	Are these Charges included in the Mileage Rates? (d.)	What is the Charge per Ton for Collection and Delivery? (e.)	Are these Charges included in the Mileage Rates? (e.)	Are there any exceptional Charges for Collection and Delivery? If so, state the Stations and Charges. (f.)	Are any of these Articles carried upon Toll, and, if so, at what Rates? (g.)
For the whole of the articles included in the FIFTH CLASS of the Clearing House Classification. Appendix CP.	Sixpence.	Minimum scale. 25 miles and under 26: 28 lbs. 0 6; 56 lbs. 0 6 8 26 „ to 50 miles: 0 6; 0 8 51 „ to 100 „: 0 9; 1 0 101 „ to 150 „: 1 0; 1 3 151 „ to 200 „: 1 3; 1 6 201 „ to 300 „: 1 9; 2 3	Five shillings.	Six miles.	From 3*d.* to 3¼*d.* per ton per mile.	From 1*s.* 6*d.* to 2*s.* 6*d.* per ton at each end; but in cases of very light, fragile, or bulky articles the charge is more.	Not in the mileage rates, but they are included in the gross rates charged to the public.	It varies from 2*s.* per ton in the country to 7*s.* per ton in London for collection, and the same for delivery.	Not in the mileage rates, but in the gross rate quoted to the public.	Yes; special arrangements are required for articles of great weight, bulk, or of a fragile character, and for delivery beyond the usual limits.	No.

London and North-western Railway.—Inquiry No. 3.—*continued.*

6. State in the following Table the charges for the conveyance of the various articles named, between Stations on your own lines, in tons of 2,240 lbs., or the equivalent measurement, including collection and delivery. Specify against any of these articles those which are from station to station only.

Name of Article.	(a.) What is the minimum Charge for Articles under 112 lbs. Weight?	(a.) What is the Scale of Charge for Articles under 112 lbs. according to Distance?	(b.) What is the minimum Charge per Ton?	(b.) What is the Distance to which this Charge is applicable?	(c.) What is the Charge per Ton per Mile when this Distance is exceeded?	(d.) What is the Charge per Ton for Porterage and Station Accommodation?	(d.) Are these Charges included in the Mileage Rates?	(e.) What is the Charge per Ton for Collection and Delivery?	(e.) Are these Charges included in the Mileage Rates?	(f.) Are there any exceptional Charges for Collection and Delivery? If so, state the Stations and Charges.	(g.) Are any of these Articles carried upon Toll, and, if so, at what Rates?
Acids and other highly corrosive articles.	Carried in accordance with Clearing House Regulations, see page 48, edition 1866.										
Basket carriage bodies and Bath chairs, *at Company's risk.*	"	"	"	"	"	"	"	23,	"

Statuary - - -	Special contract.										
Returned empty packages.	In accordance with Clearing House scale, see page 52, edition 1866.										

Small parcels - -

Minimum scale	28 lbs. s. d.	56 lbs. s. d.
25 miles and under	0 6	0 6
26 " to 50 miles	0 6	0 8
51 " to 100 "	0 9	1 0
101 " to 150 "	1 0	1 3
151 " to 200 "	1 3	1 6
201 " to 300 "	1 9	2 3

2. Are the above mileage charges uniformly applied between all stations on your system of railways?

3. If not, state the nature of the exceptions, and give an instance of each class of exceptions.

No; the charges vary according to circumstances; competition, both by rail and by water; the distance between the manufactory and the markets; and the general development of traffic to encourage it to come on to the rail.

4. Is the traffic of these articles carried at the company's risk (excepting the articles otherwise specified)?

5. If not, state in what respects you depart from this condition.

Principally at company's risk; certain articles are carried at owner's risk, when a lower rate is charged to the public.

6. Do you undertake to deliver the traffic of articles in this return within a specified time?

No specific time agred upon; but generally, in practice, from 24 hours to 48 hours, except in very long distances.

7. What time is allowed at the stations for loading and unloading this class of traffic?

From 24 to 48 hours are allowed.

8. For what period do you keep any of the articles in this return in your warehouses free of charge?

9. What charge for warehousing is made after the period has expired?

The scale of warehousing charges varies in different districts, and according to the cost of service and accommodation rendered.

10. What charge do you make for demurrage of waggons?

Three shillings per day.

FOR THROUGH TRAFFIC.

11. Do you make through charges for this class of traffic with all other railway companies connected with your system by junctions? If not, state the exceptions, and give an instance of each class of exceptions.

This company do so under agreements with the other companies.

12. Are junctions considered as stations for the traffic of articles in this return?

13. If not, state the exceptions, and give an instance of each class of exception.

Not as stations, but as places of interchange when entered at through rates, but if it is booked to the junction, then, for the purpose of forward transit, the junctions become booking stations.

14. What arrangements are made for the interchange of traffic with other companies, when through charges are not given?

Local rates are charged to the junction where the traffic is handed over to the other company, who carry it forward at their local rates, but such cases are very exceptional.

GENERAL QUESTIONS.

15. Have you any scale of charges applicable to contracts? If so,—

No.

a. Is the charge based on a minimum annual payment, or on the quantity carried?

No.

b. Or how otherwise?

No.

London and North-western Railway.—Inquiry No. 3.—*continued.*

16. Have you any special contracts independent of the foregoing scale of charges or conditions?

A special arrangement exists with the brewers at Burton as to the carriage of beer.

17. Is the traffic in all cases sent by the shortest railway route in connexion with your system of railways? If not, state the exceptions, and give an instance of each class of exceptions.

Not always by the shortest route; the company have several routes between the same stations on their system, and they classify the traffic so as to work it conveniently and carry it to its destination in the shortest time; for instance, Liverpool and Manchester, London and Manchester, London and Liverpool, Birmingham and Wolverhampton.

18. Do the mileage rates apply to the shortest railway route? If not, state to what distance they apply.

Yes; the shortest route on our own line.

19. Are any articles in this class ever carried in owner's waggons? If so, state the particulars.

No.

INQUIRY No. 4.—As to Acts of Parliament authorizing Tolls and Rates.

Give a list of the Acts of Parliament now in force, under which you are authorized to levy Tolls and Rates on the lines included in your former return.

9 & 10 Vict. c. 204. [1846], London, Birmingham, Liverpool, Manchester, &c.
7 Vict. c. 37. [1844], Preston, Lancaster, and Carlisle.
9 & 10 Vict. c. 300. [1846], South Staffordshire.
7 & 8 Vict. c. 65. [1844], Chester and Holyhead.
9 & 10 Vict. c. 231. [1846], North Union—Parkside to Preston, &c.

INQUIRY No. 5.—As to Passenger Fares.

Give the following information in reference to the lines included in your former returns:—

	Express Fares.						Ordinary Fares.							
	1st Class.		2nd Class.		3rd Class.		1st Class.		2nd Class.		3rd Class.		Parliamentary.	
	Single.	Return.	Single.	Return.	Single.	Return.	Single.	Return.	Single.	Return.	Single.	Return.	Single.	Return.
	d.	*d.*	*d.*	*d.*			*d.*	*d.*	*d.*	*d.*			*d.*	*d.*
Average fares charged per mile.	2·50	3·76	2·01	3·05	Nil.	Nil.	1·95	2·93	1·44	2·17	—	—	·95	1·65
Highest - -	2·57	3·76	2·07	3·05	Nil.	Nil.	2·07	3·17	1·54	2·23	—	—	1·	2·
Lowest -	2·28	3·76	1·85	3·05	Nil.	Nil.	1·36	2·09	1·	1·54	—	—	·66	1·
Maximum fares allowed by Act of Parliament - -	2½*d.* per mile, with Government duty added, and 1*s.* for Euston incline.	—	—	—	—	—	2*d.* per mile, with Government duty added, and 1*s.* for Euston incline.	—	1¾*d.* per mile, with Government duty added, and 1*s.* for Euston incline.	—	—	—	1*d.* per mile.	—

Places between which the highest rate of passenger fare is charged, giving the fares for each class, and the distances between the stations.

London to Newton Bridge, 188 miles, 43*s.* 6*d.*, 1st express single.
London to Chester, 178 miles, 60*s.* 9*d.*, 1st express return; 49*s.* 6*d.*, 2nd express return.
London to Crewe, 157 miles, 29*s.* 6*d.*, 2nd express single.
Birmingham to Wolverhampton, 13 miles, 2*s.* 4*d.*, 1st ordinary single; 1*s.* 9*d.*, 2nd ordinary single; 2*s.* 6*d.*, 2nd ordinary return.
Manchester to Wigan, 18 miles, 5*s.*, 1st ordinary return.
London to Liverpool, 201 miles, 16*s.* 9*d.*, parliamentary single.
Tipton to Birmingham, 8 miles, 1*s.* 4*d.*, parliamentary return.

Places between which the lowest rate of passenger fare is charged, giving the fares for each class, and the distances between the stations.

London to Bletchley, 46 miles, 10*s.* 3*d.*, 1st express single; 8*s.* 6*d.*, 2nd express single.
London to Chester, 178 miles, 60*s.* 9*d.*, 1st express return; 49*s.* 6*d.*, 2nd express return.
Birmingham to to Walsall, 11 miles, 1*s.* 4*d.*, 1st ordinary single; 2*s.*, 1st ordinary return; 1*s.* 6*d.*, 2nd ordinary return.
Manchester to Stockport, 6 miles, 6*d.*, 2nd ordinary single; 4*d.*, parliamentary single; 6*d.*, parliamentary return.

Are market tickets issued? If so, between what places, and at what proportion of the single fares?

Market tickets are issued only to one or two points, such as Wolverton. The charge for the double journey is about a single fare, with 10 per cent. added.

Give the average speeds of trains as follows:—

Average speed of express trains, including stoppages - - - - 36⅝ miles per hour.
„ „ ordinary passenger trains „ - - - - 28⅝ „
„ „ parliamentary „ „ - - - - 19⅝ „

Give some general information as to the nature and extent of your special excursion traffic, stating the frequency of the excursion trains, the places between which they run, the fares charged per mile for each class, the number of passengers of each class generally carried in each train, and the average speed, including stoppages.

Excursion trains have been run from London to the provinces, and from the provinces to London about once every three weeks during the summer months from June to October.

London and North-western Railway.—Inquiry No. 5.—*continued.*

Excursion trains are also run from the manufacturing districts of Lancashire, Yorkshire, Staffordshire and Warwickshire to the coast of North Wales every Saturday during the summer season at low fares, the tickets being available for return on the following Monday.

At general holidays, such as Easter and Whitsuntide, cheap trains are run for the accommodation of the working classes to and from all the principal towns on the system; the period of time for which the tickets by these cheap trains are available varies from two to five days.

Similar facilities are afforded (in the respective districts affected) on the occasion of many of the annual provincial gatherings, such as Chester, Northampton, or Shrewsbury Races, Birmingham Cattle Show and Onion Fair, Buxton Well Dressing, the Welsh Eisteddfod; and some of the more important fairs and anniversaries, to which day-trips as well as excursions allowing a longer period are run.

The scale of charges adopted varies in certain localities, but as a general standard the following has been the basis of calculation :—

—	1st Class Carrriages.	Covered Carriages. (2nd or 3rd Class.)
For excursions allowing one to five days for return - - -	$\frac{5}{8}$ths of a penny per mile for the double journey.	$\frac{3}{8}$ths of a penny per mile for the double journey.
For excursions allowing longer periods up to three weeks for return -	Single 1st class fare - -	Single 3rd class fare.

Another class of excursions is that run for the conveyance of school parties. It consists of day-trips run at very low fares on the occasion of the annual treats given to such schools by the teachers, who generally take their scholars out to some place of attraction in the country, for distances varying from 10 to 50 miles away from their place of residence; the promoters generally add a small sum per head to the fare quoted by the railway company for the purpose of covering the incidental expenses of the party.

Similar arrangements are made for the conveyance of parties of "mill hands" and other operatives, for distances of 30, 40, or 50 miles, the scale of fares adopted being slightly in excess of the charges for the conveyance of school parties.

The average speed of excursion trains, including stoppages, is about 25 miles per hour, and the average number of passengers conveyed by such trains is 436.

INQUIRY No. 6.—As to Rates for Parcels.

Give, in reference to the lines included in your former returns, the general rates charged for parcel traffic, both by passenger and goods trains, according to weight and distance. Also add particulars of any important exceptions made to these general rates.

General Scale by Passenger Trains.

Distances.	Weights. 1 lb.	2 lbs.	3 lbs.	Above 3 lbs. and not exceeding 7 lbs.	—	—	Above	per lb.
	s. d.	*s. d.*	*s. d.*	*s. d.*		*s. d.*	lbs.	*d.*
Not exceeding 30 miles - -	0 6	0 6	0 6	0 6	Above 7 lbs., and not exceeding 24 lbs.	0 6	24	$\frac{1}{4}$
Above 30 miles and not exceeding 50 miles	0 6	0 6	0 6	0 8	„ 7 „ „ 16 „	0 8	16	$\frac{1}{2}$

London and North-western Railway.—Inquiry No. 6.—*continued.*

Applying *only* to the district including Liverpool, Warrington, Manchester, Ashton, Stalybridge, Oldham, Huddersfield, Normanton, Leeds, Halifax, Bradford, Wakefield, Southport, Preston, Lytham, Blackpool, Fleetwood, Bolton, Blackburn, Colne, Chatburn, Widnes (Runcorn Gap), Rainford Junction, Stockport, Cheadle, Macclesfield, Buxton, and intermediate stations.

Van Parcels, specially addressed "per Van Train," conveyed between all the principal stations on the London and North-western Railway by one slow train daily, are charged one-half the ordinary parcels rates, delivery included, no less charge being made than the lowest ordinary charge for a parcel exceeding 7 lbs. in weight.

INQUIRY No. 7.—As to Charges for Horses, Carriages, and Dogs by Passenger Trains.

Insert in the following table the rates charged for horses, carriages, and dogs carried by passenger trains on the lines included in your former returns.

—	Charge per Mile.	Minimum Gross Charge.
Horse boxes containing 3 horses, not exceeding 50*l.* each in value	3*d.* per horse.	3*s.* 6*d.* each horse.
„ „ 2 „ „ „		
„ „ 1 „ „ „		
Two-wheeled carriages - - - - - -	4*d.* per carriage.	5*s.* 6*d.* each carriage.
Four-wheeled „ - - - - - -		

Dogs -					*s.*	*d.*	
For distances not exceeding 10 miles - - -					0	3	each
„ above 10 miles and not exceeding 20 miles					0	6	„
„ 20	„	40	„		1	0	„
„ 40	„	80	„		1	6	„
„ 80	„	100	„		2	0	„
„ 100	„	130	„		2	6	„
„ 130	„	150	„		3	0	„
„ 150	„	200	„		4	0	„
„ 200	„	250	„		5	0	„
„ 250	„	300	„		6	0	„
Increasing at the rate of 6*d.* for each additional 50 miles or part of 50 miles.							

What is the rate of insurance on horses exceeding the above-mentioned values?

Five per cent. on declared value above 50*l.* per horse.

State whether the rates charged for this kind of traffic are uniform, or if they are lower for the longer distances. If the latter, give the scale of distances and charges.

The rates are uniform.

INQUIRY No. 8.—As to Charges for Live Stock by Goods Trains.

Insert in the following table the rates charged, on the lines included in your former return, for live stock carried by goods trains.

—	Whole Trucks.				Half Trucks.				Double Sheep Van.			
	No. of Animals.	Maximum Rate per Truck per Mile.	Minimum Rate per Truck per Mile.	Minimum Charge per Truck.	No. of Animals.	Maximum Rate per Half Truck per Mile.	Minimum Rate per Half Truck per Mile.	Minimum Charge per Half Truck.	No. of Animals.	Maximum Rate per Van per Mile.	Minimum Rate per Van per Mile.	Minimum Charge per Van.
	This depends upon the class of truck in which the stock is loaded; the London and North-western Company have four sizes, small, 14-feet, 15-feet, and large.	*s.* *d.*	*s.* *d.*	*s.* *d.*	Half trucks of stock are charged half the small waggon rate for each class of stock.				—	*s.* *d.*	*s.* *d.*	—
Fat cattle - -		0 $6\frac{7}{8}$	0 5	5 0					—	—	—	—
Lean cattle - -		0 $6\frac{7}{8}$	0 5	5 0					—	—	—	—
Sheep - -		0 $6\frac{7}{8}$	0 5	5 0					—	0 $11\frac{1}{4}$	0 11	—
Lambs - -		0 $6\frac{7}{8}$	0 5	5 0					—	0 $11\frac{1}{4}$	0 11	—
Bacon pigs - -		0 $8\frac{1}{4}$	0 6	5 0					—	1 $2\frac{1}{4}$	1 $2\frac{1}{2}$	—
Pork pigs - -		0 $8\frac{1}{4}$	0 6	5 0					—	1 $2\frac{1}{4}$	—	—
Horses in cattle trucks		0 11	0 8	5 0					—	—	—	—

Name the stations between which the highest rates for the conveyance of live stock are charged, showing the charge for each description, and the distances between the stations.

The scale is a uniform one and applies to the whole of the system so that the cattle rates are equal at all parts excepting where from competition by sea or otherwise reduced rates are necessary; for instance, the rate from Aberdeen to London is 6*l.* per waggon, and the distance being 540 miles, the receipts only yield $2\frac{1}{2}$*d.* per waggon per mile. Again, in consequence of the competition by sea from the Dumfriesshire district our rates from that part to Liverpool yield only 3*d.* per waggon per mile; these two cases show the lowest rates in force over the London and North-western Company's system.

London and North-western Railway.—Inquiry No. 8.—*continued.*

The highest existing rates are charged between Lancaster and London, they are as under:—

Miles.	Horses.			Pigs and Calves.				Oxen and Sheep.			
	Small Waggon.	14-feet.	Large	Small.	14-feet.	Half Van.	Large.	Small Waggon.	14-feet Waggon.	Large Waggon.	Double Van.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
231	7 14 0	8 13 3	10 11 9	5 15 6	6 10 0	6 17 0	7 19 0	4 16 3	5 8 3	6 12 3	10 16 6

Name the stations between which the lowest rates for the conveyance of live stock are charged, showing the charge for each description, and the distances between the stations.

See previous remarks.

Is there any special charge for cattle to the Royal Agricultural Society's shows? If so, state it.

Stock going to the Royal Agricultural Society's shows is charged the full rate, but if it remains unsold and the *bonâ fide* property of exhibitor it is conveyed home free, viz., returned to the station at which it was received.

INQUIRY No. 9.—As to Charges at different Periods.

Give, for the lines included in your former return, the information in the annexed table, attending to the following conditions:—

The amounts are to represent the average rates charged per mile.

For goods they are to be the rates for long distances, and including terminal charges.

In the cases of railways opened since 1840 or 1850, give the rates at the time of opening, and substitute this date at the top of the column.

	1840.	1850.	1865.
Single passenger fares, 1st class	1842—3·348*d.*	2·170*d.*	2·22*d.*
„ „ 2nd class	„ 2·411*d.*	1·420*d.*	1·70*d.*
„ „ 3rd class	„ 1·312*d.*	·953*d.*	·95*d.*

LANCASHIRE AND YORKSHIRE RAILWAY.

INQUIRY No. 1.—Questions in regard to Railway Charges.

1. Give a list of the lines to which this return refers, and state their respective lengths. — Lancashire and Yorkshire Railway, 403 miles in length.

FOR ARTICLES CARRIED FROM STATION TO STATION ONLY, OR FROM JUNCTION TO JUNCTION ONLY, ON ALL YOUR LINES.

(A.) In Companies' Waggons, when loaded and unloaded by the Owners.

2. State in the following Table the charges on your lines for the conveyance of the various articles named, in tons of 2,240 lbs., or the equivalent measurement:—

Name of Article.	(a.) What is the Minimum Charge per Ton for each Article for the shortest Distance?	(a.) What is the Minimum Load of each Article below which you refuse to take it at these Rates?	(a.) What is the Distance to which this Charge is applicable?	(b.) What is the Charge per Ton per Mile when this Distance is exceeded, and up to 50 Miles?	(b.) What is your Scale of Charges according to Distance for Distances beyond 50 Miles?	(c.) What is the Charge per Ton for Terminal or Station Accommodation?	(c.) Is it included in the foregoing Charges?	(d.) What is the Charge for Loading and Unloading when done by the Company?	(d.) Is it in addition to the foregoing Charges?
				In addition to the before mentioned Minimum.	In addition to the before mentioned Minimum.				
Bricks, *common*	1*s.* to 1*s.* 8*d.*	4 tons	6 miles and under.	1½*d.*	1*d.*	The terminal charges for coal, cannel, and coke vary from 3*d.* to 6*d.* per ton, and upon other articles they vary from 6*d.* to 1*s.* 6*d.* per ton.	Yes.	This service is not performed by the Company.	Ditto.
Cannel	10*d.*	Do.	Do.	1½*d.*	¾*d.*				
Chromate ores	1*s.* to 1*s.* 8*d.*	Do.	Do.	1½*d.*	1*d.*				
Cinders	10*d.*	Do.	Do.	1½*d.*	¾*d.*				
Clay	1*s.* to 1*s.* 8*d.*	Do.	Do.	1½*d.*	1*d.*				
Coal	10*d.*	Do.	Do.	1½*d.*	¾*d.*				
Coke	Do.	Do.	Do.	1½*d.*	¾*d.*				
Compost	1*s.* to 1*s.* 8*d.*	Do.	Do.	1½*d.*	1*d.*				
Coprolites, *for manure*	Do.	Do.	Do.	1½*d.*	1*d.*				
Culm	10*d.*	Do.	Do.	1½*d.*	¾*d.*				
Draining pipes and tiles (*com. for agricultural draining*).	1*s.* to 1*s.* 8*d.*	Do.	Do.	1½*d.*	1*d.*				
Dross	Do.	Do.	Do.	1½*d.*	1*d.*				
Fire bricks and clay	Do.	Do.	Do.	1½*d.*	1*d.*				
Flagstones	Do.	Do.	Do.	1½*d.*	1*d.*				
Granite, *undressed*	Do.	Do.	Do.	1½*d.*	1*d.*				
Gravel	Do.	Do.	Do.	1½*d.*	1*d.*				
Iron ore	Do.	Do.	Do.	1½*d.*	1*d.*				
Iron, *pig*	Do.	Do.	Do.	1½*d.*	1*d.*				
Iron stone	Do.	Do.	Do.	1½*d.*	1*d.*				
Lime and limestone	Do.	Do.	Do.	1½*d.*	1*d.*	The terminal charges vary from 6*d.* to 1*s.* 6*d.* per ton.	Yes.		
Manure, *in bulk*	Do.	Do.	Do.	1½*d.*	1*d.*				
Materials for road repairs.	Do.	Do.	Do.	1½*d.*	1*d.*				
Peat	Do.	Do.	Do.	1½*d.*	1*d.*				
Potter's earth	Do.	Do.	Do.	1½*d.*	1*d.*				
Pyrites	Do.	Do.	Do.	1½*d.*	1*d.*				
Salt, *rock, and unmanufactured.*	Carried in owners' waggons only.								
Salt, *in bulk*, including manufactured salt, when so carried.									
Sand	1*s.* to 1*s.* 8*d.*	4 tons	6 miles and under.	1½*d.*	1*d.*				
Scoriæ	Do.	Do.	Do.	1½*d.*	1*d.*				
Slag	Do.	Do.	Do.	1½*d.*	1*d.*				
Slates, *common*	Do.	Do.	Do.	1½*d.*	1*d.*				
Stone, *in the rough state, building, pitching, paving, kerb, or flags.*	Do.	Do.	Do.	1½*d.*	1*d.*				
Sulphur ore	Do.	Do.	Do.	1½*d.*	1*d.*				
Tiles	Do.	Do.	Do.	1½*d.*	1*d.*				
Turf	Do.	Do.	Do.	1½*d.*	1*d.*				
Zinc ore	Do.	Do.	Do.	1½*d.*	1*d.*				

3. Are the above mileage charges uniformly applied between all stations on your system of railways?

No, there are numerous exceptions, in which the rates are below these mileage charges.

4. If not, state the nature of the exceptions.

The exceptions arise from various causes, and the special circumstances in each case are considered with due regard on the one hand to the rate which the traffic will bear, and on the other to what it may be carried at without absolute loss to the company; for instance, traffic is frequently carried at low rates in waggons which would otherwise have to return empty to the station from whence they were originally sent laden with traffic at ordinary rates.

5. Is the traffic of this class conveyed at the owner's risk, or otherwise?

Owner's risk.

6. If not, state in what respects you depart from this condition.

7. Do you undertake to deliver this class of traffic within a specified time?

No.

8. What time is allowed at the stations for loading and unloading this class of traffic?

A reasonable time for loading, and it is generally understood that 24 hours are allowed for unloading.

9. What charge do you make for demurrage of waggons?

3*s.* per day after the second day, but the rule is not rigidly enforced.

Lancashire and Yorkshire Railway.—Inquiry No. 1.—*continued.*

(B.) In Owners' Waggons.

10. State in the following Table, the charges on your own line for the conveyance of the various articles named, in tons of 2,240 lbs., or the equivalent measurement:—

Name of Article.	(a.) What is the Minimum Charge per Ton for each Article for the shortest Distance?	(a.) What is the Minimum Load of each Article below which you refuse to take it at these Rates?	(a.) What is the Distance to which this Charge is applicabfe?	(b.) What is the Charge per Ton per Mile when this Distance is exceeded, and up to 50 Miles?	(b.) What is you Scale of Charges, according to Distance, for Distances beyond 50 Miles?	(c.) What is the Charge per Ton for Terminal or Station Accommodation?	(c.) It is included in the foregoing Charges?
				In addition to the before-mentioned Minimum.	In addition to the before-mentioned Minimum.		
Bricks, *common*	1*s.* to 1*s.* 6*d.*	4 tons	6 miles and under	1*d.*	1*d.*	The terminal charges upon coal, cannel, and coke vary from 3*d.* to 6*d.* per ton, and upon all other articles they vary from 6*d.* to 1*s.* 6*d.* per ton.	Yes.
Cannel	3*d.* to 9*d.*	Do.	Do.	1*d.*	¾*d.*		
Chromate ores	1*s.* to 1*s.* 6*d.*	Do.	Do.	1*d.*	1*d.*

Scoriæ	Do.	Do.	Do.	1*d.*	1*d.*		
Slag	Do.	Do.	Do.	1*d.*	1*d.*		
Slates, *common*	Do.	Do.	Do.	1*d.*	1*d.*		
Stone, *in the rough state, building, pitching, paving, kerb, or flags.*	Do.	Do.	Do.	1*d.*	1*d.*		
Sulphur ore	Do.	Do.	Do.	1*d.*	1*d.*		
Tiles	Do.	Do.	Do.	1*d.*	1*d.*		
Turf	Do.	Do.	Do.	1*d.*	1*d.*		
Zinc ore	Do.	Do.	Do.	1*d.*	1*d.*		

10*d*. Do the charges include returning empty waggons? — Yes.

11. Are the above charges uniformly applied between all stations on your system of railways? — No, there are numerous exceptions in which the rates are below these mileage charges.

12. If not, state the nature of the exceptions. — The exceptions arise from various causes, and the special circumstances in each case are considered with due regard on the one hand to the rate which the traffic will bear, and on the other to what it may be carried at without absolute loss to the company; for instance, coal and stone in full loads is generally carried at lower than the ordinary rates when intended for shipment at a port.

13. Is the traffic of this class conveyed at the owner's risk, or otherwise? — Yes.

14. Do you undertake to convey this class of traffic within a specified time? — No.

15. And to return the empty waggons within a specified time? — No, but we work them in the same manner as our own waggons.

And if so, in what time?

16. Do you allow demurrage on owners' waggons when not returned within the specified time? — No.

FOR THROUCH TRAFFIC, WHETHER IN COMPANIES' OR IN OWNERS' WAGGONS.

17. Do you make through charges for this class of traffic with all other railway companies connected with your system by junctions? — Yes.

18. Are junctions considered as stations for this class of traffic? — No.

19. If not, state the exceptions. — When the traffic is carried at through rates.

20. What arrangements are made for the interchange of traffic with other companies, when through charges are not given? — The traffic is generally conveyed by one company to the point of junction with the other company's line, each company making its own local charge to the public.

CONTRACT CHARGES, WHETHER IN COMPANIES' OR IN OWNERS' WAGGONS.

21. Have you any scale of charges applicable to contracts? If so,— — No.

a. Is the charge based on a minimum annual payment, or on the quantity carried?

b. Or how otherwise?

22. Have you any special contracts independent of the foregoing scale of charges or conditions? — No.

Lancashire and Yorkshire Railway—*continued.*

INQUIRY No. 2.—Questions in regard to Railway Charges.

FOR ARTICLES CARRIED FROM STATION TO STATION ONLY, OR FROM JUNCTION TO JUNCTION ONLY, ON ALL YOUR LINES, IN COMPANIES' WAGGONS.

1. State in the following Table the charges on your lines for the conveyance of the various articles named, in tons of 2,240 lbs., or the equivalent measurement:—

Name of Article.	(*a.*) What is the Minimum Charge per Ton for each Article for the shortest Distance?	(*a.*) What is the Minimum Load of each Article below which you refuse to take it at these Rates?	(*a.*) What is the Distance to which this Charge is applicable?	(*b.*) What is the Charge per Ton per Mile when this Distance is exceeded, and up to 50 Miles?	(*b.*) What is your Scale of Charges according to Distance for Distances beyond 50 Miles?	(*c.*) What is the Charge per Ton for Terminal or Station Accommodation?	(*c.*) Is it included in the foregoing Charges?	(*d.*) What is the Charge for Loading and Unloading when done by the Company?	(*d.*) Is it in addition to the foregoing Charges?	(*d.*) Is any and what Deduction made when the Loading or Unloading is done by the Owner?
For the whole of the articles included in the SPECIAL CLASS of the Clearing House Classification, Appendix C1.	The ordinary minimum charge is 3*s.*, but in numerous instances it is lower.	Two tons is the ordinary minimum, but in many cases this is not enforced; for instance, in the case of corn millers and maltsters who are in the habit of sending large quantities over our line.	Six miles and under.	The general charge is 2*d.* per ton per mile, but there are numerous cases in which less is charged.	2*d.* per ton per mile, but in numerous cases it is less.	The general charge is 1*s.* 3*d.* per ton at each end, but in numerous cases it is less.	The terminal charge is in addition to the rate per ton per mile.	No separate charge is made. These services are usually performed by the company.	It is included in the terminal charge.	Seldom, the rule being for the company to do the work, but in some cases an allowance is made in fixing the rate to meet special circumstances, such as in the case of parties owning private sidings.

2. Are the above mileage charges uniformly applied between all stations on your system of railways?

No, there are numerous exceptions, the company being generally guided by what will develop the traffic and by local circumstances.

3. If not, state the nature of the exceptions, and give an instance of each class of exceptions.

Through traffic, long distances, low-priced articles which will not bear the full rates; sea competition, such as Liverpool and Glasgow, and Liverpool and Hull for the continent.

4. Is the traffic of articles in this return conveyed at the owner's risk, or otherwise?

Generally at the company's risk.

5. If not, state in what respects you depart from this condition.

By special arrangement, and some articles, such as chimney tops, made from fire-clay, are considered as carried at owner's risk.

6. Do you undertake to deliver the traffic of articles in this return within a specified time?

No, but consignees are advised by post or messenger when the goods arrive at the station, and are requested to remove them as early as possible.

7. What time is allowed at the stations for loading and unloading this class of traffic?

A reasonable time; generally 24 hours.

8. For what period do you keep any of the articles in this return in your warehouses free of charge?

Our practice is not uniform, but in no instance do we commence to charge until two days have elapsed. At some stations we allow a fortnight, some a month, some two months, and in numerous instances an indefinite period, without any charge.

9. What charge for warehousing is made after the period has expired?

Upon grain and flour at stations where a charge is made it is ½*d.* per sack, and from ¼*d.* to 1*d.* per quarter per week, but at numerous stations no charge is made for these or any other articles.

10. What charge do you make for demurrage of waggons?

3*s.* per waggon per day.

FOR THROUGH TRAFFIC.

11. Do you make through charges for this class of traffic with all other railway companies connected with your system by junctions? If not, state the exceptions, and give an instance of each class of exceptions.

Yes, by mutual arrangement, and between such places as appear from time to time to be necessary for the public convenience.

12. Are junctions considered as stations for the traffic of articles in this return?

Yes, when the traffic is not carried at through rates, but this is seldom the case.

13. If not, state the exceptions, and give an instance of each class of exception.

When the traffic is carried at through rates.

14. What arrangements are made for the interchange of traffic with other companies, when through charges are not given?

The traffic is carried at local rates, and consignments of two tons and upwards are sent through in the waggons in which they have been carried to the junction.

GENERAL QUESTIONS.

15. Have you any scale of charges applicable to contracts? If so,—

No.

a. Is the charge based on a minimum annual payment, or on the quantity carried?

b. Or how otherwise?

16. Have you any special contracts independent of the foregoing scale of charges or conditions?

No.

Lancashire and Yorkshire Railway.—Inquiry No. 2.—*continued.*

17. Is the traffic in all cases sent by the shortest railway route in connexion with your system of railways? If not, state the exceptions, and give an instance of each class of exceptions.

Yes, as a general rule, but as the shortest route is not always the most convenient, or easy to work in consequence of severe gradients, and for other reasons, it is not uniformly adopted.

18. Do the mileage rates apply to the shortest railway route? If not, state to what distance they apply.

Yes, the shortest route governs the rate.

19. Are any articles in this class ever carried in owners' waggons? If so, state the particulars.

Yes, occasionally propwood and stores for colliery proprietors, gas coal tar, and sanitary tubes.

INQUIRY No. 3.—Questions in regard to Railway Charges.

1. State in the following Table the charges for the conveyance of the various articles named, between Stations on your own lines, in tons of 2,240 lbs., or the equivalent measurement, including collection and delivery. Specify against any of these articles those which are from station to station only.

Name of Article.	(a.) What is the Minimum Charge for Articles under 112 lbs. Weight?	(a.) What is the Scale of Charge for Articles under 112 lbs. according to Distance?	(b.) What is the Minimum Charge per Ton?	(b.) What is the Distance to which this Charge is applicable?	(c.) What is the Charge per Ton per Mile when this Distance is exceeded?	(d.) What is the Charge per Ton for Porterage and Station Accommodation?	(d.) Are these Charges included in the Mileage Rates?	(e.) What is the Charge per Ton for Collection and Delivery?	(e.) Are these Charges included in the Mileage Rates?	(f.) Are there any exceptional Charges for Collection and Delivery? If so, state the Stations and Charges.	(g.) Are any of these Articles carried upon Toll, and, if so, at what Rates?
For the whole of the articles included in the First Class of the Clearing House Classification. Appendix CP. Boilers, station to station.	Sixpence.	28 lbs. and under: 1 to 10 miles 0 6; 11 to 20 0 6; 21 to 40 0 8; 41 to 60 0 10; 61 to 80 1 0; 81 to 100 1 6. 29 lbs to 56 lbs.: 1 to 10 miles 0 6; 11 to 20 0 8; 21 to 40 0 10; 41 to 60 1 0; 61 to 80 1 3; 81 to 100 1 9. Above 56 lbs.: 1 to 10 miles 0 6; 11 to 20 0 10; 21 to 40 1 0; 41 to 60 1 3; 61 to 80 1 6; 81 to 100 2 0. This scale is not however invariably adhered to.	4s. 2d. per ton, but this is not uniformly adopted.	Six miles and under.	2d. per ton per mile.	Varies from 1s. to 1s. 9d. at each end, but as a general rule in fixing rates, the charges for porterage and station accommodation and carting, are included in one sum.	No.	Varies from 1s. to 2s. at each end according to distance, but as a general rule in fixing rates, the charges for carting and for porterage and station accommodation are included in one sum.	No.	For heavy or bulky articles, and for traffic carted beyond the ordinary cartage limits.	No.

2. State in the following Table the charges for the conveyance of the various articles named, between Stations on your own lines, in tons of 2,240 lbs., or the equivalent measurement, including collection and delivery. Specify against any of these articles those which are from station to station only.

Name of Article.	(a.) What is the Minimum Charge for Articles under 112 lbs. Weight?	(a.) What is the Scale of Charge for Articles under 112 lbs. according to Distance?	(b.) What is the Minimum Charge per Ton?	(b.) What is the Distance to which this Charge is applicable?	(c.) What is the Charge per Ton per Mile when this Distance is exceeded?	(d.) What is the Charge per Ton for Porterage and Station Accommodation?	(d.) Are these Charges included in the Mileage Rates?	(e.) What is the Charge per Ton for Collection and Delivery?	(e.) Are these Charges included in the Mileage Rates?	(f.) Are there any exceptional Charges for Collection and Delivery? If so, state the Stations and Charges.	(g.) Are any of these Articles carried upon Toll, and, if so, at what Rates?
For the whole of the articles included in the Second Class of the Clearing House Classification. Appendix CP. Boilers, and flax straw, station to station.	Sixpence.	28 lbs. and under: 1 to 10 miles 0 6; 11 to 20 0 6; 21 to 40 0 8; 41 to 60 0 10; 61 to 80 1 0; 81 to 100 1 6. 29 lbs. to 56 lbs.: 1 to 10 miles 0 6; 11 to 20 0 8; 21 to 40 0 10; 41 to 60 1 0; 61 to 80 1 3; 81 to 100 1 9. Above 56 lbs.: 1 to 10 miles 0 6; 11 to 20 0 10; 21 to 40 1 0; 41 to 60 1 3; 61 to 80 1 6; 81 to 100 2 0.	5s. per ton, but this is not uniformly adopted.	Six miles and under.	2½d. per ton per mile.	Varies from 1s. to 2s. per ton at each end, but as a general rule in fixing rates, the charges for porterage and station accommodation and carting are included in one sum.	No.	Varies according to distance from 1s. to 2s. at each end, but as a general rule in fixing rates, the charges for carting and for porterage and station accommodation are included in one sum.	No.	For heavy or bulky articles and for goods carted beyond the ordinary cartage limits.	No.

Lancashire and Yorkshire Railway.—Inquiry No. 3.—*continued.*

3. State in the following Table the charges for the conveyance of the various articles named, between Stations on your own lines, in tons of 2,240 lbs., or the equivalent measurement, including collection and delivery. Specify against any of these articles those which are from station to station only.

Name of Article.	(a.) What is the Minimum Charge for Articles under 112 lbs. Weight?	(a.) What is the Scale of Charge for Articles under 112 lbs. according to Distance?	(b.) What is the Minimum Charge per Ton?	(b.) What is the Distance to which this Charge is applicable?	(c.) What is the Charge per Ton per Mile when this Distance is exceeded?	(d.) What is the Charge per Ton for Porterage and Station Accommodation?	(d.) Are these Charges included in the Mileage Rates?	(e.) What is the Charge per Ton for Collection and Delivery?	(e.) Are these Charges included in the Mileage Rates?	(f.) Are there any exceptional Charges for Collection and Delivery? If so, state the Stations and Charges.	(g.) Are any of these Articles carried upon Toll, and, if so, at what Rates?
For the whole of the articles included in the THIRD CLASS of the Clearing House Classification. Appendix CP. Boilers, station to station.	Sixpence.	28 lbs. and under: 1 to 10 miles 0 6; 11 to 20 „ 0 6; 21 to 40 „ 0 8; 41 to 60 „ 0 10; 61 to 80 „ 1 0; 81 to 100 „ 1 6. 29 lbs. to 56 lbs.: 0 6; 0 8; 0 10; 1 0; 1 3; 1 9. Above 56 lbs.: 0 6; 0 10; 1 0; 1 3; 1 6; 2 0. This scale is not, however, invariably adhered to.	5s. per ton, but this is not uniformly adopted.	Six miles and under.	3d. per ton per mile.	Varies from 1s. 3d. to 2s. 6d. at each end, but as a general rule in fixing the rates, the charges for porterage and station accommodation and carting are included in one sum.	No.	Varies according to distance from 1s. 6d. to 2s. 6d. at each end, but as a general rule in fixing the rates, the charges for carting, and for porterage and station accommodation are included in one sum.	No.	For heavy and bulky articles, and for traffic carted beyond the ordinary cartage limits.	No.

4. State in the following Table the charges for the conveyance of the various articles named, between Stations on your own lines, in tons of 2,240 lbs., or the equivalent measurement, including collection and delivery. Specify against any of these articles those which are from station to station only.

Name of Article.	(a.) What is the Minimum Charge for Articles under 112 lbs. Weight?	(a.) What is the Scale of Charge for Articles under 112 lbs. according to Distance?	(b.) What is the Minimum Charge per Ton?	(b.) What is the Distance to which this Charge is applicable?	(c.) What is the Charge per Ton per Mile when this Distance is exceeded?	(d.) What is the Charge per Ton for Porterage and Station Accommodation?	(d.) Are these Charges included in the Mileage Rates?	(e.) What is the Charge per Ton for Collection and Delivery?	(e.) Are these Charges included in the Mileage Rates?	(f.) Are there any exceptional Charges for Collection and Delivery? If so, state the Stations and Charges.	(g.) Are any of these Articles carried upon Toll, and, if so, at what Rates?
For the whole of the articles included in the FOURTH CLASS of the Clearing House Classification. Appendix CP.	Sixpence.	28 lbs. and under: 1 to 10 miles 0 6; 11 to 20 „ 0 6; 21 to 40 „ 0 8; 41 to 60 „ 0 10; 61 to 80 „ 1 0; 81 to 100 „ 1 6. 29 lbs. to 56 lbs.: 0 6; 0 8; 0 10; 1 0; 1 3; 1 9. Above 56 lbs.: 0 6; 0 10; 1 3; 1 6; 2 0.	6s. 8d. per ton, but this is not uniformly adopted.	Six miles and under.	3½d. per ton per mile.	Varies from 1s. 6d. to 3s. at each end, but as a general rule in fixing the rates, the charges for porterage and station accommodation and for carting are included in one sum.	No.	Varies according to distance from 1s. 6d. to 3s. at each end, but as a general rule in fixing the rates, the charges for cartage and for porterage and station accommodation are included in one sum.	No.	For heavy o bulky articles, and for traffic carted beyond the ordinary cartage limits.	No

5. State in the following Table the charges for the conveyance of the various articles named, between Stations on your own lines, in tons of 2,240 lbs., or the equivalent measurement, including collection and delivery. Specify against any of these articles those which are from station to station only.

Name of Article.	(a.) What is the Minimum Charge for Articles under 112 lbs. Weight?	(a.) What is the Scale of Charge for Articles under 112 lbs. according to Distance?	(b.) What is the Minimum Charge per Ton?	(b.) What is the Distance to which this Charge is applicable?	(c.) What is the Charge per Ton per Mile when this Distance is exceeded?	(d.) What is the Charge per Ton for Porterage and Station Accommodation?	(d.) Are these Charges included in the Mileage Rates?	(e.) What is the Charge per Ton for Collection and Delivery?	(e.) Are these Charges included in the Mileage Rates?	(f.) Are there any exceptional Charges for Collection and Delivery? If so, state the Stations and Charges.	(g.) Are any of these Articles carried upon Toll, and, if so, at what Rates?
For the whole of the articles included in the FIFTH CLASS of the Clearing House Classification. Appendix CP.	Sixpence.	28 lbs. and under: 1 to 10 miles 0 6; 11 to 20 „ 0 6; 21 to 40 „ 0 8; 41 to 60 „ 0 10; 61 to 80 „ 1 0; 81 to 100 „ 1 6. 29 lbs. to 56 lbs.: 0 6; 0 8; 0 10; 1 0; 1 3; 1 9. Above 56 lbs.: 0 6; 0 10; 1 0; 1 3; 1 6; 2 0.	10s. per ton, but this is not uniformly adopted.	Six miles and under.	3½d. per ton per mile.	Varies from 2s. to 5s. at each end, but as a general rule in fixing the rates, the charges for porterage and station accommodation and for carting are included in one sum.	No.	Varies according to distance from 2s. to 5s. at each end, but as a general rule in fixing the rate, the charges for porterage or cartage and for station accommodation are included in one sum.	No.	For heavy or bulky articles, and for traffic carted beyond the ordinary cartage limits.	No.

Lancashire and Yorkshire Railway.—Inquiry No. 3.—*continued.*

6. State in the following Table the charges for the conveyance of the various articles named, between Stations on your own lines, in tons of 2,240 lbs., or the equivalent measurement, including collection and delivery. Specify against any of these articles those which are from station to station only.

Name of Article.	(a.) What is the Minimum Charge for Articles under 112 lbs. Weight?	(a.) What is the Scale of Charge for Articles under 112 lbs. according to Distance?	(b.) What is the Minimum Charge per Ton?	(b.) What is the Distance to which this Charge is applicable?	(c.) What is the Charge per Ton per Mile when this Distance is exceeded?	(d.) What is the Charge per Ton for Porterage and Station Accommodation?	(d.) Are these Charges included in the Mileage Rates?	(e.) What is the Charge per Ton for Collection and Delivery?	(e.) Are these Charges included in the Mileage Rates?	(f.) Are there any exceptional Charges for Collection and Delivery? If so, state the Stations and Charges.	(g.) Are any of these Articles carried upon Toll, and if so, at what Rates?
Acids and other highly corrosive articles.	Only carried in 2-ton lots.		5*s.*	15 miles	4*d.* 51 to 66 miles, 16*s.* 8*d.* per ton. 67 miles and upwards, 3*d.* per ton per mile.	No separate charge.	Yes	Do not perform these services.		- -	No.
Basket carriage bodies and Bath chairs, *at Company's risk.*	These are carried at rates 20 per cent. above the rates at which articles in the 5th class of the Railway Clearing House classification are carried; but they are frequently carried at less rates by special arrangement.										
Caravans, *showmen's and others,* station to station.	- -	- - -	10*s.* for first ton and 3*s.* 4*d.* for each additional ton.	20 miles and under.	6*d.* for first ton, and 2*d.* for each additional ton.	No separate charge.	Yes	Do not perform these services.		- -	No.
Carriage bodies, *finished, in cases.*	These are carried at double the rates at which articles in the 5th class of the Railway Clearing House classification are carried; but they are frequently carried at less rates by special arrangement.										
Railway carriages, on their own wheels, station to station.	- -	- - -	20*s.* each carriage.	40 miles and under.	6*d.* per carriage per mile.	No separate charge.	Yes	Do not perform these services.		- -	No.
Boilers of unusual dimensions.	These are carried by special arrangement.										
Contractors' waggons and materials, *excepting rails and chairs.*	- -	- - -	5*s.*	20 miles and under.	3*d.* up to 50 miles, and 51 to 75 miles 12*s.* 6*d.* per ton, and above 75 miles 2*d.* per ton per mile.	No separate charge.	Yes	Do not perform these services.		- -	No.
Furniture, *in mats or loose.*	These are carried at rates 20 per cent. above the rates at which articles in the 5th class of the Railway Clearing House classification are carried; but they are frequently carried at less rates by special arrangement.										
Furniture, *in vans, carts, or frames.*	- -	- - -	10*s.*	6 miles and under.	3½*d.* Van is carried back free.	Varies from 2*s.* to 5*s.* at each end.	No	Varies from 2*s.* to 5*s.* at each end.	No.	- -	No.
Forgings or castings, above six tons.	Carried by special arrangement.										
Gunpowder - -	Carried by special arrangement only, and at rates not less than the rates applicable to articles in the 5th class of the Railway Clearing House classification. Ammunition and other combustible stores are conveyed for Her Majesty's Government by special contract with the War Office.										
Lucifer matches and other inflammable articles.	Only carried in ton lots.		5*s.*	6 miles and under.	3*d.*	1*s.* 3*d.* to 2*s.* 6*d.* at each end.	No.	1*s.* 6*d.* to 2*s.* 6*d.* at each end.	No.	- -	No.
Locomotive engines and tenders on their own wheels, station to station.	- -	- - -	5*s.*	30 miles	2*d.* to 100 miles; 101 to 133 miles 16*s.* 8*d.* per ton.	No separate charge.	Yes	Do not perform these services.		- -	No.
Petroleum and photogenic oil, station to station.	- -	- - -	10*s.* for 2 tons and under.	6 miles and under.	2¾*d.*	1*s.* to 2*s.* at each end.	No.	—	—	—	—
Railway waggons -	- -	- - -	5*s.* each waggon	15 miles and under.	Up to 50 miles, 3*d.* per waggon per mile for waggons less than 3 tons, and 4*d.* if above 3 tons; above 50 miles, 3*d.* per waggon per mile.	No separate charge made.	Yes	Do not perform these services.		- -	No.
Statuary - -	Carried by special arrangement only.										
Returned empty packages.	When carried in connexion with other companies the following scale is adopted:— *s. d.* Up to 50 miles, 0 4 per cwt. for the whole distance carried. 51 „ 100 „ 0 6 „ „ „ 101 „ 150 „ 0 9 „ „ „ 151 „ 200 „ 1 0 „ „ „ 201 „ 250 „ 1 3 „ „ „ 251 „ 300 „ 1 6 „ „ „ 301 „ 400 „ 1 9 „ „ „ Locally they are generally carried free.										
Small parcels - -	6*d.*	28 lbs. and under	28 to 56 lbs.	56 to 112 lbs.	—	—	—	—	—	—	—	—	—
Miles. Miles.		*s. d.*	*s. d.*	*s. d.*

81 „ 100 -	- -	1 6	1 9	2 0									

2. Are the above mileage charges uniformly applied between all stations on your system of railways?

No, there are numerous exceptions, the company being guided by what will develop the traffic, and by local circumstances.

Lancashire and Yorkshire Railway.—Inquiry No. 3.—*continued.*

3. If not, state the nature of the exceptions, and give an instance of each class of exceptions.	Through traffic, long distances, low-priced articles which will not bear the full rates; sea competition, such as Liverpool and Glasgow, Liverpool and Hull, for the continental traffic.
4. Is the traffic of these articles carried at the company's risk (excepting the articles otherwise specified)?	Yes, generally.
5. If not, state in what respects you depart from this condition.	By special arrangement.
6. Do you undertake to deliver the traffic of articles in this return within a specified time?	No, but we make arrangements for its being as expeditiously delivered as possible.
7. What time is allowed at the stations for loading and unloading this class of traffic?	These services are performed by the company as expeditiously as possible.
8. For what period do you keep any of the articles in this return in your warehouses free of charge?	Our practice is not uniform, but in no instance do we commence to charge until two days have elapsed; at some stations we allow a fortnight, some a month, some two months, and in numerous instances an indefinite period, without any charge.
9. What charge for warehousing is made after the period has expired?	Varies from 1*d.* to 3*d.* per week for small packages, and from 3*d.* to 6*d.* per ton per week for general merchandise; but at a large number of stations no charge is made.
10. What charge do you make for demurrage of waggons?	None, the company themselves performing the services of loading and unloading.

FOR THROUGH TRAFFIC.

11. Do you make through charges for this class of traffic with all other railway companies connected with your system by junctions? If not, state the exceptions, and give an instance of each class of exceptions.	Yes, by mutual arrangement, and between such places as appear from time to time to be necessary for the public convenience.
12. Are junctions considered as stations for the traffic of articles in this return?	Yes, when traffic is not carried at through rates, but this is not frequently the case.
13. If not, state the exceptions, and give an instance of each class of exception.	When traffic is carried at through rates.
14. What arrangements are made for the interchange of traffic with other companies, when through charges are not given?	The traffic is carried at local rates, and consignments of a ton and above are forwarded in the waggon in which they have been carried locally to the point of junction; smaller lots are transferred from the waggon of one company to the other company's waggon.

GENERAL QUESTIONS.

15. Have you any scale of charges applicable to contracts? If so,—	No.
a. Is the charge based on a minimum annual payment, or on the quantity carried?	
b. Or how otherwise? ..	
16. Have you any special contracts independent of the foregoing scale of charges or conditions?	No.
17. Is the traffic in all cases sent by the shortest railway route in connexion with your system of railways? If not, state the exceptions, and give an instance of each class of exceptions.	Yes, as a general rule, but as the shortest route is not always the most convenient, or easy to work in consequence of severe gradients, and for other reasons, it is not uniformly adopted.
18. Do the mileage rates apply to the shortest railway route? If not, state to what distance they apply.	Yes, the shortest route governs the rate.
19. Are any articles in this class ever carried in owners' waggons? If so, state the particulars.	Yes, occasionally stores for colliery proprietors.

INQUIRY No. 4.—As to Acts of Parliament authorizing Tolls and Rates.

Give a list of the Acts of Parliament now in force, under which you are authorized to levy tolls and rates on the lines included in your former return.

The tolls and rates charged by this company are authorized by "The Lancashire and Yorkshire and East Lancashire Railways Amalgamation Act, 1859." [22 & 23 Vict. c. 110.]

Lancashire and Yorkshire Railway—*continued.*

INQUIRY No. 5.—As to Passenger Fares.

Give the following information in reference to the lines included in your former returns :—

	Express Fares.						Ordinary Fares.							
	1st Class.		2nd Class.		3rd Class.		1st Class.		2nd Class.		3rd Class.		Parliamentary.	
	Single.	Return.	Single.	Return.	Single.	Return.	Single.	Return.	Single.	Return.	Single.	Return.	Single.	Return.
							d.		*d.*		*d.*		*d.*	
Average fares charged per mile.	No express fares						1·95	—	1·48	—	0·84	—	0·84	—
Highest							2·36	—	1·75	—	1*d.*	—	1*d.*	—
Lowest							1·63	—	1·27	—	0·54	—	0·54	—
Maximum fares allowed by Act of Parliament.	3*d.*	—	—	—	—	—	2½*d.*	—	2*d.*	—	1¼*d.*	—	1*d.*	—

Places between which the highest rate of passenger fare is charged, giving the fares for each class, and the distances between the stations.

	1st Class.	2nd Class.	3rd Class.	Distance.
	s. d.	*s. d.*	*s. d.*	
Barnsley and Burnley	8 7	6 4	3 7	43½ miles.

Places between which the lowest rate of passenger fare is charged, giving the fares for each class, and the distances between the stations.

	Single.			Distance.
	1st Class.	2nd Class.	3rd Class.	
	s. d.	*s. d.*	*s. d.*	
Bury and Manchester	1 6	1 2	0 6	11 miles.

Are market tickets issued? If so, between what places, and at what proportion of the single fares?

Very few market tickets are issued; those in operation are charged about one single fare, and a fourth for the double journey.

Give the average speed of trains as follows :—

Average speed of express trains, including stoppages - - - - 34 miles per hour.
„ „ ordinary passenger trains - - - - - 22 „
„ „ parliamentary - - - - - - - 18 „

Give some general information as to the nature and extent of your special excursion traffic, stating the frequency of the excursion trains, the places between which they run, the fares charged per mile for each class, the number of passengers of each class generally carried in each train, and the average speed, including stoppages.

These trains are run during the summer months to watering places, and other places of special attraction.

In the year 1865 we carried 530,228 passengers in excursion trains.

These trains are run about twice weekly between each of the principal places of attraction.

The fares vary from ¼th to ⅜ths of a penny per passenger per mile run.

The general rule on this line is to run third class or covered carriages only by excursion trains.

The average speed of the trains is about 18 miles an hour.

INQUIRY No. 6.—As to Rates for Parcels.

Give, in reference to the lines included in your former returns, the general rates charged for parcel traffic, both by passenger and goods trains, according to weight and distance. Also add particulars of any important exceptions made to these general rates.

Parcels by passenger train are charged according to the following scale, there being no important exceptions from it :—

	1 Mile and up to 12 Miles each.	Above 12 and up to 25 Miles each.	Above 25 and up to 50 Miles each.	Above 50 and up to 75 Miles each.	Above 75 and up to 110 Miles each.
	s. d.	*s. d.*	*s. d.*	*s. d.*	*s. d.*
Not exceeding 1 lb.	0 4	0 4	0 4	0 4	0 4
„ 2 lbs.	0 4	0 4	0 6	0 6	0 6
„ 3 lbs.	0 4	0 4	0 6	0 6	0 8
Above 3 lbs. and not exceeding 4 lbs.	0 4	0 6	0 8	0 9	0 10
„ 4 lbs. „ 7 lbs.	0 6	0 8	0 9	0 10	1 0
„ 7 lbs. „ 14 lbs.	0 6	0 8	0 10	1 0	1 3
„ 14 lbs. „ 28 lbs.	0 8	0 10	1 0	1 6	2 0
„ 28 lbs. „ 56 lbs.	0 10	1 0	1 6	1 9	2 3
„ 56 lbs. „ 112 lbs.	1 0	1 6	2 6	3 0	3 6
For every lb. above 112 lbs.	⅛*d.* per lb.	¼*d.* per lb.	¼*d.* per lb.	¼*d.* per lb.	½*d.* per lb.

Bulky packages of light weight, such such as hats, artificial flowers, paper boxes, &c., 50 per cent. above the foregoing rates.

Lancashire and Yorkshire Railway.—Inquiry No. 6.—*continued.*

Parcels by goods train are charged at the following scale:—

—	Up to 28 lbs.	29 lbs. to 56 lbs.	Above 56 lbs.
	s. d.	*s. d.*	*s. d.*
1 mile to 10 - -	0 6	0 6	0 6
11 miles to 20 - -	0 6	0 8	0 10
21 „ to 40 - -	0 8	0 10	1 0
41 „ to 60 - -	0 10	1 0	1 3
61 „ to 80 - -	1 0	1 3	1 6
81 „ to 100 - -	1 6	1 9	2 0

The rates for 56 lbs. apply to all weights above 56 lbs. until the rate per ton gives more upon the weight carried.

INQUIRY No. 7.—As to Charges for Horses, Carriages, and Dogs by Passenger Trains.

Insert in the following table the rates charged for horses, carriages, and dogs carried by passenger trains, on the lines included in your former returns.

—	Charge per Mile.	Minimum Gross Charge.
	s. d.	*s. d.*
Horse boxes containing 3 horses, not exceeding each in value -	0 9	15 0
„ „ 2 „ „ „ „ -	0 6	10 0
„ „ 1 „ „ „ „ -	0 3	5 0
Two-wheeled carriages - - - - - -	0 4	10 0
Four-wheeled „ - - - - - -		
		s. d.
Dogs Under 10 miles - -		0 3
11 to 20 „ - -		0 6
21 to 40 „ - -		1 0
41 to 80 „ - -		1 6
81 to 100 „ - -		2 0

What is the rate of insurance on horses exceeding the above-mentioned values?
This company has not had occasion to insure.

State whether the rates charged for this kind of traffic are uniform, or if they are lower for the longer distances. If the latter, give the scale of distances and charges.
Uniform according to the foregoing scale.

INQUIRY No. 8.—As to Charges for Live Stock by Goods Trains.

Insert in the following table the rates charged, on the lines included in your former return, for live stock carried by goods trains.

—	Whole Trucks.				Half Trucks.				Double Sheep Van.			
	No. of Animals.	Maximum Rate per Truck per Mile.	Minimum Rate per Truck per Mile.	Minimum Charge per Truck.	No. of Animals.	Maximum Rate per Half Truck per Mile.	Minimum Rate per Half Truck per Mile.	Minimum Charge per Half Truck.	No. of Animals.	Maximum Rate per Van per Mile.	Minimum Rate per Van per Mile.	Minimum Charge per Van.
		d.	*d.*	*s.*		*d.*	*d.*	*s.*				
Fat cattle - -	8	6	6	5	3	4	4	5	This Company have no double sheep vans.			
Lean cattle - -	8	6	6	5	3	4	4	5				
Sheep - -	35	6	6	5	12	4	4	5				
Lambs - -	45	6	6	5	15	4	4	5				
Bacon pigs - -	30	8	8	6	6	5½	5½	5				
Pork pigs - -	30	8	8	6	12	5½	5½	5				
Horses in cattle trucks	Are not carried except from Liverpool. *See below.*											

Name the stations between which the highest rates for the conveyance of live stock are charged, showing the charge for each description, and the distances between the stations.
The foregoing scale is adopted between all stations, except those given in answer to the next question.

Lancashire and Yorkshire Railway.—Inquiry No. 8.—*continued.*

Name the stations between which the lowest rates for the conveyance of live stock are charged, showing the charge for each description, and the distances between the stations.

Traffic from Liverpool and Fleetwood is charged by the following scale, no limit being placed on the number loaded in in each waggon.

	Oxen and Sheep.	Pigs and Calves.	Horses.
Small waggons,	5*d.* per mile -	6*d.* per mile.	8*d.* per mile.
14 feet „	$5\frac{5}{8}$*d.* „ -	$6\frac{3}{4}$*d.* „	9*d.* „
15 „ „	$5\frac{15}{16}$*d.* „ -	$7\frac{1}{8}$*d.* „	$9\frac{1}{3}$*d.* „
16 „ „	$6\frac{1}{4}$*d.* „ -	$7\frac{1}{2}$*d.* „	10*d.* „
Large „	$6\frac{7}{8}$*d.* „ -	$8\frac{1}{4}$*d.* „	11*d.* „

Half loads are charged at half the small waggon rates.

Maximum numbers allowed:—3 fat or 4 lean oxen, 12 sheep, 9 calves, 6 bacon or 12 pork pigs.

Is there any special charge for cattle to the Royal Agricultural Society's shows? If so, state it.

The ordinary charge is made on cattle carried to the shows; but if the cattle be not sold, and is still the bonâ fide property of the person who sent it to the show, it is returned without charge.

INQUIRY No. 9.—As to Charges at different Periods.

Give, for the lines included in your former return, the information in the annexed table, attending to the following conditions:—

The amounts are to represent the average rates charged per mile.

For goods they are to be the rates for long distances, and including terminal charges.

In the cases of railways opened since 1840 or 1850, give the rates at the time of opening, and substitute this date at the top of the column.

70 to 100 miles are considered long distances on the the Lancashire and Yorkshire Railway.

	1840.	1850.	1865.*
Single passenger fares, 1st class - - - -	The Company have not in their possession information enabling them to answer this inquiry.		1·95*d.*
„ „ 2nd class - - - -			1·48*d.*
„ „ 3rd class - - - -			0·84*d.*
Horses by passenger trains - - - - each			3*d.*
Four-wheeled carriages - - - - „			4*d.*
Parcels - - - - - - -			*See* Inquiry No. 6.

„ „ „ „ 5th „			$4\frac{3}{4}$*d.* to $6\frac{1}{2}$*d.*

* It is impossible accurately to answer this inquiry; the figures inserted are therefore to be considered as an approximate estimate only.

GREAT NORTHERN RAILWAY.

INQUIRY No. 1.—Questions in regard to Railway Charges.

1. Give a list of the lines to which this return refers, and state their respective lengths.

Great Northern, East Lincolnshire, Nottingham and Grantham, Hertford, Luton, and Dunstable, Leeds, Bradford, and Halifax, Bourne and Essendine, Boston and Sleaford, 387; Horncastle, 8; Norwich and Spalding, 16; Ramsey, 6; West Yorkshire, 16; total, 433.

FOR ARTICLES CARRIED FROM STATION TO STATION ONLY, OR FROM JUNCTION TO JUNCTION ONLY, ON ALL YOUR LINES.

(A.) In Companies' Waggons, when loaded and unloaded by the Owners.

2. State in the following Table the charges on your lines for the conveyance of the various articles named, in tons of 2,240 lbs., or the equivalent measurement.

Name of Article.	(a.) What is the Minimum Charge per Ton for each Article for the shortest Distance?	(a.) What is the Minimum Load of each Article below which you refuse to take it at these Rates?	(a.) What is the Distance to which this Charge is applicable?	(b.) What is the Charge per Ton per Mile when this Distance is exceeded, and up to 50 miles?	(b.) What is your Scale of Charges according to Distance for Distances beyond 50 miles?	(c.) What is the Charge per Ton for Terminal or Station Accommodation?	(c.) Is it included in the foregoing Charges?	(d.) What is the Charge for Loading and Unloading when done by the Company?	(d.) Is it in addition to the foregoing Charges?
Bricks, *common*	1*s.* 6*d.*	4 tons	6 miles	1*s.* 6*d.* for first 6 miles as before, and 1*d.* per ton for every additional mile.	For 51 to 66 miles 5*s.* 2*d.* per ton and 3*d.* per ton for every additional mile.	Various, according to circumstances.	Yes.	Company do not perform.	
Cannel	Do.	Do.	Do.						
Chromate ores	Do.	Do.	Do.						
Cinders	Do.	Do.	Do.						
Clay	Do.	Do.	Do.						
Coal	For Rates and conditions on which coal is carried, see attached lists. The rates from the Derbyshire collieries are made up on the same basis, but we have no printed list.								
Coke	1*s.* 6*d.*	4 tons	6 miles.						
Compost	Do.	Do.	Do.

Turf	Do.	Do.	Do.						
Zinc ore	Do.	Do.	Do.						

(LISTS.)

Great Northern Railway.—Rates for Carriage of Coal and Coke, from 1st March 1863.

1. These rates are for coal and coke in owners' waggons. Twenty-one cwt. will be allowed to the ton. If the Company provide waggons 9*d.* per ton extra will be charged.

2. The Company will find waggons, so far as their waggon stock will permit. Applications for waggons must be addressed to Mr. Newton, Doncaster, and such applications will be registered and duly attended to.

3. One clear day will be allowed from the day on which the waggons are forwarded to the collieries for their return thence to Doncaster. If detained beyond that time, or loaded contrary to the Company's order, the Company reserve the right of charging the collieries demurrage at the rate of 3*s.* per day. Demurrage will also be charged to the consignees, at the Stations, at the same rate, if the waggons remain loaded above two clear days from their arrival at the Station to which they are consigned, Sundays in both cases excepted.

4. The Company reserve the right of charging siding accommodation when owners' waggons stand loaded at the receiving Stations above one clear day, Sundays excepted.

Great Northern Railway.—Inquiry No. 1.—*continued.*

5. Coal or coke sent between any two intermediate Stations will be charged at the Goods Local Mileage Rate at 20 cwt. to the ton.

3. Are the above mileage charges uniformly applied between all stations on your system of railways?

No.

4. If not, state the nature of the exceptions.

The exceptions are so numerous, and are applicable to so many circumstances, that it is impossible to state them all here.

5. Is the traffic of this class conveyed at the owner's risk, or otherwise?

These articles are undamageable.

6. If not, state in what respects you depart from this condition.

See above.

7. Do you undertake to deliver this class of traffic within a specified time?

No.

8. What time is allowed at the stations for loading and unloading this class of traffic?

Loading, one day.—Unloading, two days.

9. What charge do you make for demurrage of waggons?

3*s.* per day.

Great Northern Railway.—Inquiry No. 1.—*continued.*

(B.) In Owners' Waggons.

10. State, in the following table, the charges on your own line for the conveyance of the various articles named, in tons of 2,240 lbs., or the equivalent measurement:—

Same as (A). For drawback allowed on private waggons, see circular below.

(Circular.)

London, May 1st, 1861.

It is determined that, when private waggons are used, an allowance of one farthing *per truck per mile* for the distance run on the Great Northern system be made to the owners, provided that every such truck contains not less than three tons, or that weight to be paid for.

The Company's full rates will be charged, and the claims for waggon hire must be sent periodically to the clerk at the *sending* station, who will check and certify if correct.

By order of 15th May [1861]. The allowance must not be made on trucks containing cinders, coal, coke, or culm except when such traffic is invoiced through the goods department.

10*d*. Do the charges include returning empty waggons?	Yes.
11. Are the above charges uniformly applied between all stations on your system of railways?	No.
12. If not, state the nature of the exceptions?	See answer No. 4.
13. Is the traffic of this class conveyed at the owner's risk, or otherwise?	These articles are undamageable.
14. Do you undertake to convey this class of traffic within a specified time?	No.
15. And to return the empty waggons within a specified time? And if so, in what time?	No.
16. Do you allow demurrage on owners' waggons when not returned within the specified time?	No.

FOR THROUGH TRAFFIC, WHETHER IN COMPANIES' OR IN OWNERS' WAGGONS.

17. Do you make through charges for this class of traffic with all other railway companies connected with your system by junctions?	Yes.
18. Are junctions considered as stations for this class of traffic?	No.
19. If not, state the exceptions.	
20. What arrangements are made for the interchange of traffic with other companies when through charges are not given?	We invoice locally to the station nearest to the other company's line.

CONTRACT CHARGES, WHETHER IN COMPANIES' OR IN OWNERS' WAGGONS.

21. Have you any scale of charges applicable to contracts? If so,—	No.
a. Is the charge based on a minimum annual payment, or on the quantity carried?	
b. Or how otherwise?	
22. Have you any special contracts independent of the foregoing scale of charges or conditions?	Yes; a few with owners of private brick fields or sidings, &c.

INQUIRY No. 2.—Questions in regard to Railway Charges.

FOR ARTICLES CARRIED FROM STATION TO STATION ONLY, OR FROM JUNCTION TO JUNCTION ONLY, ON ALL YOUR LINES, IN COMPANIES' WAGGONS.

1. State in the following Table the Charges on your lines for the conveyance of the various articles named, in tons of 2,240 lbs., or the equivalent measurement:—

Name of Article.	(*a*.) What is the Minimum Charge per Ton for each Article for the shortest Distance?	(*a*.) What is the Minimum Load of each Article below which you refuse to take it at these Rates?	(*a*.) What is the Distance to which this Charge is applicable?	(*b*.) What is the Charge per Ton per Mile when this Distance is exceeded, and up to 50 Miles?	(*b*.) What is your Scale of Charges according to Distance for Distances beyond 50 Miles?	(*c*.) What is the Charge per Ton for Terminal or Station Accommodation?	(*c*.) Is it included in the foregoing Charges?	(*d*.) What is the Charge for Loading and Unloading when done by the Company?	(*d*.) Is it in addition to the foregoing Charges?	(*d*.) Is any and what Deduction made when the Loading or Unloading is done by the Owner?
For the whole of the articles included in the Special Class of the Clearing House Classification. Appendix CP.	1*s*. 6*d*. to 2*s*. 6*d*.	Two tons.	Six miles.	Mileage rates, but these rates are on the average below the minimum allowed by the Act.		Various, according to circumstances.	The terminal charges are in addition to the mileage rates.	The rule is for the loading and unloading of station to station traffic to be performed by sender and consignee, but the Company's men assist.		

Great Northern Railway.—Inquiry No. 2.—*continued.*

2. Are the above mileage charges uniformly applied between all stations on your system of railways?	No, the charges vary according to circumstances.
3. If not, state the nature of the exceptions, and give an instance of each class of exceptions.	Exceptional cases are very numerous to meet sea competition, as, for instance, the rates between Liverpool and London.
4. Is the traffic of articles in this return conveyed at the owners' risk, or otherwise?	Generally at Company's risk.
5. If not, state in what respects you depart from this condition.	Goods in higher classes are charged at special class rates on the undertaking of the owner to bear the risk.
6. Do you undertake to deliver the traffic of articles in this return within a specified time?	No.
7. What time is allowed at the stations for loading and unloading this class of traffic?	Not exceeding 48 hours, after which demurrage is charged.
8. For what period do you keep any of the articles in this return in your warehouses free of charge?	Various according to the nature of the traffic and locality of the station.
9. What charge for warehousing is made after the period has expired?	Ditto.
10. What charge do you make for demurrage of waggons?	3*s.* per day.

FOR THROUGH TRAFFIC.

11. Do you make through charges for this class of traffic with all other railway companies connected with your system by junctions? If not, state the exceptions, and give an instance of each class of exceptions.	Yes, by mutual arrangement.
12. Are junctions considered as stations for the traffic of articles in this return?	Not when the traffic is entered at through rates.
13. If not, state the exceptions, and give an instance of each class of exception.	When the traffic is carried at local rates up to and from the junction.
14. What arrangements are made for the interchange of traffic with other companies when through charges are not given?	We load and invoice locally to the station nearest to the other company's line, and send the waggons through if the load is two tons and over.

GENERAL QUESTIONS.

15. Have you any scale of charges applicable to contracts? If so,—	No, but we have a few special rates for a given annual quantity of traffic applicable to all parties sending the same.
a. Is the charge based on a minimum annual payment, or on the quantity carried?	
b. Or how otherwise?	
16. Have you any special contracts independent of the foregoing scale of charges or conditions?	Ditto.
17. Is the traffic in all cases sent by the shortest railway route in connection with your system of railways? If not, state the exceptions, and give an instance of each class of exceptions.	Not always, but the shortest route governs the charge. The fitting of trains sometimes renders it desirable to send the traffic by a route, the property of the Company, which may be less direct.
18. Do the mileage rates apply to the shortest railway route? If not, state to what distance they apply.	Ditto.
19. Are any articles in this class ever carried in owner's waggons? If so, state the particulars.	Seldom; but salt, sanitary tubes, stone, &c., are at times sent in owners' waggons, and in some cases we make them an allowance for it.

INQUIRY No. 3.—Questions in regard to Railway Charges.

1–6. State in the following Table the Charges for the conveyance of the various articles named, between stations on your own lines, in tons of 2,240 lbs., or the equivalent measurement, including collection and delivery. Specify against any of these articles those which are from station to station only.

Name of Article.	(*a.*) What is the Minimum Charge for Articles under 112 lbs. Weight?	(*a.*) What is the Scale of Charge for Articles under 112 lbs. according to Distance?	(*b.*) What is the Minimum Charge per Ton?	(*b.*) What is the Distance to which this Charge is applicable?	(*c.*) What is the Charge per Ton per Mile when this Distance is exceeded?	(*d.*) What is the Charge per Ton for Porterage and Station Accommodation?	(*d.*) Are these Charges included in the Mileage Rates?	(*e.*) What is the Charge per Ton for Collection and Delivery?	(*e.*) Are these Charges included in the Mileage Rates?	(*f.*) Are there any exceptional Charges for Collection and Delivery? If so, state the Stations and Charges.	(*g.*) Are any of these Articles carried upon Toll, and, if so, at what Rates?
For the whole of the articles included in the First, Second, Third, Fourth, Fifth, and Sixth Classes of the Clearing House Classification. Appendix CP.	Sixpence.	Our Small Rates by Goods Trains are about as under :— 23 lbs. / 56 lbs. / 112 lbs. 10 to 25 miles - - 0*d.* 9 / 0*s.* 0*d.* 9 / 1*s.* 0*d.* 0 25 to 50 miles - - 0 9 / 1 0 6 / 1 3 9 50 to 100 miles - - 1 3 / 1 6 9 / 1 9 0 Above 100 miles - - 1 6 / 1 9 9 / 2 0 0	4*s.* 2*d.*	Six miles.	The charges are not regulated solely according to distance, but are governed by the special circumstances of each case and with reference to the Company's powers, and are only such as will fairly remunerate the Company for their capital and current expenditure.	1*s.* 9*d.* per ton and upwards at each end, according to the class of goods.	Not in the mileage, but in the gross rate charged.	In London, 3*s.* to 7*s.* 6*d.*; and in the country 1*s.* 8*d.* to 3*s.* at each end, excepting for risky and fragile goods.	Not in the mileage, but in the gross charge.	Yes, for bulky, heavy, and fragile articles, also for long distances and bad state of roads.	No.

Great Northern Railway.—Inquiry No. 3.—*continued.*

2. Are the above mileage charges uniformly applied between all stations on your system of railways?
3. If not, state the nature of the exceptions, and give an instance of each class of exceptions.

There are numerous exceptions to the scale of rates to suit particular markets and districts, and where great competition exists.

4. Is the traffic of these articles carried at the Company's risk (excepting the articles otherwise specified)?
5. If not, state in what respects you depart from this condition.

Generally at the Company's risk, excepting when provided for in the Carriers' Act, and when goods are charged at lower rates than those specified for the class to which they belong, on the undertaking of the owner to bear the risk.

6. Do you undertake to deliver the traffic of articles in this return within a specified time?

No, but in a reasonable time.

7. What time is allowed at the stations for loading and unloading this class of traffic?

The goods are delivered by the Company with all possible expedition.

8. For what period do you keep any of the articles in this return in your warehouses free of charge?

Various, according to the nature of the traffic and locality of the station.

9. What charge for warehousing is made after the period has expired?

Ditto.

10. What charge do you make for demurrage of waggons?

None, as a rule, the goods being usually unloaded by the Company and warehoused.

FOR THROUGH TRAFFIC.

11. Do you make through charges for this class of traffic with all other railway companies connected with your system by junctions? If not, state the exceptions, and give an instance of each class of exceptions.

Yes, by mutual arrangement.

12. Are junctions considered as stations for the traffic of articles in this return?

Not when the goods traffic is carried at through rates.

13. If not, state the exceptions, and give an instance of each class of exception.

When no through rates exist, and the junction is a transhipping station.

14. What arrangements are made for the interchange of traffic with other companies when through charges are not given?

We invoice locally to the station nearest to the other company's line.

GENERAL QUESTIONS.

15. Have you any scale of charges applicable to contracts? If so,—
a. Is the charge based on a minimum annual payment, or the quantity carried?
b. Or how otherwise?

No.

16. Have you any special contracts independent of the foregoing scale of charges or conditions?

No special contracts, but we have special rates applicable to all parties under like circumstances.

17. Is the traffic in all cases sent by the shortest railway route in connection with your system of railways? If not, state the exceptions, and give an instance of each class of exceptions.
18. Do the mileage rates apply to the shortest railway route? If not, state to what distance they apply.

Not always, but the shortest route governs the charge. It is sometimes more convenient and economical to work the traffic by a less direct route.

19. Are any articles in this class ever carried in owners' waggons? If so, state the particulars.

No.

INQUIRY No. 4.—As to Acts of Parliament authorizing Tolls and Rates.

Give a list of the Acts of Parliament now in force, under which you are authorized to levy tolls and rates on the lines included in your former return.

Distance, 1 mile.

Places between which the lowest rate of passenger fare is charged, giving the fares for each class, and the distances between the stations.

Between Lincoln and Louth :—

	s.	*d.*
First class, return	10	6
Second do. do.	7	6
First class, single	7	0
Second do. do.	5	0
Parliamentary	3	6

Distance, 63 miles and 56 chains.

Are market tickets issued? If so, between what places, and at what proportion of the single fares?

Cambridge Branch.—Market return tickets are issued at a single third-class fare on the following days, viz. :—From all stations to Hitchin on Tuesdays, from all stations, except Hitchin to Cambridge, on Wednesdays, and first, second, and third class market return tickets are issued from Hertford to Cambridge on Saturdays at a single fare.

Market return tickets are also issued at two single third-class fares as under :—

To Hitchin on Tuesdays from Arksey.

To Peterboro' on Saturdays from stations between Peakirk and Spalding inclusive and Stamford.

To Bourne on Thursdays from Stamford, Corby, Essendine, and Thurlby.

To Stamford on Mondays and Fridays from Great Ponton, Corby, and Little Bytham.

To Nottingham on Saturdays from stations between Grantham and Bingham, inclusive.

To Grantham on Saturdays from stations between Nottingham, Newark, Stamford, and Bourne, inclusive.

To Sleaford on Mondays from stations between Grantham and Boston, inclusive.

To Retford on Saturdays from Doncaster, Sutton, Ranskill, and Scrooby.

To Doncaster on Saturdays from stations between Retford and Rossington, inclusive, and from Arksey.

To Leeds on Tuesdays and Saturdays from Knottingley and Pontefract.

To Spalding on Tuesdays from stations between Peakirk and Boston, inclusive.

To Boston on Wednesdays and Saturdays from stations between Spalding and Kirton, inclusive; between Langrick and Lincoln, inclusive; from Horncastle and Woodhall Spa; from Swineshead, Heckington, and Sleaford, and from stations from Sibrey to Alford, inclusive.

To Lincoln on Fridays from stations between Boston Gainsbro', inclusive; from Horncastle and Woodhall Spa, and from stations between Sibsey and Louth, inclusive.

To Gainsbro' on Tuesdays from stations between Lincoln and Lea, inclusive.

To Louth on Wednesdays from stations between Firsby and Legbourne, inclusive, and Grimsby, inclusive; also from Fotherby Gate House.

To Grimsby on Fridays from stations between Louth and Waltham, inclusive; also from Fotherby Gate House.

These tickets are not issued on any other than the days named, unless to fairs, &c. when specially announced.

Give the average speeds of trains as follows :—

	Miles.
Average speed of express trains, including stoppages	40·26 per hour.
„ „ ordinary passenger trains	24·51 „ „
„ „ parliamentary	23·59 „ „

Give some general information as to the nature and extent of your special excursion traffic, stating the frequency of the excursion trains; the places between which they run; the fares charged per mile for each class; the number of passengers of each class generally carried in each train; and the average speed, including stoppages.

We run excursion trains between London and Lancashire, Yorkshire, and Lincolnshire, the extreme points being Halifax, York, Liverpool, Hull, and Grimsby, calling at the principal intermediate stations on an average about every three weeks during the season to and from some or all of these places.

The season begins in June and terminates in September.

We also run similar trains at Whitsuntide and Easter. Day trips are also run to London from Yorkshire and Lincolnshire during the season, and from the Great Northern local districts, in about the same proportion as the above-named.

Extra excursions are sometimes run on the occasion of attractive fêtes in London, at the Crystal Palace, &c.

The running of country excursions is determined by races, galas, fêtes, and various other attractions which occur at almost every place of any note during the season; for such events excursions are usually run from stations within a radius of 75 to 100 miles, depending upon the nature of the attraction.

Doncaster races is an exception, as on that occasion excursions are run from the whole of the Great Northern system.

Frequency of the excursion trains	Average 25 per week during the season.		
Places between which they run	Between all stations, the trains in each case being either to or from one of the large towns.		
		1st Class.	Covered Carriages.
Average fares charged per double mile for each class	Day trips	¾*d.* and $\frac{3}{31}$.	½*d.* and $\frac{1}{31}$.
	Four or five day trips	1½*d.* „ $\frac{13}{31}$.	½*d.* „ $\frac{1}{31}$.
Average number of passengers of each class carried in each train.	First class 20, covered carriages 350.		
Average speed per hour, including stoppages	25·65 miles.		

Great Northern Railway—*continued.*

INQUIRY No. 6.—As to Rates for Parcels.

Give, in reference to the lines included in your former Returns, the general rates charged for parcel traffic, both by passenger and goods trains, according to weight and distance.

Also add particulars of any important exceptions made to these general rates.

By Passenger Trains.

	Weight.				Ordinary Passengers' excess Luggage, per lb.	Commercial Travellers' excess Luggage, per lb.

By Goods Trains.

	Not exceeding 28 lbs.	Not exceeding 56 lbs.	Not exceeding 112 lbs.
Average rates about as under:—	*s. d.*	*s. d.*	*s. d.*
Not exceeding 25 miles - - - - - - -	0 9	0 9	1 0
Above 25 miles but not exceeding 50 miles - - - -	0 9	1 0	1 3
„ 50 „ „ 100 „ - - - -	1 3	1 6	1 9
„ Above 100 „ - - - -	1 6	1 9	2 0

There are no important exceptions to the above rates.

INQUIRY No. 7.—As to Charges for Horses, Carriages, and Dogs by Passenger Trains.

Insert in the following Table the rates charged for horses, carriages, and dogs carried by passenger trains, on the lines included in your former returns.

	Charge per Mile.	Minimum Gross Charge.
	s. d.	*s. d.*
Horse boxes containing 3 horses, not exceeding £50 each in value -	0 9	10 6
Do. 2 do. do. do. -	0 6	7 0
Do. 1 do. do. do. -	0 3	3 6
Two-wheeled carriages - - - - - - -	0 4½	5 6
Four do. do. - - - - - - - -	0 4½	5 6
Dogs - - - - - - - - -	See below.	0 3

What is the rate of insurance on horses exceeding the above-mentioned values?

Five pounds per cent.

State whether the rates charged for this kind of traffic are uniform, or if they are lower for the longer distances. If the latter, give the scale of distances and charges.

The carriage and horse rates are uniform.

Dogs are charged at the following scale:—

	s. d.	
Not exceeding - - - - 10 miles - - -	0 3	each.
Above 10 miles, but not exceeding 20 „ - - -	0 6	„
„ 20 „ „ 40 „ - - -	1 0	„
„ 40 „ „ 80 „ - - -	1 6	„
„ 80 „ „ 100 „ - - -	2 0	„
„ 100 „ „ 130 „ - - -	2 6	„
„ 130 „ „ 150 „ - - -	3 0	„
„ 150 „ „ 200 „ - - -	4 0	„
For every additional 50 miles - - - - - -	1 0	„

Great Northern Railway—*continued.*

INQUIRY No. 8.—As to Charges for Live Stock by Goods Trains.

Insert in the following Table the rates charged, on the lines included in your former return, for live stock carried by goods trains.

	Whole Trucks.				Half Trucks.				Double Sheep Van.			
	No. of Animals.	Maximum Rate per Truck per Mile.	Minimum Rate per Truck per Mile.	Minimum Charge per Truck.	No. of Animals.	Maximum Rate per half Truck per Mile.	Minimum Rate per half Truck per Mile.	Minimum Charge per half Truck.	No. of Animals.	Maximum Rate per Van per Mile.	Minimum Rate per Van per Mile.	Minimum Charge per Van.
		d.	*d.*	*s.* *d.*		*d.*	*d.*	*s.* *d.*		*d.*	*d.*	*s.* *d.*
Fat cattle	8	7	7	5 0	3	4	4	5 0	—	—	—	—

Lambs	42	6	6	5 0	15	$3\frac{1}{2}$	$3\frac{1}{2}$	5 0	—	—	—	—
Bacon pigs	22	6	6	5 0	9							
Pork pigs	34	6	6	5 0	15							
Horses in cattle trucks	7	$1\frac{1}{2}$*d.* per horse per mile, with a minimum, 6*d.*			4	6	6	—	—	—	—	—

Name the stations between which the highest rates for the conveyance of live stock are charged, showing the charge for each description and the distances between the stations.

The scale last quoted applies to all stations.

Name the stations between which the lowest rates for the conveyance of live stock are charged, showing the charge for each description, and the distances between the stations.

The scale last quoted applies to all stations.

Is there any special charge for cattle to the Royal Agricultural Society's shows? If so, state it.

If the cattle remain unsold at the close of the show they are, as a rule, taken back free.

INQUIRY No. 9.—As to Charges at different Periods.

Give, for the lines included in your former returns, the information in the annexed table, attending to the following conditions :—

The amounts are to represent the average rates charged per mile.

For goods they are to be the rates for long distances, and including terminal charges.

In the cases of railways opened since 1840 or 1850 give the rates at the time of opening, and substitute this date at the top of the column.

	1840.	1850.	1865.
Single passenger fares, 1st class	The rates between the different points of this Company's system are very numerous, and vary according to the special circumstances of the traffic, an average therefore will not fairly represent the actual charge made to the public, and any comparison between the rates in operation at the specified periods would be useless.		
" " 2nd class

MIDLAND RAILWAY.

INQUIRY No. 1.—Questions in regard to Railway Charges.

1. Give a list of the lines to which this return refers, and state their respective lengths - - - - -

MIDLAND RAILWAY.

The Midland Railway and branches consist of 663½ miles, and in addition to this the company work over 96 miles of other railways, as follows:—

11½	miles of the	Manchester, Buxton, and Matlock.
9	,,	South Yorkshire.
13	,,	West Midland.
32	,,	Great Northern between King's Cross and Hitchin.
5	,,	Redditch.
14½	,,	South Leicestershire.
11	,,	Tewkesbury and Malvern.

FOR ARTICLES CARRIED FROM STATION TO STATION ONLY, OR FROM JUNCTION TO JUNCTION ONLY, ON ALL YOUR LINES.

(A.) IN COMPANIES' WAGGONS, WHEN LOADED AND UNLOADED BY THE OWNERS.

2. State in the following Table the charges on your lines for the conveyance of the various articles named, in tons of 2,240 lbs., or the equivalent measurement:—

Name of Article.	(a.) What is the Minimum Charge per Ton for each Article for the shortest Distance?	(a.) What is the Minimum Load of each Article below which you refuse to take it at these Rates?	(a.) What is the Distance to which this Charge is applicable?*	(b.) What is the Charge per Ton per Mile when this Distance is exceeded, and up to 50 Miles?	(b.) What is your Scale of Charges according to Distance for Distances beyond 50 Miles?	(c.) What is the Charge per Ton for Terminal or Station Accommodation?	(c.) Is it included in the foregoing Charges?	(d.) What is the Charge for Loading and Unloading when done by the Company?	(d.) Is it in addition to the foregoing Charges?
Bricks, *common*	2*s.*	4 tons		1½*d.* to 1*d.*	per ton. 1*d.* to ¾*d.*	Excepting for coal, for which see special return, the charges vary according to circumstances from 6*d.* to 1*s.* 6*d.* per ton, and are generally included in the foregoing charges.	See reply in preceding column.	The Company does not load or unload any of the articles named in this list.	See reply in preceding column.
Cannel	See appended list of coal and coke rates.								
Chromate ores	2*s.* 6*d.*	2 tons		2¾*d.* to 2 1/10*d.*	2 1/10*d.* to 1½*d.*				
Cinders	See appended list of coal and coke rates.								
Clay, [*common*]	2*s.*	4 tons		1½*d.* to 1 1/10*d.*	1 1/10*d.* to ¾*d.*				
Coal	See appended list of coal and coke rates.								
Coke	Do.	do.							
Compost, [*packed*]	2*s.* 6*d.*	2 tons		1½*d.* per ton for first 40 miles, beyond 40 miles 1*d.* per ton per mile.	1*d.* per ton per mile after the first 40 miles.				
Coprolites, *for manure*	2*s.*	4 tons		1 3/5*d.* to 1 3/5*d.*	1 3/5*d.* to 1*d.*				
Culm	See appended list of coal and coke rates.								
Draining pipes and tiles (*com. for agricultural draining*).	2*s.*	2 tons		1½*d.* to 1 3/5*d.*	1 3/5*d.* to 1*d.*				
Dross	1*s.*	4 tons		1½*d.* to 1 1/10*d.*	1 1/10*d.* to ⅞*d.*				
Fire bricks and clay	2*s.*	3 tons		1½*d.* to 1 3/5*d.*	1 3/5*d.* to 1*d.*				
Flagstones	Do.	4 tons		1½*d.* to 1 1/10*d.*	1 1/10*d.* to ⅞*d.*				
Granite, *undressed*	Do.	Do.		Do.	Do.				
Gravel	Do.	Do.		Do.	Do.				
Iron ore	1*s.*	Do.		1½*d.* to 1*d.*	1*d.* to ¾*d.*				
Iron, *pig*	2*s.*	Do.		Do.	Do.				
Iron stone	1*s.*	Do.		Do.	Do.				
Lime and limestone	See mineral list. [Coal, &c. p. 32.]								
Manure, *in bulk*	Not usually carried in Midland waggons, see general remarks for exceptions.								
Materials for road repairs.	See general remarks.								
Peat	2*s.*	4 tons		1½*d.* to 1 1/10*d.*	1½*d.* to ⅞*d.*				
Potters' earth	2*s.* 6*d.*	2 tons		2¼*d.* to 2 1/10*d.*	2 1/10*d.* to 1½*d.*				
Pyrites	2*s.*	4 tons		1½*d.* to 1 1/10*d.*	1 1/10*d.* to ¾*d.*				
Salt, *rock, and unmanufactured.*	Do.	Do.		1*d.*	1*d.* to ¾*d.*				
Salt, *in bulk*, including manufactured salt, when so carried [from Stoke Works and Droitwich].	This traffic being of an exceptional character, the manufacturers usually find waggons. For exceptions see general remarks.								
Sand, [*common*]	2*s.*	4 tons		1*d.*	1*d.* to ¾*d.*				
Sand, [*moulding*]	Do.	Do.		1½*d.* to 1 1/10*d.*	1 1/10*d.* to ¾*d.*				
Scoriæ	1*s.*	Do.		Do.	Do.				
Slag	Do.	Do.		Do.	Do.				
Slates, *common*	2*s.*	Do.		1 3/5*d.* to 1 2/3*d.*	1 2/3*d.* to 1*d.*				
Stone, *in the rough state, pitching, paving, kerb, or flags.*	Do.	Do.		1¼*d.* to 1 1/10*d.*	1 1/10*d.* to ⅞*d.*				
Stone, *building*	Do.	Do.		1½*d.* to 1¾*d.*	1 2/3*d.* to 1*d.*				
Sulphur ore	2*s.* 6*d.*	2 tons		2¼*d.* to 2 1/10*d.*	2 1/10*d.* to 1 3/5*d.*				
Tiles	See draining pipes and tiles.								
Turf	2*s.*	4 tons		1 3/5*d.* to 1 2/3*d.*	1 2/3*d.* to 1*d.*				
Zinc ore	2*s.* 6*d.*	2 tons		2¼*d.* to 2 1/10*d.*	2 1/10*d.* to 1 3/5*d.*				

*The distances to which the minimum charges apply are according to the numerous varying circumstances of the traffic. In some few specia cases the minimum applies to distances up to 24 miles.

GENERAL REMARKS.

Manure, in Bulk.—

		s.	d.	
London to	Henlow	3	3	per ton.
,,	Shefford	3	5	,,
,,	Southill	3	5	,,
,,	Cardington	3	9	,,
,,	Bedford	3	6	,,
London to	Oakley	4	4	per ton.
,,	Sharnbrook	4	7	,,
,,	Irchester	5	1	,,
,,	Wellingbro'	5	4	,,

Materials for Road Repairs.—These are generally charged the same as limestone, but exceptions are made to meet peculiar circumstances.

Salt, in Bulk.—The manufacturers at Stoke and Droitwich load Midland waggons to Gloucester and Bristol, which waggons would otherwise run there empty, and for which we charge 2*s.* 6*d.* per ton to Gloucester, and 4*s.* 6*d.* per ton to Bristol.

Midland Railway.—Inquiry No. 1.—*continued.*

COAL, CANNEL, COKE, CULM, CINDERS, AND LIME, IN COMPANY'S WAGGONS.

Name of Article.	What is the Minimum Charge per Ton for each Article for the shortest Distance?	What is the Minimum Load of each Article below which you refuse to take it at these Rates?	What is the Distance to which this Charge is applicable?	What is the Charge per Ton per Mile when this Distance is exceeded, and up to 50 Miles?	What is your Scale of Charges according to Distance for Distances beyond 50 Miles?	What is the Charge per Ton for Terminal or Station Accommodation?	Is it included in the foregoing Charges?	What is the Charge for Loading and Unloading when done by the Company?	Is it in addition to the foregoing Charges?
Coal Cannel Coke Culm Cinders Lime	The Company do not supply waggons for this description of traffic.								

3. Are the above mileage charges uniformly applied between all stations on your system of railways? — Yes, subject to the remarks in the columns and margins.

4. If not, state the nature of the exceptions.

5. Is the traffic of this class conveyed at the owner's risk, or otherwise? — At the owner's risk.

6. If not, state in what respects you depart from this condition.

7. Do you undertake to deliver this class of traffic within a specified time? — No.

8. What time is allowed at the stations for loading and unloading this class of traffic? — 24 hours for loading and 48 hours for unloading.

9. What charge do you make for demurrage of waggons? — Three shillings per waggon per diem.

(B.) IN OWNERS' WAGGONS.

10. State in the following Table, the charges on your own line for the conveyance of the various articles named, in tons of 2,240 lbs., or the equivalent measurement:—

Name of Article.	(a.) What is the Minimum Charge per Ton for each Article for the shortest Distance?	(a.) What is the Minimum Load of each Article below which you refuse to take it at these Rates?	(a.) What is the Distance to which this Charge is applicable?*	(b.) What is the Charge per Ton per Mile when this Distance is exceeded, and up to 50 Miles?	(b.) What is your Scale of Charges according to Distance for Distances beyond 50 Miles?	(c.) What is the Charge per Ton for Terminal or Station Accommodation?	(c.) Is it included in the foregoing Charges?

* See note to Table (A.)

GENERAL REMARKS.

†*Bricks, Common.*—Very rarely carried in owners' waggons, and when so carried an allowance is made according to circumstances, but as a rule we allow—

3*d.* per ton up to 30 miles.
6*d.* „ „ 60 „
9*d.* „ beyond 60 „

Midland Railway.—Inquiry No. 1.—*continued.*

Coal, Cannel, Coke, Culm, Cinders, and Lime, in Owners' Waggons.

Name of Article.	What is the Minimum Charge per Ton for each Article for the shortest Distance?	What is the Minimum Load of each Article below which you refuse to take it at these Rates?	What is the Distance to which this Charge is applicable?	What is the Charge per Ton per Mile when this Distance is exceeded, and up to 50 Miles?	What is your Scale of Charges according to Distance for Distances beyond 50 Miles?	What is the Charge per Ton for Terminal or Station Accommodation?	Is it included in the foregoing Charges?	What is the Charge for Loading and Unloading when done by the Company?	Is it in addition to the foregoing Charges?
Coal - -	4*d.* per ton	4 tons - (2,352 lbs. to the ton).	Maximum 2 miles.	In excess of the maximum up to 40 miles from 1*d.* to $\frac{3}{4}$*d.* per ton per mile.	40 to 60 miles from $\frac{3}{4}$*d.* to $\frac{5}{8}$*d.* per ton per mile, 60 to 80 miles from $\frac{5}{8}$*d.* to $\frac{1}{2}$*d.* per ton per mile, 80 to 100 miles from $\frac{1}{2}$*d.* to $\frac{7}{16}$*d.* per ton per mile, 100 miles and upwards $\frac{7}{16}$*d.* to $\frac{6}{16}$*d.* per ton per mile.	Varying according to circumstances from 2*d.* to 6*d.* per ton.	No -	This service is not undertaken by the Company.	
Cannel - -	} The rates for cannel and culm are the same as for coal.								
Culm - -									
Coke - -	6*d.* per ton	4 tons - - (2,352 lbs. to the ton).	Maximum 2 miles.	In excess of the maximum up to 50 miles from 1$\frac{1}{2}$*d.* to $\frac{7}{8}$*d.* per ton per mile.	50 to 60 miles from 1*d.* to $\frac{5}{8}$*d.* per ton per mile, 60 to 80 miles from $\frac{5}{8}$*d.* to $\frac{10}{16}$*d.* pr. ton pr. mile, 80 to 100 miles from $\frac{8}{16}$*d.* to $\frac{1}{2}$*d.* per ton per mile, 100 miles and upwards $\frac{1}{2}$*d.* per ton per mile.	Do.	No -	Do.	
Cinders - -	The rates for cinders are the same as for coke.								
Lime - -	6*d.* per ton	4 tons - - (2,352 lbs. to the ton).	Maximum 2 miles.	In excess of the maximum up to 50 miles from 1*d.* to $\frac{3}{4}$*d.* per ton per mile.	50 to 80 miles from $\frac{3}{4}$*d.* to $\frac{5}{8}$*d.* per ton per mile, 80 to 100 miles from $\frac{5}{8}$*d.* to $\frac{1}{2}$*d.* per ton per mile, 100 miles and upwards $\frac{1}{2}$*d.* per ton per mile.	Do.	No -	Do.	

10*d.* Do the charges include returning empty waggons? — Yes.

11. Are the above charges uniformly applied between all stations on your system of railways? — Yes, subject to remarks in columns and margin.

12. If not, state the nature of the exceptions.

13. Is the traffic of this class conveyed at the owner's risk, or otherwise? — At owner's risk.

14. Do you undertake to convey this class of traffic within a specified time? — No.

15. And to return the empty waggons within a specified time?
And if so, in what time? — No.

16. Do you allow demurrage on owners' waggons when not returned within the specified time? — No.

FOR THROUGH TRAFFIC, WHETHER IN COMPANIES' OR IN OWNERS' WAGGONS.

17. Do you make through charges for this class of traffic with all other railway companies connected with your system by junctions? — Yes.

18. Are junctions considered as stations for this class of traffic? — Not on traffic booked through.

19. If not, state the exceptions.

20. What arrangements are made for the interchange of traffic with other companies, when through charges are not given? — The local charges to the junction are then made, and the particulars handed to the company taking forward the traffic.

CONTRACT CHARGES, WHETHER IN COMPANIES' OR IN OWNERS' WAGGONS.

21. Have you any scale of charges applicable to contracts? If so,—
a. Is the charge based on a minimum annual payment, or on the quantity carried?
b. Or how otherwise? — No.

22. Have you any special contracts independent of the foregoing scale of charges or conditions? — See remarks on exceptions.

Midland Railway—*continued.*

INQUIRY No. 2.—Questions in regard to Railway Charges.

FOR ARTICLES CARRIED FROM STATION TO STATION ONLY, OR FROM JUNCTION TO JUNCTION ONLY, ON ALL YOUR LINES, IN COMPANIES' WAGGONS.

1. State in the following Table the charges on your lines for the conveyance of the various articles named, in tons of 2,240 lbs., or the equivalent measurement:—

Name of Article.	(a.) What is the Minimum Charge per Ton for each Article for the shortest Distance?	(a.) What is the Minimum Load of each Article below which you refuse to take it at these Rates?	(a.) What is the Distance to which this Charge is applicable?	(b.) What is the Charge per Ton per Mile when this Distance is exceeded, and up to 50 Miles?	(b.) What is your Scale of Charges according to Distance for Distances beyond 50 Miles?	(c.) What is the Charge per Ton for Terminal or Station Accommodation?	(c.) Is it included in the foregoing Charges?	(d.) What is the Charge for Loading and Unloading when done by the Company?	(d.) Is it in addition to the foregoing Charges?	(d.) Is any and what Deduction made when the Loading or Unloading is done by the Owner?
Alabaster	From 2*s.* to 3*s.* as a general rule, but in some special cases a lower charge is made.	Two tons.	From 6 to 24 miles, according to the varying circumstances of the traffic.	$2\frac{1}{2}d.$ to $2\frac{1}{10}d.$	Per ton. $2\frac{1}{10}d.$ to $1\frac{1}{5}d.$	From 1*s.* to 2*s.* per ton, according to circumstances.	Included in the foregoing charges.	No separate charge is made.	No.	No.
Alkali				Do.	Do.					
Alum and alum cake				Do.	Do.					
Anchors				Do.	Do.					
Asphaltum				Do.	Do.					
Asphalte apparatus *when sent with asphalte.*				Do.	Do.					
Axles, wheels, and tyres, *railway*				Do.	Do.					
Axles, *Bessemer made*				Do.	Do.					
Axles, wheels, and tyres, *steel, at owner's risk.*				Do.	Do.					
Baggage, *military*				2*d.*	2*d.*					
Bar wood				$2\frac{1}{2}d.$ to $2\frac{1}{10}d.$	$2\frac{1}{10}d.$ to $1\frac{1}{5}d.$					
Bark (tanners'), *packed*				3*d.* to 2*d.*	2*d.*					
Barley				$2\frac{1}{2}d.$ to $2\frac{1}{10}d.$	$2\frac{1}{10}d.$ to $1\frac{1}{5}d.$					
Barytes				Do.	Do.					
Baywood				Do.	Do.					
Beans				Do.	Do.					
Bessemer made shot				Do.	Do.					
Bessemer made armour plates				Do.	Do.					
Bessemer made rails				$1\frac{1}{2}d.$ to $1\frac{3}{4}d.$	$1\frac{3}{4}d.$ to 1*d.*					
Bessemer made ingots				$2\frac{1}{2}d.$ to $2\frac{1}{10}d.$	$2\frac{1}{10}d.$ to $1\frac{1}{5}d.$					
Bessemer made rough forgings				Do.	Do.					
Bleaching powder				Do.	Do.					
Blocks, *rough cast steel horn*				Do.	Do.					
Bone ash				Do.	Do.					
Bone and horn waste, *in truck loads*				Do.	Do.					
Bones, *calcined*				Do.	Do.					
Bones, *common, for size or manure*				Do.	Do.					
Borings, *iron*				Do.	Do.					
Bran				Do.	Do.					
Brimstone				Do.	Do.					
Builders' implements, *ladders, planks, scaffold poles, &c.*				Do.	Do.					
Burr stones				Do.	Do.					
Cannon balls				Do.	Do.					
Cement				Do.	Do.					
Cement stone				Do.	Do.					
Chains, *large, loose*				$1\frac{1}{2}d.$ to $1\frac{1}{3}d.$	$1\frac{1}{3}d.$ to $\frac{7}{8}d.$					
Chalk				$2\frac{1}{2}d.$ to $2\frac{1}{10}d.$	$2\frac{1}{10}d.$ to $1\frac{1}{5}d.$					
Charcoal, *packed*				Do.	Do.					
Charcoal, *animal*				Do.	Do.					
Charubs or locusts, *actual weight*										
Chimney pots, *earthenware, at owner's risk.*				$1\frac{1}{2}d.$ to $1\frac{3}{4}d.$	$1\frac{3}{4}d.$ to 1*d.*					
China clay				Do.	Do.					
Clay retorts, *at owner's risk*				$2\frac{1}{2}d.$ to $2\frac{1}{10}d.$	$2\frac{1}{10}d.$ to $1\frac{1}{5}d.$					
Clog blocks, *rough*				Do.	Do.					
Coal dust, *in bags and casks*				Do.	Do.					
Coal tar and creosote, *in owner's trucks*				Do.	Do.					
Cocoa nut refuse, *for manure*				Do.	Do.					
Copperas				Do.	Do.					
Copper ore				Do.	Do.					
Cordwood, *machine weight*				Do.	Do.					
Cullet, *in casks*				Do.	Do.					
Dari				Do.	Do.					
Deals, $2\frac{1}{2}$ *tons per standard*				Do.	Do.					
Dills				Do.	Do.					
Disinfecting powder				Do.	Do.					
Drain pipes				$1\frac{1}{2}d.$ to $1\frac{3}{4}d.$	$1\frac{3}{4}d.$ to 1*d.*					
Earth nuts				$2\frac{1}{2}d.$ to $2\frac{1}{10}d.$	$2\frac{1}{10}d.$ to $1\frac{1}{5}d.$					
Emery stone				Do.	Do.					
Farina				Do.	Do.					
Felloes, naves, and spokes				$1\frac{1}{2}d.$ to $1\frac{3}{4}d.$	$1\frac{3}{4}d.$ to 1*d.*					
Fire-clay chimney cans, *at owner's risk*				Do.	Do.					
Fire-clay vent linings, *at owner's risk*				$2\frac{1}{2}d.$ to $2\frac{1}{10}d.$	$2\frac{1}{10}d.$ to $1\frac{1}{5}d.$					
Fire-clay ware, *not otherwise specified, at owner's risk.*				Do.	Do.					
Fire-wood, prepared, and fire-lighters, *in truck loads of 3 tons and upwards.*				Do.	Do.					
Flints				Do.	Do.					
Flint, ground, *packed, in truck loads of 3 tons and upwards.*				Do.	Do.					
Flooring boards				Do.	Do.					
Flour				Do.	Do.					
Founders' dust, *packed*				$1\frac{1}{2}d.$ to $1\frac{1}{3}d.$	$1\frac{1}{3}d.$ to $\frac{7}{8}d.$					
Fullers' earth				$2\frac{1}{2}d.$ to $2\frac{1}{10}d.$	$2\frac{1}{10}d.$ to $1\frac{1}{5}d.$					
Fustic				$1\frac{1}{2}d.$	$1\frac{1}{2}d.$ to 1*d.*					
Gas and coal tar, and creosote, *in owner's trucks.*	5*s.*			$2\frac{1}{2}d.$ to $2\frac{1}{10}d.$	$2\frac{1}{10}d.$ to $1\frac{1}{5}d.$					
Gas and water pipes, *iron, except water pipes for spouting, and their connexions.*	From 2*s.* to 3*s.* as a general rule, but in some special cases a lower charge is made.									
Gas water				Do.	Do.					
Glue pieces, *wet*				Do.	Do.					
Grains, *brewers' and distillers'*				2*d.* to $1\frac{1}{2}d.$	$1\frac{1}{2}d.$ to 1*d.*					
Grain, flour, &c. *(See separate entries)*				$2\frac{1}{2}d.$ to $2\frac{1}{10}d.$	$2\frac{1}{10}d.$ to $1\frac{1}{5}d.$					
Grindstones, *at owner's risk*				Do.	Do.					
Guano				$1\frac{1}{2}d.$ per ton for first 40 miles, beyond 40 miles 1*d.* per ton per mile.	1*d.* per ton per mile after first 40 miles.					

Midland Railway.—Inquiry No. 2.—*continued.*

Name of Article.	(a.) What is the Minimum Charge per Ton for each Article for the shortest Distance?	(a.) What is the Minimum Load of each Article below which you refuse to take it at these Rates?	(a.) What is the Distance to which this Charge is applicable?	(b.) What is the Charge per Ton per Mile when this Distance is exceeded, and up to 50 Miles?	(b.) What is your Scale of Charges according to Distance for Distances beyond 50 Miles?	(c.) What is the Charge per Ton for Terminal or Station Accommodation?	(c.) Is it included in the foregoing Charges?	(d.) What is the Charge for Loading and Unloading when done by the Company?	(d.) Is it in addition to the foregoing Charges?	(d.) Is any and what Deduction made when the Loading or Unloading is done by the Owner?
					Per ton.					
Gurdgeons				2¼d. to 2 1/10d.	2 1/10d. to 1½d.					
Gypsum				1½d. to 1¾d.	1¾d. to ⅞d.					
Hominy				2¼d. to 2 1/10d.	2 1/10d. to 1⅛d.					
Hoopwood, *rough, in bundles*				Do.	Do.					
Ice, *in 4 ton lots (weight taken at starting point).*				Do.	Do.					
Indian corn				Do.	Do.					
Boiler plates, bars, and other undamageable iron.				Do.	Do.					
[Iron rails and chairs]				1½d. to 1⅜d.	1⅜d. to 1d.					
Forgings, *in the rough, not otherwise specified.*				2¼d. to 2 1/10d.	2 1/10d. to 1⅛d.					
Iron retorts				Do.	Do.					
Scrap iron				1½d. to 1⅜d.	1⅛d. to ⅞d.					
Iron spikes				2¼d. to 2 1/10d.	2 1/10d. to 1⅛d.					
Lead ore				Do.	Do.					
Lathwood				Do.	Do.					
Lead, *pig*				Do.	Do.					
Leather shavings, *for manure*				Do.	Do.					
Mahogany				Do.	Do.					
Malt and meal				Do.	Do.					
Malt culms, *actual weight*				Do.	Do.					
Manganese				Do.	Do.					
Manures, *packed*				1½d. per ton for first 40 miles, beyond 40 miles 1d. per ton per mile.	1d. per ton per mile after first 40 miles.					
Manure, *shoddy*				2¼d. to 2 1/10d.	2 1/10d. to 1⅛d.					
Millet				Do.	Do.					
Muriate of potash				Do.	Do.					
Nitrate of soda				Do.	Do.					
Oats				Do.	Do.					
Ochre				Do.	Do.					
Oil cake				Do.	Do.					
Oil cake, *ground*				Do.	Do.					
Paddy or rice, *in the husk*				Do.	Do.					
Points and crossings, *railway*				Do.	Do.					
Patent fuel				Do.	Do.					
Peas, *dried*				Do.	Do.					
Pelts, *wet*				Do.	Do.					
Pipe clay				Do.	Do.					
Plaster				Do.	Do.					
Pollard				Do.	Do.					
Posts and rails, *for fencing*				Do.	Do.					
Postwood, *machine weight*				Do.	Do.					
Pozzolano				Do.	Do.					
Propwood, *machine weight*				Do.	Do.					
Sleepers, *railway, machine weight*				Do.	Do.					
Rice flour and meal				Do.	Do.					
Ropes, *old, including wire ropes*				Do.	Do.					
Rye				Do.	Do.					
Sago flour				Do.	Do.					
Salt, *in bags*				Do.	Do.					
Salt, *manufactured*				Do.	Do.					
Salt cake				1½d. to 1⅜d.	1⅜d. to 1d.					
Sanitary tubes				Do.	Do.					
Sash weights				2¼d. to 2 1/10d.	2 1/10d. to 1⅛d.					
Satin white				Do.	Do.					
Sawdust				Do.	Do.					
Seeds, flax				Do.	Do.					
Seeds, linseed				Do.	Do.					
Seeds, rape				Do.	Do.					
Seeds, *for crushing for oil*				Do.	Do.					
Sharps				Do.	Do.					
Shelling				Do.	Do.					
Soda				Do.	Do.					
Soda ash				Do.	Do.					
Soot				1½d. per ton for first 40 miles, beyond 40 miles 1d. per ton per mile.	1d. per ton per mile after first 40 miles.					
Spelter				2¼d. to 2 1/16d.	2 1/16d. to 1⅛d.					
Spetches, *wet*				Do.	Do.					
Staves				Do.	Do.					
Steel plates, *for shipbuilding*				Do.	Do.					
Stone, *roughly wrought up, as troughs, sinks, &c.*				Do.	Do.					
Tares				Do.	Do.					
Tiles, *roofing, ridge, paving (quarries), at owner's risk.*				1⅜d. to 1⅝d.	1⅝d. to 1d.					
Timber, *logs or baulks, by measurement*				2¼d. to 2 1/16d.	2 1/10d. to 1⅛d.					
Tyres. (*See axles and wheels*)				Do.	Do.					
Umber				Do.	Do.					
Vegetables, 3 tons and above—*Including cabbages, green peas, new potatoes, water cress, and all others, except as under.*				Do.	Do.					
Vegetables *in packages, in 2 ton lots—Including carrots, mangel wurzel, onions, old potatoes, and turnips.*				Do.	Do.					
Vetches				Do.	Do.					
Wheat				Do.	Do.					
Wheels, *railway.* (*See axles*)				Do.	Do.					
Whiting				Do.	Do.					
	From 2*s.* to 3*s.* as a general rule, but in some special cases a lower charge is made.	Two tons.	From 6 to 24 miles, according to the varying circumstances of the traffic.			From 1*s.* to 2*s.* per ton, according to circumstances.	Included in the foregoing charges.	No separate charge is made.	No.	No.

2. Are the above mileage charges uniformly applied between all stations on your system of railways? — Yes, subject to remarks in columns and margin.

3. If not, state the nature of the exceptions, and give an instance of each class of exceptions. — See reply to No. 2.

Midland Railway.—Inquiry No. 2.—*continued.*

4. Is the traffic of articles in this return conveyed at the owner's risk, or otherwise?	Generally at the company's risk.
5. If not, state in what respects you depart from this condition.	See reply to No. 4, but when the articles are charged at rates in the lower classification they are carried at the owner's risk.
6. Do you undertake to deliver the traffic of articles in this return within a specified time?	No.
7. What time is allowed at the stations for loading and unloading this class of traffic?	24 hours as a general rule.
8. For what period do you keep any of the articles in this return in your warehouses free of charge?	Articles in this class are not usually warehoused, but when they are the charge or freedom from charge varies according to circumstances.
9. What charge for warehousing is made after the period has expired?	See reply to No. 8.
10. What charge do you make for demurrage of waggons?	3*s.* per day after two clear days, but not strictly enforced.

FOR THROUGH TRAFFIC.

11. Do you make through charges for this class of traffic with all other railway companies connected with your system by junctions? If not, state the exceptions, and give an instance of each class of exceptions.	Yes.
12. Are junctions considered as stations for the traffic of articles in this return?	Not on traffic charged through.
13. If not, state the exceptions, and give an instance of each class of exception.	See reply to No. 12.
14. What arrangements are made for the interchange of traffic with other companies, when through charges are not given?	The local charges are made in such cases, and particulars of the charges handed to the company who have to carry forward the goods.

GENERAL QUESTIONS.

15. Have you any scale of charges applicable to contracts? If so,—	No.
a. Is the charge based on a minimum annual payment, or on the quantity carried?	See reply to No. 15.
b. Or how otherwise?	See reply to No. 15.
16. Have you any special contracts independent of the foregoing scale of charges or conditions?	No.
17. Is the traffic in all cases sent by the shortest railway route in connection with your system of railways? If not, state the exceptions, and give an instance of each class of exceptions.	Yes, unless a longer route is found in practice to be more convenient.
18. Do the mileage rates apply to the shortest railway route? If not, state to what distance they apply.	Yes.
19. Are any articles in this class ever carried in owner's waggons? If so, state the particulars.	A very rare event.

INQUIRY No. 3.—Questions in regard to Railway Charges.

1. State in the following Table the charges for the conveyance of the various articles named, between Stations on your own lines, in tons of 2,240 lbs., or the equivalent measurement, including collection and delivery. Specify against any of these articles those which are from station to station only.

Name of Article.	(*a.*) What is the Minimum Charge for Articles under 112 lbs. Weight?	(*a.*) What is the Scale of Charge for Articles under 112 lbs. according to Distance?	(*b.*) What is the Minimum Charge per Ton?	What is the Distance to which this Charge is applicable?	(*c.*) What the Charge per Ton per Mile when this Distance is exceeded?	(*d.*) What is the Charge per Ton for Porterage and Station Accommodation?	Are these Charges included in the Mileage Rates?	(*e.*) What is the Charge per Ton for Collection and Delivery?	Are these Charges included in the Mileage Rates?	(*f.*) Are there any exceptional Charges for Collection and Delivery? If so, state the Stations and Charges.	(*g.*) Are any of these Articles carried [illegible] and, if so, at what Rates?
[illegible]	*3d.* per package generally, but in some few cases *4d.*	We have no scale, but the charge varies according to distance from *6d.* to *3s.*	5*s.* per ton is generally the lowest charge, but in some few cases of large quantities the charge is *3s. 4d.* per ton.	Seven miles.	From 1*d.* to 8½*d.* per mile, according to distance and circumstances. The higher rate per mile in this column is for the short distances, and includes collection and delivery and station expenses.	No separate charge is made for porterage and station accommodation.	Yes.	No separate charge is made.	Yes.	No.	No.

Midland Railway.—Inquiry No. 3.—*continued.*

2. State in the following Table the charges for the conveyance of the various articles named, between Stations on your own lines, in tons of 2,240 lbs., or the equivalent measurement, including collection and delivery. Specify against any of these articles those which are from station to station only.

Name of Article.	(a.) What is the Minimum Charge for Articles under 112 lbs. Weight?	(a.) What is the Scale of Charge for Articles under 112 lbs. according to Distance?	(b.) What is the Minimum Charge per Ton?	(b.) What is the Distance to which this Charge is applicable?	(c.) What is the Charge per Ton per Mile when this Distance is exceeded?	(d.) What is the Charge per Ton for Porterage and Station Accommodation?	(d.) Are these Charges included in the Mileage Rates?	(e.) What is the Charge per Ton for Collection and Delivery?	(e.) Are these Charges included in the Mileage Rates?	(f.) Are there any exceptional Charges for Collection and Delivery? If so, state the Stations and Charges.	(g.) Are any of these Articles carried upon Toll, and, if so, at what Rates?
For the whole of the articles included in the SECOND CLASS of the Clearing House Classification. Appendix CP.	6*d.* per package generally, but in some few cases 4*d.*	We have no scale; the charge varies according to distance from 6*d.* to 3*s.*	6*s.* 8*d.* per ton is generally the lowest charge.	Seven miles.	From 1½*d.* to 11*d.*, according to distance and circumstances. The higher rate per mile in this column is for the short distances, and includes collection and delivery and station expenses.	No separate charge is made for porterage and station accommodation.	Yes.	No separate charge is made.	Yes.	No.	No.

3. State in the following Table the charges for the conveyance of the various articles named, between Stations on your own lines, in tons of 2,240 lbs., or the equivalent measurement, including collection and delivery. Specify against any of these articles those which are from station to station only.

Name of Article.	(a.) What is the Minimum Charge for Articles under 112 lbs. Weight?	(a.) What is the Scale of Charge for Articles under 112 lbs. according to Distance?	(b.) What is the Minimum Charge per Ton?	(b.) What is the Distance to which this Charge is applicable?	(c.) What is the Charge per Ton per Mile when this Distance is exceeded?	(d.) What is the Charge per Ton for Porterage and Station Accommodation?	(d.) Are these Charges included in the Mileage Rates?	(e.) What is the Charge per Ton for Collection and Delivery?	(e.) Are these Charges included in the Mileage Rates?	(f.) Are there any exceptional Charges for Collection and Delivery? If so, state the Stations and Charges.	(g.) Are any of these Articles carried upon Toll, and, if so, at what Rates?
For the whole of the articles included in the THIRD CLASS of the Clearing House Classification. Appendix CP.	6*d.* per package generally, but in some few cases 4*d.*	We have no scale; the charge varies according to distance from 6*d.* to 3*s.*	8*s.* 4*d.* per ton is generally the lowest charge.	Seven miles.	From 1½*d.* to 1*s.* 2*d.*, according to distance and circumstances. The higher rate per mile in this column is for the short distances, and includes collection and delivery and station expenses.	No separate charge is made for porterage and station accommodation.	Yes.	No separate charge is made.	Yes.	No.	No.

4. State in the following Table the charges for the conveyance of the various articles named, between Stations on your own lines, in tons of 2,240 lbs., or the equivalent measurement, including collection and delivery. Specify against any of these articles those which are from station to station only.

Name of Article.	(a.) What is the Minimum Charge for Article under 112 lbs. Weight?	(a.) What is the Scale of Charge for Articles under 112 lbs. according to Distance?	(b.) What is the Minimum Charge per Ton?	(b.) What is the Distance to which this Charge is applicable?	(c.) What is the Charge per Ton per Mile when this Distance is exceeded?	(d.) What is the Charge per Ton for Porterage and Station Accommodation?	(d.) Are these Charges included in the Mileage Rates?	(e.) What is the Charge per Ton for Collection and Delivery?	(e.) Are these Charges included in the Mileage Rates?	(f.) Are there any exceptional Charges for Collection and Delivery? If so, state the Stations and Charges.	(g.) Are any of these Articles carried upon Toll, and, if so, at what Rates?
For the whole of the articles included in the FOURTH CLASS of the Clearing House Classification. Appendix CP.	6*d.* per package generally, but in some few cases 4*d.*	We have no scale; the charge varies according to distance from 6*d.* to 3*s.*	11*s.* 8*d.* per ton is generally the lowest charge.	Seven miles.	From 2*d.* to 1*s.* 8*d.* per ton per mile, according to distance and circumstances. The higher rate per mile in this column is for the short distances, and includes collection and delivery and station expenses.	No separate charge is made for porterage and station accommodation.	Yes.	No separate charge is made.	Yes.	No.	No.

Midland Railway.—Inquiry No. 3.—*continued.*

5. State in the following Table the charges for the conveyance of the various articles named, between Stations on your own lines, in tons of 2,240 lbs., or the equivalent measurement, including collection and delivery. Specify against any of these articles those which are from station to station only.

Name of Article.	(a.) What is the Minimum Charge for Articles under 112 lbs. Weight?	(a.) What is the Scale of Charge for Articles under 112 lbs. according to Distance?	(b.) What is the Minimum Charge per Ton?	(b.) What is the Distance to which this Charge is applicable?	(c.) What it the Charge per Ton per Mile when this Distance is exceeded?	(d.) What is the Charge per Ton for Porterage and Station Accommodation?	(d.) Are these Charges included in the Milcage Rates?	(e.) What is the Charge per Ton for Collection and Delivery?	(e.) Are these Charges included in the Milcage Rates?	(f.) Are there any exceptional Charges for Collection and Delivery? If so, state the Stations and Charges.	(g.) Are any of these Articles carried upon Toll, and, if so, at what Rates?
For the whole of the articles included in the FIFTH CLASS of the Clearing House Classification. Appendix CP.	6*d.* per package generally, but in some few cases 4*d.*	We have no scale, but the charge varies according to distance from 6*d.* to 3*s.* each.	18*s.* 4*d.* per ton is generally the lowest charge.	Seven miles.	From 3*d.* to 2*s.* 8*d.* per mile, according to distance and circumstances. The higher rate per mile in this column is for the short distances, and includes collection and delivery and station expenses.	No separate charge is made for porterage and station accommodation.	Yes.	No separate charge is made.	Yes.	No.	No.

6. State in the following Table the charges for the conveyance of the various articles named, between Stations on your own lines, in tons of 2,240 lbs., or the equivalent measurement, including collection and delivery. Specify against any of these articles those which are from station to station only.

Name of Article.	(a.) What is the Minimum Charge for Articles under 112 lbs. Weight?	(a.) What is the Scale of Charge for Articles under 112 lbs. according to Distance?	(b.) What is the Minimum Charge per Ton?	(b.) What is the Distance to which this Charge is applicable?	(c.) What is the Charge per Ton per Mile, when this Distance is exceeded?	(d.) What is the Charge per Ton for Porterage and Station Accommodation?	(d.) Are these Charges included in the Mileage Rates?	(e.) What is the Charge per Ton for Collection and Delivery?	(e.) Are these Charges included in the Mileage Rates?	(f.) Are there any exceptional Charges for Collection and Delivery? If so, state the Stations and Charges.	(g.) Are any of these Articles carried upon Toll, and, if so, at what Rates?
Acids and other highly corrosive articles.	Minimum 10*s.* per ton, and 4*d.* per ton per mile up to 50 miles; 51 miles to 66 miles 16*s.* 8*d.* per ton, and then 3*d.* per ton per mile. All charged station to station only.										
Basket carriage bodies and Bath chairs, *at Company's risk.*	Minimum charge 21*s.* 8*d.* per ton, including collection and delivery, and when the mileage exceeds 21*s.* 8*d.* the charges are 20 per cent. above the fifth class rates, including collection and delivery. Basket carriage bodies, minimum weight, 1 cwt. Bath chairs, do. do. 3 cwt.										
Caravans, *showmen's and others.*	6*d.* per ton for first mile, and 2*d.* per ton per mile in addition for the weight above a ton, with a minimum charge of 20 miles. Weight under a ton to be charged a ton. Station to station.										
Carriage bodies, *finished, in cases.*	Double the fifth class rates in all cases, including collection and delivery; minimum charge 5 cwt.										
Railway carriages, on their own wheels.	6*d.* per carriage per mile.										
Boilers of unusual dimensions.	No fixed charge, but varies according to size, shape, and weight, and charged from station to station, except in rare cases.										
Contractors' waggons and materials, (*excepting rails and chairs*).	To 50 miles - 3*d.* per ton per mile 51 to 75 „ 12*s.* 6*d.* „ „ Above 75 „ - 2*d.* „ per mile Invariably charged from station to station.										
Furniture, *in mats or loose*	In all cases 20 per cent. above fifth class is charged, including collection and delivery.										
Furniture, *in vans, carts, or frames.*	Charged fifth class rate, including the van or carriage, and including collection and delivery. Vans returned free from station to station.										
Forgings or castings, above six tons.	No fixed charge, but varies according to shape and weight.										
Gunpowder - - -	Charged at fifth class rates, not less than in one ton lots, and in safety vans specially constructed for the carriage of gunpowder.										
Lucifer matches and other inflammable articles.	Charged at third class rates, not less than one ton, and all charges include collection and delivery.										
Locomotive engines and tenders on their own wheels.	To 100 miles inclusive, 2*d.* per ton per mile. 101 to 133 „ „ 16*s.* 8*d.* per ton. Above 133 „ „ 1½*d.* „ per mile. Minimum charge, 5*s.* per ton.										
Petroleum and photogenic oil.	In all cases by special arrangement.										
Railway waggons - -	If under three tons 3*d.* per waggon, if above that weight 4*d.* per waggon per mile. No less charge than 5*s.* All weights charged 3*d.* per mile above 50 miles.										
Statuary - - -	By special arrangement only.										
Returned empty packages	Not exceeding 50 miles - 0 3 „ 100 „ - 0 6 „ 150 „ - 0 9 „ 200 „ - 1 0 „ 250 „ - 1 3 „ 300 „ - 1 6 „ 400 „ - 1 9 „ 500 „ - 2 0 „ 600 „ - 2 3 These charges include collection and delivery. There are some few exceptions to this rule, where empties are not charged.										
Small parcels - -	By passenger trains from 4*d.* to 1*s.* 9*d.* from 1 lb. to 7 lbs., and for distances varying from 10 miles to 300 miles. By goods trains see replies to the question in first column under classes 1, 2, 3, 4, and 5.										

2. Are the above mileage charges uniformly applied between all stations on your system of railways?	Yes, subject to remarks in columns and margins.
3. If not, state the nature of the exceptions, and give an instance of each class of exceptions.	See reply to No. 2.
4. Is the traffic of these articles carried at the company's risk (excepting the articles otherwise specified)?	Yes.
5. If not, state in what respects you depart from this condition.	See reply to No. 4.

Midland Railway.—Inquiry No. 3.—*continued.*

6. Do you undertake to deliver the traffic of articles in this return within a specified time?	No.
7. What time is allowed at the stations for loading and unloading this class of traffic?	24 hours.
8. For what period do you keep any of the articles in this return in your warehouses free of charge?	Not usually warehoused, but when warehoused the charge or freedom from charge varies according to circumstances.
9. What charge for warehousing is made after the period has expired?	See reply to No. 8.
10. What charge do you make for demurrage of waggons?	3*s.* per day after two clear days, but not strictly enforced.

FOR THROUGH TRAFFIC.

11. Do you make through charges for this class of traffic with all other railway companies connected with your system by junctions? If not, state the exceptions, and give an instance of each class of exceptions.	Yes.
12. Are junctions considered as stations for the traffic of articles in this return?	Not on traffic charged through.
13. If not, state the exceptions, and give an instance of each class of exception.	See reply to No. 12.
14. What arrangements are made for the interchange of traffic with other companies, when through charges are not given?	The local charges are made in such cases, and particulars of the charges handed to the company who have to carry forward the goods.

GENERAL QUESTIONS.

15. Have you any scale of charges applicable to contracts? If so,—	No.
a. Is the charge based on a minimum annual payment, or on the quantity carried?	See reply to No. 15.
b. Or how otherwise?	See reply to No. 15.
16. Have you any special contracts independent of the foregoing scale of charges or conditions?	No.
17. Is the traffic in all cases sent by the shortest railway route in connexion with your system of railways? If not, state the exceptions, and give an instance of each class of exceptions.	Yes, unless a longer route is found in practice more convenient.
18. Do the mileage rates apply to the shortest railway route? If not, state to what distance they apply.	Yes.
19. Are any articles in this class ever carried in owner's waggons? If so, state the particulars.	A very rare event.

INQUIRY No. 4.—As to Acts of Parliament authorizing Tolls and Rates.

Give a list of the Acts of Parliament now in force, under which you are authorized to levy tolls and rates on the line included in your former return.

Leeds and Bradford Railway Act [7 & 8 Vict. c. 59.], 1844.
Bristol and Birmingham and Midland Railway Act [9 & 10 Vict. c. 326.], 1846.
Midland Railway, Leicester and Hitchin Act [16 & 17 Vict. c. 108.], 1853.

INQUIRY No. 5.—As to Passenger Fares.*

Give the following information in reference to the lines included in your former returns:

	Express Fares.						Ordinary Fares.							
	1st Class.		2nd Class.		3rd Class.		1st Class.		2nd Class.		3rd Class.		Parliamentary.

Are market tickets issued; if so, between what places, and at what proportion of the single fares?

Market tickets are issued as below:—

From stations on the Erewash Valley Railway to Nottingham, „ „ „ Mansfield, „ Kirkstall to Leeds — At a single fare for the double journey.

„ Newlay to Leeds — At a fare and one-third for the double journey.

„ Normanton to Leeds — At about a fare and one-sixth for the double journey.

„ Normanton, Woodlesford, and Methley to Leeds — At about a fare and one-sixth for the double journey.

„ Matlock Bridge and intermediate stations up to Clay Cross and from Pye Bridge, Doe Hill, Alfreton, and Eckington to Chesterfield — At a fare and one-sixth for the double journey.

„ Coalville, Ashby, Moira and Gresley to Burton, and from stations on the South Leicestershire line to Leicester — At a fare and one-half for the double journey. Third class only.

Give the average speeds of trains as follows:—

Average speed of express trains, including stoppages	33½ miles per hour.
„ ordinary passenger trains, „	25¼ „
„ parliamentary „ „	20 „

Give some general information as to the nature and extent of your special excursion traffic, stating the frequency of the excursion trains, the places between which they run, the fares charged per mile for each class, the number of passengers of each class generally carried in each train, and the average speed, including stoppages.

There is a large excursion traffic on the Midland Railway during the summer months to watering places, large towns, and other places which offer attractions to the general public.

Midland Railway.—Inquiry No. 5.—*continued.*

The frequency of these trains depends upon circumstances. The following trains were run during the summer months of 1865:—

1865.	Local Excursion Trains.	Excursion Trains to other Company's Lines.
June - - -	124	48
July - - -	141	80
August - - -	144	91
September - -	114	63
October - - -	36	26
	559	308
Gross total - -	867	

The fares vary according to distance and circumstances, being frequently as low as $\frac{1}{2}d.$ first class, and $\frac{1}{4}d.$ covered carriages per mile run.

In 1865 the following local excursion trains were run:—

No. of Trains.	Number of Passengers.		
	1st Class.	In covered Carriages.	Total.
685	14,907	376,374	391,281
Average per train -	21¾	549½	571¼

The average speed of excursion trains is about 20 miles per hour.

INQUIRY No. 6.—As to Rates for Parcels.

Give, in reference to the lines included in your former returns, the general rates charged for parcel traffic, both by passenger and goods trains, according to weight and distance. Also add particulars of any important exceptions made to these general rates.

General Rates for Parcels by Passenger Train.

For distances not exceeding 10 miles, not exceeding 28 lbs., 4*d.*; above 28 lbs., 2*d.* for each stone or part of a stone additional.

—	1 lb.	2 lbs.	3 lbs.	Above 3 lbs. and not exceeding 7 lbs.	—	—	—	—	Ordinary excess Luggage per lb.

Midland Railway.—Inquiry No. 6.—*continued.*

PARCELS by GOODS TRAINS.

We have no scale, but give the average charge for various distances on our line.

Distance.	Not exceeding 28 lbs.	Not exceeding 56 lbs.	Not exceeding 112 lbs.	Distance.	Not exceeding 28 lbs.	Not exceeding 56 lbs.	Not exceeding 112 lbs.
	s. d.	*s. d.*	*s. d.*		*s. d.*	*s. d.*	*s. d.*
5 miles -	0 4	0 4	0 4	80 miles -	1 0	1 3	1 3
10 „ -	0 6	0 6	0 6	90 „ -	1 3	1 3	1 6
20 „ -	0 6	0 9	0 9	100 „ -	1 3	1 6	1 9
30 „ -	0 9	1 0	1 0	120 „ -	1 6	1 6	1 9
40 „ -	0 9	1 0	1 0	150 „ -	1 9	1 9	1 9
50 „ -	1 0	1 0	1 0	200 „ -	2 0	2 0	2 6
60 „ -	1 0	1 0	1 0	250 „ -	2 0	2 6	3 0
70 „ -	1 0	1 0	1 0				

These charges are made only when the consignment would not come to more at the rate per ton, *and include collection and delivery.*

If two or more packages of different classes of goods were sent from one consignor to one consignee, the parcels rate would apply, unless the entire weight, if charged at the highest class to which any of the articles belong, would come to more at the rate per ton.

INQUIRY No. 7.—As to Charges for Horses, Carriages, and Dogs by Passenger Trains.

Insert in the following table the rates charged for horses, carriages, and dogs carried by passenger trains on the lines included in your former returns.

	Charge per Mile.	Minimum Gross Charge.
	s. d.	*s. d.*
Horse boxes containing 3 horses, not exceeding 50*l.* each in value	0 9	10 6
„ „ 2 „ „ „ „ -	0 6	7 0
„ „ 1 „ „ „ „ -	0 3	3 6
Two-wheeled carriages - - - - - -	0 4½	5 6
Four-wheeled „ - - - - - -	0 4½	5 6

Dogs		*s. d.*
	Not exceeding 10 miles - -	0 3
	Above 10 and not exceeding 20 miles	0 6
	„ 20 „ 40 „	1 0
	„ 40 „ 80 „	1 6
	„ 80 „ 100 „	2 0
	„ 100 „ 130 „	2 6
	„ 130 „ 150 „	3 0
	„ 150 „ 200 „	4 0
	„ 200 „ 250 „	5 0
	„ 250 „ 300 „	6 0

What is the rate of insurance on horses exceeding the above-mentioned values?

Five per cent. on declared value above 50*l.* if owners declare value and wish to insure.

State whether the rates charged for this kind of traffic are uniform, or if they are lower for the longer distances. If the latter, give the scale of distances and charges.

Horse and carriage rates are uniform, without reference to distance.

For dogs, see scale.

INQUIRY No. 8.—As to Charges for Live Stock by Goods Trains.

Insert in the following table the rates charged, on the lines included in your former return, for live stock carried by goods trains.

	Whole Trucks.				Half Trucks.				Double Sheep Vans.			
	No. of Animals.	Maximum Rate per Truck per Mile.	Minimum Rate per Truck per Mile.	Minimum Charge per Truck.	No. of Animals.	Minimum Rate per Half Truck per Mile.	Minimum Rate per Half Truck per Mile.	Minimum Charge per Half Truck.	No. of Animals.	Maximum Rate per Van per Mile.	Minimum Rate per Van per Mile.	Minimum Charge per Van.
Fat cattle - -	Sender may put in any number he thinks well.	Small waggon, 6*d.* 15 ft. do., 6½*d.* 16 ft. do., 7*d.* 18 ft. do., 8*d.*		Five shillings.	3	Half the charge for a full waggon.		Five shillings.	The Midland Company have no double vans.			
Lean cattle - -					5							
Sheep - -					15							
Lambs - -					15							
Bacon pigs - -					9							
Pork pigs - -					12							
Horses in cattle trucks - -		1½*d.* per horse per mile. No less charge than as for four.		5*s.*								

Midland Railway.—Inquiry No. 8.—*continued.*

Name the stations between which the highest rates for the conveyance of live stock are charged, showing the charge for each description, and the distances between the stations.

We do not in any case charge more than the scale rates.

Name the stations between which the lowest rates for the conveyance of live stock are charged, showing the charge for each description, and the distances between the stations.

Morecambe and London, *4l. 2s. 6d.*, small waggon. 262 miles.

Is there any special charge for cattle to the Royal Agricultural Society's shows? If so, state it.

Cattle to the Royal Agricultural show is charged the full rates, but is returned free if it remains the *bonâ fide* property of the original sender.

The same facilities are given to other agricultural shows on the application of the secretary.

INQUIRY No. 9.—As to Charges at different Periods.

Give, for the lines included in your former returns, the information in the annexed table, attending to the following conditions:

The amounts are to represent the average rates charged per mile.

For goods they are to be the rates for long distances, and including terminal charges.

In the cases of railways opened since 1840 or 1850, give the rates at the time of opening, and substitute this date at the top of the column.

The term "long distances" in this return is assumed to mean more than 100 miles.

	1840.	1850.

* Ordinary manure not carried long distances. This rate applies to artificial manure.

SOUTH-EASTERN RAILWAY.

INQUIRY No. 1.—Questions in regard to Railway Charges.

1. Give a list of the lines to which this return refers, and state their respective lengths. — South-Eastern Lines of Railway, 306 Miles.

FOR ARTICLES CARRIED FROM STATION TO STATION ONLY, OR FROM JUNCTION TO JUNCTION ONLY, ON ALL YOUR LINES.

(A.) In Companies' Waggons, when loaded and unloaded by the Owners.

2. State in the following Table the charges on your lines for the conveyance of the various articles named, in tons of 2,240 lbs., or the equivalent measurement.

Name of Article.	(a.) What is the Minimum Charge per Ton for each Article for the shortest Distance?	(a.) What is the Minimum Load of each Article below which you refuse to take it at these Rates?	(a.) What is the Distance to which this Charge is applicable?	(b.) What is the Charge per Ton per Mile when this Distance is exceeded, and up to 50 Miles?	(b.) What is your Scale of Charges according to Distance for Distances beyond 50 Miles?	(c.) What is the Charge per Ton for Terminal or Station Accommodation?	(c.) Is it included in the foregoing Charges?	(d.) What is the Charge for Loading and Unloading when done by the Company?	(d.) Is it in addition to the foregoing Charges?
Bricks, *common* Cannel Chromate ores Cinders Clay Coal Coke Compost Coprolites, *for manure* Culm Draining pipes and tiles (*com. for agricultural draining*). Dross Fire bricks and clay Flagstones Granite, *undressed* Gravel Iron ore Iron, *pig* Iron stone Lime and limestone Manure, *in bulk* Materials for road repairs. Peat Potters' earth Pyrites Salt, *rock, and unmanufactured.* Salt, *in bulk*, including manufactured salt, when so carried. Sand Scoriæ Slag Slates, *common* Stone, *in the rough state, building, pitching, paving, kerb, or flags.* Sulphur ore Tiles Turf Zinc ore	2*s.* 2*d.*	4 Tons.	20 Miles.	One penny.	One penny per ton per mile.	According to circumstances.	Yes.	Very rarely asked to do the labour; but if it is performed by us the charge is 6*d.* per ton for each service.	Yes.

3. Are the above mileage charges uniformly applied between all stations on your system of railways?

No; there are some few exceptions.

4. If not, state the nature of the exceptions.

Less rates are charged at points competitive with water conveyance, principally the Thames.

5. Is the traffic of this class conveyed at the owner's risk, or otherwise?

Generally at owner's risk.

6. If not, state in what respects you depart from this condition.

7. Do you undertake to deliver this class of traffic within a specified time?

No.

8. What time is allowed at the stations for loading and unloading this class of traffic?

One day for loading; and until noon of the day after arrival (say about 30 hours from time of arrival) for unloading.

9. What charge do you make for demurrage of waggons?

3*s.* per waggon per day.

South-eastern Railway.—Inquiry No. 1.—*continued.*

(B.) In Owners' Waggons.

10. State in the following Table the charges on your own line for the conveyance of the various articles named, in tons of 2,240 lbs., or the equivalent measurement.

Name of Article.	(a.) What is the Minimum Charge per Ton for each Article for the shortest Distance?	(a.) What is the Minimum Load of each Article below which you refuse to take it at these Rates?	(a.) What is the Distance to which this Charge is applicable?	(b.) What is the Charge per Ton per Mile when this Distance is exceeded, and up to 50 Miles?	(b.) What is your Scale of Charges according to Distance for Distances beyond 50 Miles?	(c.) What is the Charge per Ton for Terminal or Station Accommodation?	Is it included in the foregoing Charges?
Bricks, *common* Cannel Chromate ores Cinders Clay Coal Coke Compost Coprolites, *for manure* Culm Draining pipes and tiles (*com. for agricultural draining*). Dross Fire bricks and clay Flagstones Granite, *undressed* Gravel Iron ore Iron, *pig* Iron stone Lime and limestone Manure, *in bulk* Materials for road repairs Peat Potters' earth Pyrites Salt, *rock, and unmanufactured.* Salt, *in bulk*, including manufactured salt, when so carried. Sand Scoriæ Slag Slates, *common* Stone, *in the rough state, building, pitching, paving, kerb, or flags.* Sulphur ore Tiles Turf Zinc ore	2*s.*	4 tons.	20 miles.	½ths of a penny.	½ths of a penny per ton per mile.	According to circumstances.	Yes.

10*d*. Do the charges include returning empty waggons? Yes.

11. Are the above charges uniformly applied between all stations on your system of railways? No; there are some few exceptions.

12. If not, state the nature of the exceptions. Less rates are charged at points competitive with water conveyance, principally the Thames.

13. Is the traffic of this class conveyed at the owners' risk, or otherwise? At owners' risk.

14. Do you undertake to convey this class of traffic within a specified time? No.

15. And to return the empty waggons within a specified time? No.

And if so, in what time?

16. Do you allow demurrage on owners' waggons when not returned within the specified time? No.

FOR THROUGH TRAFFIC, WHETHER IN COMPANIES' OR IN OWNERS' WAGGONS.

17. Do you make through charges for this class of traffic with all other railway companies connected with your system by junctions? We do in most cases.

18. Are junctions considered as stations for this class of traffic? Yes; our junctions with other companies' lines are all stations.

19. If not, state the exceptions?

20. What arrangements are made for the interchange of traffic with other companies, when through charges are not given? The waggons run through whenever practicable, although the charges may not always be made throughout.

CONTRACT CHARGES, WHETHER IN COMPANIES' OR IN OWNERS' WAGGONS.

21. Have you any scale of charges applicable to contracts?

If so,—

a. Is the charge based on a minimum annual payment, or on the quantity carried? Generally on the quantity carried.

b. Or how otherwise?

22. Have you any special contracts independent of the foregoing scale of charges or conditions? Yes.

South-eastern Railway—*continued.*

INQUIRY No. 2.—Questions in regard to Railway Charges.

FOR ARTICLES CARRIED FROM STATION TO STATION ONLY, OR FROM JUNCTION TO JUNCTION ONLY, ON ALL YOUR LINES, IN COMPANIES' WAGGONS.

1. State in the following Table the Charges on your lines for the conveyance of the various articles named, in tons of 2,240 lbs., or the equivalent measurement.

Name of Article.	(a.) What is the Minimum Charge per Ton for each Article for the shortest Distance?	(a.) What is the Minimum Load of each Article below which you refuse to take it at these Rates?	(a.) What is the Distance to which this Charge is applicable?	(b.) What is the Charge per Ton per mile when this Distance is exceeded, and up to 50 Miles?	(b.) What is your Scale of Charges according to Distance for Distances beyond 50 Miles?	(c.) What is the Charge per Ton for Terminal or Station Accommodation?	(c.) Is it included in the foregoing Charges?	(d.) What is the Charge for Loading and Unloading when done by the Company?	(d.) Is it in addition to the foregoing Charges?	Is any and what Deduction made when the Loading or Unloading is done by the Owner?

Wheat	Do.	Do.								
Wheels, *railway.* (*See axles.*)	Do.	Do.								
Whiting	Do.	Do.								

2. Are the above mileage charges uniformly applied between all stations on your system of railways? — Yes, generally so.

3. If not, state the nature of the exceptions, and give an instance of each class of exceptions.

4. Is the traffic of articles in this return conveyed at the owners' risk, or otherwise? — It depends upon circumstances.

5. If not, state in what respects you depart from this condition.

6. Do you undertake to deliver the traffic of articles in this return within a specified time? — No.

7. What time is allowed at the stations for loading and unloading this class of traffic? — Generally two days or thereabouts.

8. For what period do you keep any of the articles in this return in your warehouses free of charge? — It depends upon circumstances.

9. What charge for warehousing is made after the period has expired? — Ditto.

10. What charge do you make for demurrage of waggons? — 3*s.* or 5*s.* per waggon per day according to circumstances.

South-eastern Railway.—Inquiry No. 2.—*continued.*

FOR THROUGH TRAFFIC.

11 Do you make through charges for this class of traffic with all other railway companies connected with your system by junctions? If not, state the exceptions, and give an instance of each class of exceptions. — We do in most cases.

12. Are junctions considered as stations for the traffic of articles in this return? — Yes, our junctions with other lines are all stations.

13. If not, state the exceptions, and give an instance of each class of exception.

14. What arrangements are made for the interchange of traffic with other companies, when through charges are not given? — The waggons run through whenever practicable, although the charges may not always be made throughout.

GENERAL QUESTIONS.

15. Have you any scale of charges applicable to contracts? If so,—

a. Is the charge based on a minimum annual payment, or on the quantity carried? — Generally on the quantity carried.

b. Or how otherwise?

16. Have you any special contracts independent of the foregoing scale of charges or conditions? — Yes.

17. Is the traffic in all cases sent by the shortest railway route in connexion with your system of railways? If not, state the exceptions, and give an instance of each class of exceptions. — Yes, generally by the shortest route.

18. Do the mileage rates apply to the shortest railway route? If not, state to what distance they apply. — Yes, as a rule.

19. Are any articles in this class ever carried in owners' waggons? If so, state the particulars. — Very rarely so. (Salt is an exception.)

INQUIRY No. 3.—Questions in regard to Railway Charges.

1. State in the following Table the charges for the conveyance of the various articles named, between stations on your own lines, in tons of 2,240 lbs., or the equivalent measurement, [station to station, and not including collection and delivery].

Name of Article.	(*a.*) What is the Minimum Charge for Articles under 112 lbs. Weight?	(*a.*) What is the Scale of Charge for Articles under 112 lbs. according to Distance.	(*b.*) What is the Minimum Charge per Ton?	(*b.*) What is the Distance to which this Charge is applicable?	(*c.*) What is the Charge per Ton per Mile when this Distance is exceeded.	(*d.*) What is the Charge per Ton for Porterage and Station Accommodation?	(*d.*) Are these Charges included in the Mileage Rates?	(*e.*) What is the Charge per Ton for Collection and Delivery?	(*e.*) Are these Charges included in the Mileage Rates?	(*f.*) Are there any exceptional Charges for Collection and Delivery? If so, state the Stations and Charges.	(*g.*) Are any of these Articles carried upon Toll, and, if so, at what Rates?
Acetate of lime, *in casks*			2*s.* 6*d.*	The shortest distance on the railway.	The charges vary according to circumstances.	According to circumstances.	Yes.	It depends upon circumstances.	No.	The rates vary according to circumstances.	No.
Acetate of soda			Do.	Do.	Do.						
Acetic acid, *in casks*			2*s.* 11*d.*	Do.	Do.						
Ale and porter, *in casks*			Do.	Do.	Do.						
Ammonia, *in casks or iron drums.*			Do.	Do.	Do.						
Antimony ore			2*s.* 2*d.*	20 miles.	One penny.						
Anvils			2*s.* 11*d.*	The shortest distance on the railway.	The charges vary according to circumstances.						
Apples			Do.								
Argols			Do.								
Arm and share moulds			4*s.* 2*d.*								
Ashes, *pot and pearl*			2*s.* 6*d.*								
Asphalte apparatus, *when not sent with asphalte.*			4*s.* 2*d.*								
Bagging, *Surat*			2*s.* 11*d.*								
Barilla			Do.								
Biscuit, *dog*			Do.								
Blubber			Do.								
Blocks, *bobbin*			Do.								
Boilers, *under 30 ft. long*	Special according to circumstances.										
Bomb shells (not loaded)			2*s.* 2*d.*	20 miles.	One penny.						
Bone and horn waste, *in less quantities than 3 tons.*			2*s.* 6*d.*	The shortest distance on the railway.	The charges vary according to circumstances.						
Bones, *packed*			Do.								
Bottles, *black and green, or common glass.*			2*s.* 11*d.*								
Broom and brush blocks			Do.								
Buffers, *railway*			2*s.* 6*d.*								
Canada plates			Do.								
Cannon			2*s.* 11*d.*								
Capstan bars			Do.								
Castings, *light or heavy, not otherwise enumerated, at owners' risk*			4*s.* 2*d.*								
Cattle food, *prepared*			2*s.* 11*d.*								
Chicory root			Do.								
Cider, *in casks*			Do.								
Clay retorts, at Company's risk.			Do.								
Clog soles, *dressed*			Do.								
Clothes pegs, *packed*			Do.								
Clover seed, *at owner's risk.*			Do.								
Cobalt ore			2*s.* 2*d.*	20 miles.	One penny.						
Cocoa nut fibre or husk			2*s.* 11*d.*	The shortest distance on the railway.	The charges vary according to circumstances.						
Cocoa nut matting			Do.								
Cotton wool			Do.								
Crowbars			Do.								
Cutch			Do.								
Divi Divi			Do.								
Doors, *in cases*			5*s.*								
Dyewoods, *not elsewhere specified.*			2*s.* 11*d.*								
Earthenware, *loose, at owner's risk, not less than 1 ton.*			5*s.*								

lbs.	Up to 25 Miles.	Up to 46 Miles.	Above 46 Miles.

Paper, *waste*			2*s.* 6*d.*								
Paraffin *wax*			2*s.* 11*d.*								
Pasteboard			Do.								
Pears, *common*			Do.								
Perry, *in casks*			Do.								
Pitch			2*s.* 6*d.*								
Pumice stone			2*s.* 11*d.*								
Putty			2*s.* 6*d.*								
Quercitron bark			5*s.*								
Rags			2*s.* 6*d.*								
Railway springs			2*s.* 11*d.*								
Rice			Do.								
Rosin			2*s.* 6*d.*								
Rottenstone			2*s.* 11*d.*								
Saltpetre			2*s.* 6*d.*								
Scrap steel			2*s.* 11*d.*								
Seal skins, *wet and salted*			Do.								
Seeds, *agricultural, at owner's risk.*			Do.								
Sheep skins, *in casks*			2*s.* 6*d.*								
Sheep wash, *in casks*			2*s.* 11*d.*								
Shovel moulds			Do.								
Shumac			Do.								
Silicate of soda			2*s.* 6*d.*								
Size, *in casks*			2*s.* 11*d.*								
Skins, *in casks*			2*s.* 6*d.*								
Slate slabs, *not in cases, at owner's risk.*			4*s.* 2*d.*								
Slate slabs, *in cases*			2*s.* 11*d.*								
Soap			Do.								
Spade trees			4*s.* 2*d.*								
Split peas			2*s.* 11*d.*								
Stannite of soda			2*s.* 6*d.*								
Steam hammers, *of heavy castings and forgings, not exceeding 6 tons.*			2*s.* 11*d.*								
Stearine			Do.								
Steel, *blistered*			Do.								
Stone, *carved, for building purposes, at owner's risk.*			2*s.* 11*d.*								
Sugar (*raw or refined*), *in casks and bags.*			Do.								
Sulphate of alumina			Do.								
Sulphate of copper			Do.								
Sulphate of soda			Do.								
Sulphate of zinc			Do.								
Syrup			Do.								
Tallow			Do.								
Tar			2*s.* 6*d.*								
Terra japonica			2*s.* 11*d.*								
Tiles, *ornamental, encaustic, and tesselated.*			Do.								
Tiles, *roofing, ridge, paving (quarries), at company's risk.*			2*s.* 2*d.*	20 miles	One penny						
Tin, *in blocks, ingots, and boxes.*			2*s.* 11*d.*								
Treacle			Do.								
Turntables, *in parts*			Do.								
Valonia			Do.								
Vegetables, 1 *ton and under 3 tons, including all kinds, except as follows—*			4*s.* 2*d.*								
Vegetables, viz., carrots, mangel wurzel, onions, old potatoes, and turnips, *in packages less than 2 tons.*			Do.								
Verjuice, *in casks*			2*s.* 11*d.*								
Vinegar, *in casks*			Do.								
Vitriol stone			2*s.* 6*d.*								
Washing powder and paste.			4*s.* 2*d.*								
Wood			2*s.* 11*d.*								
Wood acid, *in casks*			Do.								
Woods, viz.:—											
Boxwood			Do.								
Camwood			Do.

2. State in the following Table the charges for the conveyance of the various articles named, between stations on your own lines, in tons of 2,240 lbs., or the equivalent measurement, [station to station, not including collection and delivery].

Name of Article.	(a.) What is the Minimum Charge for Articles under 112 lbs. Weight?	(a.) What is the Scale of Charge for Articles under 112 lbs. according to Distance?	(b.) What is the Minimum Charge per Ton?	(b.) What is the Distance to which this Charge is applicable?	(c.) What is the Charge per Ton per Mile when this Distance is exceeded?	(d.) What is the Charge per Ton for Porterage and Station Accommodation?	(d.) Are these Charges included in the Mileage Rates?	(e.) What is the Charge per Ton for Collection and Delivery?	(e.) Are these Charges included in the Mileage Rates.	(f.) Are there any exceptional Charges for Collection and Delivery? If so, state the Stations and Charges.	(g.) Are any of these Articles carried upon Toll, and, if so, at what Rates?
Agricultural machines and implements, *in cases, at owner's risk.*			5*s.*								
Air stoves			Do.								
Albumen			2*s.* 11*d.*								
Ale and porter, *bottled, in cases, casks, and hampers.*			4*s.* 2*d.*								
Alkanet root			Do.								
Alizaine			Do.								
Aloes, *in casks*			Do.								
Alva marina or dry sea weed, *for upholsterers' purposes.*			Do.								
Annatto			Do.								
Archil			2*s.* 11*d.*								
Arrow root			4*s.* 2*d.*								
Arsenic			2*s.* 11*d.*								
Bacon and hams, *packed*			Do.								
Bagging			Do.								
Baking powder			4*s.* 2*d.*								
Bark, *tanners', loose*			2*s.* 11*d.*								
Bass mats			Do.								
Bedsteads, *common wood*			6*s.* 8*d.*								
Bedsteads, *iron, in cases or bundles.*			4*s.* 2*d.*								
Beef, *in casks*			2*s.* 11*d.*								
Besoms, *birch*			Do.								
Bichrome			2*s.* 6*d.*								
Biscuit			5*s.*								
Blacking			2*s.* 11*d.*								
Black lead			Do.								
Bladders, *in casks*			Do.								
Boilers, *under 1 ton in 1 waggon*			4*s.* 2*d.*								
Boilers, 30 *feet and under 45 feet.*		27. per truck.									
Bone flats			2*s.* 6*d.*								
Bones, *loose, other than for size or manure.*			Do.								
Boracic acid			2*s.* 11*d.*								
Borax			4*s.* 2*d.*								
Brass			Do.								
Brass *scrap*			2*s.* 11*d.*								
Brass wire			4*s.* 2*d.*								
Bread			5*s.*								
Bricks, *Bath or Flanders*			2*s.* 6*d.*								
Broom and mop handles			2*s.* 11*d.*								
Buckles, *brass*			4*s.* 2*d.*								
Bump			2*s.* 11*d.*								
Butter, *in casks*			Do.								
Butter, *in boxes*			4*s.* 2*d.*								
Camata			2*s.* 11*d.*								
Camatina			Do.								
Canary seed			Do.								
Candles, *except wax*			4*s.* 2*d.*								
Candlewick			Do.								
Canvas			2*s.* 11*d.*								
Cardamoms, *in casks*			4*s.* 2*d.*								
Carpeting			Do.								
Caraway seed			Do.								
Carriage and cart springs, axles, and steps.			2*s.* 11*d.*								
Catsup, *in casks*			Do.								
Chain harrows			Do.								
Chains and traces, *in casks.*			4*s.* 2*d.*								
Chains, *small, not exceeding ¾ inch loose.*			2*s.* 11*d.*								
Cheese, *packed*			Do.								
Chicory, *prepared*			4*s.* 2*d.*								
Chimney pots, *earthenware, at company's risk.*			2*s.* 11*d.*								
China, *in casks or crates*			6*s.* 8*d.*								
Chocolate			4*s.* 2*d.*								
Cider, *bottled, in cases, casks, or hampers.*			Do.								
Clod crushers			2*s.* 11*d.*								
Clover seed, *at company's risk.*			Do.								
Cocoa			4*s.* 2*d.*								
Cocoa nuts			Do.								
Codilla			2*s.* 11*d.*								
Coffee			4*s.* 2*d.*								
Confectionery, *in hogsheads.*			5*s.*								
Copper			4*s.* 2*d.*								
Copper coin			5*s.*								
Copper *scrap*			2*s.* 11*d.*								
Cordage			Do.								
Coriander seed			4*s.* 2*d.*								
Cotton twist			Do.								
Cotton waste			Do.								
Cranberries			5*s.*								
Cranework *of wood, and damageable iron, in parts.*			4*s.* 2*d.*								
Cremating			Do.								
Crucibles, *at owner's risk*			Do.								
Cudbear			Do.								
Currants, *grocers'*			2*s.* 11*d.*								
Dates			4*s.* 2*d.*								
Disinfecting fluid, *in casks or tins.*			Do.								
Drugs, *in casks or bales*			5*s.*								
Drysalteries, *not elsewhere specified, in casks.*			4*s.* 2*d.*								
Dyes, *liquid, in casks*			2*s.* 11*d.*

South-eastern Railway.—Inquiry No. 3.—*continued.*

6. State in the following Table the charges for the conveyance of the various articles named, between stations on your own lines, in tons of 2,240 lbs., or the equivalent measurement, [station to station, not including collection and delivery].

Name of Article.	(a.) What is the Minimum Charge for Articles under 112 lbs. Weight?	(a.) What is the Scale of Charge for Articles under 112 lbs. according to Distance?	(b.) What is the Minimum Charge per Ton?	(b.) What is the Distance to which this Charge is applicable?	(c.) What is the Charge per Ton per Mile when this Distance is exceeded?	(d.) What is the Charge per Ton for Porterage and Station Accommodation?	(d.) Are these Charges included in the Mileage Rates?	(e.) What is the Charge per Ton for Collection and Delivery?	(e.) Are these Charges included in the Mileage Rates?	(f.) Are there any exceptional Charges for Collection and Delivery? If so, state the Stations and Charges.	(g.) Are any of these Articles carried upon Toll, and, if so, at what Rates?
Acids, and other highly corrosive articles.	2*s.* 6*d.*	2*s.* 6*d.*	10*s.*	The shortest distance on the railway.	The charges vary according to circumstances.	According to circumstances.	Yes.	It depends upon circumstances.	No.	The rates vary according to circumstances.	No.
Basket carriage bodies, *at company's risk.*	1*s.* 8*d.*	1*s.* 8*d.*	6*s.* 8*d.*	Do.	Do.						
Bath chairs - -		Special.		Do.	Do.						
Caravans, *showmen's and others.*	5*s.*	5*s.*	5*s.*	Do.	Do.						
Carriage bodies, *finished, in cases.*	1*s.* 8*d.*	1*s.* 8*d.*	6*s.* 8*d.*	Do.	Do.						
Railway carriages, on their own wheels.	6*d.* per carriage per mile.		Minimum, 20*s.*								
Boilers, of unusual dimensions.	2*l.* per truck.			Shortest distance on the railway.	The charges vary according to circumstances.						
Contractors' waggons and materials (*excepting rails and chairs*).	—	—	5*s.*	20 miles.	Special.						
Furniture, *in mats or loose.*	1*s.* 2*d.*	1*s.* 2*d.*	13*s.* 4*d.*	The shortest distance on the railway.	The charges vary according to circumstances.						
Furniture, *in vans, carts, or frames.*	6*s.* 8*d.*	6*s.* 8*d.*	6*s.* 8*d.*	Do.	Do.						
Forgings or castings, above 6 tons.	—	—	4*s.* 2*d.*	Do.	Do.						
Gunpowder - -	5*s.*	5*s.*	13*s.* 4*d.*	Do.	Do.						
Lucifer matches, and other inflammable articles.	5*s.*	5*s.*	13*s.* 4*d.*	Do.	Do.						
Locomotive engines and tenders, on their own wheels.	—	—	5*s.*	30 miles.	2*d.*						
Petroleum and photogenic oil, *in casks*	1*s.* 2*d.*	1*s.* 2*d.*	4*s.* 2*d.*	The shortest distance on the railway.	The charges vary according to circumstances.						
Railway waggons -	4*d.* per waggon per mile.		Minimum, 5*s.*								
Statuary - - -	lbs. / Up to 25 Miles. / Up to 40 Miles. / Above 40 Miles.		13*s.* 4*d.*								
Small parcels - -	14: 0 6 / 0 8 / 0 10			The shortest distance on the railway.	The charges vary according to circumstances.						
	28: 0 8 / 0 10 / 1 0										
	56: 0 10 / 1 0 / 1 2										
	84: 1 0 / 1 2 / 1 4										
	112: 1 2 / 1 4 / 1 6										
Returned empty packages.	Nominal rates depending upon circumstances.										

2. Are the above mileage charges uniformly applied between all stations on your system of railways? — Yes, generally so.

3. If not, state the nature of the exceptions, and give an instance of each class of exceptions.

4. Is the traffic of these articles carried at the company's risk (excepting the articles otherwise specified)? — Yes.

5. If not, state in what respects you depart from this condition.

6. Do you undertake to deliver the traffic of articles in this return within a specified time? — No.

7. What time is allowed at the stations for loading and unloading this class of traffic? — Generally two days or thereabouts.

8. For what period do you keep any of the articles in this return in your warehouses free of charge? — It depends upon circumstances.

9. What charge for warehousing is made after the period has expired? — Ditto.

10. What charge do you make for demurrage of waggons? — 3*s.* or 5*s.* per waggon per day according to circumstances.

FOR THROUGH TRAFFIC.

11. Do you make through charges for this class of traffic with all other railway companies connected with your system by junctions? If not, state the exceptions, and give an instance of each class of exceptions. — We do in most cases.

12. Are junctions considered as stations for the traffic of articles in this return? — Yes; our junctions with other lines are all stations.

13. If not, state the exceptions, and give an instance of each class of exception.

14. What arrangements are made for the interchange of traffic with other companies, when through charges are not given? — The waggons run through whenever practicable, although the charges may not always be made throughout.

South-eastern Railway.—Inquiry No. 3.—*continued.*

GENERAL QUESTIONS.

15. Have you any scale of charges applicable to contracts? If so,—	
a. Is the charge based on a minimum annual payment, or on the quantity carried?	Generally on the quantity carried.
b. Or how otherwise?	
16. Have you any special contracts independent of the foregoing scale of charges or conditions?	Yes.
17. Is the traffic in all cases sent by the shortest railway route in connection with your system of railways? If not, state the exceptions, and give an instance of each class of exceptions.	Yes; generally by the shortest route.
18. Do the mileage rates apply to the shortest railway route? If not, state to what distance they apply.	Yes, as a rule.
19. Are any articles in this class ever carried in owners' waggons? If so, state the particulars.	No.

INQUIRY No. 4.—As to Acts of Parliament authorizing Tolls and Rates.

Give a list of the Acts of Parliament now in force under which you are authorized to levy tolls and rates on the lines included in your former return.

Thames and Medway Canal	39 & 40 Geo. III. [c. 23. 1800.]
" " "	58 Geo. III. c. 18. [1818.]
Canterbury and Whitstable	6 Geo. IV. c. 120. [1825.]
" " "	7 & 8 Geo. IV. c. [11. 1827.]
" " "	9 Geo. IV. c. 29. [1828.] Power to let tolls.
London and Greenwich	3 [& 4] Wm. IV. c. 46. [1833.]
Canterbury and Whitstable	5 & 6 Wm. IV. c. 82. [1835.]
Main line	6 [& 7] Wm. IV. c. 75. [1836.]
London and Greenwich	7 Wm. IV. c. 50. [1837.] Separate account of tolls to be kept.
Main line	1 Vict. c. 93. [1837.]
London and Greenwich	1 [& 2] Vict. c. 4. [1838.] As to Deptford Creek tolls.
" " "	2 [& 3] Vict. c. 19. [1839.]
Main line	2 & 3 Vict. c. [42. 1839.]
"	2 & 3 Vict. c. 79. [1839.] As to division of tolls on portion of Brighton line authorized to be purchased.
London and Greenwich	3 & 4 Vict. c. 127. [1840.]
Main line	6 & 7 Vict. c. 51. [1843.]
Paddock Wood to Maidstone	6 & 7 Vict. c. 52. [1843.]
Bricklayers Arms Branch	6 & 7 Vict. c. 62. [1843.]
Ashford, Canterbury, and Ramsgate	7 [& 8] Vict. c. 25. [1844.] Power to lease Whitstable Railway.
Folkestone Branch and Maidstone	7 & 8 Vict. c. 69. [1844.]
Brighton, Lewes, and Hastings	7 & 8 Vict. c. 91. [1844.] The tolls authorized to be taken by this Act are directed, by 8 & 9 Vict. c. 200, to be taken of the Ashford and Hastings branch.
London and Greenwich (leasing powers)	8 & 9 Vict. c. 80. [1845.]
Tunbridge Wells	8 & 9 Vict. c. 167. [1845.]
Thames and Medway Canal Company	8 & 9 Vict. c. 168. [1845.]
Greenwich Widening	8 & 9 Vict. c. 186. [1845.] As to tolls payable by Croydon Company.
Croydon and Greenwich	8 & 9 Vict. c. 196. [1845.] City coal dues.
Canterbury, Ramsgate, and Margate, and Deal Branch, and purchase of Whitstable Railway	8 & 9 Vict. c. 197. [1845.]
Ashford and Hastings	8 & 9 Vict. c. 200. [1845.] Tolls authorized by 7 & 8 Vict. c. 91. to be taken on this line.
Rye Harbour	9 [& 10] Vict. c. 55. [1846.]
Tunbridge Wells and Hastings	9 [& 10] Vict. c. 64. [1846.]
Reading, Guildford, and Reigate	9 & 10 Vict. c. 171. [1846.]
Woolwich and Gravesend	9 & 10 Vict. c. 305. [1846.]
Gravesend and Rochester	9 & 10 Vict. c. 339. [1846.]
Bricklayers Arms (junction North Kent and Greenwich	10 & 11 Vict. c. 104. [1847.]
Greenwich Widening and Station	10 & 11 Vict. c. 230. [1847.]
Reading, Guildford, and Reigate	10 & 11 Vict. c. 241. [1847.]
Reading, Guildford, and Reigate	12 & 13 Vict. c. 28. [1849.]
Mayfield Railway (line not made)	14 [& 15] Vict. c. 35. [1851.]
Reading, Guildford, Reigate Amalgamation	15 [& 16] Vict. c. 103. [1852.]
Canterbury and Whitstable Amalgamation	16 & 17 Vict. c. 156. [1853.] And as to steam packets.
Strood to Maidstone	16 & 17 Vict. c. 130. [1853.]
Steam Vessels	25 [& 26] Vict. c. 191. [1862.]
Tunbridge and Dartford Lines	25 & 26 Vict. c. 96. [1862.]
Charing Cross Act, 1859	22 & 23 Vict. c. 81. [1859.]
Hungerford and Charing Cross Bridge Act, 1860	23 & 24 Vict. c. 147. [1860.]
Charing Cross City Terminus	24 & 25 Vict. c. 93. [1861.]
Charing Cross (Amalgamation)	26 & 27 Vict. c. 115. 1863.
Caterham (Brighton Company)	17 [& 18] Vict. c. 68. [1854.]
Caterham (Amalgamation)	22 & 23 Vict. c. 35. [1859.]
Staines, Wokingham, and Woking	16 & 17 Vict. c. 85. [1853.] Company to pay tolls for use of part of Reading branch.
S. E. R. Reading Extension	[16 & 17 Vict.] c. 121. [1853.]
Staines, &c.	18 & 19 Vict. c. 139. [1855.] Company to pay tolls for use of Reading branch.
Reading Railways Junction	20 & 21 Vict. c. 96. 1857. S. E. R. to pay tolls for use of railways.

Is there any special charge for cattle to the Royal Agricultural Society's shows? If so, state it.

The ordinary tariff rates are charged for cattle *going to the show;* but they are carried *free* on the *return* journey, *if unsold,* on production of a certificate to that effect from the Secretary of the Society.

South-eastern Railway—*continued.*

INQUIRY No. 9.—As to Charges at different Periods.

Give, for the lines included in your former Returns, the information in the annexed table, attending to the following conditions:—

The amounts are to represent the average rates charged per mile.

For goods they are to be the rates for long distances, and including terminal charges.

In the cases of railways opened since 1840 or 1850, give the rates at the time of opening, and substitute this date at the top of the column.

	1848.	1853.	1865.

NORTH-EASTERN RAILWAY.

INQUIRY No. 1.—Questions in regard to Railway Charges.

1. Give a list of the lines to which this return refers, and state their respective lengths - - - - - - The North-eastern Railway. The length of the North-eastern Railway is 1,115 miles, exclusive of the line from Methley Junction to Leeds (9 miles), which belongs to the Midland Company, and over which the North-eastern Company run their trains.

FOR ARTICLES CARRIED FROM STATION TO STATION ONLY, OR FROM JUNCTION TO JUNCTION ONLY, ON ALL YOUR LINES.

(A.) In Companies' Waggons, when loaded and unloaded by the Owners.

2. State in the following Table the charges on your lines for the conveyance of the various articles named, in tons of 2,240 lbs., or the equivalent measurement :—

Name of Article.	(a.) What is the Minimum Charge per Ton for each Article for the shortest Distance?	(a.) What is the Minimum Load of each Article below which you refuse to take it at these Rates?	(a.) What is the Distance to which this Charge is applicable?	(b.) What is the Charge per Ton per Mile when this Distance is exceeded, and up to 50 Miles?	(b.) What is your Scale of Charges according to Distance for Distances beyond 50 Miles?	(c.) What is the Charge per Ton for Terminal or Station Accommodation?	(c.) Is it included in the foregoing Charges?	(d.) What is the Charge for Loading and Unloading when done by the Company?	(d.) Is it in addition to the foregoing Charges?
Bricks, *common*	1*s.* 3*d.*	4 tons	Usually from 6 to 8 miles, but in some special cases to a considerably greater distance.	2½*d.* to 1½*d.*	1½*d.* to ¾*d.*	For the articles mentioned in this return no separate charge is made for terminal accommodation or services, this being included in the scale of charges. The amount which may be taken to represent the terminal charge is therefore only a matter of estimate, and may be assumed at from 6*d.* to 1*s.* 6*d.* per ton.	Yes.	The Company does not load any of this traffic. They occasionally unload, making no charge except in some very rare instances, where by a special arrangement with consignees a charge of from 3*d.* to 6*d.* per ton is made.	See explanation in the preceding column.
Cannel	See Coal.								
Chromate ores	1*s* 6*d.*	Do.		Do.	Do.				
Cinders	See Coke.								
Clay	1*s.* 3*d.* to 1*s.* 6*d.*	Do.		Do.	Do.				
Coal	See supplementary return.								
Coke									
Compost	1*s.* 3*d.* to 1*s.* 6*d.*	4 tons		2*d.* to 1*d.*	1*d.* to ½*d.*				
Coprolites, *for manure*	Do.	Do.		2½*d.* to 1½*d.*	1½*d.* to ¾*d.*				
Culm	See Coke.								
Draining pipes and tiles (*com. for agricultural draining*).	1*s.* 3*d.* to 1*s.* 6*d.*	Do.		Do.	Do.				
Dross	1*s.* to 1*s.* 6*d.*	Do.		Do.	Do.				
Fire bricks and clay	1*s.* 3*d.* to 1*s.* 6*d.*	3 tons		Do.	Do.				
Flagstones	Do.	4 tons		Do.	Do.				
Granite, *undressed*	Do.	Do.		Do.	Do.				
Gravel	Do.	Do.		2½*d.* to 1*d.*	1*d.* to ¾*d.*				
Iron ore	See Ironstone.								
Iron, *pig*	*1*s.* 3*d.* to 1*s.* 6*d.*	4 tons		2½*d.* to 1½*d.*	1½*d.* to ¾*d.*				
Iron stone	See supplementary return.								
Lime and limestone									
Manure, *in bulk* [dung, ashes, &c.]	1*s.* 3*d.* to 1*s.* 6*d.*	4 tons		2*d.* to ¾*d.*	¾*d.* to ½*d.*				
Materials for road repairs.	1*s.* to 1*s.* 6*d.*	Do.		2½*d.* to 1½*d.*	1½*d.* to ¾*d.*				
Peat	1*s.* 3*d.* to 1*s.* 6*d.*	Do.		Do.	Do.				
Potter's earth	Do.	Do.		Do.	Do.				
Pyrites	Do.	Do.		Do.	Do.				
Salt, *rock, and unmanufactured.*	See Return B., salt being carried in owners' waggons.								
Salt, *in bulk*, including manufactured salt, when so carried.									
Sand	1*s.* 3*d.* to 1*s.* 6*d.*	4 tons		Do.	Do.				
Scoriæ	1*s.* to 1*s.* 6*d.*	Do.		Do.	Do.				
Slag	Do.	Do.		Do.	Do.				
Slates, *common*	1*s.* 3*d.* to 1*s.* 6*d.*	Do.		Do.	Do.				
Stone, *in the rough state, building, pitching, paving, kerb, or flags,*	Do.	Do.		Do.	Do.				
Sulphur ore	Do.	Do.		Do.	Do.				
Tiles	See Draining pipes and tiles.								
Turf	1*s.* 3*d.* to 1*s.* 6*d.*	4 tons		Do.	Do.				
Zinc ore	Do.	Do.		Do.	Do.				

* Under very exceptional circumstances in one district a lower rate than 1*s.* 3*d.* is taken (viz., 10*d.* per ton, 5 tons, 4 miles).

General Remarks.

Note as to column (*b.*)—The charges are not regulated by a mileage scale, nor solely according to distance. Within the limit of the Company's legal powers they are determined by the consideration, in the special circumstances of each case, of what will fairly remunerate the Company for their current and capital expenditure, and of what the traffic is able to bear. The figures, therefore, in column (*b.*) represent approximatively the charges made by the Company, the rates between any two stations depending upon the circumstances of the particular case.

3. Are the above mileage charges uniformly applied between all stations on your system of railways? — With very few exceptions the rates range within the scales of charges given in each column.

4. If not, state the nature of the exceptions.

5. Is the traffic of this class conveyed at the owner's risk, or otherwise? — At the owner's risk.

6. If not, state in what respects you depart from this condition.

7. Do you undertake to deliver this class of traffic within a specified time? — No.

8. What time is allowed at the stations for loading and unloading this class of traffic? — Twenty-four hours.

9. What charge do you make for demurrage of waggons? — Three shillings per waggon per day.

North-eastern Railway.—Inquiry No. 1.—*continued.*

(B.) In Owners' Waggons.

For the whole of the articles included in this list see Table (A.), except Salt *in bulk*.

10. State in the following Table the charges on your own lines for the conveyance of the various articles named, in tons of 2,240 lbs., or the equivalent measurement :—

Name of Article.	(*a.*) What is the Minimum Charge per Ton for each Article for the shortest Distance?	(*a.*) What is the Minimum Load of each Article below which you refuse to take it at these Rates?	(*a.*) What is the Distance to which this Charge is is applicable?	(*b.*) What is the Charge per Ton per Mile when this Distance is exceeded, and up to 50 Miles?	(*b.*) What is your Scale of Charges according to Distance for Distances beyond 50 Miles?	(*c.*) What is the Charge per Ton for Terminal or Station Accommodation?	Is it included in the foregoing Charges?
Salt, *in bulk*, including manufactured salt, when so carried.	1*s.*	4 tons - -	10 miles - -	1½*d.* to 1*d.* - -	1*d.* to ½*d.* - -	See explanation given in Table (A.)	Yes.

General Remarks.

Owners' waggons are scarcely ever used for the conveyance of this class of goods on the North-eastern Railway, except for salt (see table above), and for bricks and stone for short distances and under exceptional circumstances; in these cases a special bargain is made with each person.

10*d*. Do the charges include returning empty waggons? — Yes.

11. Are the above charges uniformly applied between all stations on your system of railways? — The rates are uniformly regulated according to the scales of charges named in each column.

12. If not, state the nature of the exceptions.

13. Is the traffic of this class conveyed at the owner's risk, or otherwise? — At owner's risk.

14. Do you undertake to convey this class of traffic within a specified time? — No.

15. And to return the empty waggons within a specified time? — No.

And if so, in what time?

16. Do you allow demurrage on owners' waggons when not returned within the specified time? — No.

FOR THROUGH TRAFFIC, WHETHER IN COMPANIES' OR IN OWNERS' WAGGONS.

17. Do you make through charges for this class of traffic with all other railway companies connected with your system by junctions? — Yes, wherever the traffic requires it.

18. Are junctions considered as stations for this class of traffic? — Not on through traffic.

19. If not, state the exceptions.

20. What arrangements are made for the interchange of traffic with other companies, when through charges are not given? — The arrangements are the same as when through rates are given, the company bringing the waggons to the junction transfer them there to the other company with all necessary particulars.

CONTRACT CHARGES, WHETHER IN COMPANIES' OR IN OWNERS' WAGGONS.

21. Have you any scale of charges applicable to contracts? If so,—
a. Is the charge based on a minimum annual payment, or on the quantity carried?
b. Or how otherwise? — No.

22. Have you any special contracts independent of the foregoing scale of charges or conditions? — No.

SUPPLEMENTARY RETURN.

Coal, Coke, Ironstone, Lime, and Limestone.

FOR ARTICLES CARRIED FROM STATION TO STATION ONLY, OR FROM JUNCTION TO JUNCTION ONLY, ON ALL YOUR LINES.

(A.) In Companies' Waggons, when loaded and unloaded by the Owners.

2. State in the following Table the charges on your lines for the conveyance of the various articles named, in tons of 2,240 lbs., or the equivalent measurement :—

Name of Article.	(*a.*) What is the Minimum Charge per Ton for each Article for the shortest Distance?	(*a.*) What is the Minimum Load of each Article below which you refuse to take it at these Rates?	(*a.*) What is the Distance to which this Charge is applicable?	(*b.*) What is the Charge per Ton per Mile when this Distance is exceeded, and up to 50 Miles?	(*b.*) What is your Scale of Charges according to Distance for Distances beyond 50 Miles?	(*c.*) What is the Charge per Ton for Terminal or Station Accommodation?	Is it included in the foregoing Charges?	(*d.*) What is the Charge for Loading and Unloading when done by the Company?	Is it in addition to the foregoing Charges?
Coal - - - -	1*s.* per ton on coal sold through the Company's depôts, and about 7*d.* on coals for manufacturing purposes and for shipment.	One waggon load. Coals for shipment are carried in train loads.	Four to six miles.	Coals sold through the depôts, chiefly household coal, 1½*d.* to ¾*d.* Coals for manufacturers and for shipment, 1½*d.* to ¾*d.* Coals for shipment at Liverpool in train loads, ⅝*d.* Coals for shipment at Hull in train loads, ½*d.*		For coals sold through depôts, including services and sale expenses, 3*d.* to 1*s.* 3*d.* For coals for manufactures, 3*d.* to 2¼*d.* For coals for shipment no terminal charge except as shown in column (*d.*)	No. No.	For coals other than those for shipment the Company never load, but in very many cases unload, for which no charge is made beyond what is mentioned in the preceding column. For coals for shipment the Company's charge for putting them on board ship is 2¼*d.*, and is included in the rate. Where this work is done at a distant port, such as Liverpool, a charge is made by the parties doing the work, and it is not included in the rate.	

North-eastern Railway.—Inquiry No. 1.—*continued.*

Name of Article.	(a.) What is the Minimum Charge per Ton for each Article for the shortest Distance?	(a.) What is the Minimum Load of each Article below which you refuse to take it at these Rates?	(a.) What is the Distance to which this Charge is applicable?	(b.) What is the Charge per Ton per Mile when this Distance is exceeded, and up to 50 Miles?	(b.) What is your Scale of Charges according to Distance for Distances beyond 50 Miles?	(c.) What is the Charge per Ton for Terminal or Station Accommodation?	(c.) Is it included in the foregoing Charges?	(d.) What is the Charge for Loading and Unloading when done by the Company?	(d.) Is it in addition to the foregoing Charges?
Coke	Coke is usually charged the same rates as coals, excepting.— To Hull for shipment, in which case the charge to the Durham collieries is $\frac{3}{8}d.$ per ton per mile. From collieries north of the Wear for shipment at the ports on the Tyne and Wear the charge is $1\frac{1}{2}d.$ per ton per mile, with 3*d.* per ton for shipment.								
Ironstone	8*d.* per ton	This traffic is arranged in train loads.	Eight miles and under.	To 12 miles 1*d.* per ton per mile. Above 12 miles $\frac{7}{8}d.$ to $\frac{9}{8}d.$, and on very long distances $\frac{5}{8}d.$ per ton per mile.		No charge made for terminals.	- -	Neither operation is done by the Company.	
Lime and limestone	1*s.* per ton	One waggon-	Eight miles and under.	To 20 miles, $1\frac{1}{2}d.$ per ton; 20 to $28\frac{1}{2}$, same gross rate as for 20 miles; above $28\frac{1}{2}$ miles, $\frac{7}{8}d.$ per ton. If limestone for blast furnaces, from $\frac{7}{8}d.$ to $\frac{9}{8}d.$ per ton per mile.		3*d.* per ton -	No -	Loading not done by the Company. Unloading generally done by the Company. No charge in addition for this.	

General Remarks.

Note.—Lime is generally sold through the Company's depôts.

3. Are the above mileage charges uniformly applied between all stations on your system of railways?

The above scales are generally applicable, subject to such modifications as the varying circumstances of the trade may render necessary.

4. If not, state the nature of the exceptions.

5. Is the traffic of this class conveyed at the owner's risk, or otherwise?

At the owner's risk.

6. If not, state in what respects you depart from this condition.

7. Do you undertake to deliver this class of traffic within a specified time?

No.

8. What time is allowed at the stations for loading and unloading this class of traffic?

Twenty-four hours,

9. What charge do you make for demurrage of waggons?

Three shillings, and in some cases less, per waggon per day; but in many cases this charge is not enforced for this description of traffic.

(B.) In Owners' Waggons.

10. State in the following Table the charges on your own line for the conveyance of the various articles named, in tons of 2,240 lbs., or the equivalent measurement:—

Name of Article.	(a.) What is the Minimum Charge per Ton for each Article for the shortest Distance?	(a.) What is the Minimum Load of each Article below which you refuse to take it at these Rates?	(a.) What is the Distance to which this Charge is applicable?	(b.) What is the Charge per Ton per Mile when this Distance is exceeded, and up to 50 Miles?	(b.) What is your Scale of Charges according to Distance for Distances beyond 50 Miles?	(c.) What is the Charge per Ton for Terminal or Station Accommodation?	(c.) Is it included in the foregoing Charges?
Coal	As a rule the same charges apply as are mentioned in Return A., an allowance being made off them for waggons at the rate of $\frac{1}{2}d.$ per ton per mile. Coals for manufacturing purposes sent in train loads to places beyond the Company's system are, when carried in in waggons not belonging to the Company, charged $\frac{1}{2}d.$ per ton per mile. Coals for London in train loads, and carried in waggons not belonging to the Company, are charged $\frac{3}{8}d.$ per ton per mile.						
Coke	The same remarks apply to coke.						
Ironstone	The same remarks apply to ironstone.						
Lime and limestone	The same remarks apply to lime and limestone.						

10*d.* Do the charges include returning empty waggons?

Yes.

11. Are the above charges uniformly applied between all stations on your system of railways?

See reply to Question 3.

12. If not, state the nature of the exceptions.

13. Is the traffic of this class conveyed at the owner's risk or otherwise?

At the owner's risk.

14. Do you undertake to convey this class of traffic within a specified time?

No.

15. And to return the empty waggons within a specified time?

No.

And if so, in what time?

16. Do you allow demurrage on owners' waggons when not returned within the specified time?

No,

FOR THROUGH TRAFFIC, WHETHER IN COMPANIES' OR IN OWNERS' WAGGONS.

17. Do you make through charges for this class of traffic with all other railway companies connected with your system by junctions?

We do not find it necessary to make through charges with all other companies, nor generally, but arrangements to a limited extent exist with some of the neighbouring companies.

North-eastern Railway.—Inquiry No. 1.—*continued.*

18. Are junctions considered as stations for this class of traffic? — Not on traffic going off the company's railways.

19. If not, state the exceptions.

20. What arrangements are made for the interchange of traffic with other companies, when through charges are not given? — The empty or loaded waggons, as the case may be, are delivered into the sidings of the receiving company at the respective junctions by whom they are forwarded to their destination; the arrangement is, that they are to be taken forward with as little delay as possible.

CONTRACT CHARGES, WHETHER IN COMPANIES' OR IN OWNERS' WAGGONS.

21. Have you any scale of charges applicable to contracts? If so,—
a. Is the charge based on a minimum annual payment, or on the quantity carried?
b. Or how otherwise? — No.

22. Have you any special contracts independent of the foregoing scale of charges or conditions? — Yes, the company have a special contract with the owners of collieries on the Hartlepool branch, which contract will expire in December 1866. They have also an unexpired contract with the owners of Whitwell colliery. Special arrangements are also made occasionally with gas companies.

INQUIRY No. 2.—Questions in regard to Railway Charges.

FOR ARTICLES CARRIED FROM STATION TO STATION ONLY, OR FROM JUNCTION TO JUNCTION ONLY, ON ALL YOUR LINES, IN COMPANIES' WAGGONS.

1. State in the following Table the charges on your lines for the conveyance of the various articles named, in tons of 2,240 lbs., or the equivalent measurement:—

Name of Article.	(*a.*) What is the Minimum Charge per Ton for each Article for the shortest Distance?	(*a.*) What is the Minimum Load of each Article below which you refuse to take it at these Rates?	(*a.*) What is the Distance to which this Charge is applicable?	(*b.*) What is the Charge per Ton per Mile when this Distance is exceeded, and up to 50 Miles?	(*b.*) What is your Scale of Charges according to Distance for Distances beyond 50 Miles?	(*c.*) What is the Charge per Ton for Terminal or Station Accommodation?	(*c.*) Is it included in the foregoing Charges?	(*d.*) What is the Charge for Loading and Unloading when done by the Company?	(*d.*) Is it in addition to the foregoing Charges?	(*d.*) Is any and what Deduction made when the Loading or Unloading is done by the Owner?
	Subject to numerous Exceptions.									
	s. *d.*									
Alabaster	1 6	4 tons.	Usually from 6 to 8 miles, but in many cases under special circumstances to a much greater distance.	From 1½*d.* per ton per mile to 2½*d.* per ton per mile. GENERAL REMARKS.

Note as to Column (b.)—The charges are not regulated by a mileage scale, nor solely according to distance. Within the limit of the Company's legal powers they are determined by the consideration, in the special circumstances of each case, of what will fairly remunerate the Company for their current and capital expenditure, and of what the traffic is able to bear. The figures, therefore, in column (*b.*) represent approximatively the charges made by the Company, the rates between any two stations depending upon the circumstances of the particular case.

2. Are the above mileage charges uniformly applied between all stations on your system of railways?

With few exceptions the rates range within the scales of charges given in each column.

3. If not, state the nature of the exceptions, and give an instance of each class of exceptions.

4. Is the traffic of articles in this return conveyed at the owner's risk, or otherwise?

The company takes the ordinary risk of a carrier unless an agreement to the contrary is made with sender.

5. If not, state in what respects you depart from this condition.

6. Do you undertake to deliver the traffic of articles in this return within a specified time?

No.

7. What time is allowed at the stations for loading and unloading this class of traffic?

Twenty-four hours.

8. For what period do you keep any of the articles in this return in your warehouses free of charge?

As a rule these goods are not warehoused except on request or when refused by consignee; in such cases the charge for warehousing begins from the expiry of one clear day after date of advice note. At Leeds and Newcastle grain is warehoused free for a fortnight.

9. What charge for warehousing is made after the period has expired?

About a halfpenny per ton per day when not requiring protection from weather; if requiring protection a penny per ton per day. Grain at Leeds and Newcastle a halfpenny per quarter per week.

10. What charge do you make for demurrage of waggons?

Three shillings per waggon per day.

FOR THROUGH TRAFFIC.

11. Do you make through charges for this class of traffic with all other railway companies connected with your system by junctions? If not, state the exceptions, and give an instance of each class of exceptions.

Yes, whenever the traffic requires it.

12. Are junctions considered as stations for the traffic of articles in this return?

Not on through traffic.

13. If not, state the exceptions, and give an instance of each class of exception.

14. What arrangements are made for the interchange of traffic with other companies, when through charges are not given?

The arrangements are the same as when through rates are given.

GENERAL QUESTIONS.

15. Have you any scale of charges applicable to contracts? If so,—

No.

a. Is the charge based on a minimum annual payment, or on the quantity carried?

b. Or how otherwise?

16. Have you any special contracts independent of the foregoing scale of charges or conditions?

No standing contracts, but not unfrequently make special bargains for heavy lots of goods under peculiar circumstances.

17. Is the traffic in all cases sent by the shortest railway route in connexion with your system of railways? If not, state the exceptions, and give an instance of each class of exceptions.

No. The exceptions are numerous and do not admit of classification. In selecting a route consideration is given not only to its comparative length, but to the gradients, convenience of working, connexion of trains, and facilities for exchange.

18. Do the mileage rates apply to the shortest railway route? If not, state to what distance they apply.

There being no mileage rates the question is inapplicable. Where there are alternative competing routes, the same gross rates are charged to each.

19. Are any articles in this class ever carried in owner's waggons? If so, state the particulars.

Very rarely indeed, except creosote, which is carried in the owner's tank waggons.

North-eastern Railway—*continued.*

INQUIRY No. 3.—Questions as to Railway Charges.

1. State in the following Table the charges for the conveyance of the various articles named, between stations on your own lines, in tons of 2,240 lbs., or the equivalent measurement, including collection and delivery. Specify against any of these articles those which are from station to station only.

Name of Article.	(a.) What is the Minimum Charge for Articles under 112 lbs. Weight?	(a.) What is the Scale of Charge for Articles under 112 lbs. according to Distance?	(b.) What is the Minimum Charge per Ton?	(b.) What is the Distance to which this Charge is applicable?	(c.) What is the Charge per Ton per Mile when this Distance is exceeded?	(d.) What is the Charge per Ton for Porterage and Station Accommodation?	(d.) Are these Charges included in the Mileage Rates?	(e.) What is the Charge per Ton for Collection and Delivery?	(e.) Are these Charges included in the Mileage Rates?	(f.) Are there any exceptional Charges for Collection and Delivery? If so, state the Stations and Charges.	(g.) Are any of these Articles carried upon Toll, and, if so, at what Rates?
	As the rule, 6*d.*; but there are a few exceptional cases in which a lower sum is charged.	There are two sets of rates:—the first for parcels under 56 lbs., the other for parcels exceeding 56 lbs. and not exceeding 112 lbs.:— Say 56 lbs., up to 10 miles, 6*d.*; to 24 miles, 8*d.*; to 34 miles, 10*d.*; to 49 miles, 1*s.*; to 60 miles, 1*s.* 3*d.*; to 108 miles, 1*s.* 6*d.*; to 132 miles, 1*s.* 9*d.*; to 170 miles, 2*s.*; to 250 miles, 2*s.* 3*s.* „ 112 lbs., „ 6*d.*; „ 10*d.*; „ 1*s.*; „ 1*s.* 3*d.*; „ 1*s.* 6*d.*; „ 1*s.* 9*d.*; „ 2*s.*; „ 2*s.* 6*d.*;	Subject to numerous Exceptions. *s.* *d.*	Usually from 6 to 8 miles, but in some special cases to a considerably greater distance.	From 1½*d.* per ton per mile to 4*d.* per ton per mile.	No separate charge is made.	The charge made by the company includes porterage and station accommodation.	No separate charge is made.	On traffic carried at carted rates the charge made by the company includes collection and delivery.	No.	No.

Other furniture woods not specified.			5 0								
Zinc, *ingots, &c.*			5 0								
Zinc-white, or oxide of zinc.			5 0								

General Remarks.

Note as to Columns (a.) and (c.)—The charges are not regulated by a mileage scale, nor solely according to distance. Within the limit of the company's legal powers they are determined by the consideration, in the special circumstances of each case, of what will fairly remunerate the company for their current and capital expenditure and of what the traffic is able to bear.

The figures, therefore, in columns (*a.*) and (*c.*) represent approximatively the charges made by the company, the rates between any two stations depending upon the circumstances of the particular case.

North-eastern Railway.—Inquiry No. 3.—*continued.*

2. State in the following Table the charges for the conveyance of the various articles named, between stations on your own lines, in tons of 2,240 lbs., or the equivalent measurement, including collection and delivery. Specify against any of these articles those which are from station to station only.

Name of Article.	(a.) What is the Minimum Charge for Articles under 112 lbs. Weight?	(a.) What is the Scale of Charge for Articles under 112 lbs. according to Distance?	(b.) What is the Minimum Charge per Ton?	(b.) What is the Distance to which this Charge is applicable?	(c.) What is the Charge per Ton per Mile when this Distance is exceeded?	(d.) What is the Charge per Ton for Porterage and Station Accommodation?	(d.) Are these Charges included in the Mileage Rates?	(e.) What is the Charge per Ton for Collection and Delivery?	(e.) Are these Charges included in the Mileage Rates?	(f.) Are there any exceptional Charges for Collection and Delivery? If so, state the Stations and Charges.	(g.) Are any of these Articles carried upon Toll, and, if so, at what Rates?
			Subject to numerous Exceptions.

North-eastern Railway.—Inquiry No. 3.—*continued.*

2. Are the above mileage charges uniformly applied between all stations on your system of railways?	With few exceptions the rates range within the scale of charges given in each column.
3. If not, state the nature of the exceptions, and give an instance of each class of exceptions?	
4. Is the traffic of these articles carried at the company's risk (excepting the articles otherwise specified)?	The company takes the ordinary risk of a carrier except where a special agreement to the contrary is made with sender.
5. If not, state in what respects you depart from this condition.	
6. Do you undertake to deliver the traffic of articles in this return within a specified time?	No.
7. What time is allowed at the stations for loading and unloading this class of traffic?	Twenty-four hours. But, in fact, the company begins to load or unload as soon as the goods are received.
8. For what period do you keep any of the articles in this return in your warehouses free of charge?	See answer to No. 2, question 8. At Leeds we at present warehouse free wool, hair, shoddy for Hull and Hartlepool; also, fruit and potatoes, and occasionally outwards machinery.
9. What charge for warehousing is made after the period has expired?	On furniture and fifth-class articles 2*d.* per ton per day; on other articles 1½*d.* per ton per day. At Leeds, oil one week free, then 3*d.* per ton per week; flax and tow a fortnight free, then 1½*d.* per ton per week.
10. What charge do you make for demurrage of waggons?	Three shillings per day.

FOR THROUGH TRAFFIC.

11. Do you make through charges for this class of traffic with all other railway companies connected with your system by junctions? If not, state the exceptions, and give an instance of each class of exceptions.	Yes, wherever the traffic requires it.
12. Are junctions considered as stations for the traffic of articles in this return?	Not on through traffic.
13. If not, state the exceptions, and give an instance of each class of exception.	
14. What arrangements are made for the interchange of traffic with other companies, when through charges are not given?	The arrangements are the same as when through rates are given.

GENERAL QUESTIONS.

15. Have you any scale of charges applicable to contracts? If so,—	No.
a. Is the charge based on a minimum annual payment, or on the quantity carried?	
b. Or how otherwise?	
16. Have you any special contracts independent of the foregoing scale of charges or conditions?	No standing contracts, but sometimes make special bargains for large lots under peculiar circumstances.
17. Is the traffic in all cases sent by the shortest railway route in connexion with your system of railways? If not state the exceptions, and give an instance of each class of exceptions.	See answer to Inquiry No. 2, question 17.
18. Do the mileage rates apply to the shortest railway route? If not, state to what distance they apply.	See answer to Inquiry No. 2, question 18.
19. Are any articles in this class ever carried in owner's waggons? If so, state the particulars.	No.

INQUIRY No. 4.—As to Acts of Parliament authorizing Tolls and Rates.

Give a list of the Acts of Parliament now in force, under which you are authorized to levy tolls and rates on the lines included in your former return :—

17 & 18 Vict. c. 211. [1854]. This Act is qualified by 26 & 27 Vict. c. 122. ss. 76 and 77 [1863], and by 28 & 29 Vict. c. 211. s. 30 [1865].
20 & 21 Vict. c. 46. s. 23. [1857] authorizes North-eastern Company to exercise powers contained in 18 & 19 Vict. c. 180 [1855].
22 & 23 Vict. c. 91. s. 13. [1859] authorizes North-eastern Company to exercise powers contained in 16 & 17 Vict. c. 137. [1853] and 17 & 18 Vict. c. 151. [1854].
25 & 26 Vict. c. 120. s. 13. [1862] authorizes North-eastern Company to exercise powers contained in 16 & 17 Vict. c. 93 [1853].
26 & 27 Vict. c. 122. s. 12. [1863] authorizes North-eastern Company to exercise powers contained in 21 & 22 Vict. c. 116. [1858], 22 & 23 Vict. c. 127. [1859], 20 & 21 Vict. c. 40. [1857], 21 Vict. c. 14. [1858], 24 & 25 Vict. c. 72. [1861], and 25 & 26 Vict. c. 40. [1862].
26 & 27 Vict. c. 221. s. 28 [1863].
28 & 29 Vict. c. 211. s. 30 [1865].

North-eastern Railway—*continued.*

INQUIRY No. 5.—As to Passenger Fares.

Give the following information in reference to the lines included in your former returns :—

—	Express Fares.						Ordinary Fares.							
	1st Class.		2nd Class.		3rd Class.		1st Class.		2nd Class.		3rd Class.		Parliamentary.	
	Single.	Return.	Single.	Return.	Single.	Return.	Single.	Return.	Single.	Return.	Single.	Return.	Single.	Return.
Average fares charged per mile.	No express fares on the North-eastern Railway.						2·10	—	1·5	—	3rd & 4th 0·85	—	—	—
Highest - -							$2\frac{1}{2}d.$	—	2*d.*	—	$1\frac{1}{4}d.$	—	1*d.*	—
Lowest - -							0·7	—	0·5	—	0·3	—	—	—
Maximum fares allowed by Act of Parliament.							$2\frac{1}{2}d.$	—	2*d.*	—	$1\frac{1}{4}d.$	—	1*d.*	—

Places between which the highest rate of passenger fare is charged, giving the fares for each class, and the distances between the stations.

—	1st Class.	2nd Class.	3rd Class.	Parliamentary.	Distance.
	s. d.	*s. d.*	*s. d.*	*s. d.*	
Newcastle and York - -	17 6	14 0	8 9	7 0	84 miles.

Places between which the lowest rate of passenger fare is charged, giving the fares for each class, and the distances between the stations.

—	1st Class.	2nd Class.	3rd Class.	Distance.
	s. d.	*s. d.*	*s. d.*	
Newcastle and South Shields - - -	0 9	0 6	0 4	13 miles.

Are market tickets issued? If so, between what places, and at what proportion of the single fares?

Market tickets are issued to all the various market towns from the stations adjacent to such market towns, the rates being calculated at about a fare and a sixth of the single journey fares.

Give the average speeds of trains as follows :—

Average speed of express trains, including stoppages - - - - 40 miles per hour.
„ „ ordinary passenger trains - - - - 30 „
„ „ parliamentary „ - - - - - 20 „

Give some general information as to the nature and extent of your special excursion traffic, stating the frequency of the excursion trains, the places between which they run, the fares charged per mile for each class, the number of passengers of each class generally carried in each train, and the average speed, including stoppages.

Excursion trains are run chiefly during the summer months, and to watering places, large towns, or other places which offer attractions to the general public.

The frequency of excursion trains depends upon circumstances. The following trains were run during the summer months of 1865 :—

1865.	Local Excursion Trains.	Foreign Excursion Trains.
June - - -	70	41
July - - -	92	45
August - - -	125	59
September - -	76	34
October - - -	26	14
	389	193
Gross total - -	582	

The fares vary according to distance and other circumstances from $\frac{3}{8}$ths to $\frac{3}{16}$ths of a penny per mile run.

In 1865 the following local excursion trains were run :—

No. of Trains.	Number of Passengers.		
	1st Class.	In covered Carriages.	Total.
447	6,588	213,345	219,933
Average per train -	$14\frac{3}{4}$	$477\frac{1}{4}$	492

The average speed of excursion trains is about 15 miles an hour.

North-eastern Railway—*continued.*

INQUIRY No. 6.—As to Rates for Parcels.

Give, in reference to the lines included in your former returns, the general rates charged for parcel traffic, both by passenger and goods trains, according to weight and distance. Also add particulars of any important exceptions made to these general rates.

Parcels by passenger trains are charged on the North-eastern Railway according to the following scale :—

Distances.	Not exceeding 1 lb.	Not exceeding 2 lbs.	Not exceeding 7 lbs.	Not exceeding 14 lbs.	Not exceeding 28 lbs.	Not exceeding 56 lbs.	For every lb. above 56 lbs.	Excess Luggage per lb.
	s. d.	*s. d.*	*s. d.*	*s. d.*	*s. d.*	*s. d.*	*s. d.*	*s. d.*
1 mile to 15 miles - -	0 3	0 4	0 4	0 6	0 6	0 8	0 $0\frac{1}{4}$	0 $0\frac{1}{4}$
16 miles to 30 „ - -	0 4	0 6	0 6	0 6	0 8	0 10	0 $0\frac{1}{4}$	0 $0\frac{1}{4}$
31 „ to 50 „ - -	0 4	0 6	0 8	0 9	0 10	1 0	0 $0\frac{1}{2}$	0 $0\frac{1}{2}$
51 „ to 100 „ - -	0 6	0 6	0 10	1 0	1 0	1 3	0 $0\frac{1}{2}$	0 $0\frac{1}{2}$
101 „ to 150 „ - -	0 6	0 9	1 0	1 2	1 6	1 9	0 $0\frac{3}{4}$	0 $0\frac{3}{4}$
151 „ to 200 „ - -	0 8	0 9	1 0	1 2	1 8	2 0	0 1	0 1
201 „ to 250 „ - -	0 9	1 0	1 2	1 2	2 0	2 6	0 $1\frac{1}{4}$	0 $1\frac{1}{4}$

There are no important exceptions made to these general rates.

Parcels by goods trains are charged on the North-eastern Railway according to the following scale :—

Distances.	Not exceeding 28 lbs.	Exceeding 28 lbs. and not exceeding 56 lbs.	Exceeding 56 lbs.
	s. d.	*s. d.*	*s. d.*
